"True enough, adding fuel to the inflationary flames which are already threatening the economy would mean an increase in retail sales in dollars as a result of rising prices, but any increase in dollar sales without a corresponding increase in unit sales hurts our economy instead of helping it. Declining unit sales mean reduced production, increased unemployment and a lower standard of living for all."

Lebhar goes on to say that retail sales are likely to increase this year no matter what Government fiscal policy is followed. But the question—and it's as big a question as the Nation faces—is whether this will be a healthy increase, based on a stabilized currency, or an increase which merely reflects further degradation of the dollar.

We will know before long. The answer is up to Congress.

Forty-first Lithuanian Independence Day

SPEECH
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. ADDONIZIO. Mr. Speaker, today we think of wars as the worst events in human history, and as the horrors of destruction and death that are sure to be caused by wars in this atomic bomb and nuclear age, we dread the thought of any war. In this we are probably and rightly justified in regarding wars as scourges of the human race. That is the consensus of today. But in the past, even in the relatively recent past, there have been wars which were regarded as the only way out of difficult international situations, and even out of some imminent calamities. Certainly defensive wars are always treated in this spirit. The First World War is also regarded as such by many peoples who found their liberation and independence in the culmination of that war. As that world holocaust drew to its close, autocratic monarchies tumbled down one after the other: The Russian czarist regime, monarchical Germany, the Austro-Hungarian monarchy and the Sultan of the Ottoman Empire, all perished in that destructive and devastating war. And that war shattered the chains which held millions of innocent and helpless people in bondage and servitude. The Lithuanians were among these people.

The Lithuanian people have a distinct place in the turbulent history of northeastern Europe. They are justly proud of their long and glorious past. For centuries the Lithuanian kingdom was a powerful force in the whole east European region. At times they not only successfully repelled some of the incursions of barbarian invaders from the east, but they were the stouthearted champions of Christianity and its advance guard in that part of Europe. Late in the 16th century their kingdom was united with the Polish kingdom, and formed a dual monarchy. This union lasted for about 200 years. During that time the destinies of both nations were wedded together. In the late 18th century when Poland was partitioned, most of Poland and with it all Lithuania was incorporated into the Russian Empire. But the loss of national independent almost 200 years ago did not mean the loss of the spirit of freedom on the part of Lithuanians. While they suffered under the autocratic regime of the czars, they worked hard for the attainment of their freedom. They became firmly convinced that individual and national well-being could not be fully achieved or enjoyed without national political independence. They learned that in order to enjoy the benefits of their labor, they should have complete freedom in their homeland. To regain that freedom they worked ceaselessly, but it took them more than a full century to see their cherished dream come true. Not until the detested regime of the czars was overthronw could they have their freedom. In 1917 when that regime was shattered by the Russian Revolution, then, along with other peoples, the Lithuanians felt free. On February 16, 1918, they proclaimed their independence and set up their Republic. That day marks a new day in the modern history of the Lithuanian people.

Both in the attainment of Lithuanian independence and in its maintenance for more than two decades the United States has made important contributions, officially and unofficially. The encouragement which the Lithuanians found in the famous 14 points of our former President Wilson was a boon to their cause. It was a source of inspiration for them to know that their struggle for liberty and independence had the support of our wartime President and our people. Nor was the moral and material aid given to Lithuania by the people of this country, especially by the body of our loyal citizens of Lithuanian descent, of less significance. With such aid, and through their own industry and perseverance, the Lithuanian people turned their war-torn country, in a short time, into a happy habitat for all lovers of freedom and liberty. They worked wonders in making Lithuania a prosperous and progressive democracy, a model in many respects. And during those two decades the people were happy, leading a contented life. But, unfortunately, this period did not last long. As the war-clouds began to thicken in the late 1930's, Lithuania sensed the danger to her independence. No mercy was expected from either totalitarian regimes, neither from Berlin nor from Moscow. In the end, however, it was Moscow that in a series of villainous acts put an end to Lithuanian independence in July of 1940 and enslaved the people.

Today, for more than 18 years, unhappy Lithuanians find themselves once more in chains and cut off from all contacts with the free world. There are some 3 million helpless and innocent souls completely sealed off behind the Iron Curtain. Many elemental means of livelihood and all freedoms are denied to them. They live as in a large prison camp, to work as slaves for their taskmasters in the Kremlin. Communist rulers of the country have been doing their very worst to eradicate any feeling of nationality and, one might say, rationality, among its inhabitants. All national events and the observance are rigidly controlled and prescribed. There is no freedom of speech, of press, of movement, and no one is free to correspond with people in the free world. The only freedom these poor souls have, the one which their heartless overlords cannot take away from them, is to cherish their freedom and pray for deliverance from Communist totalitarianism. On this historic anniversary, on the 41st Lithuanian Independence Day, I hope that they will regain their freedom and once more enjoy it in their historic homeland.

Under One Roof 58 Years

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of Sunday, February 15, 1959:

UNDER ONE ROOF 58 YEARS

Last week the Washington Bureau of the Associated Press moved out of the old Star Building to quarters in the spick-and-span new Machinists' Building, 1300 Connecticut Avenue NW. Within another 2 or 3 weeks (much about that later) we shall ourselves be leaving, setting up shop overnight in our brand-new building on Virginia Avenue between Second and Third Streets SE.

So ends an era for the AP bureau as well as the Star, and the beginning of a bright new one for both. But having shared the same roof for more than 58 years, the physical parting has not been without regrets. The Associated Press (although its organization and concept are vastly different now) is older than the Star, the first AP Washington correspondent having been stationed here in 1848—4 years before the Star was founded. In 1856 the AP established its lone correspondent in an office, which became the first AP Washington bureau, one of two in the United States. And in 1900, when the Star moved into its ultramodern "marble palace" at Eleventh and Pennsylvania Avenue, the AP bureau moved in with us. We have been together ever since, both of us, in recent years, bursting at the seams as we outgrew what, so few years ago, seemed

unlimited space. Both of us have room now for future expansion—but no longer under the same roof.

The physical separation between the Star and the AP bureau now is measured in miles, rather than feet. Yet, due to the marvels of modern communications, the Star will be in closer contact with the AP bureau, and the news and pictures it receives and send, than when we were separated by a few floors. For more than half a century we exchanged our copy with the AP through pneumatic tubes, a marvelous device when they were installed. Now the AP's battery of teletype machines and photo transmitters, bringing the news from around the world, will be within a few feet of the editors who handle the copy, with direct telephone lines linking the desks in both buildings.

This is all fine, and means progress. Yet 58 years is a long time to have shared a building together, and all the good news and all the bad news that rushed in and out of that building every day in all those years. It is hard to be casual about such a parting.

Truman Endorses Macmillan Visit

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 18, 1959

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of February 18, 1959:

TRUMAN ENDORSES MACMILLAN VISIT—HOPES MOSCOW JOURNEY WILL OPEN A DOOR—OPPOSES TRIP BY A U.S. LEADER

(By Harry S. Truman)

I hope the visit of Prime Minister Macmillan to the Kremlin results in the opening of a door. I, for one, can see no objection to the initiative of the British Prime Minister.

Macmillan may be able to use this occasion to take soundings of the Soviet's immediate intent. All recent attempts to engage in exchanges and conversations with the Kremlin have proved futile and have been subverted for propaganda purposes.

Despite all the discouragements suffered by the West to date and the continuing skepticism of the Kremlin's peaceful intentions, I think the Macmillan trip is all to the good. This mission cannot be construed as arising out of weakness, or division of the West, or appeasement, and is one not likely to be used by the Russians for external propaganda purposes.

VISIT BY AMERICAN OPPOSED

If the Russians have a grain of peaceful intention in their program, the Macmillan visit might provide them a chance to return to constructive diplomacy where matters may be discussed quietly without the need for waving missiles in public.

In my judgment, this approach could not now be undertaken by the President of the United States or the Vice President without such a move being misunderstood and leading surely to another serious setback.

I have seen some public suggestions that the Vice President undertake a trip to Moscow in return for the Mikoyan visit and address the Soviets and the Russian people, with the stipulation that all of his remarks be published as given.

Because of my well-known personal feelings about the Vice President, I hope that no one will misconstrue the conviction I have that a visit by him to Russia, particularly at this time or a visit by any other leading American official, for that matter, would backfire.

There is another reason why I think a mission such as Macmillan's should be welcomed by us. I feel that the situation in which we find ourselves makes it desirable for our allies to assume equal initiative in the diplomatic field, provided, of course, that they do so in full concert and communication with all their partners.

We must realize that what we are after is not only to keep the peace but to make it durable, and at all stages to leave the door open to reason and conciliation, if we are to be met by a like attitude. And by like attitude, I do not mean flippant statements such as Khrushchev made recently before the Soviet party congress in Moscow when he declared that he is willing to concede victory in the cold war to the West while expecting the West to capitulate on Russian terms.

BLAME FOR THE COLD WAR

The Soviets initiated the cold war and have kept it up ever since with taunts, threats, and broken agreements.

We never wanted the cold war, and we don't like it. It has diverted our economy from further expansion for peaceful purposes at home and abroad. We converted from a war economy, beginning in 1945, and achieved immediate and unprecedented success in full employment and a balanced budget. But Communist aggression in Korea and elsewhere compelled us to redirect some of our economy to measures of defense at great sacrifice to our people.

The Russians have now embarked upon an economic war against us. It is a war they cannot possibly win. They can only bring further privations to their own people. They could not win even if our own leadership failed to put to maximum use our enormous and as yet untapped industrial capacity and economic might.

Let me remind the Kremlin rulers that this would not be a struggle between socialism and capitalism but one between dictatorial state capitalism and a free enterprise system where there are laws protecting the rights and welfare of the individual.

The Russians may feel confident that they possess the ability and the capacity to upset the economy of the entire world. If so, they are laboring under a delusion.

Such a task is beyond their ability or that of any other single power. More and more we see that the future welfare of all mankind is based upon the free cooperation of all nations.

NO MISGIVINGS SEEN

We have no misgivings about the industrial and economic progress of Russia. Neither are we disturbed over the dramatic strides in industry and agriculture in Red China. If the policies of Russia and Red China were aimed at peaceful cooperation with all their neighbors and for the benefit of mankind, we would be the first to acclaim their achievements and extend to them fullest cooperation.

Mikoyan told the Soviet party congress that peace follows trade and that nations that trade with each other are at peace.

If Mikoyan had come here not with the blandishment of trade but with a program of peace, his chances for success would have been greatly enhanced.

But Mikoyan has the mistaken belief, as do the Kremlin leaders and, I suspect, some businessmen here, that trade comes first and is a cure-all for all international differences. They believe that if you have trade, peace automatically follows.

Two world wars have proved that trade alone is not the road to peace.

One thing history teaches us is that dictatorships almost inevitably have led to war. From the days of Augustus Caesar the record on this is clear.

WILL TO BE FREE SPREADS

In this respect, however, I think the world is getting younger, rather than older, and the will to be free is manifesting itself in every part of the world. There is comfort in the fact that in this century of the two most oppressive dictatorships in history, freedom has come to more nations and to more millions of people than has ever been known before.

I hope and believe that in Russia and in China—perhaps not in my lifetime—the indomitable will in the human being to be free will triumph.

This immutable process of the will to be free will take some time. But in the meantime we have the problem of living and getting along with the Russian and Chinese dictatorships as best we can. This means that we must keep our guard up, much as we would prefer not to do it, in order that we secure ourselves against rapacious and foolhardy imperialism.

If Russia would agree to a peaceful unification of Germany, with proper safeguards to Russian as well as European security, that would be an important step in keeping the peace.

If Russia would make another step by abandoning her intrigue in the Middle East so as to create a climate for peaceful international cooperation, the peace of the world would be strengthened.

Success in the direction of peace in these two critical areas could produce a constructive approach to the problems in the Pacific. But let us remember that up to now the Communists use words they do not mean.

THE PRINCIPAL DIFFICULTY

The principal difficulty is that where you have a government which has total control of mind as well as material things, it is hard to find many opportunities for meaningful negotiations.

But limited as the opportunities may be, the statesmen of the West must be on the search and on the alert for any possible chance to advance the cause of peace. The most immediate pressing problem facing the West is the ultimatum date set by Khrushchev to abandon West Berlin.

Russia would like a meeting at the summit without an agenda and we do not know for what purpose. Our experience at the summit conference at Geneva proved it a complete waste of time and effort. It only served as a stage to present Khrushchev and Bulganin to the world as the new rulers of the Kremlin.

It seems to make sense that before we are maneuvered into another such meeting we at least wait for the report of Prime Minister Macmillan after his visit to Russia.

Republicans, by Whatever Name, Are Not the Friends of the Masses

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 17, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the February 16, 1959, issue of the New Republic:

ROCKEFELLER TAXES

Faced with a large prospective deficit, mandatory increases in State aid programs, and uncertain revenue prospects in the State of New York, Gov. Nelson Rockefeller could

have chosen one of two unpleasant alternatives—a cut in spending or an increase in taxes. He creditably refused to curtail programs which he had supported and promised to expand during the successful campaign. He was left only with a tax increase. Quite possibly he has overestimated the gap between receipts and expenditures. Such, at least, is the contention of Arthur Levitt, the only Democrat to survive the Republican landslide in New York. But much more disconcerting to the Governor's liberal admirers is the character of the increases. Of the $277 million in new revenue anticipated, $150 million will come from the State income tax, $47 million from a 2-cent rise in cigarette levies, and $69.5 million from larger gasoline imposts. Given the structure of State finances, the Governor had to depend on these taxes, but he could have moderated their regressive impact. Of these taxes, both the cigarette and the gasoline tax (save possibly in New York City where the poor do not own cars) take a larger percentage from those whose incomes are lower.

The change in the State income tax which might have counteracted these effects seems rather to intensify them. The drastic drop in exemptions from $2,500 for a married couple to $1,200, and from $1,000 for a single person to $600, will add 400,000 new taxpayers to the rolls. The $10 exemption will relieve only 100,000 of them from this new charge. Such changes inevitably fall most heavily on those who earn less than $5,000. For example, a married couple with no children earning $3,500 will pay $39 instead of $13, a rise of 200 percent. If a couple with the same income have a single child, their tax liability rises from $5 to $21, or more than 300 percent. Although the dollar amounts are small, the tendency is unfortunate. It is not as if there were no alternative. Relatively slight increases in the upper brackets and more modest downward shifts in the exemptions would have produced the same revenues.

Eleven Million Dollars Paid to Unemployed in 1958 in Wilkes-Barre Area

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Wilkes-Barre Record of February 12, 1959:

ELEVEN MILLION DOLLARS PAID IDLE IN WILKES-BARRE—NANTICOKE GETS $5 MILLION AND PITTSTON $2.7 MILLION

Economic impact exerted in 1958 through State unemployment compensation disbursements made in the area covered by Wilkes-Barre office of the Pennsylvania Bureau of Employment Security is indicated in announcement yesterday by the manager of the office, N. J. Haydock, that approximately $11,258,000 was paid last year by the various State unemployment compensation programs to unemployed workers in the immediate Wilkes-Barre area. This sum is estimated to be the equivalent to annual payrolls of a number of substantially large industries.

Total unemployment compensation claims processed by Wilkes-Barre office of the Bureau of Employment Security in 1958 was 397,200.

Manager Haydock announced a breakdown of disbursements and number of claims for the various State unemployment compensation programs last year as follows, through the Wilkes-Barre Bureau of Employment Security office:

Regular unemployment compensation: $9,625,000; 346,200 claims filed.

Unemployment compensation for Federal civilian employees: $61,000; 2,100 claims.

Unemployment compensation for ex-servicemen, under Social Security Act amendment of August 28, 1958: $31,000; 1,100 claims.

Unemployment compensation for veterans under Veterans' Readjustment Act of 1952: $209,000; 8,900 claims.

Temporary unemployment compensation under Federal act approved June 4, 1958: $1,132,000; 38,900 claims.

Mr. Haydock also announced that for 1958, unemployment compensation disbursements totaling $4,972,000 were made to unemployed workers in the area served by the Pittston office of the State Bureau of Employment Security; and a total of $2,768,000 to idle workers serviced by the Nanticoke Bureau of Employment Security office.

Through claims filed at the Hazleton Employment Security office, the fourth in the Wilkes-Barre and Hazleton labor market area, State unemployment compensation payments totaled at $5,314,000 to idle workers in the Hazleton City area.

Of a total of 107 local Bureau of Employment Security offices in Pennsylvania, the Wilkes-Barre office's 1958 unemployment compensation disbursements of $11,258,000 were exceeded by only four other offices. These were: Johnstown, $11,640,000; McKeesport, $11,439,000; Uptown Philadelphia, $11,341,000; Frankford, $11,287,000.

Scranton office unemployment compensation benefit payments totaled $8,847,000.

The Armenian Struggle Against Communism

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. MULTER. Mr. Speaker, February 18 is a memorable day in the history of the Armenian people. This is the day on which they successfully challenged the forces of communism in their historic homeland 38 years ago, and for a while evicted them. That event marks one of the first instances in which the forces of evil suffered a setback, even if only a temporary one.

Armenians had lost their independence centuries ago. During modern times their country was divided, for the most part, between Russia and Turkey. Under the autocratic misrule of the czars and the despotic Ottoman sultans they suffered untold miseries. During the First World War they faced almost total extermination in Turkey, when more than 1 million were massacred.

The survivors of that holocaust and their kinsmen in Russian Armenia joined hands in 1918 and proclaimed their national independence.

Soon after the end of that war the country was overrun by Russian Communists and by the end of 1920 it was dominated by them. Communist misrule and cruelty was intolerable, and the people staged a revolt against their unwanted overlords on February 18. The revolt proved successful; in the course of a single week the oppressors were evicted, and once more the people were free.

The freedom thus gained did not last long. Soon the Communists were reinforced and came back with greater force and fury. By early April they again overran the country, and incorporated it into the Soviet Union. Since then Armenian independence has vanished into past history. All those who still cherish freedom and independence, celebrate the anniversary of that day because it marks the beginning of their short-lived but long-remembered liberation from the yoke of totalitarian communism.

I am glad to join these fighters for freedom on the anniversary celebration of that memorable event and with them pray for early deliverance for all tyrants.

The Federal Government Should Assume the Cost of ROTC Facilities at Colleges and Universities Since ROTC Programs Are Essential to the Defense of the Nation

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. VAN ZANDT. Mr. Speaker, the colleges and universities in this country which accommodate ROTC units on their campuses appear to be grateful that I have introduced a bill—H.R. 1983—which seeks to provide Federal financial support for the various facilities occupied by these ROTC units. In the opinion of the State universities and land-grant colleges which accommodate over 80 percent of the students enrolled in ROTC programs this legislation is not only just and needed but is long overdue. Other Representatives and Senators have recognized this need for a long time and have introduced similar bills in previous Congresses. It has been a source of disappointment, discouragement, and disenchantment to these institutions that their efforts have not succeeded.

These institutions must assume that over the years the civilian and military officials in the Defense Department have meant what they have stated on repeated occasions that the ROTC programs are essential to the defense of the Nation. No less a respected authority than Gen. George C. Marshall has stated that our mobilization for World War II would have been delayed much beyond what it was had it not been for the availability of Reserve officers trained through the ROTC. Some 90,000 of the first 120,000 officers mobilized in 1941 were ROTC graduates.

More recently the Secretary of Defense and the Secretaries of the Army, the Navy, and the Air Force, has assured

some distinguished university presidents of the essentiality of the ROTC program to the Defense Establishment. Indeed, I know of no one in authority who has stated otherwise.

All of this being so, there was ample justification for Defense officials as far back as 1945 making commitments to the colleges and universities that they would vigorously support proposals that the Federal Government provide the necessary facilities to accommodate these units. However since 1945 when these commitments were made and continuing to the present when they have been reaffirmed, the Federal Government has yet to build the first facility at any institution.

The universities and colleges in this country simply cannot understand why they should be expected to expend their own limited capital funds to construct and maintain buildings for the exclusive use of the U.S. Government. Some institutions have done so only at the expense of depriving themselves of other sorely needed academic facilities. Still other institutions have been obliged to maintain their ROTC units in completely inadequate structures, some of them being World War I barracks which to say the least ought not to be imposed upon any college or university.

Obviously this matter cannot or certainly should not be confused with the complex or controversial issues involving Federal aid to education. All the institutions seek is a payment from the Government for facilities used by the Government. These institutions believe the Government should pay 100 percent of the cost of ROTC facilities. The bill I have introduced provides only for 50 percent of the cost which I daresay the institutions will willingly accept even though they believe it is but half of that which they deserve.

Mr. Speaker, it is my sincere hope that the 86th Congress will give favorable consideration to H.R. 1983 as its provisions will enable the Federal Government to assume at least 50 percent of the cost of ROTC facilities which are borne in full at the present time by our educational institutions causing many of them to divert funds from other badly needed academic facilities.

Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. ROBERT N. GIAIMO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. GIAIMO. Mr. Speaker, February 16, 1959, was the anniversary of the Declaration of Independence of Lithuania. This day means so very much not only to our good Lithuanian friends, but to all of us who espouse the cause of freedom.

We who have had occasion to meet Americans of Lithuanian descent realize the debt owed to Lithuania and how much its sons and daughters have contributed to the progress of America.

It is with a sad and heavy heart that we contemplate the present condition of Lithuania enslaved as it is by the brutal forces of Soviet Russia. The recent struggle for fredom against impossible odds by the Hungarian people pointed up and made clear to everyone the cruel suffering and tyranny with which people have been confronted in the captive nations such as Lithuania.

We all know and appreciate Lithuania's fine contributions to civilization during its independence and we all join on this memorable occasion in sympathetic greetings to all those in Lithuania and express to them our wish and prayer that their great country and people will again enjoy freedom as a nation.

Anniversary of Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. GARMATZ. Mr. Speaker, once again we pause to observe the anniversary of Lithuanian independence, this year, the 41st. As we do, we realize that the Communist regime is endeavoring to tighten its control over its satellites, a definite indication that there is considerable unrest in these nations, a chafing at the bit, so to speak. We are again reminded that the price of freedom comes high. It is not something that is won once and then remains our possession for as long as the country exists. The price of freedom is still eternal vigilance. Lithuania serves as an example of how freedom can be won and lost.

As it has done for a number of years, the Council of Lithuanian Societies of Baltimore commemorated the anniversary of Lithuanian independence with a banquet held in Baltimore on February 14, with the president, Mr. Thomas G. Gray, serving as toastmaster. The invocation and benediction were given by the Reverend Anthony Dranginis of St. Alphonsus Catholic Church. Prominent Federal, State, and city representatives attended to pay tribute to Lithuania.

In this connection, I would like to include in the RECORD, a proclamation issued by the Governor of Maryland and also one by the mayor of Baltimore:

GOVERNOR'S PROCLAMATION—REPUBLIC OF LITHUANIA DAY, FEBRUARY 16, 1959

It is not easy to shackle a liberty-loving nation.

It is doubly difficult when the nation has known the experience of freedom.

Lithuania gloried in her liberty.

But her people were deported, enslaved, and mass-murdered. Religion was repressed and freedom obliterated.

No American can take a casual view of the plight of Lithuania. Those whose ancestors came from Lithuania and their friends of all national origins join them in their hopes and prayers for liberation from communism.

In recognition of the faith and courage of the Lithuanian people and in support of all men who fight for freedom, I, J. Millard Tawes, Governor, do hereby proclaim February 16, 1959, the 41st birthday of Lithuania's independence as Republic of Lithuania Day in Maryland.

Given under my hand and the great seal of the State of Maryland, at the city of Annapolis, this 23d day of January, in the year of our Lord, 1959.

[SEAL] J. MILLARD TAWES,
By the Governor.
THOMAS B. FINAN,
Secretary of State.

PROCLAMATION BY MAYOR THOMAS D'ALESANDRO, JR., DESIGNATING MONDAY, FEBRUARY 16, 1959, AS REPUBLIC OF LITHUANIA DAY IN BALTIMORE

Whereas on February 16, 1919, liberty-loving Lithuanians unfurled the flag of their country to indicate their independence and to declare that henceforth their country should be free and independent, but recent events have seen the forcible enslavement of Lithuania by the powerful might of ruthless dictators who have, for the time being, crushed all opposition on the part of the freedom-loving people of Lithuania; and

Whereas despite despotic oppression, the people of Lithuania never allow the fires of freedom and justice to burn dim, but work and pray constantly for the day when, once again, Lithuanians can walk erect as freemen in the enjoyment of that freedom that is the birthright of all men; and

Whereas every year, on February 16, the Lithuanian colonies throughout the Nation gather together to observe the independence day of Lithuania and to offer up prayers that their beloved mother country will soon be enabled to enjoy the blessings of freedom not only for their own country but also for all other nations now under the domination of despotic rulers who seek to destroy all those things freemen cherish and hold most dear; and

Whereas the city of Baltimore is justly proud of the many citizens of Lithuanian birth or ancestry who have made important contributions to the civic and industrial life of our community and who have been enabled to enjoy here the freedoms denied their compatriots in Lithuania: Now, therefore,

I, Thomas D'Alesandro, Jr., mayor of the city of Baltimore, do hereby proclaim Monday, February 16, 1959, as Republic of Lithuania Day in Baltimore, and do urge all our citizens to join with the people of Lithuania in praying and working unceasingly to the end that the blessings of liberty and justice will again return to the world.

In witness whereof, I have hereunto set my hand and cause the great seal of the city of Baltimore to be affixed this second day of February, in the year of our Lord 1959.

[SEAL] THOMAS D'ALESANDRO, JR.,
Mayor.

Mr. Speaker, the following resolution, which I believe will be of interest to all Members of the House, was adopted unanimously at the banquet:

Whereas in this year of 1959 millions of freedom-loving Lithuanians in their homeland are not permitted to openly celebrate or even talk or write about Lithuanian Independence Day; and

Whereas it is manifest the people of Lithuania have bravely resisted all Soviet attempts to convert them to the Communist outlook and the way of life; and

Whereas Kremlin propagandists, such as Menshikov and Mikoyan, talk of their peaceful aims in one breath and boast in the next breath that the future of man shall be determined by scientific achievement and the development of new and terrifying weapons of war:

Now, therefore, we Americans of Lithuanian descent, living in the city of Balti-

more, in the Free State of Maryland, assembled at Lithuanian Hall, under the auspices of the Council of Lithuanian Societies, on this 14th day of February 1959, in commemoration of the 41st anniversary of Lithuanian Independence Day, hereby resolve to remind the American people, and particularly their appointed and elected representatives, that every time we read a newspaper born of our free press, every time we vote in our free elections, every time we celebrate the Fourth of July, we do so in full awareness that millions of our fellow human beings in Lithuania, Latvia, Estonia, and other subjugated countries are being denied by the Kremlin liberties and freedoms which we in America often take for granted, and, further, let none of us forget the age-old lesson that the human spirit is still the ultimate weapon in any conflict, and men, rather than mechanical weapons developed by them, will decide who shall be the winner in the struggle between freedom and totalitarianism.

COUNCIL OF LITHUANIAN SOCIETIES OF BALTIMORE,
THOMAS G. GRAY, *President.*
LUCY LASKAUSKAS, *Secretary.*

Relief for Our Taxpayers

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. HOLTZMAN. Mr. Speaker, I am today reintroducing in the House of Representatives legislation that will provide some small measure of relief for our taxpayers.

The first bill will increase the present income tax exemption of a taxpayer and/or his dependent from the present $600 level to $1,000. The $600 exemption now in effect was adopted over 10 years ago, and, of course, in this day and age is totally unrealistic and unfair.

The second bill grants an exemption from income tax in the case of retirement annuities and pensions. We must be concerned about our older citizens who have been forced to exist on fixed incomes while prices continue to rise. These citizens are over the age limit where they can seek and find employment to supplement any such annuities or pensions, and with the current lack of jobs their situation is more desperate than ever.

The third and last bill would permit a parent to deduct for income tax purposes amounts paid for the care of children while the parent is working, and would allow an income tax exemption for any child under 18 years of age who has been a member of the taxpayer's household, or attending school at the taxpayer's expense, during the entire taxable year. Once again the high cost of living has made it necessary in many instances for both husband and wife to seek work, thus necessitating the care and supervision of any children to another individual or organization. This provision would give much needed relief to those parents who are forced to pay for the care of their children while they themselves are working.

The cost of living in the last decade has continued to skyrocket like a missile and the tax laws have placed a heavy and unfair burden on our middle and lower income families. Recent figures show that there is still too much unhealthy unemployment throughout our country and the trend shows no signs of diminishing in the near future unless we take some steps to place more money into the hands of the consumer.

A tax cut now, even in the form of increased or liberalized exemptions, would increase consumer income and at the same time stimulate purchasing power, thus giving a "shot in the arm" to our sagging economy.

We must take some action, and quickly, to ease the burden of the taxpayer, and I respectfully urge my colleagues to give this immediate consideration to the enactment of a program which will provide that relief.

Steamship "Argentina": Launching and Initial Voyage

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. FLOOD. Mr. Speaker, the launching of a large vessel and its initial voyage are always thrilling experiences to those who watch the ship slide down the ways to become waterborne, and are fortunate enough to be on board during its first trip at sea.

On March 12, 1958 the Steamship *Argentina*, owned by the Moore-McCormack Lines, was launched at the Ingalls Shipyard, Pascagoula, Miss. It was uniquely fitting that, as special launching and initial voyage guest on this vessel which will run to South America, was Harry W. Frantz, the distinguished foreign correspondent of United Press-International whose extensive writing published in Latin America for more than 38 years have made his name a notable journalistic tradition.

It is fortunate that Mr. Frantz recorded his impressions, later published in a news story in the January 8, 1959 issue of the Mulberry Reporter, Mulberry, Ind.

The indicated news story follows:

A REPORTER ON THE STEAMER "ARGENTINA"
(By Harry W. Frantz, foreign correspondent of United Press-International)

WASHINGTON, December 22, 1958.—The outstanding event of my reportorial life in 1958 was to act as "trigger man" at the launching of the $26 million superliner *Argentina* at the Ingalls shipyard in Pascagoula, Miss.

The Moore-McCormack Lines, owners of this wonderful ship, gave me this task as a mark of good will for 38 years of newswriting for Latin American countries. The *Argentina* was built for first-class passenger service between New York and the east coast ports of South America.

On March 12 I pushed the lever that started the *Argentina* down the ways into the Pascagoula River, and at the same moment the ceremonial champagne bottle was cracked across the bow for the christening. The launching occurred without a hitch, and my reputation for good luck was established with the builders and the owners.

At midnight on December 3, I arrived again at Pascagoula with a newsmen's party, and boarded the *Argentina* for its trial tests and delivery run to New York City. My cabin was No. 174 on the upper deck.

At 6:10 a.m., on December 4, I was awakened by the announcement on the communications system: "Attention. All ashore that are going ashore. The gangway is going off."

On the previous day I had written an advance story, and as a reporter had no immediate reason to get excited. I waited drowsily in bed for the whistles, noise, and commotion which ordinarily attend a big ship's departure.

A radio in the cabin carried a quaint song from a shore station purportedly sung by three chipmunks. I felt no motion and heard no noise, except the radio, and presumed that the departure had been delayed.

Ten minutes later I roused myself and looked out of the port. To my amazement the *Argentina* was already out on the Pascagoula River and on its way to New York. This was my first realization that modern ship designers had accomplished a miracle, creating a 22,770-ton vessel which was almost entirely without vibration or tremor. It meant goodbye to that ancient hazard to ocean travelers—seasickness.

The propulsion machinery was located far aft, and experiments at every stage of construction had progressively eliminated the possibility of abnormal motion.

I soon learned that even in the rough seas, the new Denny-Brown stabilizers could be turned on to reduce the ship's roll; the *Argentina*, therefore, would become something like a floating hotel for its passengers.

When a new steamer takes to sea on its trial cruise, the sequence of events suggests a butterfly emerging from its cocoon. Countless objects are unboxed for the storerooms, carpets are uncovered, swimming pools are filled, teak deck chairs are set on the promenade deck, trash is thrown overboard, all the metal is scoured, and the vacuum cleaners go to work.

There were four reporters aboard, and we were given the freedom of the ship's seven decks, the bridge, and even the engineroom. About 250 officers and crew from the Ingalls shipyard were taking the *Argentina* to New York. Also aboard were about 150 contractors' representatives, Federal inspectors, and Moore-McCormack Lines' officials. Tests of all equipment were in progress.

The Barbadoes suite on the upper deck was assigned to the idling and conviviality of the newsmen and their company escorts. Our hosts were Joe Medaroch and Harold Hatch of New York. At intervals we made excursions to every part of the steamer. Curiously, the reporters seemed to be most fascinated by the wonderful interior decorations of the de luxe liner. The general theme was Spanish Colonial, with special attention to Argentine scenes. The prominent colors in the wool-carpeted lounges were orange and yellow and red, and the long passageways were finished in a bluish plastic called Mikarta.

The dining salon is called the Inter-American room, and the waiters come by escalator from the chrome and stainless steel galley. The deck cafe decorations feature the whaling industry with a mural of whale ships and a cabinet of scrimshaw, the name for the the whale-tooth oddities, logbooks, and other relics of a great period in Yankee shipping. There was a quiet room for passengers not looking for excitement.

On December 5 a news story was indicated and we had to go to work. A hot bearing

had developed on a differential gear between one of the turbines and a propeller shaft on the previous evening. The ship idled for repairs, and we sent news stories to New York by radio-telephone. The ship was in no danger, and the repairs were made at sea.

Trouble with a bearing is more or less routine when a big new ship takes to sea for the first time. There was no other mechanical trouble of any kind during the voyage, and our reportorial holiday continued.

Before dawn on December 6 a passenger tanker flashed a greeting to the *Argentina* with its blinker lights. "Are you the *Argentina*?" the tanker asked. After affirmative reply, the tanker signaled, "Good luck on voyage to New York and then to South America."

This incident was memorable because it was the first greeting to the *Argentina* from another ship, and meant that the marine world already was aware that a new queen of the sea was on the ocean. To me, this was a tipoff that one of my earlier stories had been used in shore-to-ships service.

William D. Dubuisson, port captain for the Ingalls Shipyard, was commander of the trial run to New York. He generously explained the radar, "Loran" navigational system, and other equipment on the bridge. His wife writes feature stories on historical topics for southern newspapers, and I ventured to give him a collection of travel pieces that my wife Kathleen and I had written for the Mulberry Reporter.

In repayment he showed me charts of the Hydrographic Office, which on their back print technical stories about the seas which would be of much value to me as a reporter.

Three engineers from the General Electric Co. spent a lot of time explaining the propulsion machinery to me, and each gave me a good Havana cigar.

Another valuable informant was Harold Pearlman, assistant works manager of the Ingalls Shipbuilding Corp. at Pascagoula. He watches the ship construction through every stage, sees all, knows all, and answered every conceivable question.

In the forenoon of December 6 we passed the Dry Tortugas and Sand Point Island, and at noon the *Argentina* passed Key West and entered the Atlantic Ocean for the first time. Now we cruised smoothly northward in the Gulf Stream. By dark we were 30 miles offshore from Miami. In the next 24 hours there was nothing more noteworthy than the fact that the temperature dropped about 50 degrees from Key West until our arrival off Cape Hatteras December 7, at 8:36 a.m.

The *Argentina* easily cruised at its required speed of 23 knots or better, and made up the time lost during repair of the hot bearing. On December 8, at the appointed hour of 11:30 a.m., the pilot boarded from the pilot boat *Romer* to direct the ship into New York harbor for the traditional waterfront welcome.

Fifteen minutes earlier, a 14-foot broom had been hoisted to the radio tower of the *Argentina*. The broom meant clean sweep, and was a symbol that the ship had successfully completed its trial run.

Soon airplanes with cameramen were flying past the ship, and the Jersey coastline was visible.

Thomas Murphy, chief purser, invited us to his cabin for final toasts and Godspeeds, and we raised glasses enthusiastically "to the country and its people for which the *Argentina* is named."

By 12:40 p.m. we were off the Statue of Liberty. The sky was clearing and the sun broke through overhead. Manhattan's mighty skyline lomed ahead. Twenty or more tugs, fireboats, and ferryboats took up the escort, and innumerable ships blasted welcome. Huge fountains of water played from the fireboats. Helicopters and airplanes flew overhead.

The *Argentina* was full-dressed with pennants and flew the blue-and-white flag which meant trial run.

At 1 p.m. we were off the Battery and moving up North River, and an hour later the *Argentina* docked at the Todd Shipyard on the Hoboken side.

In a reporter's life there is no greater thrill than to arrive on a fine new ship at its home port of New York. You can almost feel the surge of interest from the spectators on the waterfront, and in the ship's company there is a strange mood of pride, enthusiasm and eager speculation about voyages yet to come.

I was so thrilled that I forgot to make notes, and only came back to life when aboard a limousine in the Lincoln Tunnel. A traffic jam was delaying the "Special" for Buenos Aires which I would write upon arrival at the newsroom.

On December 12 the *Argentina* departed from the Moore-McCormack Lines, pier 32, North River, on its maiden cruise to Buenos Aires, about 12,500 miles round trip in 31 days.

Trials and Executions in Cuba

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 18, 1959

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and editorial:

HAVANA, CUBA, *February 5, 1959.*
The Honorable ADAM C. POWELL,
Member of Congress,
Washington, D. C.

DEAR MR. POWELL: Thank you for your letter of January 27 and the copy of your speech before the House of Representatives.

A great deal is being said in Congress today about the Provisional Government of Cuba and the executions of some known murderers. In the majority of cases, misleading information and misinterpretation are taking the place of veracity and sound judgment of the Cuban events.

I am glad that you visited our country and had face-to-face conversations with our leaders. You are now in a position to tell your colleagues in Congress that Castro and his bearded ones have nothing to do with the ordering of the executions as such; it is the people of Cuba who demand that the guilty ones be punished exactly as is being done now.

I enclose an editorial by Ralph McGill, one of the most distinguished American writers. This is by far the finest, clearest, most unprejudiced piece I have seen in the American press concerning our trials. It expresses exactly how we feel about the Cuban executions; it is, in fact, the most eloquent exposition of our behavior toward Batista's hired killers.

I hope you will pass this information on to your colleagues and that you will continue to work so effectively for real and amicable Cuban-American relations.

Yours very truly,

J. MIRO CARDONA,
Prime Minister, Republic of Cuba.

[From the Atlanta Constitution, Jan. 8, 1959]

A REVOLUTION WE MUST AID

(By Ralph McGill)

This is about the Pearl of the Antilles—Cuba. It needs a text.

Let us take one from so conservative a figure as Eugene Black, president of the World Bank. He said recently that the greatest story of this part of the 20th century was the stir and development going on in the underdeveloped countries of the world.

They are, in final analysis, the last best hope for the future. If we can export to them the western industrial civilization—well and good. If we can't then the Marxists will export theirs.

This brings us back to Cuba.

A viciously ruthless and corrupt dictator, ethically and politically bankrupt, has been driven from Cuba. Fidel Castro and the young people of Cuba have won a revolution. They have not consolidated it. This may be difficult for them to do. Powerful interests will oppose them.

But it should be obvious that Fidel has no intention of going Communist. He is a product of western civilization. Nor do the intellectuals and the people about him consider orienting themselves toward Moscow.

But it is apaprent that if this revolution does not succeed the next one will go far to the left.

A STABLE CUBA

Therefore, it is to the selfish interest of the United States to do all it can to make this revolution, so arduously won, a success. A stable Cuba would have a stabilizing effect on all the Caribbean. That is important to us.

First, we should recall Ambassador Earl E. T. Smith. He several times referred to the revolutionists as bandits. This stamps him as a most unobservant man, and an ambassador who failed to give his country sound information. The U.S. policy there was damaging. Not only was the Ambassador blind to the strength of the Fidel Castro movement, he continued to be very cozy with the Batista crowd.

Happily, the Cuban people are not angry with the United States as a people. They do believe, with reason, that official Washington supported one of the most evil dictators in Latin America.

Secondly, we should assist the Fidel Castro government to carry out at least two of its platforms. One should be easy. Our Government should be rigorous in assisting to root out the gambling underworld from the United States which Batista allowed to proliferate there. It was arrogant and powerful. It once again demonstrated that gambling is the worst of vices. The worst of our gangsters were overlords in Havana. They will try to get back in.

SUGAR LAND

Fidel Castro also wants to expropriate some of the American-owned sugar land—paying an agreed-upon price and carry out a program of land reform. This will not be easy. There are millions of acres of idle land in Cuba, much of it is owned by sugar corporations. Unless some of the thousands of landless squatters are anchored on land of their own, they will remain a focal point of radical infection.

About 35 percent of Cuba's sugar mills are United States owned.

This isn't good for the United States or Cuba. It compels us to be too much concerned about U.S. interests in Cuba and not enough about Cuba herself.

The United States would do well to assist this new Government to affect a land reform. Cuba lives on sugar. About 75 percent of her economy is built on it. To protect a small field of sugar-beet growers we impose a tariff and a quota. It is not as high as the tax on other sugar-producing countries, and it should not be.

It would be good sense for the United States to assist Cuba to own more of her economy and to see to it that her sugar market is at least not restricted. This is the sort of foreign aid which the last half of the 20th century needs.

Cuba, insofar as national security is concerned, is as important as Florida. A sound, democratic Caribbean would be of incalculable value to us.

If we fail to assist this test revolution to find its feet we later will have cause to regret it.

Garnishment

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. LANKFORD. Mr. Speaker, under leave to extend my remarks, I wish once again to call the attention of our colleagues to an excellent series of articles dealing with garnishment in the District of Columbia appearing in the Washington Post and Times Herald. The distressing conditions caused by this archaic law are well known to me and I believe that Mr. Mintz has performed a real service to the community by his excellent analysis of the situation existing today as a result of easy credit operations. The House District of Columbia Committee will commence hearings tomorrow, February 19, and it is my hope that a reasonable solution can be found in order that human misery and grief now present in the District can be eliminated. The first of this series is enclosed at this point in the RECORD.

EASY CREDIT IS WRIT LARGE ON SEVENTH STREET

(By Morton Mintz)

(First of a series)

About 190 times every working day, a deputy U.S. marshal hands a District employer a writ of attachment—a municipal court paper ordering him to freeze the wages owed an employee and turn them over to a creditor.

Some of these writs are the last resort of creditors who have acted in good faith and exhausted every other means of collection from deadbeats. But a huge share originates with a few easy credit stores.

Most of the easy credit stores' customers are such poor risks that they cannot get ordinary credit. At least 9 out of 10 wage attachments are against poor Negroes (earning roughly $30 to $60 a week), uneducated and unequal to both the inner and outer pressures to buy more than they can possibly afford. And when their pay is attached, they often are left with nothing for necessities.

NO CASH, PLEASE

The easy credit stores, unlike other merchants who extend credit, balk at selling for cash, and extremely few of their customers can pay cash. A common denominator of their operation is interest charges concealed in the sales price and little or no concern with whether the buyer is a reasonable credit risk.

What these operators are concerned with is that the customer, or another person whose name gets on the account as a guarantor, is privately employed. This is because they can and do, under the District's bad debt or garnishment law, use the municipal court and private employers as their collection agents. The pay of Federal and District employees cannot be attached.

The District's garnishment law, which will be detailed in later articles, permits a creditor to get successive attachments for the same debt, to attach every cent of wages a man has coming to him, to have a man's wages frozen while he seeks an exemption, to give their demands priority over a court order for support of a man's family. If a head of a household earned more than $400 in the preceding 2 months, some judges understand the law to direct that not a penny of this shall be exempt for food, shelter, or anything else.

Thousands of writs served on employers of one person (a maid, for example) up to those who have thousands working for them—have their roots in a few—not all—easy-credit stores in the 700 block of Seventh Street NW. A Washington resident who shopped but did not buy in these stores reports some of these sights, sound, and practices:

Temptations: "Credit as you like it." "No money down." "One dollar for each new account you bring in." "Free shoes for all the children." "Free—big, juicy, delicious ham for your Easter dinner with every purchase amounting to $15 or more, when opening a new account or reopening an old one."

A prospect looks in the window and a man grabs him by the arm and whisks him inside. "What can I show you?"

"An overcoat."

"Where do you work? Not a Government employee? OK, we'll fix you up. Do you have an account here? No? That's all right; we'll fix you up. Let's open an account first; we have what you want."

"What's the price on this coat?"

"Don't worry about prices; we have what you want to pay. Let me show you this one at $59."

TEN DOLLARS DOWN, MONTHS TO PAY

So saying, he unbuttons the prospect's coat.

"I know you'll like this one—just sold one like it to the famous orchestra leader so-and-so."

"I saw the same one at —— for $45."

"How much can you pay down? About $10? Fine. Pay $2 or $3 a week for 6 months, 6 months, mind you, not 6 weeks."

"That would come to $82."

"But we're not charging you any interest. Can you pay $2.50 a week? You look like a person who could pay $2.50 a week. If you can pay cash you can have it for $40. Let's go back and talk to the gentleman back here."

The gentleman back here: "All right; step right up, $10 down, $2.50 a week for 6 months."

"That would be $70."

"Well, look we gotta have some interest—we can work this thing out, anyway you want to do it."

The prospect starts to leave but is hailed at the door by a third man: "You like the coat, you want the coat, don't be ridiculous; we can work this out to suit you. We're in business to make a profit, but still we're willing to practically give it away to you."

The prospect gets away and goes to another store.

"What are your prices?"

"Forget about prices. We've got a coat you can buy. We don't sell prices. Do you have an account?"

"No."

"We can open one up for you. Where do you work? A private outfit? Good."

The salesman shows a coat he says is priced (there is no price tag) at $69.50.

"I can't pay that," the prospect says.

"You can have it for $60."

"Is it wool?"

"All wool. Pure wool, wool."

The prospect cannot find a label certifying the fabric is all wool.

The salesman whispers secretively: "Look, you want the coat? I'll let you have my profit. I'll let you have it for $55, but for heaven's sake don't go out on the street and tell other people."

The prospect still balks.

"You look like an intelligent, clean-cut young man, and I want you to have a break."

"I saw a gray tweed I liked at —— for $45."

"Gray tweed? That's an old man's coat."

"But this one is dark blue."

"There's a difference between an old man's coat and a conservative coat. This is conservative. How much money do you have on you? Can you pay $15 down?"

"Maybe $10."

Ten dollars, OK, fine.'

Instantly someone nearby starts filling out a sales contract, but the prospect is still hesitant.

The owner approaches; his tone is harsh: "You like the coat, take the coat, take the coat, fellow, for heaven's sakes."

The salesman: "Oh, come on, come on, come on."

The owner, as the prospect leaves: "We just want to talk to you. Nobody's going to hold a gun to you. We'll work out whatever terms you want to work out."

Prices: A conservative estimate is that such stores average on clothing about 50 percent more than for the same or comparable articles elsewhere. However elastic, they include provision for interest and intricate bookkeeping. The merchandise is often shoddy.

From the bag of tricks:

A customer on the phone: "I can't make my payment this week. I'll pay next week."

An employee who calls himself "Jack" replies: "Perfectly all right."

The next day a suit is filed against the customer which could lead to garnishment of his wages. He goes to the store to find out who gave the oral assurance.

"I'm Oscar, he's Joe, she's Wilma. There's no Jack here."

A customer goes to an easy credit store to complain that he is "paying and paying, and I can't seem to see the end." He asks for a copy of his account. This brings on laughter—and a refusal.

A person opens an account. Another name, usually the husband's or wife's, is put on the account as a guarantor.

The purchaser becomes delinquent. A suit is filed. The summons, under rule 4 of the municipal court, is served on an adult on the premises. It happens that the summons is served on the very person who made the purchase, and he tears it up.

Twenty days pass, and no answer is made in court. The court therefore declares a default judgment.

The innocent party—the guarantor—gets his first knowledge of all this when his pay is attached. If the creditor has waited 90 days after the default judgment, it cannot be attacked. Even if it asks more than what is owed, even if otherwise there would have been no legal liability. The guarantor is stuck, and that's it.

The actual purchaser, or one of those innocent guarantors, pleads with the easy credit store not to attach his wages, because if it does he will be fired. He promises to pay, say, $2 a week.

A garnishment is filed despite assurances that none would be. He tries to find out who gave him the assurance. Again, "There no Jack here."

A $35-a-week maid, the sole support of her daughter and four grandchildren, picks out an Easter topper. She is told not to worry about the price.

After it is entered on her account, that is, after it's too late, she finds the price is exorbitant—$109. The store refuses to cancel the sale or give her other, more needed merchandise in exchange.

The store tries to attach her wages but fails, because she has no wages owed her; as

a matter of fact, she is in debt to her employer. Finally she arranges to pay $2 a week.

"As soon as I get in there," she said, "they follow me all the way back to the door, trying to get me to buy something more, but I just won't do it."

Municipal Court Judge Milton S. Kronheim, Jr., testifying before a Senate District Subcommittee June 19, 1957, said of the handful of retail easy-credit merchants who have made a garnishment mill out of the court:

"Their floor personnel and credit manager are instructed to extend credit to workingmen and their families far beyond their ability to pay. Poor people without luxuries are easy prey to a fast-talking salesman who tells them that all they have to do is sign now and pay later. The storekeeper has learned to rely on the garnishment statute to collect his money and some retailers in Washington have lawyers who devote their entire day, every day, to garnishment of wages."

In a statement to the same Judiciary Subcommittee, Senator JOHN MARSHALL BUTLER, Republican, of Maryland, referred to this handful of easy-credit operators as "credit racketeers; they are nothing more."

Preserving the Family Farm as a Way of Life

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 4, 1959

Mr. McGOVERN. Mr. Speaker, one of the most alarming developments in recent American history is the accelerated deterioration of the family farming units of our Nation. The replacement of family-size farms with huge corporation style farm operations is not only undercutting the opportunities for young Americans to make their livelihoods in agriculture, but it is a direct threat to the continuance of our rural communities with their schools, churches, and commercial life. When scores of farm families are replaced by one large factory-type operation, we have actually set the stage for a kind of modern day feudalism with the remaining farmers playing the role of serfs.

Deploring this trend, Rev. Louis J. Miller of Colman, S. Dak., rural life director of the Catholic church in South Dakota, recently offered a most urgent and compelling statement to a committee of the South Dakota State Legislature. I urge my colleagues in the Congress to read Father Miller's statement which I include in the CONGRESSIONAL RECORD:

STATEMENT BEFORE A LEGISLATIVE HEARING AT PIERRE RE THE REORGANIZATION OF THE STATE DEPARTMENT OF AGRICULTURE, JANUARY 29, 1959

Gentlemen, I appreciate very much the opportunity of appearing before this legislative committee. I am speaking as the director of the National Catholic Rural Life Conference in the eastern part of our State. I also make bold to say that the thinking stated here is widely shared by many farm people not of my religious persuasion.

I am specifically concerned with Senate bill 134, section I on policy, and section 5(c) on rural development. The conference for nearly 40 years has been grappling with serious problems that confront the family unit of agriculture—seeking to apply Christian principles to a solution of its difficulties.

I am sure every member of this committee is concerned about this social institution of the family as the basic unit of agriculture in South Dakota, and throughout the country for that matter. You are concerned that it remain the predominant pattern of farm production. You are interested in maintaining it as an efficient unit, as well as a way of life.

In dealing with any kind of legislation it is vital to have clear objectives. Legislators would not be like some trigger-happy, irresponsible game hunter who fires in all directions at anything he hears or sees. Here, likewise, it is not enough to take a random legislative shot in the general direction of farm problems, make a big noise to kid the folks back home something is being done for them. We need what we have not had in agricultural policy in this State—a clear objective—a rifled aim at the maintenance and development of family unit agriculture and the rural community that springs from it. We need an objective that will seek in season and out of season to help upgrade those family units that have fallen short of a sound operation, and at the same time to discourage and cut back if need be superscale factory farming.

As you know only too well, agriculture is No. 1 both as an industry and as a way of life in our great State of South Dakota. I wish to call to your attention that, despite assurances we have heard from the USDA and other spokesmen as to the continued strength and prevalence of the family farm pattern, the fact remains that there are forces in the economy today that pose a real threat, yes, have already wrought their damage, to family-unit farming.

Let's look at one aspect of the record. According to a study recently published by State College on vertical integration we learn that 275 units, vertically integrated with feed companies in California are producing 90 percent of that State's need for beef—that is an average of about 18,000 head per farm. There you have it—a type of agriculture foreign to our concept we derive from Jefferson. It's here. In California as a matter of fact, the family type operation is no longer the predominant.

There are powerful interests in the country for whom agriculture means this type of operation. Agriculture is simply a profit-making enterprise in the field of food and fiber production instead of in appliances, cars or what have you. These folks even visualize a time when there will be, let's say several thousand hog units to produce the pork of the Nation, so many cattle feeder lots to fatten the beef the Nation consumes, etc. They speak of easier solutions to the problems of surplus, grading, marketing when the factory methods have taken over in the field displacing the family. This is the kind of cold-blooded thinking that is going on.

We feel this whole matter is an urgent one. The family pattern of farming has disappeared in California; it is weakened in other areas of the Southwest where some 500,000 Mexican nationals are being exploited at sub-American wages for the aggrandizement of factory-farm operators. In these days of rapid communication we must recognize that what happens in one State, might conceivably happen in another.

We have been informed by the USDA and farm experts that the greatest single factor of change in the farm picture is a technological revolution. The word "revolution" is well and deliberately chosen, for it is clear to any student of the problem that the changes this technology brings will affect the farm family as radically and disturbingly as the industrial revolution affected urban England more than a century ago. Any reader knows the wretchedness and misery follows as described in Dickens' novels. It was not that mass production technology was evil; rather that the technology was imposed on a nation's economy with almost total disregard for human beings.

I mention this to emphasize the urgency of the subject matter before you in bill 131. One might say we have come to a fork in the road in South Dakota agriculture—take the path to the right and we enter what might well become the golden age of agriculture, the wedding of the farm family to the best modern agricultural know-how; or take the fork to the left and we enter the realm of factory farming, with its depopulated countryside, dependent serfs in what remains of ghosttown communities—an ugly sight to behold.

We do not believe that the sovereign State of South Dakota should sit neutral on the sidelines when a way of life for so many tens of thousands of our farm families is at stake; it is inconceivable that our State government lift nary a finger while blind economic forces be allowed to operate unhampered, monopolizing markets that at present undergird the economy of our families on the land.

We believe that the State of South Dakota should take a positive role in fostering a climate favorable to family unit agriculture, first by an explicit declaration of policy supporting its preservation and growth, and by legislation which will enable it to maintain its level of efficiency, and assist where needed in raising it to a level of sound operation. In view of the mere dollar sign thinking in the field of agriculture, we feel the impact of a legislative policy is needed to focus attention on the value to the State of a family type of agriculture.

For it's more than poetry to speak of farming as a way of life. The greatest product of rural South Dakota is its people. A public relations man, who spent some years in war industry in California, told me the other day—among personnel men the Midwest farm boys were the most sought for in recruiting labor. Why? They were versatile, they had some initiative, responsibility, and, above all, they weren't afraid to work. This is one of the products, believe me, that this State and this Nation can ill afford to lose. So we feel there is no such thing as being neutral when a valuable way of family living is in danger of being replaced by huge factory-farm agriculture.

Be that as it may, not only should the State department of agriculture actively foster the welfare of the family farm, it should also be concerned about what's happening to people in the rural communities of this State. Certainly the State has a role to perform other than recording the demise of one rural community after another in its bureau of statistics.

One of the great reasons why many of our rural communities are dying is because we are sending too many of our raw products outside of the community, yes, outside of the State, to be processed. This is in many cases inexcusable at a time when our farm people, with the enlightened partnership of their Government, have brought power to every community of the State. For whenever we send out such raw materials, we send with them some of the finest talent, brains and brawn in young people along with those materials. We have been at the mercy of out-of-State processors and manufacturers long enough.

One of the most heartbreaking experiences I have as a rural pastor is to see some of our fine lads come back to the community after a stretch in the service. They want to stay in the community; they would like to give their work-span to the community, but we have nothing for them to do. So off they move to the big city where many of our products are being processed. And this is part of that endless subsidy farm folks make

that makes the chambers of commerce of neighboring cities boast of their growth.

If we profess a love and concern for the youth of our State, if we have a regard for the opportunities of our young people, their future, their potential contributions to our State, it is imperative that the State Department of Agriculture be authorized to direct, let's say, an institution like our land grant State college (which Abe Lincoln made possible so the American farmer might not be just a dumb farmer or peasant); commission this institution to give the people the knowledge, the research that is needed if they are to help themselves. I do not mean research on crop varieties, seeds, animal husbandry, etc., which is being done, and is important from the viewpoint of agriculture as an industry.

At the same time we should have more research that has to do with rural people and their resources, rural development; we need, for instance, knowledge on the economic potential areas in the State, the possibilities of rural-related industry, processing, recreation; knowledge of land ownership and tenure, research into how widespread ownership can be maintained with capital outlay so high, problems of and extent of land concentration in this State—and a host of research of this nature that concerns people, and not mere agricultural economics. For knowledge is power, and without it a free people will die.

In driving through the land of magnificent distances that is our State, I have seen a sign: "South Dakota State College—Education With a Purpose." A noble quote indeed. But to this day I have met no two people who agree on what that purpose is supposed to be. We feel that the people, the rural people of the State should supply the answer for our land grant college: place the duty upon it of giving rural South Dakota more research into that aspect of agriculture that is a way of life—people in rural communities, rural development.

There is one more thing I wish to bring to your attention as a kind of background for the big picture. The major problem in the trouble spots of the world today are rural problems. Who shall own the land? Look at South America, China, Spain, Europe behind the Iron Curtain—all of them places where family farming has not been the general state of affairs. Result? Social discontent and revolution.

The family and ownership of land is the natural God-given way of human living and whenever the church or the state or powerful influential people forget that, and take over the ownership of God's land in a disproportionate manner, the economic, spiritual, and social balance of a nation is disturbed and evils of every kind result.

It should not be forgotten by this committee that never before in the history of the human race have so many families enjoyed the privilege of living on land of their own as in the area between the Appalachians and the Rocky Mountains, between the Canadian border and the Mason and Dixon line. It's been a good way of life—it has proven itself. Indeed, this is a heritage that has meant strength for our Nation and our institutions, abundance for our tables, fiber for our factories. It is a heritage that must be passed on to posterity. It has proven its right to survive.

We believe that there is enough down-to-earth commonsense in this heartland of America and the Dakotas to insist that here in this State we foster and strengthen a pattern of agriculture that is at once efficient in the production of food and fiber and at the same time retain a good way of life for tens of thousands of South Dakotans.

For these reasons we believe, and respectfully submit to this committee, that in a rural State such as ours and after 70 years of statehood we have a Department of Agriculture dedicated to clearly defined objectives. We further repeat that, along with a commitment to the traditional Jeffersonian idea of a family owned and controlled agriculture, the Department be given the duty to help strengthen the rural community.

This, we believe, will help maintain an agricultural industry first in productivity in the world, and one that will retain a built-in, cost-free subsidy to the Nation of an endless supply of hardworking people whose feet are on the ground, to help the Nation keep its feet there too.

Thank you for your kind attention.

Rev. Louis J. Miller,
Rural Life Director.

United States Is Facing a Clobbering in the Battle for Markets

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article appearing in the Washington Daily News of Monday, February 16, 1959:

UNITED STATES IS FACING A CLOBBERING IN THE BATTLE FOR MARKETS

(By Charles Lucey)

The United States is beginning to come awake to the fact that we face a clobbering in the battle for world markets.

Partly it's a matter of price. Evidence grows that domestic U.S. inflation is shoving up our costs so that overseas nations can undersell us.

Partly it's technology. No longer do we have any corner of it—and our edge might have been much thinner anyway if western European technology hadn't felt the havoc of two world wars.

Increasingly the gap closes between foreign productive techniques and capabilities and the marvelous big-volume, low-cost American way of pouring out mountains of goods.

The U.S. goal for a decade has been to build our allies economically strong. They've shaped up well. Any blithe notion we're competing today against a scattering of pot-and-kettle tinkers is fatuous. As more and more of the world reaches out for the good life, Japan and western Europe will be competing steadily harder against us to provide it for a price.

Partly, too, the new challenge rises because our competitors are trade-hungry. Exports are their lifeblood. They provide jobs for millions.

Yet the issue is not simply one of whether our foreign competitors take a bigger share of the overseas market. It involves also the ability of foreign-made goods to compete with U.S. goods here at home.

TURNABOUT

Many of these goods from overseas are made by U.S. firms. In the postwar years U.S. firms have increased their direct foreign investments by $20 billion—three times as much as in 1946. So long as U.S. plants overseas sell their output abroad perhaps few U.S. jobs at home are lost. But when they import lower-cost goods in the United States it's a different story.

Many U.S. businessmen believe the danger of the United States pricing itself out of foreign markets is an immediate one. But even if costs and prices are kept in check here at home, more intense, vigorous overseas competition against the United States is a challenge still to be met.

On the broad question of whether the United States is pricing its exports too high, some Government economists are skeptical. They say most commodities or articles cited represent special cases. Others say wages and prices generally have not increased more here than in other competing nations—though the foreign rates, starting lower, could have climbed faster and still be under United States levels.

WARNINGS

Warnings of danger ahead are increasing. In President Eisenhower's economic message to Congress was an insistence that high prices here at home could "lower our capability to compete in world markets."

The National Industrial Conference Board, in a study made partly in response to a suggestion by the House Ways and Means Committee, found that in hardest-competing Western Europe, unit production costs were lower than U.S. costs in 55 of 85 instances analyzed.

Other warnings have come from Federal Reserve Board Chairman William McChesney Martin, United States Steel Chairman Roger Blough, Ford Motor Chairman Ernest R. Breech, and Board Chairman John McCloy, of the Chase Manhatan Bank, former U.S. High Commissioner to Germany.

Said Mr. McCloy:

"We have to face the fact that in many lines we are pricing ourselves right out of the world market. It is up to us to make clear to all that we have to keep prices and costs down, we have to make better products and we have to work harder and longer to make them. There are disconcertingly large numbers of people in this world who are working harder than we, and they are achieving comparable know-how.

"I have referred to Europe but we are all aware of the tremendous strides Russia has made in industrial development. We no longer stand out as the single great supplier of goods we were in the early postwar period."

NO WAGE PRESSURE

Mr. Breech, returning from Europe, praised German and English labor leaders who, he said, had not pressed for wage increases they felt their countries could ill afford. He cited Ford assembly-line workers' hourly wage of $2.44, not counting a 50–60-cent fringe benefit, compared with $1.05 in England, 69 cents in Cologne, Germany.

Mr. Breech found auto factories producing a couple thousand engines and bodies daily, a rate comparing well with U.S. auto plants. He found striking advances in design, making and selling of autos and consumer durable goods; noted a 1958 European total auto output not far behind ours.

Like Mr. McCloy, Mr. Breech cited the disappearance of the long-held U.S. advantage which let this country beat lower wage competition overseas with its greater investment in plant, tools and big volume. He particularly warned of a movement overseas of U.S. products with high labor content.

CHEAPER IMPORTS

Steelman Blough described a Dusseldorf, Germany, steel plant laying down barbed wire in Cleveland at $40 a ton less than wire his own company sold there. Even with Germany's progress, a Cleveland steelworker, with his highly productive tools, can turn out more steel than a German worker. But, said Mr Blough, Cleveland's three-times-higher wages shove U.S. costs above those of Dusseldorf.

Mr. Blough sees the technological revolution that began in the United States in the

early 1900's "sweeping across the face of the globe at a vigorous pace—and happily so."

But it means rougher competition for the United States everywhere.

Labor, of course, has big stakes in this argument. It recognizes the possible inroads on U.S. overseas markets by foreign competitors but it is by no means ready to acknowledge high American wages are a main factor.

Mayor Jess Lanier and Miscellaneous Proposals of Municipal Interest

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. HUDDLESTON. Mr. Speaker, on yesterday, February 17, 1959, a fine group of mayors from 35 different Alabama cities and towns came to Washington for a conference with the Members of the Alabama congressional delegation. The purpose of the visit was to enable the Alabama League of Municipalities to present its views on 20 separate legislative items presently pending before the Congress.

Twenty mayors each presented the position of the league on a particular field of legislation. Among the 20 was the Honorable Jess Lanier, mayor of the progressive and expanding city of Bessemer, Ala., in my district, who commented on the subject of "Miscellaneous Proposals of Municipal Interest."

With the thought that Mayor Lanier's remarks will be of interest to the Members of the Congress, I am privileged to insert them herewith in the Appendix of the CONGRESSIONAL RECORD:

MISCELLANEOUS PROPOSALS OF MUNICIPAL INTEREST

(By Jess Lanier)

You gentlemen have been very patient and kind to listen to our expression of municipal views on programs and legislative proposals considered from time to time by Congress. We want to thank you for this courteous hearing and I shall close it with a brief review of miscellaneous programs and legislative proposals which affect the municipal government interest.

ASSISTANCE TO DEPRESSED AREAS

Hearings are to start next week, I believe, on a bill—S. 722—which would create an independent Federal agency to administer a program designed to provide economic redevelopment in industrial and rural areas which are suffering from or are threatened with chronic unemployment and poverty. The program would include loans for private industry at low interest rates, loans for public facilities at low interest, $75 million annually in grants for public facilities—as well as informational, planning, and technical assistance to eligible areas.

Assistance under the proposal would be available to: industrial areas with unemployment equal to 6 percent of its labor force for 18 of 24 months preceding, or 9 percent for 15 of 18 months preceding, or 12 percent for 1 year preceding—or, at the discretion of the agency head, 15 percent for 6 months preceding; and rural areas with the largest number and percentage of low income families and substantial and persistent unemployment.

PAYMENTS IN LIEU OF TAXES TO MUNICIPALITIES

Another bill—S. 910—is of general interest to city and town governments. It would provide limited payments in lieu of municipal taxes on federally owned commercial and industrial property, as well as special assessments levied by municipalities for streets, sidewalks, sewers, etc., on other federally owned property. Municipal officials in Alabama are more interested in the latter feature of the proposal—that the Federal Government come along with other property owners and pay its proportionate part of the cost of public improvements that are financed through the issuance by cities and towns of public improvement assessments bonds. Other classes of property do this and we feel that such improvements improve and enhance the value of Federal property the same as they raise the value of other classes of real estate and property.

CENSUS OF GOVERNMENTAL FACTS AND DATA

We favor ample appropriations to carry on effectively the work of the Federal agency which collects, publishes, and distributes useful and dependable facts and information concerning the operation and programs of all layers of government—the census of governments.

FINANCING GOVERNMENT OFFICE BUILDINGS

Municipal officials all over the United States are aware that a heavy backlog of Federal office buildings exists because no sound method has been established for the construction of such facilities. With the collapse of the Federal lease-purchase arrangement for the construction of such buildings, no new program has emerged which will provide for keeping abreast of the demand for new Federal office buildings. The municipalities have a vital interest in this problem, not only because of the need for improving Federal services to local citizens, but also because such new Federal construction can provide the cornerstone for redevelopment of blighted urban areas. It would seem logical to establish a Federal office building corporation, patterned after the Federal National Mortgage Insurance Agency. It could sell bonds on the open market for the construction of new Federal buildings, which bonds could be retired by charging rentals to the Federal agencies occupying the buildings. Such a device would not only provide a means for keeping abreast of the need for new office facilities, but would eliminate the possibility of adding to the national debt or requiring annual appropriations from Congress. I might say that we have such a law in Alabama whereby municipal governments may issue revenue bonds payable from rents charged various departments and agencies of our municipalities. It is being widely used at this time in our State and frees municipal funds that would normally go into building programs for other municipal uses.

There are other matters we could discuss, but we have already used up the time we planned for this session with you. As bills of interest to cities and towns come up in this session of Congress, we shall be sending you expressions of our interest and policy with respect to them. Thank you again for your courteous and patient interest in our viewpoints. From time to time, representatives of the American Municipal Association and the U.S. conference of mayors will appear before your various congressional committees or discuss pending legislation with you in your offices. Needless to say, we shall appreciate hearings and time given them in acquainting you with the national municipal viewpoint on various bills and programs handled by Congress from session to session.

I thank you again.

The Foreign Affairs Committee Should Review Local Currency Situation

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1959

Mrs. KELLY. Mr. Speaker, there has been considerable discussion during the past few months concerning the possible uses for and the extent of the local currencies held by the United States and of counterpart funds. Counterpart funds are those derived from the mutual security program through the sale of commodities in the foreign country. They do not belong to the United States but are under the joint control of the United States and the local government.

These counterpart funds are, in effect, matching funds provided by the foreign country to those provided by the United States. Up to 10 percent of counterpart funds are set aside for the uses of the U.S. Government such as local currency administrative costs.

Local currencies belonging to the United States are solely owned by the United States. The United States owned local currencies are derived from a variety of sources, United States income tax collections, sales of surplus property, repayment of loans, the 10 percent counterpart described above, and so forth. The greatest portion of these United States owned funds, however, is derived from the sale of surplus agricultural commodities under Public Law 480 and under the Mutual Security Act.

There follows a summary of local currencies owned by the United States and of counterpart under the mutual security program. The figures shown reflect sums on hand as of June 30, 1958.

Mr. Speaker, I should emphasize that many of these funds and much of this counterpart are already committed for new embassies and consulates, for support of armed forces, for development projects, and so forth. Furthermore, most of the Public Law 480 funds can be spent only pursuant to the agreements with the purchasing country which, in many instances, restricts the use of such funds.

Mr. Speaker, the Bureau of the Budget administers some of these local currencies. The International Cooperation Administration administers others, the Department of Defense still others, and so on. In view of the lack of central control in the executive branch, it would appear that some mechanism should be devised to provide such control both in the executive branch and in the Congress. I think that it would be most appropriate if the Foreign Affairs Committee would undertake a thorough review and study of the entire local currency situation. I think that the Foreign Affairs Committee is best equipped for this task.

I submit, Mr. Speaker, the summary to which I previously referred, of the foreign currencies owned by the United States or jointly controlled by the United States and other countries as of June 30, 1958:

Status of foreign currencies owned by United States or jointly controlled by United States and other countries, as of June 30, 1958

[Dollar equivalent calculated with the June 30, 1958, Treasury market rate]

[In thousands of U.S. dollars and thousands of foreign currency units]

Country	Unit of currency	Exchange rate, foreign currency to $1	Currencies owned by the United States: Dollar equivalent acquired under— Mutual security program surplus agriculture sales (1)	Title I, Public Law 480, surplus agriculture commodities sales (2)	U.S. portion counterpart funds (3)	Lend-lease and surplus property (4)	Miscellaneous (5)	Total: Units of foreign currency (6)	Total: U.S. dollar equivalent (7)	Currencies owned by other countries—But requiring U.S. agreement as to use: Mutual Security Act (8)	Title II, Public Law 480 (9)	Miscellaneous (10)	Total: Units of foreign currency (11)	Total: U.S. dollar equivalent (12)	Grand total: Units of foreign currency (13)	Grand total: U.S. dollar equivalent (14)

Adequate National Park Roads

EXTENSION OF REMARKS
OF

HON. B. F. SISK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 18, 1959

Mr. SISK. Mr. Speaker, the San Joaquin Valley Council of the California State Chamber of Commerce recently conducted in that area a most important and significant study meeting, a Sierra Access Conference, which developed opinion and crystallized views about the preservation, availability, and proper use of our magnificent Sierra Nevada, the majestic mountain chain rearing its snow-clad peaks from end to end of the great Central Valley of California and incorporating three great national parks.

One of the thoughtful messages laid before the conference was that of Mr. Chester H. Warlow, a most respected leader for many years in public affairs of the valley and the State of California, and a prominent citizen of my home community of Fresno. I think Mr. Warlow's views will be of interest and importance to conservationists throughout the country, and I have therefore sought and obtained permission to insert his address in the RECORD, where it will be available for study.

Mr. Warlow is eminently qualified to present authoritative views on the preservation and the wise use of our mountain areas and to make specific recommendations about mountain roads and trails required to make available those areas dedicated to public use and enjoyment. I feel sure that reading of his address will show that from his long and varied experience he has developed a philosophy worth considering, particularly in relation to pending controversies about Mission 66, under which our national parks are being rehabilitated.

Mr. Warlow has been actively concerned with our mountains for more than 40 years, during which he has both enjoyed them and contributed materially to making them available for the enjoyment of others. Since 1929 he has been honored with a succession of posts of responsibility in the development of our national parks, park roads, water resources, and State highway matters. For the past 15 years he has been a member of the California State Highway Commission. Last year the Fresno Chamber of Commerce honored him as "Mister Highways."

Mr. Warlow approaches our mountains with reverence. His reverence is coupled with the belief other people are entitled to share with him, in safety and at a cost within their means, the majesty of the mountains, the cathedrals of nature which so perfectly display the hand of the Creator.

I commend to you the eloquent words of a man who has devoted his life to people and to mountains:

Mr. Chairman, ladies and gentlemen, I crave your indulgence, but I have something to say which in general is perhaps pertinent to all the matters which have been discussed here today.

First, however, let me remind you that I have been an active member of the San Joaquin Valley Highway Committee of this chamber of commerce since prior to 1927, and that I speak to you today solely as such. I would also like to briefly mention my mountain experiences, with which most of you are entirely unfamiliar.

For nearly 20 years, commencing prior to 1913, I spent most of my vacations in the High Sierra in the territory between Yosemite Valley and Mount Whitney. On two occasions I led the large parties of our local citizens from this valley to the mountain tops of this region. Those who went with me also came back with acute cases of "mountain mania," from which none of us ever recovered. With pack and saddle animals, I wandered in wildernesses. I have to my credit many firsts—passages where only knapsackers had gone before. I love our Sierra. I respect them. I revere them, but I have what I believe to be a rather unselfish attitude toward them because I feel that others are entitled to the inspirations which their grandeurs induce.

These high, hard rocks, these deep canyons, these lofty, snow-covered peaks, the quiet meadows, the roaring rivers with their waterfalls, are all a part of God's cathedral, and our Sierra should be treated as such.

Most of my public activities have been directed to the positive, but today I find myself in a critical mood. I propose to speak frankly to and about some of my very best friends, and also about some of my acquaintances for whom I have the utmost respect. I speak not of their motives or of their sincerities, but solely of their philosophies and their conclusions as to how our mountain areas are to be administered.

Of what value is a cathedral with spiked doors upon which the parish communicants are impaled while seeking to enter We expect all who so desire to enter to enter with safety, to sit quietly in the solitude of the nave and transept and even to approach the rail for communion. But the vestry, the pulpit, and the foot of the altar are reserved for the use of the few. True, the altar and, in many cases, magnificient back altars are in view of the communicant to inspire, elevate, and broaden the horizons of his thoughts, but communicants need not tread upon the more holy ground behind the rail to grasp these inspirations. I ask you, what esthetic values have our mighty mountains unless mankind, the average fellow, is to be able to move at least within reasonable sight distances of these truly magnificient panoramas that have been prepared for him from all eternity by the Great Creator.

What is all this about? Well, a great controversy is raging, most of it entirely under cover. The United States Park Service has a great program of rehabilitation underway, Mission 66, with which most of you are generally familiar. It is in great danger. Our particular interest is in that part of the mission relating to park roads. I hasten to point out that in this whole mission road program, there are only a very few miles of proposed new roads and that mileage is not under dispute. The rest of the entire road program is entirely rehabilitation modernization. Not opening new areas to vehicular traffic—not putting motorcars behind the communion rail, but removing the impaling spikes from the cathedral doors.

Safety, safety of travel for the many who desire to enter the nave of God's cathedral, for the many who desire and need the inspiration of our mountains but who, like some of us who have now grown old, will never be able again to wander in wildernesses, to walk between the altar and the communion rail.

This great controversy is not about from where to where these reconstructed roads shall lead, but only about their basic designs. Many of the apostles of the wilderness vehemently insist that reconstructed secondary park roads should consist of two 9-foot lanes with 3-foot shoulders on the outside, with 12 percent grades, 200-foot sight distances, and hairpin turns.

The Park Service has been lately talking about 10-foot lanes with somewhat lesser grades, and with about the same sight distance and curvature. Even if that is to be the program, why waste the money rebuilding these auto trails when on being finished they will still be wagon roads? No public agency, Federal, State, or county, has built such roads in the last 25 years except logging roads in the timber area and fire protection roads where they are necessary.

I find myself now critical of the Park Service. I speak only as one of their very sincere friends. No one is proposing anything but two lanes for these roads. However, these roads should be built upon not less than the minimum standards set by the State of California for 40-mile-per-hour travel. That means 11-foot lanes, 6-foot shoulders, and the following minimums: 550-foot radius on curves, nonpassing sight distance of 275 feet, and passing sight distance of 1,100 feet. Grades should be kept below 7 percent. When the El Portal, Big Oak Flat, and Ash Mountain entrance roads, and the roads leading into Lassen Park are to be reconstructed, these standards should be considerably stepped up because of the higher volumes of traffic involved. Certainly on these roads the standards should not be less than those provided for 50-mile-an-hour movements.

Returning to our 40-mile-per-hour roads, the limit-standards above suggested should be used only where they are absolutely necessary on account of the terrain or landscaping features. Reasonable turn-outs should be provided at appropriate places so that there would be no stopping on the regular travel lanes.

Imagine a driver of a modest car towing a camp trailer (I refer not to luxurious house trailers 30 feet long and 10 feet wide, but many of the camp trailers are 8 and 10 feet wide). Imagine this driver attempting to negotiate a 12 percent grade. He is either completely stalled or moving in low gear with 6 or 8 cars fussing along behind him until some restless soul tries to pass with only a 200-foot sight distance ahead of him.

Take a look at the fellow with a flat tire on a 9-foot lane with a 3-foot shoulder. He is either running a tire while seeking a safe, wide spot, or is incurring the danger of getting smacked by a passing car while attempting to mount the spare on the wheel at that point where he first noticed the flat.

We are talking about safety and human lives, and reasonable passage ways through country presently open to auto travel.

There is even more to this controversy than this. Unless you see the whole picture the true equities are not apparent. These Apostles of the Wilderness are subject to criticism for they are not only pressuring the Park Service to adopt these obsolete road standards for these reconstructions in areas already open to motor vehicle travel, but they are also being extremely selfish.

Much testimony has been introduced at Congressional Committee hearings reciting that but 1 percent of the visitors to our National Parks and National Forests use exclusively 99 percent of those areas, while 99 percent of the visitors have available for their use but 1 percent of these lands. These Apostles of the Wilderness are not content with what has been assigned to them, but they insist on telling the 99 percent under what conditions they shall be permitted to use their limited part of God's Cathedral.

Except in a very few limited places, this 99 percent, these communicants who look longingly from afar at the majesties of the High Sierra, presently can approach within reasonable viewing distances of these vistas only by auto trails over which they do not dare to travel, roads which long since have become obsolete and now demand moderni-

zation. If a few do dare to travel that way they dare not look at the scenery, but must fasten their eyes continuously on these old roads which demand their undivided attention. They are negotiating a tortuous passage with no safety turn-outs where they can stop their cars, get out and really enjoy the scenery.

I do not point the finger of disapproval toward that great mountain club which is so important to California or toward the great majority of its 10,000 members. I do decry the thinking and what to me appears to be a selfish philosophy of a very small group of that membership—a small group which meets in a tower, feeds on its own thoughts, and then endeavors to fasten its conclusion upon our national parks and national forests, never comprehending that there are other people in this world, and without any conception of the mountain travel limitations of these other people.

It is not a case of the tail wagging the dog, but a situation where the flag at the tip of the tail is temporarily in full control of the vocal apparatus of a very fine, highly pedigreed and very useful creature.

Let me remind you that the National Park Service, the National Forest Service, and the Bureau of Public Roads are in the charge of highly skilled, long service, dedicated groups of men, and within their personnel we find the most experienced road builders and the most capable landscape architects. These men of all three branches cooperate completely and proceed carefully in relation to every problem.

You may perhaps think that I am being inconsistent when I suggest that you do something about this particular problem and at the same time criticize others for attempting to dectate to these services of our Government. Let me suggest that where there is great pressure on these agencies to do something not in the public interest then there is great need for a great organization like the California State Chamber of Commerce to provide a counterirritant to the end that the true public interest be brought into full public view.

Let us look further. A recent publication of that club contained many pictures of a partially constructed park road unmistakably presented to create in the minds of the beholders an impression that great desecration is taking place. Heretofore I had occasion to suggest to you the impropriety of a group placing a great Sequoia log as a part of a picture on the front page of a pamphlet objecting to the construction of the proposed Mammoth Pass highway, when without doubt the producers of that picture knew that there was not a single Sequoia gigantea growing anywhere within many miles of the study lines of that proposed route.

Now I question the ethics behind the set of pictures above referred to because to me they appear to be deliberately misleading.

I question the ethics of publishing a picture which is presented to create the idea of excessive road width when we know that that picture was taken at a place where a view turnout plaza is also being prepared. A narrow angle lense could have been used to make the roadway appear in the picture even wider than it is on the grouhd.

I question the ethics of presenting views of piles of fractured rock, including views of the stumps of scraggily trees along partially cleared rights-of-way, all to show desecration when the construction contract definitely provides that such debris be entirely cleared away before the roadway is accepted as completed.

Who would have, in good conscience, presumption to present a view of a half finished Union Square Garage to show how Union Square Park in San Francisco would not look when the whole undertaking was completed? Do our friends think they are deceiving any thinking persons where they picture partially completed highways?

Take a look at that magnificent double page photograph of Tenaya Lake appearing in the publication which we are now discussing—read the printed caption line of that picture, "We'll do well to remember Tenaya as it used to be * * *." Horrors. Something terrible is to happen to that scenery. Now be informed that the only change which is being made here, and which would appear in a later photograph taken from the same place after all the work is done, will be the absence of the boulder slide which shows in the lower center of the published print. An ugly pile of detritus, a closeup view of which appears on another page of that publication. The removal was necessary to permit construction of a safe road on the identical alinement of the road which has been there in place since long before the establishment of that park.

The sacrifice is a pile of rock to make over a couple of miles of a dangerous one-way auto trail into a two-lane mountain road. And what did they find beneath that rock pile—a much revered, highly polished native granite, polished by the ancient glacier that had passed that way.

I could belabor you further on the subject of that set of pictures, but I will not do so. I must say, however, that Dr. Bradley's photographs presented proper views of very beautiful complete mountain roads though one of them was of a very narrow, winding wagon trail unfit for motor travel.

These Priests of the Pinnacle are unusual people. They strain on a gnat and swallow a camel. Not a single erratic must be moved in putting in a safe road, a road, not a freeway or a highway, but a simple safe road. There are thousands of those glacial erratics and millions of volcanic erratics scattered over the High Sierra. These people shudder with horror at the thought of moving one single such stone. I get the same reaction when I think of rusting spikes and rotting ropes dangling on the face of two of the most magnificent monoliths in the world. These Apostles of the Wildernesses cheered and danced in ecstasy while the climbs to the summits which children could reach by safer routes were taking place. My reactions—well with a hammer and a sufficient number of spikes an ordinary fellow can climb a tall flagpole and monkeys swing on a trapeze. Why deface these magnificent cliffs.

I shock you—well I shock myself. I merely seek to bring out that all these so-called desecrations discussed here today are primarily psychological and to these our minds can be adjusted. That is fortunate because I am not going to get the spikes and ropes removed and they, unless I am badly mistaken, are going to suffer the agony of seeing the 99 percent travel on safe roads, not freeways, not highways—just on safe roads through that part of these wonderlands that the 99 percent are to be permitted to use.

I seek to bring this controversy into the open where public opinion will solve it in the public interest. I am hoping that the pressures of the opposing forces will offset one another so that the skilled, dedicated men of the services will be permitted to do, unhampered, that which ought to be done, and so freed, I will be satisfied with whatever they do.

If these specialists should perchance go too far and make a few errors in all their plans and completions, our friends can take solace in the fact that eventually another glacial age will obliterate the puny scratching of mere man and that God's cathedral will be resculptured to His liking.

Meanwhile, let us give the present tabernacle reasonable opportunity to elevate the plateaus of human existence. I am on the side of the 99 because I believe all of us and all our thinking can be greatly improved.

After study and deliberation, I hope that the California State Chamber of Commerce will take a firm and aggressive stand on this basic problem because there are several national park roads in California which will have to be reconstructed in the next few years. The money must not be wasted building wagon roads.

Connecticut's Labor Record

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. DADDARIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement regarding the number of man-days lost in work stoppages in 1958 in Connecticut, noting that Connecticut's record is better than the national average. The statement by Connecticut's Labor Commissioner, Renato Ricciuti, is from the January issue of the Monthly Bulletin of the Connecticut Labor Department:

Preliminary estimates show that Connecticut had approximately 0.1 percent of man-days lost due to labor disputes in 1958. Once again, this will put Connecticut below the national average, which is estimated at 0.2 percent. Since the end of World War II, Connecticut's labor relations record, based on man-days lost due to work stoppages, has been below the national average in every year except one. In addition, using the same measurement, Connecticut's labor relations record has been consistently better than other industrial States.

This fine record can be attributed in large measure to the generally responsibile leadership of labor and management in our State. Another factor is the work done by the members and agents of our own State Board of Mediation and Arbitration. Quietly and effectively from day to day throughout the year, these people do the groundwork in maintaining industrial peace. They work harmoniously with the representatives of the Federal Mediation Service in Connecticut. * * * In Connecticut the Federal Mediation and Conciliation Service and the State Board of Mediation and Arbitration don't just preach cooperation—they practice it daily. The close coordination of assignments and activities between these two services makes for more effective and efficient service to the parties involved in labor disputes.

Such a labor relations record provides one of the elements necessary for a favorable climate of industrial development. Governor Ribicoff's proposal that labor and management sit down for discussions, away from the emotional pressures of their particular negotiations, is aimed primarily to enlist the assistance of labor and management in further enhancing the favorable atmosphere for industrial development in Connecticut. The enthusiasm with which industrial and trade union leaders have responded to this idea is encouraging.

Although these meetings will concentrate primarily on the broad topics of area development, the groundwork can be laid for a better understanding of other problems which confront labor and management and point up more dramatically many mutual goals. Eventually, the results of these conferences should encourage an even greater degree of stability and maturity in Connecticut labor relations.

Aircraft Nuclear Propulsion Program

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. PRICE. Mr. Speaker, the following material is submitted for the consideration of my colleagues in the House in connection with remarks which I made on the floor this afternoon.

The material, compiled by Mr. John W. Darley, Jr., an industrial manager engaged in the nuclear aircraft propulsion program, gives a comprehensive picture of the present status of the project along with the trials and tribulations it has gone through since its inception.

I feel that if each Member of the Congress would read carefully this presentation he would have a better understanding of what needs to be done to support this project which is so vital to our national security.

Under leave to do so, I herewith submit a letter from Mr. Darley to me; a letter addressed to President Eisenhower by Mr. Darley, and the text of Mr. Darley's summary of pertinent views on the importance to our national security of the aircraft nuclear propulsion program:

Hon. MELVIN PRICE,
House of Representatives,
Washington, D.C.

Subject: The aircraft nuclear propulsion program.

DEAR MR. PRICE: One month ago, on January 14, I sent the attached letter to the President concerning the national aircraft nuclear propulsion program. In this letter, I stated that I did not plan further distribution until after an appropirate period of time had elapsed and would not further distribute this information should he instruct me that such an act would be contrary to the best interests of the United States.

One month has now elapsed. No further word has been received from the White House.

Due to your expressed interest and work in the area of the ANP program, coupled with your responsibilities as a member of the Joint Committee on Atomic Energy and the House Armed Services Committee, I am here transmitting this information for your use as you see fit.

Speaking frankly, I have become convinced that if any corrective action can be taken, the impetus for same must now come from the legisaltive branch of the Government. All other avenues of approach to the decisionmaking problem appear to have been exhausted.

I join in your conviction that the ANP program badly needs a definitely targeted date for nuclear flight—with programmatic decisions and funding levels consistent with that target. Without same, there is no possible ANP program which can still meet the needs of this Nation.

Sincerely,

JOHN W. DARLEY, Jr.

(NOTE.—Additional copies of this letter to the President are currently being transmitted to Senator CLINTON P. ANDERSON, Representative CARL T. DURHAM, Representative WILLIAM E. HESS, and Representative JAMES E. VAN ZANDT.)

Hon. DWIGHT D. EISENHOWER,
The President of the United States,
The White House, Washington, D.C.

Subject: The aircraft nuclear propulsion program.

DEAR MR. PRESIDENT: I am an industrial manager engaged in the national aircraft nuclear propulsion program—having been connected with this activity for the past 7 years. I have sought neither counsel nor approval from my associates or superiors, however, for what I am about to say.

I am speaking as a conscientious voting citizen who is sorely troubled by the trend of events taking place in the world around me.

While the individual statements contained within this letter are not security-classified, their overall content is certainly sensitive. Since you occupy the most powerful office in the world and are the only common authority over all of the agencies and departments who effectively administer the national ANP program, however, there are certain things which cannot be left unsaid.

I am trying to gain your understanding that what has been written here has been decided upon after very careful personal thought and after an evaluation of the pending risks versus the responsibilities involved. Opinions, of course, must be properly evaluated; please consider my specialized experience and the personal knowledge thus acquired when you evaluate mine.

On December 10, during your scheduled press conference, and in answer to a question on the subject of aircraft nuclear propulsion from Mr. Merriam Smith, you are reported to have replied as follows: (1) "There is no usefulness that anyone could possibly see from such a plane"; (2) "there is no use of going into a field where the whole purpose would be to get a plane a few hundred feet off the ground"; (3) "there is absolutely no intelligence to back up a report that Russia is flight-testing an atomic-powered airplane."

I recognize that your responses were based upon the best information available to you. I am only concerned as to the quality of that information and, speaking frankly, it is my opinion that you have been on the receiving end of some sloppy staff work, which may be setting some sort of historical records in this direction.

Because I know full well that this letter has only a small chance of reaching you through a buffering staff wall unless some incentives are offered, I have simultaneously prepared copies of this letter for eventual distribution to the managing editors of selected magazines and newspapers. I do not plan to send these copies to these editors until after an appropriate period of time has elapsed, and will not send same if you instruct me that such an act would be contrary to the best interest of the defense of the United States.

You may be wondering why I have delayed so long after your press conference of December 10 before sending you this letter. Speaking frankly, I have been caught on the horns of the dilemma as to whether or not I would be doing the ANP program more harm than good by responding to the situation in this way. The compelling reasons behind my choice were that (1) the situation is urgent, (2) it does not show signs of straightening out through the normal channels, (3) the problems of understanding and motivation are so massive that it appears to me that they can only be overcome by a thorough airing.

The text which I have used, and which is attached to this cover letter, is quite lengthy; to assist you in its understanding, I will be following this outline:

I. Strategic considerations.
II. Soviet ANP capability.
III. The promise and status of the U.S.-ANP program.
IV. Criticisms of the U.S.-ANP program.
V. The national problems of administering the U.S.-ANP program.
VI. Recommendations for action.
VII. Concluding remarks.

It is my hope that by the time you have digested these remarks you may agree with my premise that you have not been receiving the best in information. Further, I hope that, through such an overall view of the ANP program, you will join those of us who are moved by a compelling faith and conviction that the program is vital to the continued security of the United States.

At the least, I hope that I have provided another point of view.

Sincerely,

JOHN W. DARLEY, Jr.

I. STRATEGIC CONSIDERATIONS

Let me first talk to your first point that "there is no usefulness * * * from such a plane," dealing in order with various elements of national strategy.

If I correctly understand our country's strategic concepts for survival, they are based upon:

(a) Posing a massive retaliatory threat such that a potential enemy cannot help but see that he will suffer considerably more damage than he will be able to inflict should he decide to start anything. In consideration of the amount of effort which is going into it, this seems to be our No. 1 strategy.

(b) Erecting sufficient air defense to warn of an incoming attack in sufficient time to permit the dispatching of our retailatory force, to minimize civilian casualties, and to cause an enemy some loss in his attacking force; included in this element is passive civil defense through dispersal, evacuation, shelters, etc., on which little has been done to date.

(c) Deploying sufficient mobile ground and sea forces to quench local eruptions in so-called police force action or small wars.

No preventative war—what this means

I share with you the absolute conviction that the United States must never engage in a preventative war; this then rightly means that we have effectively granted an enemy any advantage accruing to the initiative. Any retaliatory threat posed by the United States will therefore only prevent a war as long as a potential enemy can only conclude that he will not be able to stop this retaliatory force from destroying those targets which he cannot afford to lose if he is going to eventually prevail in the disagreement.

I agree with you that there will be no winning of any future war—only the prevailing of one ideology over the other. It is my opinion that a disciplined and ruthless enemy will decide that the side which prevails—all other massive destruction forgotten—will be that side which has remaining an active strategic force after all the major stratigic forces of the other side have either been spent or destroyed.

Our real war to end war, then, is the task of convincing of the other side that (a) he cannot save any portion of his active strategic force should he decide to embark on the path of armed conflict, regardless of how mobile and unpredictable in location that strategic force may become; (b) he cannot destroy the strategic striking force of the United States, due to the fact that it is mobile and dispersed beyond his reach or beyond his ability to destroy before it retaliates against his forces.

The concept of mobility—its meaning to us

I realize that the above looks like the application of a double standard to the two systems. The key to this effect is that for the

United States and the Western Allies, mobility provides an even greater advantage than it does for the Soviet Union. This is because of the fact that (1) we are already granting them the initiative; any additional advantage due to mobility is sugar coating to their main capability and mainly defensive against our retaliatory strike, (2) the world's area available for on-alert dispersal of our mobile force far exceeds that behind the Iron and/or Bamboo Curtain.

I will be dealing more with the meaning behind this concept in subsequent paragraphs.

The retaliatory threat

Our No. 1 strategy—the retaliatory threat, including current plans for the implementation of same—involves the use of (1) intercontinental missiles, (2) intermediate-range missiles—ground, air and undersea launched, (3) manned strategic chemically powered bomber aircraft.

Weaknesses of missiles

All of these missiles, since they can hit targets of known importance and location, are certainly vital weapons in the military inventory. They do, however, suffer on two counts one of which is being worked on and the other of which is beyond their reach: (a) In that all missiles have to possess sufficient protection against attack or a sufficiently quick response time to get off the ground after warning and before the enemy's weapons strike—they either have to be put on active standby underground or under the sea—or fueled by propellants which permit the necessary quick response on short notice (hopefully 15 minutes in the case of the ICBM's but shorter in the case of the IRBM's). I can see that both of these methods of improvements are being undertaken; (b) in that missiles, however, are only able to hit targets of known importance and location, they absolutely fall short of being able to hit the highest priority targets—namely those containing or contributing to the enemy's mobile strategic striking force—a force which can only be predicted in location by the most detailed intelligence information. It is my understanding that we do not have nor will we ever have this quality of intelligence coverage. Should the Russians come to possess operational quantities of air-orbiting nuclear-powered aircraft, the problem will become even worse than in our current situation—which is already difficult enough (I will deal more with this later).

Continued need for manned aircraft

Because of this need to pose a threatened strike at these mobile and unpredictable targets of opportunity, the role of the manned aircraft will continue to exist. The availability of human eyes and human minds in target areas—whether on weapons carriers or reconnaissance vehicles—is absolutely needed if these highest priority military targets are to be indentified and subsequently destroyed. That this need will continue into the future is verified by the existence of the B–70 program.

Weaknesses of chemically powered aircraft

Chemically powered aircraft, however, will suffer some definite drawbacks during future years due to the following:

(a) Limitations in airborne time—risks taken: Because of the fact that airborne time—limited by chemical fuel capacity or by the programing or logistic complexities of in-flight-refueling operations—is relatively short compared to ground turn-around maintenance time, only a fairly small proportion of a total chemically propelled bomber force can be in the air at any one time—or, for that matter, be gotten into the air within the period allowed by a 15-minute alert warning time. This means that, assuming that a potential enemy would logically concentrate on such ground-bound targets, only a fairly small proportion—namely that airborne—would survive the initial, all-out blow.

I recognize that it is hoped that geographical base dispersal will save a larger proportion of the force which cannot get off the ground prior to the attack. My only reaction here is that, for the long-term future, the cost of an enemy's missile and launching sites zeroed in on a larger number of dispersed bases will be appreciably less than the cost of these dispersed bases. For those who say that the potential enemy's ICBM's are not as accurate as required, I can only say that if this is true now, it won't be true for long.

(b) Complicated fuel logistics—risks taken: Because of the fact that modern day military strategic aircraft require extensive aerial in-flight refueling in order to reach their targets, the total operation becomes dependent upon a critically linked chain of events involving (1) the availability of aerial tanker bases—both within the continental United States and overseas—all of which are subject to the same manner of obliteration and the need for discouragingly quick response times that apply to the regular bomber force; as a matter of fact, this could be the major weak link in the chain; (2) a critically programed and extremely complicated requirement for rendezvous meetings between the surviving bomber and tanker forces at the right time and at the right place and with the right amount of fuel available.

(c) Vulnerability of chemically powered aircraft at high altitudes: Due to the technical characteristics of air-breathing jet powerplants, chemically powered strategic aircraft—even if suitably refueled near the enemy's perimeter—can only reach the required target areas by flying at high altitudes. If I interpret the recent test results on high-altitude nuclear bursts correctly, the survival of a manned aircraft at high altitudes—almost regardless of the speed at which it is traveling—will become increasingly less probably with the passage of time. If during the target-zone penetration portion of their mission chemically powered aircraft are forced to low altitudes, their range becomes so limited as to reach only a small proportion of the required target coverage.

This then is a technical fact. There is no known way by which any current or proposed chemically propelled strategic aircraft can reach anything more than a very small proportion of required target areas if it is required to approach same at low altitudes. This same limitation does not apply to nuclearly powered aircraft.

The promise of nuclear-powered aircraft

Here, then, due to an imposing combination of the above, is one primary regime of usefulness for the nuclearly powered aircraft, namely, in the area of retaliatory threat, strategic reconnaissance, and bombardment.

1. Nuclear aircraft—extended airborne alert: Because of their inherently large fuel capacity, nuclear aircraft will have much extended airborne time, i.e., the amount of time they spend in the air will grow to equal or perhaps even exceed the amount of time they spend in maintenance turnaround on the ground. This means that a much, much higher percentage of the total number of aircraft will be airborne at all times—airborne and armed at variable and unpredictable locations throughout the world from which they pose a maximum retaliatory threat without range limitations.

In effect, this airborne alert capability raises the percentage of the total force which is saved from the initial enemy blow in order for it to be able to go on and do its job. A potential enemy, recognizing this capability, is thus faced with the realization that he will not be able to eliminate that which will eventually destroy his mobile strategic force. I would call this an improved retaliatory threat.

2. Nuclear aircraft—independence from complicated logistics and foreign bases: Already airborne, the nuclear aircraft can do its job independent of any need for aerial in-flight refueling or foreign-based aerial tanker fleets. It is my opinion that our relations with our allies are or will be increasingly strained by the existence of these tanker fleets based overseas (and which constitute important military targets) in much of the same way that there was definite foreign reaction against the basing of IRBM's in England or Italy. I am not proposing isolationism—only trying to identify a trend in the climate of world opinion.

3. Nuclear aircraft—versatility in application: Once airborne, that portion of the nuclear aircraft force on retaliatory patrol duty is independent of any other logistic need—and only requires a signal that the United States has been attacked and that it should proceed on its assigned retaliation mission. Due to the inherently large weapons carrying capacity of nuclear aircraft, its armament can include a number of air-launched air-to-ground missiles and regular laydown weapons which far exceed the weapons carrying capability of their chemically powered counterparts. This means that fewer aircraft can do the job.

Due to this enlarged load-carrying capability, coupled with high endurance, the nuclear strategic aircraft possesses a tremendously improved versatility in usage which embraces (a) airborne retaliatory patrol, safe from initial attack, (b) missile launching from outside the enemy's defense periphery; (c) reconnaissance and warning near the enemy's periphery; (d) omnidirectional low-altitude penetration under the enemy's radar warning net for reconnaissance and location of the enemy's mobile strategic forces; (e) low-altitude penetration, followed by either missile launching and/or conventional bomb laydown or by a combination of both.

The significance of the low-altitude approach is treated in the following paragraph.

4. Nuclear-aircraft—potency of alternate low-altitude attack: Contrary to the range-limitation of chemically powered aircraft at low altitudes (where survival will become increasingly more probable than penetration at high altitudes), a nuclear-aircraft could actually come down from its cruise altitude and penetrate the enemy's early-warning perimeter from an infinite choice of directions and at extremely low altitudes—holding this low altitude on its way to its assigned target area. If you want to get a reading as to the enormous potential potency of this kind of attack, I would suggest that an answer can be acquired by postulating that an enemy had such a method of delivery. The answer may surprise you.

For those who would say that it is easy for a potential enemy to protect itself against such a manned-retaliatory force, I would suggest that for a country with the land mass and extended perimeter of Russia, they are welcome to try. The Soviet Union could very easily bankrupt itself in just erecting a low-altitude warning net—not to mention the number of active defensive missiles and aircraft which would have to be employed.

5. Nuclear-aircraft—fewer aircraft, fewer bases: Let us talk next as to the number of bases from which nuclear aircraft would need to be deployed. Because of the fact that a higher percentage are airborne at all times, because each aircraft has appreciably more weapons capacity, and because lower comparative attrition can be increasingly expected due to the omni-directional low-altitude attack, a much fewer number of manned strategic aircraft would be needed. This

translates into a fewer number of costly bases.

My best estimate is that from two to three nuclear-aircraft bases—appropriately located on Atlantic and Pacific islands to take an enemy's major attack away from the Continental United States—would do the peacetime job. It is to be assumed that all of these bases would be lost in an initial attack—but an attractive percentage of their based force would have regularly been airborne and would constitute a manned strategic force to fight the war.

The next question here is that of rearming and restriking with this surviving force after their return from their first strike mission. There are two services which will be needed, namely the probable replacement of the nuclear powerplants (in that the remote-handling base facilities for individual detailed powerplant maintenance will no longer be available) and the rearming of the aircraft with new weapons. Both of these services can be provided from mobile ground equipment and at locations which are variable and unpredictable. Any number of currently available landing and take-off areas would do the job. This rearming and restriking problem is essentially no different from that with chemically powered aircraft.

6. Nuclear aircraft—lower total costs than the massive chemical system: As a final note on this matter of a nuclear-aircraft retaliatory force, let us take up the matter of comparative costs. The best information which I have, and which is based upon appropriately detailed study, is that the nuclear-powered retaliatory force will cost appreciably less than its chemically powered counterpart system. I recognize that this statement is hard to believe in these days of accelerating weapons obsolescence; the major factor producing this situation is the fact that our current manned retaliation system is enormously expensive. The cost advantage accruing to the nuclear-aircraft force is predominantly due to (a) a larger percentage of aircraft airborne at all times; therefore, fewer losses on the ground and fewer aircraft required in total; (b) a larger weapons-carrying capacity per aircraft; therefore fewer aircraft required; (c) no tanker aircraft required; (d) no bases required, foreign or domestic, for the basing of the tanker aircraft; (e) no complicated chemical fuel logistics and staging required at a wide number of bases, foreign or domestic; (f) considerably fewer bases from which the manned retaliatory force would need to operate.

And, interesting enough, none of the above cost elements have even stopped to consider (a) that chemically powered aircraft can't even do the job if they are forced, as predicted, to attack at low altitudes, where their range is drastically limited; (b) that omnidirectional nuclear aircraft will suffer fewer losses using low altitude penetration than will their chemically powered brothers at high altitudes—again acting to cut down on the total number of aircraft required.

Practically all of the foregoing reasoning has concentrated in the area of continuing to pose a real threat of retaliation as a means of making the instrument of war appear unprofitable for a potential enemy. While this area alone testifies as to the potential usefulness of nuclear aircraft, the story does not end here.

Static defenses encourage circumvention

At numerous tmies during the history of the world countries have based their longevity upon static, immobile means of defense. The Chinese wall, the Maginot line, and now the DEW line, have all acted to create the popular impression of impregnability. While the DEW line, supplemented by BMEWS equipment for ballistic-missile warning, is heavily useful for protecting the retaliation force, its coverage is still based upon the threat coming from a predictable direction and at a predictable altitude. If history teaches us anything, it is that a potential enemy is thereby provided with an incentive to circumvent the erected defense or warning line.

To me, the DEW or BMEWS line means two things: (1) That a potential enemy will strive to develop a weapon whose manner of attack will neutralize the usefulness of the erected defense; (2) that there is a supplemental need for mobile warning facilities which can react to various technological and political threats by virtue of their mobility.

Soviets advanced in neutralizing fixed defenses

Interestingly enough, the Russians already appear advanced in the development of weapons designed to neutralize the warning line. Their already recognized submarine force—improved in armament through the use of submarine-launched missiles—is in the process of being further supplemented by nuclear aircraft. Both of these threats circumvent our erected warning line.

Nuclear aircraft—Use as a defensive vehicle

If we are to be responsive to these threats, we should not respond by more massive, immobile, narrow-range equipments, but rather by systems whose versatility and mobility are matched to the changing and variable challenge. Air-orbiting, nuclear-powered, radar-warning aircraft constitute one family of such systems.

Ending commentary re usefulness of nuclear aircraft

I have now responded to two of the major comments which you are reported to have made relative to the ANP program—namely, that "there is no usefulness that anyone could possibly see from such a plane" and that "there is no use of going into a field where the whole purpose could be to get a plane a few hundred feet off the ground."

As indicated by the foregoing analysis, there is plenty of "usefulness." The "few hundred feet" comment, as provided to you by your advisers, is a dangerously simple statement which completely misses the point of low-altitude-penetration attack.

I realize that you may think I am proposing that the nuclear aircraft is an "ultimate weapon." Believe me, I am not. I do believe, however, that without them we stand every chance of no longer having a stalemate in the strategic chess game.

II. SOVIET A.N.P. CAPABILITY

The third comment which you are reported to have made went to the effect that "there is absolutely no intelligence to back up a report that Ausisa is flight testing an atomic-powered airplane." The question which prompted your reply was undoubtedly triggered by the article in the December 1 issue of Aviation Week which reported on the estimated status of the Soviet A.N.P. program.

I would like to say, however, that the staff man who provided your text, was a hair-splitter of the first order:

1. Intelligence is available: In the first place, I am positive that there is intelligence on the relative state of the Soviet A.N.P. program. Considering the strategic incentives which we have given them in the form of our DEW line plus their natural interest in showing evidence of technological supremacy, it should not be surprising if they were ahead of us. Maj. Gen. D. J. Keirn, in charge of the U.S. program, made a public statement to this effect a few weeks ago, adding that it would not surprise him if the Soviets flew on nuclear power within a year.

2. Characteristics of Soviet aircraft are significant: To a second point, I understand that there is significant evidence that a Soviet aircraft of the size and configuration described in the Aviation Week article has been sighted.

Using the article's overall design dimensions—and unless the Soviets have suddenly retrogressed in their ability to competently design chemically-powered aircraft—there is little doubt but that this particular airframe is intended for use with nuclear powerplants. As a purely chemical airplane—even with advanced chemical turbojets—it is not a very good aircraft or weapons system.

As a side note, this is the first very large Soviet aircraft with pylon-mounted powerplants—it being the usual Russian design approach in such cases to bury their powerplants within the wing structure. This difference is particularly significant, however, because this is the direction you would take for easier later replacement of chemical with nuclear machinery and subsequent easier maintainability of the nuclear powerplants.

3. Existence of Soviet aircraft verified by their announcement: Subsequent to your December 10 press conference, on January 1, Moscow radio, in a formal multilingual announcement, made two promises for 1959. These were that the Soviets would shoot a rocket to the moon and that they were going to fly a nuclear-powered civil aircraft during the next year.

I think that you will find that your intelligence agencies place a high credibility on this particular type of formal announcement, even without the fact that the Soviets—within 2 days—had a 50-percent scoring record.

Many public comments re Soviet program are not to the point

I agree with your advisers, however, that the Aviation Week article presented no concrete evidence that this Soviet aircraft currently has nuclear powerplants installed. To the contrary, it is difficult to believe that any nuclear engine is currently installed within the comparatively small engine nacelles indicated on their drawings.

Whether or not this aircraft has actually flown on nuclear power, as questioned by your advisers and provided in their text for your use, is not really to the point.

It does not take any classified information to realize that if the United States started today on its prototype-aircraft program for A.N.P. purposes, it would be approximately 3 years before any substantial chemically powered flight-test program on the aircraft would take place. As far as the relative airframe programs are concerned, therefore, we now have a pretty good fix on relative progress.

Sightings of this Soviet aircraft, of course, do not necessarily testify as to the state of progress in the Soviet nuclear powerplant program. Some criticism of the news article takes this direction, with the additional inference that the Soviet nuclear powerplant program is probably only to follow with an installed powerplant at a much later date. Even if this opinion is partially true, as it would be for any such program where the approach must be to take logical sequenced steps, it is a defensive comment and underestimates Russian technological competence in those areas where they really apply their effort. Certainly it does so if you believe, as I do, their January 1 announcement.

Ending commentary re Soviet ANP capability

Completely aside from all of the above, however, I join you in the belief that just because some other country is doing something is no reason for the United States to undertake a similar program in the same direction. That which the United States needs to accomplish should be tailored to its particular situation and to the particular objectives which it must reach in order to survive and prosper.

While I have already adequately dealt with some of the unique usefulness of nuclear-powered aircraft within part I, there are other questions and subjects which need to be discussed.

It is for this reason that I would be irresponsible if I stopped here. Going by the theory that better understanding cannot but help in the evaluation and decision-making process, I would now like to turn to the other issues which are raised by this general subject.

III. THE PROMISE AND STATUS OF THE U.S.-ANP PROGRAM

In the foregoing pages, I have already laid a foundation with respect to the promise of the U.S.-ANP program. We have dealt with (a) the property of versatility and mobility, (b) the airborne alert-force concept, (c) the manned nuclear-aircraft retaliatory mission, (d) low-altitude penetration for reconnaissance and bombardment, (e) the freedom from chemical-tanker logistics, (f) the freedom from foreign-basing restraints, (g) the reduction in the number of bases required, (h) the inherently large load-carrying capacity of nuclear aircraft, (i) the cost implications due to increased simplicity in the total manned retaliatory system, (j) the air-defense potential of nuclear aircraft warning systems.

Promise similar to that of nuclear submarine, but more revolutionary

In many respects, this identified promise for the nuclear aircraft sounds much like that popularly assigned to the nuclear-powered submarine. A pure extrapolation here, however, would undershoot the mark.

The nuclear submarine provides quite a revolution over its diesel-electric-snorkel predecessors but, in terms of the relative gain in total systems simplicity, the revolution in the air due to the nuclear aircraft is of a much higher order of magnitude. By total system I mean the vehicle itself, its weapons, range, lethalness, vulnerability, and the total complex of logistics and communications which permits it to do its job.

Compared to the submarine, nuclear aircraft have a more massive effect on these logistic parts of the overall system which, in the aircrafts' case, constitute a very major part of the whole.

The promise, moreover, does not stop here.

Nuclear aircraft program additionally important

The U.S.-ANP program for manned nuclear aircraft is important beyond the high value of its initial applications; this additional importance is due to the following:

1. Much technology transferable into space vehicles: The basic technologies of the manned nuclear aircraft program are transferable and/or expandable into the nuclear missile, heat transfer, nuclear rocket, and nuclear powered space vehicle areas.

2. Reason to believe aircraft must precede space vehicle: There is serious reason to believe that the United States will never proceed on sure footing into the more exotic nuclear space vehicle regimes until it has learned how to live and operate with a manned nuclear aircraft program. The king sized step otherwise required appears indigestible from a practical mobilization and technological point of view.

3. Technology in forefront of nuclear reactor field: By the very nature of its effort in the area of comparatively lightweight, high-performance nuclear machinery, the ANP powerplant program is automatically working in the forefront of nuclear reactor technology, with resulting long-range ramifications in the atomic-electric field.

Thirteen years now invested

As you know, 13 years have now been invested in the aircraft nuclear propulsion program. With a modest beginning in 1946, feasibility studies into 1951 resulted in the conclusion that the application was feasible and deserving of development effort.

It is interesting to note that studies made during this feasibility period predicted the amount of time and money which would be required to do the job.

The predicted time has now been exceeded; less than half of the predicted amount of money has thus far been spent. In periods of national emergency, we have rightfully excused the trading of more money for less time; in consideration of the threat now around us, I wonder if going so far in the other direction (trading more time for a lesser expenditure per year) makes real sense.

With engineering development beginning in 1951, the program was directed toward a flying-test-bed application in which the initially flyable powerplant would be tested within a worked-over and modified B–36 aircraft—the aircraft retaining its normal chemical powerplants in order to carry the nuclear powerplant aloft for testing purposes. This is normal practice with new aircraft powerplants and is practiced with chemical turbojets today.

Near cancellation in 1953

But what happened? In 1953, the program was cut back (and nearly canceled in total) because the B–36 wouldn't fly high enough or fast enough to make it a military weapon—something which this B–36 was never intended to be in the first place. You may remember the word "shitepoke" which was a term of endearment provided by the Secretary of Defense at that time.

Could have flown by now

It is my firm opinion that had this cutback step not been taken in 1953, we would be flying a nuclear-powered aircraft today.

In consideration of what the Soviets show every sign of doing during this next year, we may live to massively regret this 1953 decision.

Still need an aircraft in the program

At the present time, however, we have yet to go through this flying-test-bed stage—or its equivalent using an experimental aircraft. It is absolutely vital that this step be taken at the earliest possible moment.

The way support seems to be leaning in 1959, however, this event is still some years away.

Don't get me wrong.

The decision in 1953 of heading toward a better airframe for initial testing of the powerplant was not a bad idea.

It is just that (1) at a point practically 6 years later, we have yet to even commit for the airframe part of the program, (2) the announced reason for making this 1953 decision did not reflect any sophisticated understanding of aircraft powerplant development philosophy—or normal research and development practices.

Eight years of engineering development

Actual powerplant development has now been proceeding for practically 8 years, with full-scale reactor and reactor-turbojet-systems tests in process since 1956. Considerable airframe studies have taken place intermittently and at a variable pace during the same period.

During 1954–55, the Air Force—undoubtedly remembering its 1953 experience—began to clothe the ANP development effort in the mantle of a weapons system. It must be remembered that it was the fashion of the day (particularly since 1953) that if more money was needed to get the job done, the only way it would be forthcoming was to prove that the project was going to result in something which flew higher and faster or carried more or what have you.

Uniqueness of initial nuclear-aircraft capabilities not recognized

This originally visualized weapons system (called 125–A) was to do everything that regular chemically powered aircraft could do—and then some—rather than harnessing the particular and special capabilities of nuclear propulsion.

While this 125–A affiliation was undoubtedly on shaky ground from the start—due to nuclear propulsion trying to compete initially with the best of chemical propulsion in the chemical regime's own backyard, it did accomplish one very beneficial result. Some additional money was made available, at least enough to really get a leg up on the powerplant development work.

Since then, some real powerplant development progress has been made.

Development ready to proceed at a faster pace

The powerplant development work is now at a stage where it is ready to proceed at a faster pace. It is true that some solutions in detail (as opposed to feasibility) are required, but these are the reasons why the development is necessary in the first place.

In today's environment, I get the impression that the only way to really get development support is to prove that everything is already comfortably in position—with all challenges answered in minute detail. In such a position, there will be development money made available—when, if such was really the case, the weapon should be in quantity manufacture.

Today's situation on the nuclear-aircraft program is similar to that which prevailed on the missile programs 3 to 5 years ago. At that time, development work was accelerated on propulsion and guidance aspects of the work; today, we are just beginning to see signs that we will have operational missile systems over the next 2 to 4 years.

The same situation can prevail for nuclear aircraft.

Capability in depth available

When I say we are ready to proceed, I am not referring to an informal group of scientists working in the laboratory. I am talking about a balanced and sizable organization of scientists, design engineers, manufacturing engineers, and test engineers—all backed up by a complex of pilot-line manufacturing facilities, raw material sources, subcontractor installations, and hardware vendors.

Promise of the future is great

Of considerable significance to the nuclear-aircraft program is the fact that the initial powerplant and the initial application can now be clearly seen to be the first of a family of improving performers. Enough is known about the designs farther back in the conceptual and preliminary design stages to predict with certainty that the initial hardware approach will improve in performance even beyond that which is now called the requirement.

As a matter of fact, this promise is one of the problems.

The vacillator and the fence sitter want to wait for the 1985 model, although the 1959 model will still manage to outdistance anything on the road.

It is my conviction, however—and I have lots of knowledgeable company—that failure to buy the 1959 model is not going to result in any improvement in what the 1985 model will do in its time.

As a matter of fact, if we delay in facing up to the full-scale development of what can be done today, the 1985 capability won't come out until the year 2000, if ever.

"Camal" mission a unique application

One of the main reasons behind the fact that program acceleration now makes such sense is the unique concept of the "Camal" mission, as described in summary fashion in part I. This approach not only takes perfect advantage of the unique properties accruing to nuclear propulsion; it also turns out to offer a uniquely different and extremely valuable weapon for the defense situation which faces us.

Further, this approach will not only do a real job of using the initially developable airframe and powerplant, but will also improve in performance and capability as the second cousins come out of the developmental brooder.

Let's face it. Nuclear-powered aircraft are inevitable. The sooner we get about really facing up to the job in total, including an airframe, the sooner they are going to be a valuable weapon in our arsenal.

IV. CRITICISMS OF THE U.S.-ANP PROGRAM

With all of the promise and all of the progress which I have talked about thus far, you may well ask: "Where has all the trouble been coming from?"

Let's take a look at the collection of critical comments which have been made against the nuclear aircraft program, examine them in some detail, and see if some pertinent conclusions can be reached.

Criticisms of the U.S.-ANP program can generally be classified into three broad areas; these are: (a) applications (the use to be gained); (b) technology (the state of the development); (c) administration (program decision problems).

Let us deal with each of these areas in sequence.

Applications—oriented criticisms

Critical comments in the area of applications, or the use to which aircraft nuclear propulsion would be put, can be listed as follows:

"The aircraft is too big or too slow."

Here we find the man who wants to go higher and faster all of the time, regardless of where he should be. I can understand the necessity for going higher and faster with part of our retaliatory force—just to force the Soviets to defend against such an attack—but less and less of our total force will be able to penetrate in this way.

This critical comment therefore fails to recognize that the survival of aircraft at high altitudes and even very high supersonic speeds will become increasingly less probable with the passage of time. Attrition in this regime will be markedly higher than that at extremely low altitudes and respectable subsonic speeds. Chemical aircraft can't do the latter. (Please see part I.)

On the comment of size, initial nuclear aircraft will be no bigger, and possibly smaller, than today's larger chemical aircraft. They may weigh more; that is, be "denser" aircraft, but I can't see where the point is. As a matter of fact, nuclear power may very well cause a complete reevaluation as to what constitutes the optimum size of an airplane.

"The aircraft would be easy to shoot down."

This is probably the same gentleman who wants to go high and fast. He doesn't understand the overwhelming defensive requirements superimposed by an omnidirectional, low-altitude penetration attack. He doesn't realize the magnitude of investment required for a low-altitude, radar-warning net and the associated defensive missiles and air-defense aircraft (which are range-limited at these low altitudes).

In short, he hasn't recognized that for a country with the land mass and perimeter of the Soviet Union, he now has the weapon of economics (and possible bankruptcy) on his side.

"We don't really need a nuclear aircraft."

This gentleman either doesn't understand anything mentioned in part I, or else he is a saturation war man. This latter breed says if anything starts we will just plaster everything and everywhere, using an immense number of missiles carrying atomic and hydrogen warheads. This way, he says, we will be sure and hit everything worth hitting.

This reasoning is fallacious on two counts. First, the rest of the world would be in danger of becoming uninhabitable. Second, I don't believe the United States will ever choose to adopt this inhuman and reckless defense posture.

It has been said: "As soon as men decide that all means are permitted to fight an evil, then their good becomes indistinguishable from the evil that they set out to destroy."

"The application being worked on is the wrong one" (regardless of which one is being worked on).

Here is the man who says that we should make up our mind over and over again. Or perhaps he is stating that he doesn't want to do anything until everybody decides to do it his way. I really don't know.

I only know that the application chosen is a particularly valuable one and that after satisfying this first step there will undoubtedly be others.

"I don't understand it."

We have found an honest man; he is one of the gentlemen for whom this letter is written.

Technically oriented criticisms

Critical comments in the area of technology, or the state of the development, are fairly represented by the following:

"An airborne reactor is too dangerous."

What this gentleman is saying is that aircraft are dangerous. As far as the aircraft's crew is concerned, a reactor with its radioactive parts is less dangerous than several tons of inflammable aviation fuel.

It is true, however, that experimental and perhaps operational nuclear aircraft will have to fly in specified corridors when over land to eliminate the danger of a possible crash in populated areas. This will undoubtedly be a function of the demonstrated reliability of the total aircraft system as well as the appropriate selection of locations for the operational bases. Significant study has already been devoted to this problem with encouraging findings.

Please understand that what is being talked about here is not an atomic explosion, but the potential spillage of radioactivity should an aircraft crash.

A fair comment in this area would be: There are some risks; they are the types of risks which can be overcome by operational procedures and system reliability; they are a very long way from being sufficiently large enough to give up what the aircraft has to offer as a military weapon.

"The radiation is too high; the crew can't last."

Without going into a mass of technical data, much of which is classified, let me just state that current design of the system is based upon each operational crew flying for a very appreciable number of days each year, for a very appreciable number of years, and still at the end of the period have received no more radiation exposure than they would have had they spent those years working in an AEC industrial laboratory. And please believe me, this is just about as radiation-safe as you can get—anyplace, anywhere.

"The reactor temperatures aren't high enough."

This is the comment of the man who wants to wait for the 1985 model—as mentioned in part III. The temperatures are high enough to do what needs to be done first; they promise to be higher by the time they need to be higher. If we wait until then before we accomplish development-testing needed now, the whole program will suffer and be delayed.

As a side comment, there is little if any doubt but that as the development progresses, the designed temperature capability of the reactor will come to put extreme engineering pressure on the designers of the remaining parts of the powerplant. Believe me, this is plenty high enough.

"It isn't being done the way I would do it."

No comment appears necessary.

"I don't understand it."

The people who have already built and test-operated reactor-turbojet systems do understand it, and they'll talk to anyone who has a security clearance and a desire to listen. As a matter of fact, they won't let you get away.

Administratively oriented criticisms

Critical comments in the area of administration, or making program decisions, can be summarized as follows:

"Aren't ready; wait until next year when things will be better."

Here is the administrator, either technically or politically motivated, who either wants to wait for the 1985 model or who is too tired to fight for what he believes is right. Perhaps he just doesn't want to risk his position by being a nonconformist in a bureaucratic world. Whatever he is, he is not doing a responsible, risk-taking, managerial job.

"It's too expensive."

Too expensive? Relative to what?

Individual nuclear aircraft will be more expensive than their individual chemical aircraft brothers, just as nuclear submarines are more expensive than conventional submarines. But the total cost of doing the overall larger and necessary job will be less through the nuclear application.

This is the gentleman who either doesn't understand the cost situation, or who equates a currently positive bank balance with lower overall, long-run costs. I will have more to say about this later.

"The other government agency hasn't made up its mind."

This is perhaps better described as the Alphonse-Gaston phenomena. It is the frame of mind which says that the only good decision is the unanimous decision. I firmly believe that many unanimous decisions, appropriately watered down and denatured to achieve unanimity, are the worst kinds of decisions. True, they are better than none at all, but unanimous decisions or "no decisions" appear to me to be the only kinds of decisions the ANP program has had.

"Government leadership on the program is too weak."

Here is a crackerjack. This is hard to believe but some Government representatives have actually withheld enthusiasm for the ANP program because they felt that the Government leadership on the program wasn't strong enough. I can only say: either discard the criticism or fix the situation; don't use it as a reason for continued vacillation.

Criticisms raise major questions of program administration

All of these critical comments raise major questions.

It is evident that little understanding exists, that there are overlaps in responsibility and authority, that people have decided that it is much more politically comfortable to be against something or to be silent than it is to have faith and conviction and to fight for what they believe.

Let's take a look at some of these national problems of administering the U.S.-ANP program.

V. THE NATIONAL PROBLEMS OF ADMINISTERING THE U.S.-ANP PROGRAM

Many administrative problems of the U.S.-ANP program tend to be peculiar to it, and to it alone. These are disturbing.

Many additional problems of the U.S.-ANP program are shared with many other national defense programs. In that these have an even larger effect, they are even more disturbing.

We are trying to compete technologically with inadequate attention to the creaking administrative system for doing the competitive technological job. Our administrative machinery must be as up-to-date as the technology which it energizes.

Let's take a look at some of this machinery.

Problems peculiar to the ANP program

Those major administrative problems which tend to be peculiar to the ANP program can be described as follows:

Multiple Offices, Agencies, and Departments

I would conservatively estimate that there are well over 60 separate and effectively independent offices, agencies, and departments in the U.S. Government which have a measurable influence over the rate of progress of the ANP program. While there is currently existing an ANP office, its relative authority falls far short of that necessary to accomplish the job.

For example, in addition to the ANP office, there are:

1. The AEC (including the Division of Reactor Development, multiple staff groups, various committees, etc.).
2. The USAF (including the Air Research and Development Comamnd, the Air Materiel Command, the Strategic Air Command, at least 15 different staff groups, various committees, study groups, etc.).
3. The USN (including the Bureau of Aeronautics, the Office of Naval Research, staff groups, committees, etc.).
4. The DOD (including the Deputy Secretary and his office, essentially all of the Assistant Secretaries and their offices, various staff groups, committees, study groups, etc.).
5. The NASA (NACA)—(I haven't figured this one out yet).
6. The Bureau of the Budget.
7. The Central Intelligence Agency.

Conflicts From the Contributing Government Departments

In the case of the Air Force, the issue is mostly a question of decisionmaking and delegating authorities to do the job. In many major respects, the decision mechanisms (even for many minor matters) only reside at the very top of the USAF organization. This means that even if major policy decisions are made, many of the individual implementing decisions either have to go bubbling back to the top or be laboriously handled through satellite staff or administrative offices.

The contributions of the Atomic Energy Commission have been very real and valuable. Although the AEC also suffers occasionally from bureaucratic strangulation, you can usually count on them to make a real college try. The AEC's responsibility, however, has been greatly complicated by the problems which the Air Force has had in making up its mind in the face of severe budgetary pressures.

The Navy definitely wants a nuclear aircraft program. But unless they can have a nuclear aircraft as soon or sooner than the Air Force, I am convinced that they will do everything in their power to destroy the Air Force program.

No Strong Governmental Program Leadership

The issues of multiple offices, agencies, and departments and conflicts from contributing departments would be less severe were the ANP program vigorously led by a program manager with appropriately delegated responsibilities and authorities. This has not been the case.

With all due respect to Maj. Gen. D. J. Keirn, he has not received necessary support and authority to do the job (regardless of various surface changes made).

Even if he had received such delegations, however, he is too much of a gentleman to knock heads together when the going gets tough.

With so many different people going in so many different directions, somebody has to be able to say follow me and keep in line.

Problems shared with other defense programs

There are other administrative problems which the nuclear-aircraft program shares with other defense programs. Since some of these are fairly well understood, I will only comment on those which appear to me to need some more understanding.

Remote Decision-Makers Have Meant the Usual (Easy Way Out) Use of Review Committees

The problem here is that most, if not all, review committees are also remote. How a group of men can spend 2 to 4 hours—at intervals of 18 to 24 months—talking with the people who are doing the job—and then say they have reviewed the program is beyond my understanding.

Depending upon their length of time in their positions, most committee members are previously committeed to the support of other programs. Since these members are well aware of the pressures of funding, they are not going to support anything which looks as though it will steal support from something they feel they have already staked their reputations on.

Many committee members are simultaneously in other positions, either in Government or industry, where they can advance competing or delaying proposals of their own. Don't misunderstand; most competition is a good thing. It is just that here is an avenue for the guy who says, "Why don't you do it my way?" He can really delay decisions; after all, he is a member of the committee who will review the new idea he has just proposed.

There are those who say that the use of review committees is a fundamental part of the process of democratic government. This is hard to defend; we had democratic government long before we had review committees. The use of such committees is, in my opinion, a fundamental symptom of faulty organization. If policymakers are so enmeshed that they can't get closer to their decisionmaking job, then their positions are too big and should be split into smaller responsibilities. Adding extra layers of organization doesn't help either, and there are plenty of them.

High Security Classifications and Multiple Security Systems

It should be no surprise that the extent and height of security classification would come under criticism. Enough has been said about this elsewhere.

What is even more difficult to understand is why we continue to need both a military-security system and an atomic-energy security system. They duplicate one another in the military reactor field and only manage to get in one another's way to the detriment of everything else.

Excessive Checks and Balances

Many laws passed by Congress and many other administrative laws created and installed by Government agencies are based upon the premise that it would be horrendous for anybody to make a mistake. Mistakes must be prevented.

The result is that we now have erected an enormous, overlapping, and detailed system which goes significantly beyond the original intent of checks and balances and effectively achieves partial strangulation. Harmful program delays are inevitable.

The Tremendously Large Number of People Who Can Say "No" and the Effective Absence of Anyone Who Can Say "Yes"

I believe that I have adequately commented on this subject on previous pages. It is a shorthand description common to many of our major administrative problems: Extreme competition among the military services; absence of vision re something different, the solutions to problems and the predictable future; complacency re the Soviet threat; the concept of business as usual.

VI. RECOMMENDATIONS FOR ACTION

In consideration of what I have already said, my recommendations should come as no surprise.

The United States desperately needs and must regain the initiative in all fields. In the military area, initiative should be equated to the concept of mobility and mobile forces, as opposed to relying almost solely on static concepts.

The United States should adopt the nuclear aircraft as one prime contributor to the operating concept of mobility; the implementation of this decision requires at this time: (1) The strengthening of Government program leadership in the nuclear-aircraft field; (2) growth in support for the powerplant program; (3) initiation of the prototype airframe program.

VII. CONCLUDING REMARKS

In closing, I want to quote some extremely pertinent remarks by others on the general question of the defense posture of the United States.

Early in 1958, the Rockefeller report (from panel II) on "International Security—The Military Aspect," had this to say:

1. "The basic requirement * * * is a retaliatory force so well protected and numerous that it can overcome any defense."
2. "The hard core of this striking force, whether based at home or overseas, must be continuously alert, fully armed, and as secure as we can make it against destruction or neutralization by surprise attack."
3. "It is therefore imperative that * * * we develop units which can intervene rapidly and which are able to make their power felt with discrimination and versatility."
4. "Accelerated research and development support should be provided for all key programs including missiles and advanced reconnaissance systems."
5. "The panel is convinced * * * that * * * increases in defense expenditures are essential and fully justified. * * * We can afford to survive."
6. "When the security of the United States and of the free world is at stake, cost cannot be the basic consideration. The cold war cannot be won and a hot war cannot be avoided without a major effort. This is clearly not the time for complacency. * * * What is required throughout the country is an attitude of sustained and informed determination."

Late in 1958, the nonpartisan, nonpolitical National Planning Association issued a significant warning:

"The dismal fact is that unless the United States takes many measures not contemplated in its present military program, the moment is approaching when (the assumption that United States retaliatory power is an effective deterrent to Soviet military action) will have losts its validity. * * * If steps are not promptly taken vastly to strengthen American retaliatory capability, the Soviet Union in the not distant future will be in a position, by the use of ICBM's and IRBM's armed with thermonuclear warheads, to inflict so strong a blow on SAC bases in the United States and Europe that retaliation by the United States would be held within limits acceptable to the Soviet Union."

Any feeling of complacency in this defense area must be based upon a judgment that (1) communism is self-destructive; (2) an internal collapse of the Soviet system is inevitable; (3) only reasonable retaliatory strength is required.

I cannot identify any compelling evidence which supports this judgment.

I am sure, however, that the overwhelming majority of Americans are behind you in the mounting battle to balance the national budget. I believe that your leadership in the fight to eliminate deficit financing makes a real contribution to the noninflationary economic growth required over the next decade.

The problem then is one of making choices.

The Rockefeller report (from panel IV) on "The Challenge to America: Its Economic

and Social Aspects" emphasized this problem of choice—concluding that the United States could afford all defense essential for survival if it decided to do so.

In my opinion, the real danger lies in an underestimation of the American people. They are willing to pay for more national security, even if this means reduced Government services in other less immediate areas.

The proposed Federal budget for fiscal year 1960 has already taken at least part of this willingness into account.

But does it go far enough?

I cannot help but conclude that it does not. I believe that an overwhelming majority of American citizens would prefer to be absolutely sure that the amount of national defense available is adequate for security, rather than risk even a momentary period of potential collapse in retaliatory deterrent.

The nuclear-aircraft program can help to prevent this potential collapse.

Respectfully,

JOHN W. DARLEY, Jr.

CINCINNATI, OHIO, *January 14, 1959.*

A Program of Action for the 86th Congress

EXTENSION OF REMARKS

OF

HON. THOMAS L. ASHLEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 18, 1959

Mr. ASHLEY. Mr. Speaker, several weeks before this 86th Congress convened on January 7, I received a letter from the social relations group of the First Unitarian Church of Toledo, a group of high-minded, forward-looking men and women who take their responsibilities as American citizens very seriously, as indeed they should.

The letter told how shortly after the elections in November this earnest group had carefully reviewed the national scene and compiled a comprehensive legislative program of congressional action to effectively meet the present needs of America.

Their program objectives fall into three main groupings: The first envisages some changes in congressional procedures to permit affirmative majority action; the second relates to recommended congressional action to improve the national economy and the general welfare, while the third aims at ameliorating American foreign relations.

With respect to the work ahead for the 86th Congress, their program impressed me as one of the best of its kind that I had ever seen, perhaps because it reflects a good many ideas and objectives which I share and which I know many of my colleagues also share.

I include the letter here and respectfully commend it to your thoughtful attention:

THE SOCIAL RELATIONS GROUP,
THE FIRST UNITARIAN CHURCH,
Toledo, Ohio, November 25, 1958.

Representative THOMAS LUDLOW ASHLEY,
House of Representatives,
Washington, D.C.

DEAR MR. ASHLEY: It seems appropriate that our group should frame and present to the administration and to the elected Representatives and Senators who will be present at the opening of the congressional term the first week in January, 1959, an expression of our thinking in the areas of work ahead for the Members of the 86th Congress.

At his post-election press conference President Eisenhower asked, commendably, what the public wanted. It is our firm conviction that those who feel their obligations as voters, and envisage to the best of their ability from study and research what needs to be done, should make their views known to their leadership.

We have worked out this statement of the needs of America as we see them and wish respectfully to present it before the opening of the 86th Congress. The following comments relate to three principal divisions of interest, and do not attempt to cover the entire subject:

1. Changes in congressional procedures to permit affirmative majority action.

(a) Provide for majority cloture in the Senate. (Senate Rule 22 which permits unlimited debate and filibusters has been the major stumbling block to action on civil rights legislation, welfare measures, school construction, etc.)

(b) Restore the 21-day rule in the House. (In 1949 the House voted to let any bill be brought up on the floor if it had been before the Rules Committee for as long as 21 days. This 21-day rule was rescinded after the election of 1950. The 85th Congress ended with several bills such as the $2.5 billion housing bill, authorization for self-financing of TVA, etc., unconsidered because the committee would not grant them rules.)

(c) An expanded and more representative Rules Committee. (Six votes of the 12-man Rules Committee are enough to prevent a measure from coming to a vote on the floor. Moreover, by the operation of the seniority system the present Rules Committee has become controlled by an entrenched sectional block.)

2. The national economy and the general welfare.

(a) Upward revision of social security benefits to include housing for the aged and medical care.

(b) Increased initiation of activity emanating from the Attorney General's office.

(c) Federal aid to public education including school construction, teachers' pay, increased attention to vocational education, and the training of farm youth.

(d) Adoption by Congress of such measures as the community facilities bill, area redevelopment programs, public services of all sorts.

(e) Control of inflation, practical plans for adjusting U.S. economy to genuine disarmament.

(f) Improved civil rights legislation to insure equal opportunity for all our citizens and equal protection by the laws.

(g) Improved channeling of information on governmental activities to the public: "letting the people know."

3. Foreign affairs.

(a) Development of an economic aid program to help prevent the increase in anti-Americanism among the common peoples that has grown by our military support of dictatorships in Formosa, Thailand, Pakistan, Saudi Arabia, Turkey, Morocco and Spain. Half of the $30 billion that we have spent militarily in the last 10 years in these countries, if diverted to economic development would have created miracles in improved living conditions, education, and a more stable political rule in each country.

(b) Supporting of the seating of the People's Republic of China in the United Nations and then the channeling of the disputes with this country through the good offices of the United Nations.

(c) Making it imperative that all international questions be taken to the United Nations. The United States must display more confidence in the ability of other nations to decide international affairs. The miracle that Abdel Khalik Hassouna performed in the Mid East crisis is an example.

(d) Full support financially and technically to India in these last 2 years of her second 5-year period. In its role as a key country in the Far East, Indian is of vital importance to the Free World. It is in our own self-interest to help maintain a free and independent India.

(e) Developing of an effective program of world disarmament to include the use of atomic energy for peaceful purposes. The United States should redirect the use of its vast resources toward positive peaceful purposes rather than toward deterrence.

Respectfully yours,

ADRIENNE C. CURTIS,
Secretary.

Address Delivered at the Commissioning of the U.S.S. "Claud Jones" (DE–1033) by Rear Admiral John S. Thach, U.S. Navy, on Tuesday, February 10, 1959

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 18, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, on Tuesday, February 10, 1959, I had the privilege of attending the ceremony when the U.S.S. *Claud Jones* was commissioned at the U.S. Naval Base, Charleston, S.C., by Rear Adm. John S. Thach, USN. Admiral Thach, who is commander of Carrier Division 16, has flown all types of naval aircraft, including heavy multiengined patrol bombers and high performance fighters. During World War II he developed what was known as the "Thach weave" and evolved the theory that a two plane fighter formation was superior to the old, established, three-plane formation. He is a distinguished leader and has one of the most stupendous jobs in the world, that of defending our shores from attack by enemy submarines. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include the speech made at the commissioning ceremony by Admiral Thach:

ADDRESS DELIVERED AT THE COMMISSIONING OF THE U.S.S. "CLAUD JONES" (DE–1033) BY REAR ADM. JOHN S. THACH, U.S. NAVY

It's a pleasure and an honor to be present today as a new antisubmarine vessel joins the fleet. This ship is a most welcome addition to our antisubmarine forces, and as the first of a new class of ocean escorts, her performance will in many ways influence the course of antisubmarine defense for years to come. It is significant that she bears the name of *Claud A. Jones,* for there is a striking similarity between her mission of convoy escort and the career of Admiral Jones, who worked so diligently to improve the ships of our Navy. He was not rewarded by public acclaim, but, rather, by that inner realization of a job well done, which was exemplified in the steady material improvement of the fleet. Long hours, hard work, and competence were the ingredients of Admiral Jones career. Such is the stuff of which convoy escort is made.

Today there is not the distinction between peace and war that existed during Admiral Jones' lifetime. Conflicts between nations now cover a wide spectrum, ranging from political maneuvering through an infinite variety of cold war and limited war situations, up to all-out war and mutual suicide at the extreme end of the scale. This extreme of total war and mutual suicide is the least probable situation, but within the range of cold and of limited wars we may struggle for a long time to come.

The United States is an island, and transocean transport is her life's blood. Of this overseas transport, ships are responsible for more than 99 percent of the commercial and military tonnage. This is true because there is no other practical way it can be done. Not only is the United States economy dependent upon this vital sealift but so is the economy of her Allies. We must have a strong antisubmarine warfare force to protect these vital sealanes from any airborne or subsurface threat.

This ship commences her naval career at a critical time. For at this time we are just becoming fully aware of the threat to our national security posed by the Soviet fleet of 450 submarines. In addition to the threat to our shipping, our cities may already be on the Communist submarine target list. Our population centers are at point blank range. To a 1,500-mile missile, not a single square inch of the United States is immune to attack.

The U.S.S. *Jones* will meet her test at a time when the submarine can go deeper, can stay submerged longer and need only reveal itself at the time of launching a missile. The ASW mission of protecting our shipping remains as vital as ever but now there has been superimposed on this mission the necessity of finding and keeping under surveillance every potentially hostile submarine that comes within missile range. This we must do during the current cold war and if we do it well enough, the cold war will never get hot.

As Admiral Jones devoted his life to improving the capabilities of the Navy, as he proved his courage in peacetime disaster; so this ship, his namesake, and her sister ships, may perform a similar mission by developing and improving our antisubmarine defense to the ultimate level required for us to maintain true control of the seas.

So to the commanding officer, the officers and men of this fine ship I wish to express my congratulations. You will be shouldering a great responsibility. To discharge it will require hard work, but from your efforts, and from the efforts of all of us in ASW can come the necessary contribution to the Navy's vital role in the defense of our country.

Herman P. Eberharter

SPEECH
OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 17, 1959

Mr. DAGUE. Mr. Speaker, the Members of this House, and especially the Members of the Pennsylvania delegation, were immeasurably saddened when we heard of the untimely passing of our distinguished colleague from Pittsburgh. We paused in that sad hour and recalled his long years of service in this body and the outstanding contribution he had made in our unending quest for a solution to the tax problems confronting our Nation.

The fact remains, however, that our estimate of a colleague's work in most cases rests on our day-by-day observation and how he conducts himself when on the legislation firing line. In HERMAN EBERHARTER'S case, the highest accolade we can award him is to point out that never, even under the most severe provocation, was he observed to desert the role of gentleman which he played to the last.

His latter years in the public service were made doubly arduous due to the loss of his helpmate, who preceded him in death, and his own physical impairment. It can be said of this lovable colleague, however, that he accepted these burdens with a light heart and a cheerful mien, and no one can recall meeting him without receiving a cordial greeting and the firm handclasp of friendship.

Our heartfelt sympathy goes out to the members of his family who are left to mourn his passing, and it is our prayerful hope that they will be comforted by the assurance that we, his colleagues, mourn with them and for them.

James V. Bennett, Director of Federal Bureau of Prisons

EXTENSION OF REMARKS
OF

HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 18, 1959

Mr. LINDSAY. Mr. Speaker, on Tuesday, January 20, the President of the United States presented medals to five distinguished public servants for their contribution to the country in the Federal civilian service. Each of these men has provided a lifetime of leadership in his particular field. I should like to make reference to one recipient of this award, and I single him out only because I have known and worked with him on a close personal basis.

He is James V. Bennett, the Director of the Federal Bureau of Prisons. I knew, and had a daily working relationship with Jim Bennett, during the period in 1955 and 1956 when I was executive assistant to the Attorney General of the United States.

Jim Bennett's contribution to the country, and indeed to a great many other countries, cannot be overstated. He has been a credit to several administrations. He is a recognized world authority on the subject of penology. Anyone who has seen the results of his work, firsthand, cannot help but be impressed at the progress that has been made under his leadership. I would guess that no single service in the Federal system has a higher esprit de corps than the prison service despite the lesser pay scale under which it operates compared to some others. This is due almost entirely to Jim Bennett. I have visited three of the Federal institutions and in each place saw examples and evidences of the Bennett touch. The respect for him among the inmates of all Federal institutions is a further example of the model way in which this aspect of the Federal service is managed. The country owes a vote of thanks to Jim Bennett.

A Killer Is on the Loose

EXTENSION OF REMARKS
OF

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 18, 1959

Mr. FRIEDEL. Mr. Speaker, under leave to extend my remarks, I would like to insert an article entitled "Crusade for Safety," written by Mr. Maurice R. Shochatt, executive secretary of the Safety First Club of Maryland. This article appeared in the February edition of the Baltimore Beacon, of which Mr. Shochatt is the editor and publisher.

The Safety First Club of Maryland, of which I am a member, is a nonprofit organization dedicated to traffic safety. It was organized on February 13, 1956, in Baltimore, with the premise that "Traffic Safety Is Everybody's Business."

Under the able leadership of Mr. J. O. Shuger, the club's president, the organization has enlisted the cooperation of outstanding safety leaders to serve as members of its advisory board and provide guidance in its program. Members of this board include leaders in the business, industrial, and professional spheres in Baltimore City.

The club will extend recognition to personalities who have made contributions in the field of traffic safety at its third annual Wheelmaster banquet to be held in Baltimore on April 14, 1959.

The text of the article is as follows:

CRUSADE FOR SAFETY

(By Maurice R. Shochatt)

A KILLER ON THE LOOSE

He is brutal, savage, cruel. He strikes on the streets, highways, and country lanes. He is within striking distance of each and everyone of us 24 hours around the clock. He's not the type of killer who skulks, lurking in the shadows, fearful and apprehensive when people are around him. In fact, he stalks boldly about—destroying, smashing, and maiming and adding to his long list of victims every hour, every minute, every second.

People are aware of his presence; yet ignore him and, at times, even play dangerous games with him. He never loses, but they always do. He has an inexorable record that neither time nor tide will halt. His devilish game of death and destruction can be predicted, but seemingly cannot be halted or deterred. He snatches a victim every 13 minutes in the United States of America. That doomed victim never returns to the land of the living. He injures a man, a woman, or child in the United States of America every 23 seconds. He is "Murder, Incorporated" of the 20th century. He is the modern monster of death on the highways.

The grim statistics show that 1,081,600 people lost their lives in the United States of America between January 1, 1925 and January 1, 1958, according to the to the National Safety Council.

In Maryland, the traffic toll for 1957 was 552 fatalities; while 504 persons lost their lives in 1958.

According to the Evening Sun of Baltimore the Nation's 1958 automobile driving records, in brief, are estimated thus: 40,000 killed, 10 million accidents, 2,500,000 persons injured, 20 million traffic court cases, and $7 billion economic loss.

Now compare that record with our three recent wars.

In World War I, the United States had 126,000 fatalities, and 234,300 were wounded in the 2 years of that conflict.

During the 4 years of World War II, 407,828 were killed and 670,000 wounded.

In the Korean war from 1950 to 1953, a total of 25,604 Americans were killed, 7,955 listed as missing, and 103,284 were wounded.

"Murder, Incorporated" of the highways must be arrested. All citizens should join the crusade for safety to protect their own lives, their dear ones, their neighbors, their fellow Americans.

Where Do We Stand on Water Rights?

EXTENSION OF REMARKS
OF

HON. HENRY ALDOUS DIXON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 18, 1959

Mr. DIXON. Mr. Speaker, I am inserting in the CONGRESSIONAL RECORD an excellent speech entitled "Where Do We Stand on Water Rights?" This speech was given at the joint commodity, land, and water conference of the American Farm Bureau Federation on December 8, 1958, in Boston, Mass., by Charles Butler, director of land and water use, American Farm Bureau Federation. This speech helped show the alarming possibility which could result from Federal encroachment on established State water rights:

I believe we stand in an extremely precarious position, one from which we could easily and quickly slip to complete Federal control of our water resources. No doubt many of you are thinking: "How could that possibly be true?"

To properly understand what has taken place in the field of water rights it is necessary to review some of our Nation's history.

I like to think that the men who framed our Constitution were political philosophers who had studied the lessons of history—and that upon this background they devised a basic concept to insure the survival of liberty in this Nation.

Their training, experience, and divine guidance told them that liberty could not survive the concentration of power in a strong centralized government, and so they wrote into our Constitution, as clearly as they knew how, the concept that political power should be diffused among the Federal Government and the States by reserving to the States those governmental powers not specifically allotted to the Federal Government.

This political system survived as its authors intended until the thirties and forties of this century. It was then that the protection of the Constitution against excessive concentration of political and economic power was smitten, first by the U.S. Supreme Court to be followed by actions of the Justice Department. It was during this period, when the Socialist-Communist centralization philosophy began to seriously influence our Federal Government, that the Federal supremacy theory in water was advanced. With the implementation of this doctrine no right to the use of water in the United States is safe from Federal preemption.

For over 75 years prior to this period, the citizens of our country living in States where a definite system of water laws has developed, have thought that the State, as trustee for all the people, holds title to the water in the streams. They have never thought it was intended that the reserved rights of the States could be invaded by the U.S. Supreme Court by changing the definition of a navigable stream or by changing the definition of public lands. But that is exactly what has happened. This is how the Federal supremacy theory in water has been implemented.

Our concept of water right administration by the States was not pulled out of thin air. It was built upon judicial decisions of State and Federal courts, including decisions of the U.S. Supreme Court (prior to implementation of the Federal supremacy theory) and upon numerous laws passed by the Congress.

Prior to the passage of any Federal laws relating to the administration of water rights, a definite system of water law had already been formulated by various judicial decisions. The fundamental principles of many of these decisions are still recognized as basic water law.

In 1866 Congress passed the first Federal legislation ratifying the principle of State administration of water rights which had been developed to date in accordance with local customs.

In 1870 Congress reaffirmed its position taken in the act of 1866. Seven years later, in 1877, Congress passed the Desert Land Act which definitely reaffirmed the rights of the States to legislate on all matters concerning nonnavigable waters within their borders. In a discussion of this act the U.S. Supreme Court said, that all nonnavigable waters should be reserved for use of the public under laws of the States. The Court made similar statements on a number of other occasions during this period.

From these citations it can definitely be seen that by 1878 a new body of water law had been recognized by the Congress and the Supreme Court and reserved for State administration. Some students of this subject claim that there have been at least 17 congressional acts and at least an equal number of Supreme Court decisions to support State administration and control of water rights.

A number of years rolled by with the development of the Nation's water resources rapidly taking place. Little thought or question was given to the State's authority in water rights. Then came the 1930's and 1940's with the tremendous increase in the powers of the Federal Government.

Those who were ready, willing, and anxious to increase the powers of the Federal Government, and to form a strong centralized government, looked to the field of water resources with an envious eye—here was a fertile field in which to assert more Federal control.

The federalizers started their activities in the field of navigable waters. They well realized that in this area lie the main restrictions on State control of water because of the powers which the Constitution had conferred on Congress to regulate commerce and control navigable waters.

The Supreme Court gave the federalizers the cue when they said that the Federal Government holds a "dominant servitude" on waters of navigable streams, and that if the Federal Government chooses private rights initiated under State law for use of such water can be wiped out without payment of compensation.

Other Supreme Court decisions further implemented the Federal supremacy theory in water, including the famous Appalachian Power case in Virginia and the First Iowa case.

In the former case the Supreme Court simply adopted a new definition of a navigable stream, which extended Federal control to any stream which might by reasonable improvements be made navigable, even though such improvements were never actually compelled or even authorized.

Under this definition, it is literally possible for a mountain torrent to be classed as a navigable stream.

The net effect of these decisions is that Federal control has not only been extended to the top of the watershed, but also to the entire watershed, which includes your farm and mine.

Why were such decisions handed down? At this time the federalizers realized that it would be most difficult to upset the acts of 1866, 1870, 1877, and the supporting Supreme Court decisions which took nonnavigable waters out of Federal control unless they took advantages of conditions in the East, South, and Middle West. They took this advantage by changing the definition of navigability, and this is why these areas are so extremely vital in the whole question of water-policy and water-right legislation.

By extending Federal control of water to the entire watershed, the federalizers calculated to destroy the authority of the States to claim title to the waters in all streams.

By 1955 the federalizers had found a way to directly upset the congressional acts of 1866, 1870, and 1877, and the Supreme Court decisions supporting these acts. They accomplished this in the now famous Pelton Dam case in Oregon, where the U.S. Supreme Court simply referred to most of our public lands as "reserved lands." By this decision it was held that the acts of Congress and decisions of the Supreme Court under which western water law was established had no application to "reserved lands."

This doctrine of Federal supremacy in water, as now expressed by the Supreme Court and supported by the Justice Department, is exceptionally dangerous because it has the elements of authoritarianism as the supreme law of the land.

These Court decisions bring up the question of the importance of "settled law." Abraham Lincoln defined "settled law" as something that had been affirmed and reaffirmed in decisions for years afterwards.

It seems that on the basis of the many congressional acts and Supreme Court decisions relative to State administration of water rights prior to the 1930's that State control of water and water rights should be a matter of "settled law."

How important is settled law to the future of our Nation? Former Chief Justice of the Supreme Court, Edward D. White, wrote in 1895:

"Teach the lesson that settled principles may be overthrown at any time and confusion and turmoil must ultimately result. * * * Break down this belief and let it be felt that on great contsitutional questions this Court is to depart from the settled conclusions of its predecessors, and to determine them all according to the mere opinions of those who temporarily fill its benches, and our Constitution will, in my judgment, be bereft of its value and become a most dangerous instrument to the rights and liberties of the people."

Is it possible that we have now reached the stage described by Justice White 63 years ago? One cannot help but wonder when an analysis is made of some of the recent decisions of the Court as they relate to our water resources.

Perhaps you are saying to yourself, "Federal supremacy is nothing more than a theory; it has no application to me; no rights have been threatened or destroyed in my

area." Let us look at the record and then make a decision.

Soon after the Supreme Court's decision in the Pelton Dam case the so-called Hawthorne case broke into the news. Adjacent to the town of Hawthorne in the State of Nevada, the Navy Department operates an ammunition depot on reserved Federal lands. At the time of the Pelton decision, the Navy Department was in the process of applying to the State for a water right to make use of underground water. Following the Pelton decision the Justice Department advised the Navy that it was not necessary for them to obtain a water right under State law since the ammunition depot was located on reserved land.

In compliance with the advice of the Justice Department the Navy withdrew its application for a water right and proceeded to use water to which the town of Hawthorne held a prior right. This case was before the United States district court, and on August 27, 1958, the U.S. district judge ruled that the Federal Government did not have to comply with State water laws; in other words, a decision supporting the contention of the Justice Department.

This is an excellent example of the Federal supremacy theory in action and may have even more far-reaching effects on State control of water than previous decisions since groundwater is the main source of the base flow of streams.

The Justice Department's apparent determination to subordinate private water rights to Federal authority is clearly evident in the Santa Margarita case in southern California. This case has been before the Federal courts in California for the past several years, however, in the spring of 1958 it came to a very serious point.

The controversy over the rights to the use of water in the Santa Margarita River started during World War II when the Federal Government purchased the Santa Margarita ranch as the site for Camp Pendleton, a Marine Corps base. The ranch was not an irrigated area, and the question immediately developed as to the amount of water than went with the land.

Starting in April of this year the Justice Department, through United States marshals, started serving summonses to thousands of landowners and water users in the entire area to prevent their continued use of water rights which had been established for many years under California laws. The summonses were served during all hours of the day and night. Many farmers were awakened in the middle of the night to be served with a summons about the size of the old Sears, Roebuck & Co. catalog, a document which few of them understood.

The suit in which these summonses were served, asked the Federal district court to rule that all the rights to the use of water asserted by the defendants are subject and subordinate to the right of the Federal Government to the continued and undiminished flow of the river, including the rights to underground water. In other words, the Justice Department asked the Court to stop all water users from their continued use of both surface and underground water. Do you realize what this means to farmers in a desert area? What will happen to property values in the Santa Margarita Valley if the request of the Justice Department is upheld?

Each defendant was informed that unless he answered the complaint within 20 days, his right to assert any claim to the use of water would be gone forever.

It is extremely difficult to believe that such a thing as is presently going on in the Santa Margarita Basin could happen in America—that an individual's right to the use of water, a right which had been lawfully acquired under laws of the State, can be claimed by an all-powerful Federal Government without payment of compensation to the individual water users. But it has happened within the past few months; it is the cold, hard facts of the Federal supremacy theory in water.

The Federal supremacy theory in water again raised its ugly head in consideration of Corps of Engineers authorization bill, S. 497, of the 85th Congress. This was the bill to authorize new rivers and harbor and flood control projects estimated to cost $1,600 million. The President vetoed this bill twice and after it was revised and passed by Congress for the third time, the President signed it into law.

The bill which was vetoed on May 15 of this year extended to the Corps of Engineers and the Bureau of Reclamation an extraordinary delegation of congressional authority for water storage to regulate low flow and for present and anticipated future demands for municipal and industrial water. The text of the bill did not mention water rights in any manner. The American Farm Bureau Federation immediately became concerned because we saw in this authority the possibility of serious infringement upon individual water rights which had been obtained under State law.

Western State farm bureaus, the American Farm Bureau Federation, and the National Reclamation Association contacted a number of Senators and requested that the controversial section, section 205, be amended by adding the phrase "and storage authorized under this section shall be used in compliance with applicable State water law and interstate compacts." A bipartisan group of 15 Senators presented this language to the Senate-House conferees. Naturally, the Corps of Engineers fought this type of an amendment because they are not used to being hampered by State laws. However, the real resistance to this suggested amendment came from the Justice Department.

This simple, clearly stated amendment was rejected by the conferees who in lieu added the following language: "Nor shall any storage provided under the provisions of this section be operated in such a manner as to adversely affect the lawful uses of water."

No one seemed to really understand the meaning of this ambiguous language. Some of the top lawyers in Washington commented that they could litigate over the meaning of this language for the next 50 years.

In an attempt to clarify the intent of the language Congressman ASPINALL, of Colorado, during a House floor debate on the bill, asked the floor leader, Congressman DAVIS of Tennessee, if the language meant that individual water rights obtained under State law were to be protected. Congressman DAVIS replied that that was exactly the meaning of the language. For some reason the reply of Congressman DAVIS was stricken from the CONGRESSIONAL RECORD. Could it be that the supporters of the Federal supremacy theory in water could not permit this kind of legislative history to hurt their cause?

Perhaps they couldn't take this chance and for that reason had the official record of the U.S. Congress stricken in their behalf.

The bill, therefore, emerged from Congress and was sent to the President with a clouded legislative history so far as this vital issue was concerned. The ambiguous language which had been substituted and the legislative history would have sustained the Justice Department in its contention that Federal projects may be constructed and operated without recognition of, or compensation for, the long-standing rights of water users to use water under rights established by State law.

This clear-cut invitation to disregard State law and private rights to the use of water established under State law, an invitation extended by the Justice Department, was too much for the American Farm Bureau Federation and, as a result, the President was requested to veto the bill. The President complied with this request on May 15.

There is yet another chapter to this story. When the revised Corps of Engineers authorization bill came up for consideration, the Senate bill had no reference to water rights. The House bill contained the same language relative to water rights which was in the bill vetoed by the President. Again, Congressman ASPINALL asked Congressman DAVIS, who was piloting the bill through the House, the meaning of the water-right language. Congressman DAVIS' reply indicated that individual water rights were to be protected under State laws. This was too much for the Justice Department, who immediately stepped in and demanded that no language with reference to water rights be included in the bill—and that's exactly what the Nation got.

Here you see unquestionable evidence of the Congress of the United States being forced to bow to the long-standing views of the judicial and Justice arms of the Government to the effect that the Federal Government should in no way and at no time bind itself to observe any rights of this kind. Again you see the Federal supremacy theory over water in action. Please keep in mind that this has just as much application to your area as it has to any other area in the United States.

Perhaps you are asking, "Is this a hopeless situation; have we gone so far down the road toward socialism as it relates to our water resources that there is no turning back, or is there a way to set at rest forever the dangerous doctrine of Federal supremacy as it relates to our water resources?"

This ridiculous situation relative to Federal control of water resources can be put to an end through Federal and State legislation. It must be remembered that there are few, if any congressional acts which definitely support the Federal supremacy theory. Actions in support of this theory are based on decisions of the Supreme Court and other lower Federal courts and Justice Department interpretations. Congress has the authority and the only authority to enact Federal legislation that will rout this dangerous theory.

One of the best methods of paving the way for passage of Federal legislation to protect individual water rights and State control of water resources would be the enactment of the States rights bill which was known as H.R. 3 in the 85th Congress. This bill was written to protect the States against Federal court decisions which have invalidated State laws in various fields under the preemption doctrine. Passage of this bill would underscore the rule, long ignored by the Federal courts and the Justice Department, that no Federal law or court decision takes priority over State law unless Congress decides that it should do so. The enactment of this bill was vigorously opposed by the Justice Department and the AFL–CIO during the 85th Congress.

The next step toward freedom from Federal control of water resources would be definite congressional legislation designed to establish the position of State governments in the control of water resources and the administration of water rights within their borders. Such legislation will be extremely difficult to enact because of the powerful opposition already in existence.

Each State can help put an end to the Federal supremacy theory in water by the enactment of State legislation providing for strong State department of water resources with authority for planning, construction, and operation of water resources projects. Such State legislation should not overlook provisions for the participation of local units of government in water resource development. Basic in any such legislation is the provision of a definite means whereby any individual water user may acquire a legal right to the use of water.

Why do the advocates of Federal supremacy so strongly support this theory? I am going to leave it up to you to answer that question. But I should like to remind you that we can have authoritarian laws and control in this country just as much as in Russia or Red China unless we assume our responsibilities to see that authoritative processes are used instead.

The Fiscal Tragedy of a Welfare State

EXTENSION OF REMARKS
OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 18, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks, I wish to bring to the attention of my colleagues, as well as to other interested persons, an editorial which appeared in the Kansas City Star on February 12, 1959. It pertains to a matter which, in its implications, is of such vital importance to the future welfare of our great Nation that I believe it should receive the widest possible dissemination.

We find that the great State of Michigan is experiencing the most serious financial crisis in its history. The situation is directly attributable to the unsound policies pursued by the present State administration under the leadership of Gov. G. Mennen Williams and his political mentor, Walter Reuther, president of the United Auto Workers Union.

Not only has Governor Williams spent every available dollar of State funds, but he has compounded the felony by driving taxpaying industrial concerns away from Michigan.

As the people of Michigan have learned, unrestrained spending by government can lead only to disaster. The lesson is clear and should not be lost upon those of us who have the responsibility of formulating Federal policies.

The editorial follows:

[From the Kansas City Star, Feb. 12, 1959]

THE FISCAL TRAGEDY OF A WELFARE STATE

Michigan is one of the wealthiest States in the Union. Its government is broke.

So the bubble of the welfare State bursts and as it does, we see a pointed lesson for the Nation. For the battle of the budget in Washington this year may determine whether the United States is to proceed further down the welfare path, or whether it is to regain its fiscal sanity.

The depth of the Michigan financial crisis is indicated by a recent desperation move by Gov. G. Mennen Williams. Politically underwritten by Walter Reuther of the United Auto Workers, Williams has created what many regard as a totally unfavorable climate for private business and industry. His chief targets have been the big corporations. Now he has appealed to 23 of the largest companies to pay their taxes in advance. Most have agreed.

And for the next fiscal year, the Governor has proposed sweeping new tax proposals that would include the State's first personal income tax. The people of Michigan are learning that even the welfare State cannot provide something for nothing.

A report on the Michigan crisis appears in the current U.S. News & World Report. Politically, the magazine may be guilty of some understatement when it merely says that the Williams administration "is closely alined with Walter Reuther, politically powerful head of the United Auto Workers." We have heard it stated more strongly. At least Williams seems to have accepted much of the Reuther philosophy of welfarism.

The result of that philosophy has been the creation of a State in virtual insolvency. U.S. News refers to the plight of the two big State universities which have been living on money borrowed from banks against tuition fees. It mentions the unpaid bills due contractors.

Through the dawning period of crisis, welfare roles have continued to grow. And certainly Detroit has been the city hardest hit by the recession. In January unemployment was 11 percent. The impact of the business slowdown has been used to rationalize the fiscal crisis in the Williams government. It has been a factor. So has a large population influx. And inflation.

But two basic factors existed long before the recession struck. One was the statist philosophy that created expenditures far in excess of income. Paradoxically, the Michigan Legislature has been willing to go along with spending programs but not with revenue schemes.

Yet the drift of the Reuther-Williams tax line is to take the money out of the hide of business. That is the second large factor behind Michigan's troubles. U.S. News quotes the mayor of a Detroit suburb who pointed out that a large steel company decided against locating there because it didn't like "the political and industrial climate of Michigan." Since 1947 only 30 of the 100 new factories built by the Big Three of the car industry have been located in Michigan.

We see here an immediate moral for the other States. With a better climate for industry, Michigan might have created the new job opportunities that would have taken up some of the slack when motorcar employment fell off. But the lesson for all the American people is even more obvious.

It is particularly pointed when you recall the recent testimony of Walter Reuther before the Joint Economic Committee of Congress. Reuther is the dominant spirit behind the Michigan welfare state. In Washington, Reuther spoke in terms that must have been all too familiar to Michigan.

He called for wage and price increases, a boost in the minimum wage, Federal aid to depressed areas, higher unemployment compensation benefits, stepped-up defense expenditures, more foreign aid, aid to education, and other spending.

We don't know how carefully the Senators and Representatives were listening. But we do know that the Federal Government is piling up a deficit of $12 billion this fiscal year. Strong forces in Congress and in the Nation regard a balanced budget as unimportant. They think that Uncle, too, can exist indefinitely with a philosophy of "spend, spend, spend."

In effect, they are beating the drums for what Reuther was suggesting, without using the precise phrase: "The welfare state."

And in Michigan, the myth of the welfare state has been exploded.

Mr. Speaker, as a further extension of my remarks, I am including the article from U.S. News and World Report of February 13, 1959, to which reference is made in the editorial appearing above. This analysis of the extremely difficult problem confronting the people of Michigan is excellent and I commend it to the attention of all.

The article follows:

A WELFARE STATE RUNS INTO TROUBLE

G. Mennen Williams, now in his 11th year as Governor of the great industrial State of Michigan, saw his State come to the end of its financial road last week. The Governor was forced to appeal to the corporations that he has often fought for money with which to meet the State payroll.

Governor Williams frequently is spoken of as one of the hopefuls for the 1960 Democratic presidential nomination. People of Michigan six times have voted him their chief executive. The Governor is famed as a liberal. His administration is closely alined with Walter Reuther, politically powerful head of the United Auto Workers.

When the money ran out, however, it was the corporations which came to the aid of the State with advance payment of taxes. The Governor appealed to 23 of the State's largest employers to pay taxes early and help ease the financial plight. Most agreed to do so.

OVERDUE OBLIGATIONS

The State's finances had reached the point of crisis. The University of Michigan and Michigan State University received their last payments from the State last November. Both were living on money borrowed from banks against student fees. The banks were unwilling to lend more.

The State fell 3 months behind in payments into its teachers' retirement fund. Bills due contractors in some instances went unpaid. There was a question where money could be found to meet State payrolls. Interest payments of $15 million are due on the State debt March 15, with no clear indication of where the money will come from. A payment of $34.5 million is due on a school fund in May.

Through it all, checks went regularly to those on relief—and welfare rolls continued to swell as unemployment spread through Detroit and many other industrial areas of the State. More than 11 percent of the State's labor force was jobless in January, according to estimates by the Michigan Bureau of Employment Security.

Michigan, in other words, suddenly found that, while it was continuing to spend freely, it had run out of money to meet its bills. Spending from the State's general fund ran ahead of income by $21 million in the fiscal year ended last June 30. A deficit of $89 million is estimated for the current fiscal year.

A JUGGLING ACT

As the State's financial crisis deepened in recent months, Michigan officials searched for new ways to raise additional cash.

Last year, for example, the State government liquidated one of its assets by transferring $19 million, representing liquor inventories held by State-owned liquor stores, to the credit of its general fund. The State also drew down $10 million from a special fund for soldiers' bonuses and from other funds set aside for the redemption of bonds.

This fiscal juggling brought in an extra $29 million of nonrecurring income, but that was still not enough to meet demands for cash. Money went out faster than it came in.

PLEA FOR TAX BOOSTS

As one way out of the financial crisis, Governor Williams last week asked the legislature to boost taxes by 18 percent over what was collected in 1958. He called for enactment of the State's first income tax, and for increases in other taxes that would bring in, all told, an additional $140 million a year.

Included in the Williams tax proposals are some that are certain to run into heavy opposition among Michigan taxpayers and businessmen: a graduated tax on personal incomes, a flat 5 percent tax on corporation

incomes, and a 7 percent tax on the income of banks and other financial institutions.

Meanwhile, as a stopgap measure, the Governor has asked the legislature to mortgage the veterans' trust fund, which now contains securities valued at around $38 million. If the legislators approve, these securities could be used as collateral to secure loans.

SPENDING AS USUAL

In the face of the present cash crisis, the Governor's budget for the fiscal year to start next July 1 calls for still higher spending, over and above that for the present year. He has asked additional outlays centering chiefly on education and mental health programs, and a pay boost for State employees. These would increase the State's general fund expenditures from a current annual rate of $380 million to a rate of $424 million in the coming year. For new public works spending—which lately has been cut sharply—Mr. Williams proposes that the legislature create a State building authority, empowered to issue revenue bonds.

A LONG-TERM PROBLEM

How did Michigan get into its present plight? Look back at the record, and you see that the State's troubles have been years in the making.

For one thing, over the past decade—the years in which the Williams administration has been in office—total State spending has gone up from about $500 million annually to more than $1 billion.

State financial officials say that inflation and the increase in Michigan population have accounted for about half that rise. The other $250 million increase in spending is accounted for by new State services, improvements in old ones, or by a shift in costs from local areas to the State treasury.

For another thing, new revenues coming into the State treasury have not kept pace with the rise in spending. Over the years, Governor Williams has sought approval from the legislature for higher taxes. But the legislators, while generally going along with higher spending have not been eager to provide additional taxes.

A DOUBLE-EDGED RECESSION

Meanwhile, revenues from existing taxes have declined recently because of the recession in business. Sales-tax collections, the largest single source of revenue, fell off. The estimate of revenue from this tax for the current fiscal year had been $323 million. Now the estimate has been reduced to $296 million.

As auto plants and other factories began to lay off workers, welfare costs began to rise. These costs put a heavy drain on State revenues. Normally, the State pays 30 percent of general relief costs, cities and towns 70 percent. Recently the State has shouldered the entire cost in Detroit and some other areas because the local governments ran out of funds.

FRONT RUNNER IN WELFARE

Michigan's spending for many types of State services—for education, highways, health and hospitals, public safety—run well ahead of the average for other States. Most recent figures show that the State's spending for education, for example, was the highest of all States, at about $61 per capita, compared with a nationwide average of $37.41 per capita.

Other factors, having to do with jobs and business activity, have had a long-term effect on Michigan's financial problem.

Since 1950, Michigan has added more than 1.5 million to its population. This population increase included many thousands of people who came from other States, lured by the prospect of high wages on Michigan's world-famous assembly lines. But new jobs over the past few years have not kept pace with the rise in population.

"COLD SHOULDER" FOR BUSINESS?

One reason frequently cited by some businessmen for this decline in jobs is that the State has an unfavorable climate for attracting and holding private business and industry. All through the State government, businessmen say, they run into an attitude of hostility.

Last year, a big Detroit manufacturer closed down its factory with a payroll of 700 workers and moved to Arkansas. There, the company's president says, it will save $75,000 a year in taxes alone—and many times that amount in wages.

In the Detroit suburb of Monroe, Mayor Milton H. Knabusch said that one of the country's largest steel producers decided against building a plant there because the company didn't like the political and industrial climate of Michigan. Since 1947, the Big Three of the auto industry have built or acquired about 100 new plants across the country. Only 30 of these have been located in Michigan. Neighboring Ohio alone got 29.

All these problems have combined to add to the State's financial worries. New business enterprises are slow to come to Michigan. Revenues from existing businesses are down. Spending is way up.

Thus, the people of Michigan, one of the wealthiest States in the United States, now find their government is broke. Many of these people are wondering whether the State can continue to spend as it has in the past—and whether taxpayers are willing to provide the new money that will be needed to support the spending programs already projected for the future.

A New Publication

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. DADDARIO. Mr. Speaker, I should like to call the attention of the Members of the House to a new publication of the Office of Technical Services in the Department of Commerce. As you will recall, the Select Committee on Science and Astronautics last year under the chairmanship of the majority leader expressed concern at the poor flow of scientific information. A great deal of foreign work of quality was not available to our own scientists. Although scientists abroad did publish reports, it was not translated or not brought to the attention of people doing work in comparable fields here.

As a result of the interest shown by Congress, some progress is being made. We still have a long way to go, to remove roadblocks in the path of information. Science, like news, should know no political boundaries, but should move freely across borders. Where language barriers stand in the way, they must be removed. This publication, called Technical Translations, is a step in that direction. It lists articles published in many journals, provides briefs of the contents where possible, and tells how to get copies. Members of the House may wish to bring this to the attention of universities or research centers in their districts.

Antipollution Law Threatened

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. DINGELL. Mr. Speaker, an article which appeared in the Iowa Waltonian, official publication of the Izaak Walton League of America, Iowa division, in its November-December 1957 issue describes the real motive behind the move to return water pollution grants to the States along with the 10-percent tax on telephones.

That article is most timely in view of the nature of the issue.

[From the Iowa Waltonian, November-December 1957]

ANTIPOLLUTION LAW THREATENED—FEDERAL-STATE ACTION COMMITTEE URGES ALL AID TO MUNICIPALITIES BE DROPPED

Under the guise of returning to States some of the powers taken unto itself by the U.S. Government, the Federal-State Action Committee has recently, while meeting in Chicago, voted specifically tha the President should ask Congress in January of 1958 to discontinue the recently begun program of Federal grants to municipalities to build waste treatment plants. Such an action would nullify many years of effort on the part of the league and other conservation groups.

Many Waltonians will recall the stark drama of the moment during the convention in Washington last April when Dr. Preston Bradley called for immediate recess of the convention to permit league members to rescue the Federal Pollution Control Program. They will recall how, after the recess and after Waltonians had had time to contact their Congressmen, that an earlier vote by an economy minded Congress, scuttling the act by refusing to grant the $50 million in funds needed to carry on the work; was overwhelmingly reversed in a later vote.

Now * * * comes a new and more threatening move on the part of the pollutionists.

Why the constant pressure by a certain group to dump this legislation designed to help give the Nation and its citizens clean water? Drew Pearson, in his column in the Washington Post and Times Herald for April 18, 1957, expresses it very plainly as follows:

"Opposition to the grant (program to aid construction of municipal sewage treatment plants) came from the powerful chemical, pulp and paper manufacturers which dump their factory waste into the Nation's streams. Federal aid to clean up municipal pollution, they feared, would eventually focus attention on industrial pollution."

As a result, these firms launched a virtual let-them-drink-sewage campaign.

Iowa Ikes cannot and must not disregard or treat this matter lightly. If we are to have clear clean streams and lakes, the Federal Water Pollution Control Act must be continued and the funds for its operation must be provided.

Pollution control must be kept in Federal hands if for no other reason than that most of the principal lakes and streams of the Nation go beyond the border of the State in which they rise and involve the well-being of the citizens of many States.

The Federal-State Action Committee is made up of people wielding great power. It's recommendations will be listened to.

The committee has on the Federal side, the Secertaries of the Treasury, Labor, and Health, Education and Welfare, the Budget

Director, two Special Assistants, and one Deputy Assistant to the President, and other lesser officials. For the States, membership includes the Governors of these 10 States: Idaho, Illinois, Kansas, Maryland, Mississippi, Nebraska, New Hampshire, Pennsylvania, Rhode Island, and Texas.

To preserve the Federal Water Pollution Control Act in the face of adverse recommendations of the committee will require action on the part of every Waltonian. Let the people on this committee know how you feel on the subject. Make sure your Congressman and Senator know how you feel. Send protests as individuals and as chapters. Organize opposition to the proposed cut in appropriations in other locals, sports, and civic organizations.

AND DO IT NOW—TODAY

The November issue of Sport Fishing Institute has this to say in part about this vital subject.

"Passage of Public Law 600 climaxed a 30-year-long period of legislative struggle and study. If it would be allowed to operate as Congress intended in the public interest, it would hold the promise of virtually unpolluted water for 50 million Americans who look to clean water for their chief source of vitally needed outdoor recreation.

"Moreover, these same citizens—including a large part of the voting public—not only drink a lot of this water. They also pour $10 billions or more into the annual economy while purchasing all the goods and services they need out fishing, boating, hunting, swimming, picnicking, camping, and the like. All this requires an increasing amount of abundant clean water.

"Now, however, it looks to us as if the water-pollution advocates may come up with a completely new and cleverly appealing scheme for torpedoing this most vitally needed Federal function. This time, apparently, it's to be done under the alluring mantles of economy and State rights. On the contrary, if successful, we believe the public will 'pay through the nose' as never before."

[From the Iowa Waltonian, Nov.-Dec. 1957]

PRINGLE CALLS FOR INCREASED FEDERAL ANTIPOLLUTION FUNDS

WASHINGTON.—The Izaak Walton League of America called today for doubling Federal appropriations to help municipalities fight sewage pollution in the Nation's streams and rivers. This announcement of League action policy was made by League President William H. Pringle, Pierre S. Dak., and released here by J. W. Penfold, League conservation director.

Pringle said that the initial appropriation of $50 million to implement Public Law 660—the bill authorizing municipal-Federal cost sharing on sewage treatment facilities—had "launched the most spectacular gain in water-pollution control in the Nation's history."

"Operating as a strictly voluntary program and recognizing that the demand for pollution control and most of the financing must come from the grass roots, the Federal Aid to Water Pollution Control Act has proved so popular with local and State public health and pollution control experts that a great backlog of requests for cooperative local-State-Federal projects has piled up," Pringle said.

Pringle emphasized that, "this demonstration of local demand to clean up our waterways must not be allowed to founder because of niggardly appropriations."

Pringle sharply disagreed with published reports—notably by a joint Federal-State action committee set up to study delegation of Federal authorities and tax sources to the States—which pointed to pollution control as a strictly State function.

"No citizen organization has had a more constructive record of pollution control activity than the Izaak Walton League," Pringle said. "We've worked since the early twenties to bring a stop to the pollution of the Nation's water resources. We've made good progress, but we all have been hampered by lack of a uniform national pollution control policy and program. We have that now, and we have no intention of seeing it abandoned in the misguided name of economy or of returning Federal powers to the States.

"Pollution is in many cases an interstate problem," Pringle continued. "Rivers don't stop at State boundaries. Moreover, hundreds of communities are unable to completely finance pollution control facilities on their own, even though the benefits in the form of clean and usable water for the home, the farm, industry, and recreation far exceed the investment required."

Pringle said that far from abandoning the pollution control program, the Federal Government should act decisively in the upcoming Congress to put itself unmistakably on record as recognizing the current program as an outstanding success and to further expedite progress made under it by increasing its annual appropriation from the present $50 million per year to $100 million.

"It has proved to be the most effective single piece of pollution control legislation ever passed by Congress and is a heartening example of voluntary cooperation by local, State, and Federal Government to combat a broad, public evil. The Izaak Walton League," Pringle concluded, "will fight with vigor and unity at local, State, and National level to assure continuation of the program and will seek increased appropriations in order that completion of the job can be assured within a reasonable period."

Forty-first Anniversary of Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. WILLIAM T. MURPHY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 18, 1959

Mr. MURPHY. Mr. Speaker, on Sunday, February 15, I was privileged to address a group of approximately 1,200 persons at Maria High School, located in my congressional district, in commemoration of the 41st anniversary of Lithuania's independence. At this meeting the Honorable Petras Dauzvardis, consul of Lithuania, delivered a speech in Lithuanian and I am pleased to include a translation of it in the RECORD:

Lithuanian's Independence Day is February 16. On that day in 1918 the restoration of the state of Lithuania was declared by its National Council in the ancient capital, the city of Vilnius. The restoration of the independence of Lithuania was based on the principle of self-determination of nations proclaimed by Woodrow Wilson, President of the United States, and on the long history of the Lithuanian nation.

The history of the Lithuanian nation goes back to the pre-Christian era. The written history of the state of Lithuania began from the ninth century, marking Lithuania's struggles and sacrifices for herself and for Europe through the centuries. It was the Lithuanians who stopped the Mongol surge westward and the Teutonic push eastward in the 14th and 15th centuries. At that time Lithuania was the great power between the east and the west—she was like a bastion in the center of Europe.

Lithuania's neighbors were envious. The Russians especially did everything possible to hinder the Lithuanians. For this reason, and due to lack of strong leaders, after the death of Vytautas the Great in 1430, Lithuania entered into an alliance with Poland in 1569 and finally fell under Russian occupation in 1795. However, the long and severe Russian occupation did not conquer the Lithuanian spirit of freedom. Each succeeding generation of Lithuanians revolted against the occupants and demanded liberty, until eventually the Lithuanians regained their freedom and proclaimed the restoration of their independent state during World War I.

In 22 years of independent existence, the Republic of Lithuania performed near miracles. Starting from scratch, the Lithuanians created a "Little America." Her progress and her people's prosperity were a blessing to the Lithuanians and a thorn in the side her erstwhile occupant and oppressor, Russia.

Disregarding the Lithuanian-Soviet Russian treaties of peace and nonaggression and the fact that both states belonged to the League of Nations, and that both had signed the antiwar Kellogg-Briand pact, the Soviet Communists invaded Lithuania during World War II, occupied her by force and illegally incorporated her in their empire. They robbed the state and its people, converted them into serfs without any rights, murdered or banished to Siberia some 300,000 Lithuanians. Even the cruelest czars hadn't done anything as barbarous.

The people in Lithuania, the farmers and laborers, are now slaves. They are forced into bolshevik sovchozes and kolchozes as hired hands. Their pay is niggardly. Kolchoz workers receive from 50 kopeks and 700 grams of grain to 5 rubles and 2 kilograms of grain per day. Factory and white-collar workers get 200 to 500 rubles a month. The cost of living is fantastically high. For example, a pair of dress shoes costs 200 to 400 rubles, the equivalent of 1 month's wages. Higher officials and Communist Party bosses, on the other hand, receive handsome salaries and enjoy all kinds of luxuries.

Lithuania, Latvia, and Estonia are victims of rapacious and shameless Soviet imperialism and aggression. There are no other such victim nations after this last war. They are forcibly seized and incorporated into the Soviet Union. The incorporation is not legalized by the free world. The states of Lithuania, Latvia, and Estonia are considered by the free world as independent nations occupied by Soviet forces. As such, they put the lie to Soviet leaders' claims to peacefulness and respect for the rights and independence of other nations.

The case of the Baltic States, though brought up by many people, should be raised by many more, with greater firmness and frequency, and directed at the Soviets at every opportunity.

For instance, Khrushchev's right-hand man, Deputy Anastas Mikoyan, visited here recently. While being wined and dined, he boasted and lied to the Amerian people about how good the Soviet Union is, how peaceloving, and how much she wants to be friends with the United States and other nations. At a meeting of the National Press Club in Washington he publicly stated: "It stands to reason one cannot coexist unless international treaties are kept. For that reason we scrupulously keep all commitments."

There is one truth and one untruth in those two sentences. It is true that there can be coexistence without respect for treaties and fulfillment of their respective obligations. It is untrue that the Soviets

scrupulously keep their treaty obligations. A glaring example is the Soviet conduct in Lithuania.

Lithuania and the Soviet Union had freely concluded treaties of peace and nonaggression. In article I of the Peace Treaty signed in Moscow on July 12, 1920, Russia committed herself as follows:

"Russia, without any reservation whatsoever, recognizes Lithuania as a self-governing and independent State with all juridical consequences that follow from such a recognition and in a spirit of free and good will renounces for all time all sovereignty rights of Russia concerning the Lithuanian nation and the Lithuanian territory which previously belonged to her."

The Non-Aggression Pact of September 28, 1926, provided that:

Article 2: "The Republic of Lithuania and the Union of Soviet Socialist Republics mutually undertake to respect in all circumstances the sovereignty and territorial integrity and inviolability of each other."

Article 3: "Each of the two contracting parties undertakes to refrain from any aggressive action whatsoever against the other party. Should a conflict arise and if impossible to settle it in a diplomatic way, both contracting parties agree in such case to nominate conciliatory commissions."

The Mutual Assistance Pact of October 10, 1939, which was forced upon Lithuania by the Soviets after they had colluded with Hitler to seize Lithuania and other neighboring countries, stated:

"The realization of this treaty must not infringe the sovereign rights of the contracting parties, especially the structure of their state, their economic and social systems, military instruments and altogether the principles of nonintervention of one state in the internal affairs of the other state."

These treaties and pacts completely and solemnly provided for peaceful coexistence, nonaggression against one another of the contracting parties and noninterference in one another's internal affairs. By these treaties Lithuania's independence was recognized and her territorial integrity guaranteed. These points were particularly repeated in the Mutual Assistance Pact. In presenting this pact to the Supreme Soviet for ratification on October 31, 1939, Minister of Foreign Affairs Molotov solemnly and publicly proclaimed:

"This treaty stipulates the inviolability of the sovereignty of the signatory states and the principle of noninterference in each other's affairs. We stand for the scrupulous observance of treaties and declare that all nonsense about sovietizing the Baltic countries is only to the interest of our common enemies and all anti-Soviet provocateurs."

And what, pray tell, happened to all of these solemn agreements and official public pronouncements? Not even 8 months after Molotov's formal statement, the Soviet Union trampled them all underfoot. She executed the criminal secret agreement of September 28, 1939, with Hitler, occupied Lithuania by force, interfered in Lithuania's internal affairs, sovietized Lithuania and, against the people's will, annexed her to the Soviet Empire.

Are these Soviet acts compatible with the high-flown words of Molotov, Mikoyan, Khrushchev, and their comrades?

Of course not. They will be compatible only when they will restore sovereign rights and self-government to Lithuania and other countries which they now occupy and dominate, and abide by their treaties, pledges, and undertakings.

Khrushchev has proposed to withdraw occupation forces from West Berlin and to declare it a free city, guaranteed by the big powers and the United Nations. Why just Berlin? Why this magnanimity to just one-half of one city? Why don't the Soviets withdraw their occupation forces from the Baltic and other states—restore to them their freedom as provided in their peace treaties, and pledge their future inviolability to them and to the United Nations.

The Lithuanian nation demands that the Soviet Union withdraw its troops, police, agents, and colonists from Lithuania, return Lithuanian deportees from Siberia and elsewhere in Russia and keep its pledges, set forth in the treaties of peace and nonaggression, not in words but in acts.

Medicine and the Conquest of Space

EXTENSION OF REMARKS
OF
HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. KILDAY. Mr. Speaker, throughout the U.S. Air Force, the city of San Antonio, in my home district of Texas, is regarded with the affection reserved for the alma mater. And indeed it was there that great numbers of men—commissioned, and noncommissioned, rated and nonrated—began their Air Force careers.

Many years have passed since the establishmnt of the air training bases near San Antonio. The tremendous pace of progress in the arts and sciences of flight, however, has brought us to the borders of space itself; a logical extension of the conquest of the air.

That such progress was clearly foreseen by the Air Force is attested by an observance on February 9, 1959, at Randolph Air Force Base, in the District I have the honor to represent. This observances was in commemoration of the 10th anniversary of the establishment, within the Air Force School of Aviation Medicine, of a Department of Space Medicine.

This was no impractical, visionary step.

Ten years ago, the Air Force scientists realized that with operational altitudes already at 40,000 feet they were within a scant four miles of the beginning of the space environment itself. It was evident that aviation research and development would soon take the earth-adapted human being into an altogether alien environment. The decision was taken, then, 10 years ago, to prepare for that day when man would be expected not only to enter, but to work in, and to return from, the far reaches of the cosmos.

Today we can salute the foresight of Maj. Gen. Harry G. Armstrong, now retired, but then the Commandant of the Air Force School of Aviation Medicine. And we can salute the guidance given to this work toward space by the distinguished physician and physiologist, Dr. Hubertus Strughold.

A recital of their findings through the years would be too long to undertake today. One example out of dozens of projects and studies is the recent experiment in which Airman Donald Ferrell spent 7 days in a sealed cabin in simulated space flight. This experiment provided valuable data concerning the physiological requirements for one man in a hermetically sealed cabin and vital information relating to performance and behavior under the conditions men will experience when they are actually in space. The studies in the Department of Space Medicine have been directed toward the problem of the human organism in space; however, the earth-bound human has already begun to profit materially from the work of these space medicine pioneers.

A technique developed there, for example, primarily as a research tool, is finding application in operating rooms, where it is used to measure the anesthetic gases absorbed by a patient under surgery. Again and again, humanity benefits from military research.

My specific purpose today is to call attention to the important ongoing work of the Department of Space Medicine in the Air Force School of Aviation Medicine. I wish to commend this group of dedicated workers to the Nation on the 10th anniversary of their work, and to remind all of us that we may be thankful for their farsightedness and intelligent devotion in their self-appointed tasks—work which we must remember was undertaken at a time when there was little support or general comprehension of their purposes. As we peer into the future, awake to the full meaning of our conquest of space, we must resolve for continuing support of these farsighted Air Force scientists who help point the way to our success in space. In addition to commending this group, as responsible citizens we should charge them to pursue this Air Force research so vitally concerned with the practical orientation of man in space.

Integrated Housing Called for in New York To End Discrimination Evil

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the statement of Dr. Gardner C. Taylor, president of the Protestant Council of the City of New York, before the Federal Civil Rights Commission hearing on discrimination in housing on February 3, 1959.

Dr. Taylor's statement appeared in the February 7, 1959, issue of Protestant Church Life:

DR. TAYLOR URGES MORE LOW- AND MIDDLE-INCOME HOUSING—PROTESTANT COUNCIL PRESIDENT HEARD BY CIVIL RIGHTS GROUP—INTEGRATED HOUSING CALLED FOR TO END DISCRIMINATION EVIL

I am pleased to speak today in the name of the Protestant community of New York. The very fact that in this greatest city in our Nation, I, the titular leader of one of its three great religious faiths, could be a

member of a racial minority, and the most disadvantaged national minority historically, augurs bright promise for the fulfillment in this country of the purposes for which this commission has been established and for the early resolution of the problems of segregation and discrimination throughout this land.

The home is the basic unit of our society, and in New York City some 600,000 families, or 2 million citizens, occupy dwelling units which are below standard for wholesome and healthy living. These substandard and overcrowded dwelling units are occupied to a marked degree by Negro and Puerto Rican families, and, to a less extent, by Jewish families. All of the reasons why these minorities occupy a disproportionate amount of the substandard dwelling units are not traceable to racial or religious discrimination, but discrimination by race or religion does form entirely too much of the reason. It is a known fact that these racial and religious minorities, easily discernible by color or accent or religious practices, find the greatest difficulty because of irrational prejudices in escaping the ghettos in their quest for better living conditions. Also, the oldest housing falls to those least able to pay for better housing, and those least able to pay, because of economic discrimination, are Negroes and Puerto Ricans. Thus great, dark, depressed, seething geographical and psychological ghettos scar the city and the Nation. Those outside the slum area fear the alien monolith represented by the ghetto and libel and label as inferior or dirty or violent all who live on the racial or religious reservation. The residents of the ghetto, on the other hand, develop angry and bitter resentments toward those who live beyond their ragged, run-down borders, all of whom they feel are somehow responsible for the conditions under which they must live and rear their children.

There are those who say that the people who inhabit the ghettos are dirty people who depress property values wherever they live. It is an open secret, however, among minorities that the suppliers of private housing in our cities, the real estate interests, keep the supply of housing available to minorities at a trickle, while the demand remains enormous, in order to keep the price exhorbitant. Thus an area, block by block, is made available to minorities. The great rush for the thin supply inevitably means that overcrowding and excessive purchase price doom the area to blight, if it is not already blighted by the time the minority families secure occupancy.

In such an area, crime increase at a frightening rate. A few years ago, the New York Academy of Medicine reported that the 2½ million people living in substandard areas, and comprising 20 percent of the metropolitan residential area, accounted for 45 percent of our crimes, 55 percent of our juvenile delinquency, and 60 percent of our disease. An overcrowded living condition strains family life, induces frustration, encourages immorality, breeds violence, and cripples the minds and bodies of growing children. This, indeed, is a form of infanticide.

In junior high schools whose population is composed of minority groups the percentage of substitute teachers is 30 percent higher as compared to areas whose school population is not drawn from minority groups. The facilities are often the oldest, the background of the children the poorest, the learning motivation the weakest, the teaching the least efficient.

The city of New York is aware of the problems. Under the courageous leadership of Robert Wagner and the city council this city has begun an honest, forthright war on discrimination in housing. The Brown-Sharkey-Isaacs bill has put the city solidly on the side of integrated housing. The full impact of this legislation cannot yet be measured, but its effect is bound to change the face of New York in housing time. The Baker-Metcalf bills in State housing promise a far brighter housing picture for all of New York State.

The Federal Government must not only continue but increase its housing programs for low-income and middle-income dwellings if we are to win the battle for good housing for all our citizens. Better, more equitable plans for relocation of tenants in slum clearance areas must be devised. Almost invariably the slum-clearance area is unbelievably overcrowded. Often there have not been dwelling units available for those who are compelled to move. By throwing a number of evicted people into an already inadequate housing market larger than the number for whom housing in the cleared area is provided, the problem's solution becomes a part of the problem itself. Also, many persons operating small business have lost their locations without adequate compensation. There is a question in many minds as to whether the Federal and State and local governments have been as solicitous as they might have been in the equal preservation of the churches and synagogues of the major faiths which are located in housing developments.

The need for federally aided middle-income housing is very great. Since middle-income families are ineligible for low-income publicly supported housing they have been driven to increase the number of slum dwellers or move to the suburbs, thus depriving the city of their great strength, perhaps the chief financial and moral strength of any city. The housing provisions that have been made for these middle-income families are far from adequate.

Gentlemen, the great unsolved riddle of our democracy is the problem of discrimination because of race or religion. This is the dangerous disease in our body politic. The symptoms may vary in intensity in different parts of the body, but the malady is throughout the Republic. The Nation's moral health depends so much on cleansing our Nation of the guilt and shame of segregation and discrimination. In all likelihood, this Nation's permanent appointment with history may well depend on whether or not we free ourselves of these destructive divisions and enmities of color and creed and origin. A fair and freely integrated housing pattern in this city, and all cities, will go far, very far, toward solving America's greatest problem—discrimination.

White Doctors Elect Negro President

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. McCORMACK. Mr. Speaker, I enclose in my extension of remarks a most interesting and informative article appearing in the Boston Sunday Globe of February 15, 1959, relating to Dr. L. M. Donalson of Fayetteville, Tenn., and the understanding and constructive community spirit action of the doctor members of the Lincoln County Medical Association in electing Dr. Donalson as president of their medical association.

More than anything else, nobility of mind such as possessed by Dr. Donalson and what such nobility of mind symbolizes to others is the road to understanding and progress in our association with each other. In different spheres of human activity in all parts of our country, and without regard to race, color or creed, there are countless persons who by their fine life are missionaries of understanding, and who reduce areas of misunderstanding and tension by widening areas of understanding and respect.

WHITE DOCTORS ELECT NEGRO PRESIDENT

FAYETTEVILLE, TENN., February 21.—He came to Fayetteville with little more than a diploma and a 98-cent medical bag.

And in those penny-hard depression days, he began his long service ministering to the medical needs of his fellow Negroes.

For his service, Dr. L. M. Donalson, 51, has won praise and recognition.

But no honor can touch the one recently given him. His colleagues—all of them white—picked him to be 1960 president of the Lincoln County Medical Association.

Nowhere else in the southland does a Negro head such a white professional group.

How did Donalson react to his election?

He seemed somewhat embarrassed by the attention focused upon him.

"I'm just a country doctor trying to make a living," he says.

The doctor showed similar reticence about having the county's Negro hospital named after him.

When the Lincoln County court announced that it would be known as the Donalson Hospital, he suggested:

"Call it the Booker T. Washington Hospital."

"Booker T. Washington was a fine man," Donalson was told, "but he never did anything for Lincoln County."

Naming the hospital for Donalson as well as his selection as association president-elect were accepted locally as the rightful thing to happen to a man of proved ability.

Thus, white and Negro residents of the county were astonished that there was such widespread attention given Donalson's election.

Negroes in the area are "very, very proud he received such an honor," says James Lemons, Lincoln County Negro leader who is an agriculture teacher at Fayetteville's Negro high school. He adds: "However, Dr. Donalson is high qualified."

Whites and Negroes alike point with pride not only to the Donalson Hospital but to the well equipped Negro high school, a big new Negro elementary school, and a summer recreation program for Negroes.

"Let the preachers handle this," Dr. Donalson, who has a number of white patients, says of integration. "All I can do is practice medicine. I think doctors should stay in their place and let politics alone. We have no problem in this county at all."

The white doctors who elected Donalson call the move routine. Young Dr. Lex Patrick, the current head of the association, explains that Donalson was a qualified member in good standing, and it was about time he took over the president's chores. The election was without opposition.

The doctor's arrival in Fayetteville in 1932 after graduating from Meharry, a highly ranked medical college at Nashville 85 miles away, is something of a local legend.

Donalson picked Fayetteville, because it was small enough so he could walk from patient to patient. He had no car and no hope of getting one.

Before boarding the bus in Nashville, he bought his equipment—a 98-cent medical bag, one 40-cent roll of gauze, a roll of adhesive, 1 artery clamp, and a stethoscope. With that he set up a practice.

That practice led him for 6 months on foot, then in a borrowed car, to Negro homes in the town and for miles around. There were frequent stops at the offices of his new friends, the town's white doctors, who not

only assisted in difficult operations, but opened their supply rooms to him.

Lack of facilities didn't stop the need for operations.

"Most of them took surgery at home," Dr. Donalson says. It was usually a good choice. The town's first Negro hospital, opened in 1936, was a rundown double tenement house with two beds.

Donalson put a request before the county court for a real hospital for Negroes. The court gave him an old dormitory from the white hospital, provided the Negroes could raise $500 to move the structure to the town's Negro section.

The newly established hospital was destroyed by the 1952 tornado.

Donalson went to the court again. This time it offered to pay rent on a house to be used as a temporary hospital.

Then the court granted the hard-working doctor's biggest dream. A new $100,000 hospital. Included were an operating room, a delivery room, X-ray room, office, treatment rooms, a laboratory, a small nursery and rooms for about a dozen patients.

Almost as soon as it was built the hospital, which is nearly self-supporting, was overcrowded. Again Donalson appealed to the county court.

"They've never turned me down," he says. The court authorized a 10-bed wing and construction is already underway. Donalson gives the court most of the credit for the modern medical service to Negroes in the area.

He plans another appearance there soon. "What I really want," he says, "is a pediatrics wing staffed by interns and resident specialists from Meharry."

When he started his Fayetteville practice, Dr. Donalson had one thing in mind: Earn enough money to get to New York City and practice there. It wasn't long before local white doctors talked him into staying. Now he is trying to get young Negro doctors to do likewise in places like Fayetteville.

"Everybody's grateful to Dr. Donalson," says Mrs. Herbert Baker, a patient of Donalson for 18 years.

And Dr. Donalson is grateful to everyone. An extremely modest man, his own description of his work consists of credits to others, his college, the Lincoln County Court, Fayetteville's white physicians and the towns' business and civic leaders of both races.

He's not sure he likes the amount of publicity his new medical association office has brought him. Like his fellow townsmen he prefers to take it quietly in this stride. Had he known he was coming, he told one of a recent string of visiting newsmen, "I would have been out somewhere hunting rabbits."

Mayor Hubert Kilgore and "The Need for Federal Aid for Schoolhouse Facilities"

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. HUDDLESTON. Mr. Speaker, on yesterday, February 17, 1959, a fine group of mayors from 35 different Alabama cities and towns came to Washington for a conference with the members of the Alabama congressional delegation. The purpose of the visit was to enable the Alabama League of Municipalities to present its views on 20 separate legislative items presently pending before the Congress.

Twenty mayors each presented the position of the league on a particular field of legislation. Among the 20 was the Honorable Hubert Kilgore, mayor of the progressive and expanding city of Irondale, Ala., in my district, who commented on the subject of "The Need for Federal Aid for Schoolhouse Facilities."

With the thought that Mayor Kilgore's remarks will be of interest to the Members of the Congress, I am privileged to insert them herewith in the Appendix to the CONGRESSIONAL RECORD:

THE NEED FOR FEDERAL AID FOR SCHOOLHOUSE FACILITIES

(By Hubert Kilgore)

I am certain that there is no more pressing need in Alabama communities today than that of our schools for adequate classroom facilities. Our school population is increasing at a very rapid rate year by year, and the need for more classrooms increases just as fast—but the supply of decent or standard schoolhouse facilities is falling behind all the time.

This is not a problem just in Alabama. It is Nationwide—no matter how rich or poor the States may be. The problem is that there simply is not the taxing power in the States and local communities to raise anything like the amount of money needed for construction of adequate schoolrooms. Only the Federal Government has that kind of revenue-raising power.

I was impressed by an article that able and far-sighted Congressman CARL ELLIOTT of the Seventh Alabama District wrote back in 1955 for the Alabama Municipal Journal on the subject of education and the need for a Federal-aid program to help solve school-building needs. He quoted Walter Lippmann, famous newspaper columnist, as writing this about our failure to provide national support for education. I quote from that item:

"We must measure our educational effort as we do our military effort. That is to say, we must measure it not by what it would be easy and convenient to do, but by what is necessary to do in order that the Nation may survive and flourish. We have learned that we are quite rich enough to defend ourselves, whatever the cost. We must now learn that we are quite rich enough to educate ourselves as we need to be educated."

IS FEDERAL-AID NEEDED?

Mr. ELLIOTT went on to inquire: "Does this mean Federal aid for a school-building program?" He then added: "Yes, it does. It means first of all that the Federal Government is going to give grants-in-aid to the States for highways and hospitals, and I agree that it should. It must be prepared to do the same thing for schoolhouse construction. It is common knowledge that our States are inclined to extend themselves where their efforts are matched by Federal dollars. * * * I feel very strongly that the Federal Government has a definite and measurable responsibility toward providing educational facilities for our Nation's children."

I agree wholeheartedly with Congressman ELLIOTT. To bridge the gap between the need for schoolhouse facilities and the ability of the States and municipalities to finance needed classrooms and related facilities, we simply must have an adequate Federal-aid program. I am not familiar with the details of the proposed school-aid bill recommended last week to Congress by the President, but I can say as a small city mayor that if anything like what is needed in a program of this sort is to be had, Congress needs to look the President's proposal over with great care because he isn't noted for favoring domestic programs to anything like the size and extent he is foreign aid programs—including the building of all kinds of community facilities in foreign nations while we suffer here for the lack of them.

THE SCHOOLHOUSE SHORTAGE IN ALABAMA TODAY

To give you gentlemen some idea of the school facilities deficiency in our State today, I would like to cite facts and figures made available to us just last week by the State department of education. They are based on a survey conducted in recent months by the Alabama Education Commission, a study group set up by the State legislature to look into education problems in our State.

To bring our schoolhouse program up to a reasonable standard we need 8,000 more classrooms. In addition, the space needed in the school buildings to provide libraries, lunchrooms, cafeterias, auditoriums and gymnasiums would amount to the equivalent of 4,000 more classrooms—making a total of 12,000 classrooms needed. The cost of such a program would amount to $317 million.

Even though education is a State government function in Alabama under the provisions of our Constitution, you gentlemen will be interested in the fact that the State does not invest one dime in school buildings. All schoolhouse facilities we have are built by municipal governing bodies, county and city school boards. The total annual expenditures of all 300 incorporated towns and cities in Alabama for all municipal purposes amount to $50 million. So if every dime of our revenue were used for school construction for 6 years—providing no support for police, fire, water, street, sanitation, public works and other municipal services—we still would not be able to build school facilities fast enough to catch up with the demand.

I think it is easy for all of us to see that there must be Federal aid if the local communities are to have the classrooms and related school facilities needed to take care of our ever-expanding school population.

Point of No Return After Planter Takes A or B Plan

EXTENSION OF REMARKS
OF
HON. JAMIE L. WHITTEN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. WHITTEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Jackson Daily News of February 15:

POINT OF NO RETURN AFTER PLANTER TAKES A OR B PLAN

(By Florence Sillers Ogden)

The $64 million question is upon us.

Will the cotton planter take the A or the B plan?

Inexorably we move closer and closer to the ides of March, the deadline. The planter must make up his mind by the 16th day of March and sign on the dotted line.

There is no point of return.

From then on he is in the hands of the elements and the Government, and may soon be on the welfare.

It's fewer acres under A, with a higher price guarantee, or increased acres and lower price—from 4 to 6 cents a pound less.

Farmers, like merchants, have to have a reasonable turnover. Yet, on the other hand, they can't produce cotton below production cost. They cant' pay high for what they have to buy and sell low. They cannot compete with the pauper wages of foreign growers, under a controlled program, while U.S. labor and farm supplies run wide open with the sky as the limit.

Cotton trade advances the theory that cotton is pricing itself out of the market. That really stirs up my red hair. The manufactured good, machinery, etc., the farmer buys, and the labor boys are what is pricing cotton out of the market.

TRADE SUGGESTION

The trade suggests that the farmer reduce by 15 points the parity price. Well, if the farmer has to reduce, why not the warehousemen, the poison dealers, the farm equipment people, labor, compresses, banks, buyers, oil mills, and cotton mills take their share of the reduction? Then the farmer might be able to make a small profit and retain a just share of the world market for the United States.

But no, the cotton grower is the only one anyone ever suggests to take the licking.

When will the farmers ever learn that somebody else is doing their talking for them?

Surely no farmer in his right mind is going to go about crying that cotton is too high, when everything he buys or uses is skyrocketing to the moon.

As for the A and B plan:

To add to the joys of making the great decision on just how you're going broke, on the eve of the day of decision the Department of Agriculture announces a reduction in parity via a new way of figuring parity.

Now this new rule is some strange thing born in the Department—and out of wedlock, I feel sure—the brain child of the bureaucrats. Nobody understands this will-o'-the-wisp called change in parity, least of all the Department of Agriculture, or else they never could have reduced it when everything is selling at the highest prices ever known except farm products.

PARITY FIGURE

Parity is based supposedly on the relative value of farm products and other goods in 1912, or thereabouts.

How they arrived at the present parity reduction, only the bureaucrat knows. How they reduced it in the face of rising prices for everything but farm products, only the Department of Agriculture knows. Where it is taking us only the Lord knows.

When people yell about farmers deliberately building up a cotton surplus for the U.S. Government to hold, I say: "'Taint so."

The surplus foundation was built in the fall of 1950 when the Government placed an embargo on American cotton, stopped all shipments to foreign markets, closed down the cotton exchange, put a ceiling on our cotton of around 40 cents a pound.

What happened? Foreign cotton sold in the world market for from 75 cents to $1 a pound.

That was when we lost our foreign markets.

American capital went to foreign countries, financed foreign production. The U.S. farmers were left holding the bag.

More than that, our Government (and misguided farm organizations) put on a campaign in 1950 marketing season which urged American growers to produce 16 million bales for 1951. This was put on a patriotic basis, a stockpile, because of the Korean war.

The United States lost the Korean war but the farmers came through with the 16 million bales. We've had a surplus ever since.

FARMER IS LAMB

As long as the things the cotton farmer buys are sold in an uncontrolled, protective market through high tariffs, and he sells in a world market in competition to pauper labor, the farmer is a lamb to the slaughter. You can put that in your pipe and smoke it.

Last month in Washington I was reminded of 1929. Everyone is rolling in money up there. Business is swell, money is on the loose, the rich are getting richer every day.

In the late summer of 1929 I went to Chicago on a round trip excursion rate ticket in a last year's dress to visit my husband's kin. Everybody up there was rich but me. At home everybody was poor, including me. But Chicago was crazy with money. Washwomen were making thousands of dollars overnight on stocks, porters and clerks were riding the waves of prosperity. I felt like Little Orphan Annie at Belshazzar's feast.

After I got home it wasn't long before down here in the cotton patch we heard the reverberation of the big guns of the depression as they fired on Chicago. And believe me, it was some reverberation.

I say: Beware of the Ides of March.

Export-Import Picture Has Changed in Last 2 Years

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 18, 1959

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Daily News of February 17, 1959:

EXPORT-IMPORT PICTURE HAS CHANGED IN LAST 2 YEARS

(By Charles Lucey)

Autos, sewing machines, typewriters, bicycles, steel—almost all the way across the industrial front today the United States is drawing a rising challenge from oversea competitors in export markets.

At one time it must have seemed nobody could peddle sewing machines around the world the way Americans could. But the picture has changed, as shown in our own export-import figures for the last 2 years. In 1956 and 1957 we shipped abroad 80,000 sewing machines; we imported 2 million.

In 1957 we exported about 100,000 typewriters and imported 337,000. In January–September of 1958 we shipped 42,000 typewriters overseas and took in 280,000.

As for bicycles. Arrivals last year—800,000. Exports—negligible.

REPORT

President Eisenhower's economic report to Congress the other day noted our auto exports have shown a pronounced decline, even in the boom oversea selling year 1957. In the first half of 1958 foreign car imports were five times U.S. auto exports.

The overall figures suggest no cavein of U.S. selling abroad. The roughly $16 billion of exports in 1958 was perhaps $4 billion under the high rate achieved in the first part of 1957. But due to the Suez crisis and other causes, sales abroad had been abnormally high in the earlier year. Comparison of 1958 with 1956—years not too different—may be fairer.

Yet Mr. Eisenhower told Congress:

"While imports were well maintained, exports declined sharply after mid-1957 * * *. From the first half of 1957 to the first half of 1958 the value of U.S. merchandise exports fell more—in relative, as well as in absolute terms—than those of all other countries combined.

"Exports of the industrially developed countries declined relatively little, and unlike those of the United States, remained significantly higher in the first 6 months of 1958 than in the first half of 1956."

SIX MAJOR ITEMS

By far the greater part of the recent falloff in U.S. exports—and this was true of the 1957 export rise—came in six major commodities. That is, petroleum, cotton, wheat, metals, coal, and autos. The President observed also that the effect of this changed world market situation on U.S. steel exports has been aggravated by intensified price competition from foreign suppliers.

There always must be give and take in foreign trade: old markets and traditional product lines are supplanted by new ones. Western Europe's industrial development may cut into our exports of finished goods but the United States may sell Western Europe more raw materials and machine tools to help make such finished goods.

But overseas competitors, especially Western Europe and the Japanese, have been closing the gap in technology and increasingly exports may rise or fall on superiority of product design or lower prices. Studies made up to now still leave some economists skeptical on how great the advantages really are in favor of lower cost output abroad, yet many businessmen are convinced of the great danger of high U.S. costs.

LABOR VIEW

Labor economists by no means accept the notion that high wage rates here will be the factor to lose export markets for this country—and hence jobs for Americans—in future foreign trade competition.

They insist that placing blame on high wages is a smokescreen, arguing that most of the inflationary price rise of the last 2 or 3 years has come in food increases, advances in costs of services and in other areas quite outside the industries where collective bargaining by unions has forced prices upward.

They contend the greatest danger is likely to come by establishment of United States factories overseas, especially in the new European common market area, to escape tariff and quota discrimination against United States-made products.

The labor people contend also that technology advances abroad are not the only answer. They say availability of raw materials and presence of mass markets, both of which the United States has, still will enable this country to produce goods to compete price-wise with lower labor-cost nations.

CONTENTION

AFL-CIO Secretary James B. Carey, who studied European industry extensively, contends the United States still has the technology and the better work habits of American workers to outproduce them. He contends—as do other labor spokesmen—that prices on too many United States products are set at levels to produce a too-high profit.

He says they reflect low volume production instead of the cheaper unit prices possible with a high consumption, high volume economy.

It's an argument bound to be fought out harder in days to come. The possible loss of a sizable share of our foreign markets—for reasons of inability to compete because of high costs and for other reasons—represents too great a hazard to be accepted without much travail here at home.

Department of Defense Multibillion Dollar Supply Systems

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. McCORMACK. Mr. Speaker, during the past decade, there have been a number of objective studies, investigations, and reports by qualified people which point to the need for better management of the many common supply and service systems in the Department of Defense, which have stock valued at $46 billion. Within the past year, the Comptroller General of the United States has issued a number of reports which show beyond doubt that much needs to be done to improve these systems.

In 1951 the Secretary of Defense ordered a study to test the feasibility of one service handling medical and dental supplies and equipment for all services. The test, though successful, was terminated in November 1954, over strong protests of many Members of both Houses of Congress and others. A year later, the Secretary of Defense started similar tests along broader lines to handle subsistence, clothing, medical, and petroleum products under a unified approach called single manager plans.

Numerous statements by officials in the Department of Defense during the past 2 years indicate that the single manager plans point to much-needed progress. However, Secretary McNeil seemed to testify to the contrary on February 10, 1959, before the Joint Economic Committee. I have, therefore, requested Secretary McElroy to clarify the matter. My letter to him on February 15, 1959, is as follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., February 16, 1959.

Hon. NEIL H. McELROY,
Secretary of Defense, Department of Defense, Washington, D.C.

DEAR MR. SECRETARY: I have reviewed the testimony of Assistant Secretary McNeil before the Joint Economic Committee on February 10, 1959, concerning the effectiveness, economy, and efficiency of the single manager plans for subsistence, clothing, medical, and petroleum products.

It is disturbing to note the wide disparity in Secretary McNeil's testimony with that of other Department of Defense witnesses before congressional committees in recent years.

I would think that sufficient time has elapsed since the plans were initiated to permit the Department of Defense to issue a factual evaluation of them. The enormous overlapping, duplicative and wasteful supply systems in the numerous divisions of the Department of Defense contain stocks valued at $46,585,403,000 as of June 30, 1958 according to figures you have furnished the Government Operations Committee of the House.

Even a casual review of the distribution and ownership of the staggering total reveals the excesses and duplications within and among the departments. I might add that this inventory of $46 billion is more than the entire 1960 budget for the Department of Defense, is over 60 percent of the national budget of $77 billion and is almost one-sixth of the national debt. Yet the supply systems inventories of $46 billion are only a portion of the worldwide Department of Defense personal property inventories of $120 billion from which a $10 billion surplus disposal program is expected in fiscal 1960.

Furthermore, the many hearings of congressional committees, the Hoover Commission reports, studies of the National Chamber of Commerce, numerous reports of the Comptroller General of the United States and others attest to the degree of waste and the need for much better management in these areas in the Department of Defense. There can be little doubt about it.

This is no new idea, Mr. Secretary, which has been provoked by recent events. The O'Mahoney amendment to the Department of Defense Appropriation Act, 1953, called upon the Secretary of Defense to develop an integrated supply system. Many Members of Congress from both Houses and parties sponsored the measure, and some early progress was made in implementing it.

After the termination of the Alameda medical supply test, which was a single-manager plan, I wrote to your predecessor on October 24, 1955, and stated, in part:

"The whole story of the Alameda test was detailed to you in Congressman THOMAS B. CURTIS' 13-page letter of January 19, 1955. Certain of the Hoover reports confirm the conclusions of the congressional reports and enactments as to the need for more integration among the military services with respect to common supplies and services and as to the necessity of following applicable laws and regulations.

"As I view the situation, Mr. Secretary, not only is the basic problem of constitutional government involved, but many other issues of real concern to the American people. I will comment briefly on some of them.

"The facts are conclusive that our educational facilities—though basic to defense—need great assistance. Large sums are required for the development and conservation of basic natural resources. Billions are needed for highways and public works. Costly outlays for fundamental and applied research are a must if we are to keep ahead in the technological race. Our health institutions are not in th state we desire. Oppressive taxes should be reduced, especially for the low-income groups. The budget requires balancing in its turn and the ever-growing national debt reduced.

"As you know, I am, and have always been, an advocate for a strong national defense upon which to support a foreign policy. It is also essential to our survival. I will not be beguiled into laxity by the palliative tactics now emanating from the Kremlin. No one dares be. I believe that our defenses and basic institutions should be strengthened in every possible way for the long pull ahead.

"But the evidence is conclusive that the overlapping, duplication, and waste is of such magnitude in and among the military services as to make possible enormous savings, with no loss of efficiency or military effectiveness, and thus release funds badly needed for the objectives listed above."

Since that date our fiscal and defensive positions have, in my opinion, worsened. The national debt continues to grow and the budget, if balanced, as some contend, is from the bookkeeping point of view. It does not provide for investment expenditures in many fields.

It was for these reasons that I sponsored the amendment to which you agreed in the Department of Defense Reorganization Act of 1958 empowering you to "provide for the carrying out of any supply or service activity common to more than one military department by a single agency or such other organizational entities as [you] deem appropriate." I realize that this statute has been in effect for only 6 months, but the single-manager plans have been operating for a considerable period of time.

I will appreciate an authoritative evaluation from you as to the success of the single-manager plans and what is programed for the future as to other common classes of supply and service functions. I might add that it is not my contention that the single-manager plans are the ultimate. I can visualize that it may prove to be impracticable to have two or more single managers operating in the same depot under different departments, and that something more general may be required. However, it does seem apparent that steady progress must be made.

This is a subject of wide interest, so I will insert this letter in the CONGRESSIONAL RECORD and will afford your reply the same consideration.

Sincerely yours,
JOHN W. McCORMACK,
Majority Leader.

Mayor Claud Smithson—"The Increasing Importance of Intergovernmental Relations"

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. HUDDLESTON. Mr. Speaker, on yesterday, February 17, 1959, a fine group of mayors from 35 different Alabama cities and towns came to Washington for a conference with the members of the Alabama Congressional Delegation. The purpose of the visit was to enable the Alabama League of Municipalities to present its views on 20 separate legislative items presently pending before the Congress.

Twenty mayors each presented the position of the league on a particular field of legislation. Among the 20 was the Honorable Claud J. Smithson, mayor of the progressive and expanding city of Fairfield, Ala., in my district, who commented on the subject of "The Increasing Importance of Intergovernmental Relations."

With the thought that Mayor Smithson's remarks will be of interest to the Members of the Congress, I am privileged to insert them herewith in the Appendix to the CONGRESSIONAL RECORD:

THE INCREASING IMPORTANCE OF INTERGOVERNMENTAL RELATIONS

(By Claud J. Smithson)

The relations between the Federal, State, and local governments determine the limits of the ability of municipalities to solve their own problems and to serve their citizens. Therefore, progress in American municipal governments is dependent on a proper relationship and understanding between the various governmental levels and units.

The need for such an understanding is emphasized by looking at the many areas in which questions of intergovernmental policy and action arise. For example:

1. The competition for revenues.

2. The overlapping and duplication of services.

3. The tendency to provide so many independent governmental units in a geographic area that it no longer functions as a recognizable governmental unit.

4. The tremendous effects of State and Federal grants-in-aid on local governments.
5. The impact of State and Federal standards and State and Federal personnel on local affairs.
6. The demand for local services and expenditures growing out of Federal programs.
7. The competition for high grade personnel between the Federal, State, and local governments.
8. The absence of any overall policy on relations between the levels and units of government.

OPPORTUNITIES FOR CONSTRUCTIVE PUBLIC ACTION

All these relations and problems are also opportunities—opportunities for initiative and constructive public action, serving the general community.

There is no inherent antagonism between the Federal Government, the States, and the municipalities. In its overall aspects, government should be conducted as if it were concerned with all of the people and with due regard for its impact on the individual citizen where he lives.

The Alabama League of Municipalities endorses the philosophy expressed in the 30th Report of the Committee on Government Operations in regard to Federal-State-local relations that:

"The interest and initiative for increasing the responsibilities of the States and localities must come from those levels of government. Responsibility cannot be created by a transfer of programs and tax services. It is imperative that the Federal Government do everything possible to promote a favorable climate for the proper functioning of the other levels of government. This includes making available to the States and localities those revenue sources that are not of primary importance to the Federal Government and which are well adapted for State and local use. Such action should be taken independently of Federal decision concerning particular grant programs."

NEED FOR A PERMANENT NATIONAL COMMISSION

We also agree completely with one of the major recommendations of the Committee namely that: A permanent national commission on all phases of Federal-State-local relations be created pursuant to an act of Congress. Its members should be true representatives of each type of government. Few activities are more urgent or more important as a means of proving that a democratic Federal Government can work effectively and harmoniously.

We also believe that the representatives of municipal interests have long been pretty consistently ignored in the development of national policies and programs which vitally concern them. The role of the cities in the national economy has never been fully evaluated or understood.

To a large extent the problem stems directly from the fact that the representatives of urban interests and affairs are not represented as such in the councils that shape fundamental Federal policy.

No single individual or agency at the Federal level is concerned with urban problems. Nowhere at the Federal level has it been recognized that the many urban problems with which the Federal Government now deals, highways, airports, urban renewal, water-pollution control, advance public facility planning loans, etc., are interrelated and cannot be fully effective unless coordinated with one another. Most of the proponents of Federal programs created along functional lines are too limited in their approach and too preoccupied with the progress of their particular effort to make a case for larger and more fundamental problems of urban community development.

DEVELOPING A NATIONAL URBAN POLICY

A national urban policy must be developed on the part of the Federal Government. Only by way of such policy can the various functional programs now operative at the Federal level be related and focused in such a way as to take advantage of the full social and economic potential of the Nation's urban areas.

The question is, then, How do we see to it that such a national urban policy is developed on the Federal level?

The creation of a Department of Urban Affairs has been proposed by many of us who feel that only through Cabinet rank can the urban problems really get the concentrated attention they need.

Also many urban problems are interstate in nature and cannot be handled effectively by the States. Further, the States themselves are neither willing nor able to promote and develop solutions to urban problems.

Other reasons we have for urging a Department of Urban Affairs are: (1) stronger executive leadership in the Government's housing programs must be secured; (2) we need to do a much better job of coordinating existing Federal programs which affect urban areas and governments; and (3) we must fix responsibility for necessary research and policy recommendations concerning urban problems and their solutions.

The Alabama League of Municipalities finds itself in full accord with a resolution passed in Boston by the American Municipal Congress this last December on the subject.

RESOLUTION DISCUSSING URBAN AFFAIRS

The resolution referred to reads as follows:

"Rural areas have been so successful in focusing national attention on the farm problem that our Government today spends more money annually on potatoes than it does on urban renewal of the great metropolitan areas in which more than 70 percent of our people live.

"Unless the city problem is raised to the same level of national consciousness and effective steps taken to halt the steady erosion of our cities, our Nation faces a damaging loss in national strength almost as great as that which could be inflicted by enemy action.

"As a first step in focusing attention on the city problem and granting our urban centers an authoritative voice in the highest levels of our National Government we urge the creation of a Department of Urban Affairs, to be headed by an official of Cabinet rank.

"We further urge that the U.S. House of Representatives and Senate create standing committees on urban affairs, to deal with legislative matters affecting our urban areas.

"As a further step in focusing national attention on the vital problems of our urban areas we urge the President to proclaim a White House Conference on Urban Affairs, which conference would be held a year from the time of issuance of said proclamation, and to be preceded by State conferences throughout the Nation. These conferences would draw together Government officials, technical experts, civic leaders, management, and labor officials, as well as leaders in the many fields of activity involved in urban living, and the conferences would culminate in a national White House conference which would recommend a national urban policy to be followed by our Government."

She Wept

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. FINO. Mr. Speaker, the recent visit to our country of Deputy Premier Mikoyan, of Soviet Russia, was received by the American people with mixed feelings. However, the talented Rev. Owen McEnaney, of St. Helena's Church in the Bronx, expressed poetically the feelings of most when he wrote the following poem:

SHE WEPT

Limousines of varied shade
Led the triumphal parade,
"Welcome! Welcome." the Committee cried,
And a voice was heard:
"Because of him my family died."
Everything was sweetness and light
Festive candles shone brilliantly bright,
Empty smiles linked one with another:
And that voice again was heard:
"He killed my brother."
Red carpets lined the way
Rich bankers led the way
To halls of gold and crimson:
And the voice continued on:
"My son's in a Red prison."
O yes,
A city cheered and roared,
Officials the first to applaud
And decree decorum be kept:
And while this was going on—
The Statue of Liberty wept.

Foreign Policy Officials

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. James Reston which appeared in the New York Times on February 11, entitled "Foreign Policy Officials," which I think should be brought to the attention of every Member:

FOREIGN POLICY OFFICIALS—EISENHOWER, IN CONTRAST TO 1952, SEEKS MEN WHO CAN FILL TASKS ADEQUATELY

(By James Reston)

WASHINGTON, February 10.—President Eisenhower made a comment today that illustrates the change that has gradually developed in the selection of top foreign policy officials of the Government.

He defended at his news conference his record of nominating top officials on the ground that in every vacancy that occurs, we try to find a man that can fill it adequately. Political considerations did enter into his choices, he said, but these were always secondary. Finally, he said that he could not give any more time to the supervision of foreign policy matters than he now did without neglecting his responsibilities in other fields.

President Eisenhower's emphasis today on adequacy was quite different from the theme and tone of the early days of his political career in 1952, when he was talking, not about getting adequate men, but about getting the best men in the country to fill these jobs, regardless of party affiliation.

NINETEEN HUNDRED AND FIFTY-TWO SPEECH RECALLED

The single standard for filling top executive posts, he told the voters in Duluth, Minn., a month before his first election, shall be merit and not political reward.

Two weeks later, he told a rally at Bridgeport, Conn., "this problem of bringing peace to the world is one that is going to demand in Washington the finest people that this country affords, men and women of prestige

in their own region, men and women who in their combined selves can command the respect of, and unite the people of the United States behind great programs."

This issue is up again because the new chairman of the Senate Foreign Relations Committee, Senator J. W. FULBRIGHT of Arkansas charged publicly yesterday that some of the President's ambassadorial appointments had not been up to standard.

Coincidentally, Senator FULBRIGHT and others have complained that partisan political considerations—specifically a protest from the chairman of the Republican National Committee, Meade Alcorn—have blocked the appointment of Henry Labouisse as director of the International Cooperation Administration.

ALCORN PROTESTED

The Acting Secretary of State, C. Douglas Dillon, recommended Mr. Labouisse as the best man for the job, but Mr. Alcorn opposed him on the ground that he registered as a Democrat in one presidential election, 1940.

This is one of those conflicts that might be settled by a little quiet consultation between the President and the Democratic leaders in the Senate, but that could cause considerable trouble in the last 2 years of the Eisenhower administration if it is not resolved.

The President and the Senate share responsibility for appointing ambassadors and other top executive officials. The Democrats, with a 64–34 majority in the Senate, have the power to block the President's appointments, and some of them, particularly Senator FULBRIGHT's colleagues on the Foreign Relations Committee, are in a mood to do so if they think the President has reversed his 1952 principle of "merit and not political reward."

The President is in a difficult position in the Labouisse case. The Mutual Security Program, administered by ICA under the State Department, is the President's favorite overseas program. He defended it again today.

ALLOWED EARLIER BLACKBALL

But he permitted Mr. Alcorn to blackball Mr. Labouisse last year for the deputy directorship of the ICA, and he is now seeking the support of a reluctant Congress for another mutual security appropriation while seeming to be indifferent about his own State Department's second attempt to appoint Mr. Labouisse, this time to the directorship.

As a matter of fact, there is a basis for understanding and compromise in this field. The President complained today that he could not appoint anybody but rich men to major ambassadorships because Government allowances for these posts were not high enough.

It is widely believed here, however, that the President could get the support of Speaker SAM RAYBURN in the House, and Senator LYNDON JOHNSON in the Senate for adequate representation allowances provided he would go back to his original principle of appointing the best men available, regardless of party or financial position.

At most, this would cost under $5 million a year to provide adequate allowances for superior ambassadors and their aids in London, Paris, Madrid, and the other expensive posts. The main objective of U.S. policy is to deter wars. This is the function of diplomacy and of the so-called bipartisan policy of strength, supported by both parties but not extended to the selection of the men who must administer it.

The Democrats are not asking for equal appointments. They are merely saying that, when the President's own officials in the State Department select an experienced and even distinguished man for a major job, he should not be rejected merely because he registered as a Democrat 19 years ago.

They are also saying that in this day, it is not good enough to have American Ambassadors in Madrid, Paris, Brussels, The Hague, Bonn, Copenhagen, Oslo, Ankara, and Athens—to mention only a few—who have no working knowledge of the language of those capitals.

In short, they are making a fuss, not because they oppose the appointments policy the President defined in 1952, but because they agree with it but do not think he has redeemed his promise.

Army "Firsts"

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. FULTON. Mr. Speaker, Maj. Gen. D. E. Beach appeared before the Committee on Science and Astronautics on February 9, 1959, and outlined the Army's progress in the field of missiles. The U.S. Army has a commendable record of firsts in this field.

Under leave to extend my remarks, I submit the following "Army Firsts" in the field of missiles:

ARMY FIRSTS

1. First U.S. ballistic missile firing, May 1947: On May 22, 1947, the first full-scale flight test of a Corporal missile was entirely successful. The missile was fired by a team from the Jet Propulsion Laboratories, under contract to the Army, with participation by the First Guided Missile Battalion, Fort Bliss, Tex. and U.S. Army Ordnance personnel of White Sands Missile Range, N. Mex. Fired at White Sands, the Corporal responded accurately to guidance commands and reached a range of 63 miles.

2. First penetration of outer space, February 1949: On February 24, 1949, a two-stage missile consisting of a German V–2 with a WAC Corporal as the second stage, was fired by the team of scientists under Dr. Von Braun at White Sands Missile Range, N. Mex., as part of the Army missile program. Army personnel of the First Guided Missile Group at Fort Bliss and U.S. Army Ordnance personnel of the White Sands Missile Range participated in the firing of this missile, which achieved an altitude of 250 miles, a world record at that time.

3. First successful intercept of aircraft by guided missile November 1951: The Army R & D contractor (Western Electric) accomplished this on November 27, 1951 at White Sands Proving Ground with the first Nike missile fired at an aerial target. The missile detonated about 25 feet from the target. The target was flying at about 15 miles range, 33,000 feet altitude and at a speed of 300 miles per hour.

4. First operational air defense GM unit December 1953: In December 1953, the U.S. Army Air Defense Command (then called the Army Anti-Aircraft Command) placed the first operational surface-to-air missile system on-site in the continental U.S. air defenses. This unit, a Nike Ajax battalion, was deployed in the Washington-Baltimore defenses.

5. First U.S. operational ballistic missile unit, November 1954: In November 1954 the Army's 259th Field Artillery Missile Battalion (Corporal) completed training at Fort Bliss, Tex., to become the first operational U.S. ballistic missile unit. The battalion was deployed to Europe in February 1955 to provide guided missile support for units in the Seventh U.S. Army.

6. First free world successful IRBM firing May 1957: On May 31, 1957, a full-scale Jupiter missile fired at the Atlantic Missile Range, Cape Canaveral, Fla., was the first successful IRBM of the free world. The firing was conducted by the Army ballistic missile team from the Army Ballistic Missile Agency and the Jet Propulsion Laboratories.

7. First free world solution of reentry problem August 1957: On August 8, 1957, a Jupiter-C ballistic missile, fired at the Atlantic Missile Range, Cape Canaveral, Fla., confirmed the first free world solution to the problem of missile nosecone reentry into the atmosphere. Firing was jointly conducted by personnel of the Army Ballistic Missile Agency and the Jet Propulsion Laboratory, both agencies of the U.S. Army Ordnance Corps.

8. First free world satellite in orbit January 1958: On January 31, 1958, the first free world satellite, Explorer I, was placed in orbit by a Jupiter-C missile, fired from the Atlantic Missile Range, Cape Canaveral, Fla. This project, a joint achievement of the Army Ballistic Missile Agency and the Jet Propulsion Laboratories, was completed only 84 days after the Army was given the mission.

9. First intercept of very low-altitude aircraft May 1958: In May 1958, a Hawk missile fired by the Army R. & D. contractor (Raytheon) successfully engaged an F80 jet target flying at treetop level at White Sands Proving Ground in New Mexico.

10. First intercept of very high-altitude supersonic target missile November 1958: A Nike Hercules missile, fired by the Army R. & D. contractor (Western Electric) in November 1958, destroyed a supersonic target missile traveling faster than 1,500 miles per hour at an altitude greater than 60,000 feet.

Bill To Permit Use of Social Security Records To Trace Parents of Neglected Children

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. VANIK. Mr. Speaker, I have today introduced a companion bill to one introduced by Representative WILLIAM B. WIDNALL, of New Jersey, to permit the use of social security records to trace parents of neglected minor children.

Thousands of parents escape their moral and legal obligations of child support by simply moving to another State and leaving no forwarding address. In the new place of residence the runaway parent simply gets a new job and continues his participation under the social security system with complete protection of social security regulations which prohibit the disclosure of his new residence. Since abandonment of family is a felony in most States, the social security regulations of secrecy protect the potential felon from apprehension.

The interstate escape of runaway parents is costing the States and the Federal Government billions of dollars in public assistance and welfare funds

which must be spent to support abandoned children. In 1958 alone the total bill for aid to dependent children totaled $902,651,000 for the support of 2,155,151 children. Some runaway fathers are believed to have abandoned different families in several States, compounding the wrong.

Under my bill, the Secretary of Health, Education, and Welfare would be directed to supply from social security files the most recent address of a father certified as having failed to support his family to a State, or local welfare agency or to a court of competent jurisdiction.

In addition to the neglected children being supported by Federal funds, hundreds of thousands of other abandoned children are being supported through the sole effort of one parent. When the father runs away from his obligation of family support, it is the working mother who single-handedly assumes the burden of child care. Since she usually receives no public help in the support of her family, the effect of social security secrecy regulations is deplorable.

Under present circumstances it is almost impossible for an American to work anywhere without submitting his social security number. It should be equally impossible for such a person to work without contributing to the support of his dependent children. The Social Security Administration should not be a party to the development of an escape route from the legal and natural obligation of parents.

My attention was drawn to the need for this law by a case which arose in my district. Mrs. Irene Boguniecki, of 3607 East 74th Street, mother of two children, Henry 9 and Marianna 8, filed a claim with the Veterans' Administration as the unremarried widow of her war veteran husband who had disappeared for over 7 years. The Veterans' Administration turned down her claim on the ground that it was in receipt of information from the Social Security Administration that her husband was living and working as of December 31, 1957.

Thus, the regulation opens up social security records for the purpose of rejecting her claim and then denies her an opportunity to use the records to apprehend her runaway husband. Since then scores of mothers of abandoned families have written of their desperate and futile efforts to locate runaway fathers. Last autumn I urged the Secretary of Health, Education, and Welfare to modify social security secrecy regulations, making the new residence of runaway husbands available to the agencies in each community administering the Uniform Reciprocal Enforcement of Support Act. This request has been turned down in order to preserve and maintain confidentiality of old-age and survivors insurance records.

On October 14, 1958, I addressed the following letter to the Honorable Arthur Flemming, Secretary of the Department of Health, Education, and Welfare:

OCTOBER 14, 1958.

Hon. ARTHUR FLEMMING,
Secretary, Department of Health, Education, and Welfare, Washington, D. C.

DEAR MR. SECRETARY: It has recently come to my attention that a resident of my district, Mrs. Irene Boguniecki of 3607 East 74th Street, Cleveland 5, Ohio, has been refused the cooperation of the Social Security Administration in determining the whereabout or the recent employment of her husband, Anton J. Boguniecki, who abandoned her and their two children over 7 years ago and apparently is employed with Social Security coverage somewhere in the United States.

Mrs. Boguniecki recently filed claim on March 28, 1958 with the Veterans' Administration for widow's pension as an un-remarried widow, alleging the death of the veteran by reason of his 7 years' unexplained absence. The Veterans' Administration turned down the claim on receipt of information from another governmental agency (the Social Security Administration) that their records indicated the veteran was living as of December 31, 1957. Upon recepit of this information, the Veterans' Administration properly disallowed her claim as an un-remarried widow.

Under the code of Federal Regulations, Regulation I, relating to the disclosure of official records and information (part 401, chap. 3, title 20), the employees of the Social Security Administration are precluded from disclosing information relating to the employment or residence of a social security beneficiary or contributor to the fund, unless the information is requested by an agency distributing Federal aid under a public assistance title. Under this provision Mrs. Boguniecki would be assisted in locating her husband if she were a recipient of Federal aid to dependent children. She did not apply for such aid, because she preferred, upon the failure of her husband, to work and provide for these children through her own efforts. It seems to me that her entitlement to information relating to the whereabouts of her husband is even greater than that of a person receiving the benefits of Federal aid.

In checking with the local agency administering the Uniform Reciprocal Enforcement of Support Act in this community, I find that there must be thousands of mothers supporting their own children who are unable to locate the fathers, also responsible for such care. Insofar as this information is denied to these working mothers or to State or local agencies charged with the administration of the Uniform Support Act, the effect of of this regulation is deplorable. Since in Ohio and many other States failure to support dependent children may constitute a felony, the Social Security Administration, in effect, shelters many likely felons from apprehension, indictment and prosecution.

Under present circumstances it is almost impossible for an American citizen to work anywhere without submitting his social security number. It should be equally impossible for such a person to work without contributing to the support of his dependent children. The Social Security Administration should not be a party to the development of an escape route from the legal and natural obligation of parents.

I respectfully urge that you give prompt consideration to the immediate revision of the social security regulation barring the disclosure of residence or employment of a beneficiary or contributor to the social security fund and permit public agencies charged with administering the Uniform Reciprocal Enforcement of Support Act to obtain such information for the benefit of dependent children, regardless of whether Federal funds are involved in their support.

Sincerely,

CHARLES A. VANIK,
Member of Congress.

Mr. Speaker, on December 2, 1958, I received the following reply from Mr. C. I. Schottland, Commissioner of the Social Security Administration:

DEPARTMENT OF HEALTH,
EDUCATION, AND WELFARE,
December 2, 1958.

Hon. CHARLES A. VANIK,
House of Representatives,
Washington, D.C.

DEAR MR. VANIK: This is in reply to your letter of October 14 requesting that consideration be given to the revision of the social security regulation barring the disclosure of information to permit public agencies charged with administering the Uniform Reciprocal Enforcement of Support Act to obtain information concerning the residence or employment of a beneficiary or contributor to the social security fund for the benefit of dependent children regardless of whether Federal funds are involved in their support.

As you are no doubt aware, section 1106 of the Social Security Act prohibits disclosure of information from old-age and survivors insurance records except as the Secretary of Health, Education, and Welfare may by regulations prescribe. Regulation No. 1, two copies enclosed, sets forth the information which will be disclosed and to whom. As you will note, the regulation does not authorize the disclosure of information in cases such as that of Mrs. Boguniecki.

However, section 402(a) of the Social Security Act requires that State agencies administering the aid-to-dependent-children program give notice to law enforcement officials where a parent has deserted a child receiving aid to dependent children. In connection with this provision of the law, we are furnishing information as to the whereabouts of a deserting parent of a child receiving aid to dependent children to State assistance agencies on an experimental basis. Under this procedure, however, information is furnished only where the State agency has no recent information as to the parent's whereabouts and has exhausted its other resources for locating the parent. The information provided to the State agency under this procedure may be used only for the purpose of fulfilling its responsibilities under section 402(a) of the Social Security Act.

The confidentiality of old-age and survivors insurance records has been maintained ever since the inception of the old-age and survivors insurance program. It stems from a pledge made publicly by the then Social Security Board, in response to a nationwide public demand, that information obtained from employers and employees for the purpose of administration of the program would be used for that purpose and kept confidential and not made generally available for other purposes. Congress implemented that pledge by enacting section 1106(a) above. Pursuant to the pledge, the regulation which authorizes disclosure does so only in those limited areas which involve the administration of the old-age and survivors insurance and closely related programs, and in certain cases relating to the national security.

It will be noted that section 401.3(f) of regulation No. 1 authorizes disclosure of information to other agencies of the Federal Government lawfully charged with the administration of a law providing for public assistance or work relief, or pension, or retirement, or other benefits for the proper administration of such law. In line with this provision of the regulation, procedures have been established under which information is furnished to the Veterans' Administration where it is needed in determining a claimant's entitlement to payments under a law administered by that agency.

The Social Security Administration has sought and secured the coperation of the public by continued adherence to the policy that the information furnished us would be used for the administration of the Social Security Act and related programs. The successful administration of the old-age and survivors insurance program is dependent on

a great degree on the accuracy of the information which is voluntarily furnished us by the public.

Aside from the likelihood that a general relaxation of the policy might be considered as a breach of trust on our part with a resultant loss of good will toward the program, the retention of the policy is essential from an administrative standpoint. A general relaxation of the present policy, with respect to the confidentiality of the records, would probably cause account number holders to apply for new numbers under fictitious names and new applicants for account numbers to give misleading information because of the possibility that correct information might some day be used against them. Were many individuals to obtain account numbers under assumed names or to submit incorrect data for our records, a serious disruption of the basic operations and services for the social security program might well be anticipated.

Administration of the social security program does not necessitate the keeping of current address information with respect to the more than 120 million persons who have been issued social security account numbers. Thus, the only address information in our files is generally the individual's address at the time he applied for a social security account number. Frequently this happened many years ago. Thus, a person's current whereabouts could be ascertained only if a recent report of earnings for him has been submitted, and then, the only address available would be the address of his employer or place of self-employment. Because of the length of time it takes to receive and process wage reports, there is generally a lag of about 9 months between the time a person worked and the time his wages are credited to his earnings account. There is an even longer period in the case of self-employed persons who file their returns on an annual basis. Thus, the information we could furnish, if permissible, would never be very current and would probably be of limited value for the purpose of locating the present whereabouts of persons.

Since the inception of the social-security programs, we have received a wide variety of requests from law-enforcement officials for information indicating the whereabouts of persons who have committed or who are suspected of committing various crimes. These requests have been uniformly refused, the only basic exception being in connection with an investigation of major importance relating to the commission of an act of espionage or sabotage inimical to the national security.

We have on several occasions reviewed our policy regarding the disclosure of information and we shall continue to do so. However, in view of the discussion above, we believe that at present there are greater equities in favor of continuing the present policy than in revising our regulation along the lines you propose.

We hope the above explains our position in this matter. If further information is desired, please let us know.

Sincerely yours,

C. I. SCHOTTLAND,
Commissioner.

Mr. Speaker, it seems to me that the time is long overdue for Congress to review the need for surrounding the social security records with secrecy in the face of the increasing incidence and costliness of child neglect and family abandonment.

Sewage Called Damaging to Northeast Fishing

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. DINGELL. Mr. Speaker, an article appeared in the Boston (Mass.) Herald on December 11, 1958, telling more about the danger from pollution to fishing and human beings.

That article was an interesting discussion of how everybody points a finger at everybody else on pollution but very few do much about it.

The citizens of New England point to the Navy's dumping of sewage offshore and the Navy points to citizens dumping sewage into the ocean. The result is a thoroughly unsanitary condition for the people in the area as well as serious danger to the fishing and shell fishing industries in the area.

The article follows:

SEWAGE CALLED DAMAGING TO NORTHEAST FISHING—NAVAL DISTRICT HEAD DENIES HIS VESSELS ADD TO POLLUTION

The chairman of the New England Interstate Water Pollution Control Commission charged yesterday that irreparable damage may be caused New England fishing and beaches by the dumping of sewage offshore by naval and merchant vessels.

The commandant of the First Naval District issued a quick denial that the Navy contributed to pollution.

CHARGE MADE IN NEW YORK

Edward T. Dickinson, chairman of the NEIWPCC and a commissioner of the New York Commerce Department, made the charge in a New York speech at a commission meeting.

New England communities spend millions annually, he said, to control water pollution, "yet these efforts are constantly frustrated by the dumping of sewage into offshore waters by vessels with no regard for the efforts and expense of these communities."

"It is highly discouraging," Dickinson added, "for a community to construct with hard-earned tax dollars a facility which will prevent its own sewage from polluting rivers and offshore waters and then to have a vessel—with no apparent concern for pollution—discharge the sewage of hundreds of men.

"There is no excuse for this, when the proper precautions would prevent the pollution of these waters upon which so much of the economy of New England depends."

SAYS PROTESTS IN VAIN

He said the organization has protested to Federal public health authorities oil spills from vessels but that the Commission's attempt to improve the situation have so far been largely in vain.

"It is imperative," he said, "that some action be taken before irreparable damage is done to the beaches of New England and its shellfishing industry."

Rear Adm. Carl F. Espe, First Naval District commandant, denied that naval vessels have polluted offshore waters and pointed out that nobody has made any complaints to us.

ONLY FEW SHIPS

"The only possible place that might be affected," he said, "is Newport, and that's deep tidal water which would carry refuse out to sea.

"We have only a few ships at the navy yard, and we have strict regulations that ships must be a certain number of miles offshore when they refuel or clear their bilges.

"By the way," Admiral Espe added, "don't most of these cities dump their own sewage into the ocean?"

Counselor Clifford Responds for Freedom of Research for Krebiozen

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. LIBONATI. Mr. Speaker, my personal correspondence with the Honorable Counselor Thomas N. Clifford and his attitude on the subject of krebiozen after correspondence with the American Cancer Society and the American Medical Association references only goes to prove that you cannot fool all the people all the time. The edict that krebiozen shall not pass is herculean in its strength of purpose. But I can only say that a bad bargain is a bad fight and that justice will prevail in the end—even if we who feel the urge of a righteous cause must go searching in the dark corners of this infamous conspiracy. In the end we find the answer.

The medical benefits of krebiozen, even in its early experimentation in Senator Vandenberg's case, will be the answer to the world—meantime we investigate. I am proud of the efforts of Attorney Clifford to clarify the issue. His interest is the honest citizen's interest in seeing that the poor, ailing, unfortunate victims of this dreaded disease get the best treatment that medical science, under the freedom of research, can give to him.

The correspondence follows:

BALTIMORE, MD., *November 26, 1958.*

Congressman ROLAND LIBONATI,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN LIBONATI: I would appeciate it very much if you could send me a copy of your remarks with respect to the drug, krebiozen.

I wish to congratulate you for your efforts in forcing and prodding a national agency to do its duty.

I merely note, in passing, that these same agencies which must be prodded to investigate possible cures never have to be prodded when it comes to asking the public for money and telling the public how much they are doing.

Please keep up the good work; you are getting nationwide attention.

Very truly yours,

THOMAS N. CLIFFORD,
Attorney and Counselor at Law.

BALTIMORE, MD., *February 12, 1959.*
The Honorable ROLAND V. LIBONATI,
House Office Building
Washington, D.C.

DEAR CONGRESSMAN LIBONATI: I appreciated your excerpt very much as I had tried to get that issue of the CONGRESSIONAL RECORD and was unable to do so. Enclosed please find a copy of my recent correspondence with the American Cancer Society on krebiozen. I have sent copies of this to Senator DOUGLAS but thought you also would be interested.

I commend you and compliment you for the courage you have shown in this matter.

Very truly yours,

THOMAS N. CLIFFORD,
Attorney and Counselor at Law.

FEBRUARY 16, 1959.

Mr. THOMAS N. CLIFFORD,
Attorney at Law, Baltimore, Md.

DEAR COUNSELOR: I certainly appreciate having the copies, which you recently sent to me, of your correspondence with the American Cancer Society on the subject of krebiozen. I could make use of this material, in order to carry a point, relative to the present controversy between the National Cancer Institute and Dr. Andrew C. Ivy and the Krebiozen Research Foundation.

There is no question but that the American Cancer Society is dominated by the American Medical Association, and the evasive answers to your questions only proved that the board of directors and the various committees which passed upon this request, with their "do nothing" policy, is a result of this vicious pressure. I would like to reprint this correspondence in the Appendix of the CONGRESSIONAL RECORD with your name, if you so desire, deleted. I believe that you realize that you have accomplished a great deal in eliciting answers from them to very pertinent questions, and I believe that it is in the public interest that the public know the attitudes of these individuals who have control over these public funds, and administer these funds in accordance with the whims and caprices of the medical-political professionalists, who dominate the policies of the American Medical Association.

Maybe the raising of millions of dollars of funds for charitable projects has become a "racket," and the longer that they remain in the test-tube stage of development, the longer patronage and job payrollers remain in their soft berths.

Would you please be so kind as to indicate to me your attitude in this matter, as it is important that we trace the malignant jobgrowth of this charity to its source. They quibble too much over procedures for their honesty of purpose while we seek a cure. They complain too loudly against another who, seemingly, has perfected a work that the public expects its charity dollars to do. Maybe we should investigate the American Cancer Society's operations. At least, their "do nothing" attitude creates a suspicion that they don't want a cure or that their desire is to prolong the agony of others, while they fiddle around, trying to perfect their own cure. Some progress should have been made up to this time in the control of cancer by them. Krebiozen has a record that anyone can read in the reports of the Krebiozen Research Foundation, given by 500 doctors in actual cases which they have treated.

I hope that you will agree with me in permitting me to print all correspondence which you have sent to me in the Appendix of the CONGRESSIONAL RECORD, for Americans to read and understand. I hope that this does not embarrass you.

Sincerely,

ROLAND V. LIBONATI,
Member of Congress.

BALTIMORE, MD., *February 17, 1959.*
The Honorable ROLAND V. LIBONATI,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN LIBONATI: I have received your letter of February 16, 1959, acknowledging receipt of my correspondence with the American Cancer Society and requesting permission to print the same in the Appendix of the CONGRESSIONAL RECORD.

I grant you that permission and also permission to use my name and address provided you also print this letter along with the correspondence so that I may make my position clear on, one, the charity funds and, two, the American Medical Association.

With respect to the charity funds, it is now obvious to me that at least some of them are becoming honeycombed with abuses that react to the disadvantage of the entire public.

There is a basically unhealthy condition inherent in all charity foundations. It is that unless all services are on a volunteer basis and are fully explained to the public there is an inevitable tendency by officers and employees to perpetuate their jobs by the simple expedient of becoming skeptical about new ideas for cures. The only way to eradicate this danger is to have everybody serve on a volunteer basis or if some people must be paid, then there should be yearly financial statements of income and disbursements published.

I personally feel that a congressional investigation into this matter would be good since the public would then know which are the worthy charities and which are the unworthy charities and the unworthy ones would be promptly eliminated.

I do not feel that I have the same right to criticize the American Medical Association since they are not soliciting public funds to run their organization, whereas, the American Cancer Society is using public funds for purposes which I feel are quite contrary to the public desire.

Nevertheless, if the American Medical Association has an unhealthy contact or relationship with the American Cancer Society and either of them or both of them are working together in any manner to prevent the testing of any product that might be helpful in fighting cancer then this condition must be corrected.

That this controversy should involve the American Medical Association is distressing to me since I feel that I owe my life to an emergency appendectomy performed on me by a Dr. Hart of Duke University. Furthermore, on other occasions where I have consulted practicing physicians, I feel they always did their best to help me.

However, if there is a group of nonpracticing political physicians who have become powerful in the American Medical Association and are creating abuses in that association then that association must submit to correction just as the bar association or the courts or any other group must yield to the public interest.

It is my sincere hope that you may be successful not only in obtaining a test of krebiozen but also inaugurate a new day in our research era whereby those groups which are soliciting funds will be the very first to seek out any treatment or rumored treatment that has shown any promise, and will submit complete records of their activity including yearly financial statements published in the newspapers.

Enclosed please find and feel free to retain after sending me photostats, the original letter of the American Cancer Society of January 6, 1959, and the original letter of the American Cancer Society of January 30, 1959. The subject matter of their letter of December 9, 1958, is in effect repeated and covered in more detail in their letter of January 6, 1959.

Very truly yours,

THOMAS N. CLIFFORD,
Attorney and Counselor at Law.

Send Menshikov Home—Recall Our Ambassador

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. BOSCH. Mr. Speaker, it is difficult for me to be temperate when I speak of the Soviet regime and its complete disregard for honor and integrity. Their attitude has been one of duplicity at every turn. Another example of the callousness of the Soviet leaders is the case involving the American plane shot down over Russia on September 2, 1958. One begins to wonder: "Why should we continue to try to maintain relations with this country?"

Under leave to extend my remarks, I include an editorial on this subject from the U.S. News & World Report of February 13, 1959:

SEND MENSHIKOV HOME—RECALL OUR AMBASSADOR

(By David Lawrence)

We have reached the end of the line with the present Government of the Soviet Union. Diplomatic relations no longer are of any practical value.

When a government—through its Deputy Premier, through its Foreign Office and through its accredited Ambassador—lies repeatedly to another government, there can be no trust in any promise or pledge or so-called agreement emanating from such a regime.

Ever since September 2 last, when 17 American airmen were deliberately murdered as their unarmed transport strayed a few miles over Russia due to a navigational error, the United States has been trying to elicit the facts from the Soviet Government.

The Moscow regime, its Deputy Premier and its Ambassador in Washington have persistently disclaimed any knowledge, except that the plane crashed and that six bodies were recovered.

Yet, in an aviation journal published in the Soviet Union, about 2 weeks after the episode last September, there is given in detail an account of a so-called practice mission which parallels in large part what actually happened when the American transport was shot down. The same information and almost identical radio conversations between the attacking pilots were recorded on a tape—obtained by American authorities through its efficient intelligence system—at the exact time and place that the American plane went down.

This tape recording tells in dramatic manner how the American plane was shot down even though it was fully recognized as an unarmed transport, and hence entitled to be guided to a safe landing. But the recording of the conversation of the Soviet flyers shows also how they gloated over the murder of the American airmen. All the evidence and the written transcript of the tape recording was presented last November directly to Soviet Ambassador Menshikov in Washington.

When Soviet Deputy Premier Mikoyan came to this country in January, he was asked specifically by Vice President Nixon and Secretary Dulles about the facts uncovered in the tape recording. The State Department declared last week in a formal statement concerning the Mikoyan conference with Mr. Dulles:

"Mr. Mikoyan said that the Soviet Government had done all that it could, that all the

bodies had been returned and that the Soviet Government did not know about any other personnel. * * * He denied that the plane had been shot down, asserting that it had crashed."

How can any government in the Western World—in the face of the evidence presented—any longer do business with the Soviet regime? Of what use are "new ideas" or the historic devices of diplomacy itself when dealing with a crooked government? Of what avail are summit conferences or tours of Soviet Russia by high officials of the West?

The time has come for the United States to take the lead in cutting off all diplomatic relations with the barbaric dynasty that rules in Moscow.

The time has come for the United States to urge all its allies to do likewise and to embargo all trade with the Soviet empire.

There is no need to go to war, ostracism is a salutary alternative. There is every reason to isolate the Soviet regime and, applying the words of the late President Franklin Roosevelt, to impose a "quarantine" on the Moscow government. Had such a course been followed by our allies in the 1930's the Hitler government would never have gotten the munitions it needed so acutely in order to build up its war machine.

America has been studiously patient. The facts about the tape recording were available to the Soviet Government as far back as last November. The United States tried for months, quietly and without publicity or the display of public emotion, to get the Soviet Government to cooperate at least in establishing the facts—the discussion of responsibility for the error of the unarmed transport could come later.

Most insulting of all, however, was the attitude of Ambassador Menshikov in his meeting with the Deputy Under Secretary of State, Robert Murphy, on November 13 last. The State Department's indictment says:

"Mr. Murphy said that it was Ambassador Menshikov's responsibility, as Soviet Ambassador to the United States, to listen to the representations that were being made to him. The Soviet Ambassador nonetheless refused to listen to the tape recording."

Why should the United States continue to deal with any Ambassador who shows such discourtesy to the Government to which he is accredited? Why should we keep an American Ambassador in Moscow who is refused information about the cold-blooded murder of 17 American citizens?

Millions of Americans would answer: Send Menshikov home—recall our Ambassador.

Lithuania Has Not Died

EXTENSION OF REMARKS
OF
HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. GALLAGHER. Mr. Speaker, in addition to my remarks of yesterday on the Lithuanian Independence Day, I would also like to insert a very interesting editorial from my home newspaper, the Bayonne Times:

LITHUANIA HAS NOT DIED

On February 16 in the winter after the Bolshevik revolution, little Lithuania proclaimed her independence, and it is testimony to the eternal strength of the human spirit that Lithuanians in the United States have not forgotten it. They might have become discouraged and disillusioned, and they might have abandoned hope, because in June 1940 the Soviet Union confiscated the tiny neighbor that Lenin had pledged to hold inviolate. Loyal Lithuanian citizens were killed, or arrested and transported to scattered points within the Soviet Union where they could be watched and kept isolated.

At that time Stalin broke the promise made by Stalin by the Lenin he claimed to adore, the Soviet Union could and did plead military necessity. That necessity has long since passed, but now the Kremlin looks upon former Lithuania as an integral part of its dominions. It is the glory of the people of Lithuanian descent, here in Bayonne and elsewhere, that they do not agree, and are determined never to agree. We hope they don't.

It may well be that there will never be a Lithuania in the sense that there was one between 1918 and 1940. But if the spirit that prompts observances of Lithuanian Independence Day in the United States is preserved in the hearts of men, we can be sure that tyranny and tyrants will never be permanently enthroned.

Letter by Hon. John J. Rhodes to the Editor of the Washington Post and Times Herald

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to insert in the RECORD the letter which I have today sent to the editor of the Washington Post and Times Herald.

The letter follows:

FEBRUARY 18, 1959.

EDITOR, THE WASHINGTON POST AND TIMES HERALD,
Washington, D.C.

DEAR SIR: An editorial in the Washington Post of February 18 is an example of the kind of thinking which many professional budget-stretchers are indulging in at this time to the harm, I think, of our country. Sounding a note of alarm, the Post insists that we have to add billions of dollars to the administration's defense budget or be faced with national catastrophe.

The Post suggests that we are going to sit by and count our dollars while the Russians outproduce us in intercontinental missiles. It also says, "If Members of Congress abhor the prospect that the United States will be reduced to a second-best position as much as they ought to abhor it * * * it is their duty to vote the military appropriations they think the country really needs." And again, "It is time that Congress * * * addressed itself to the vital problem of who is going to save the country in the next 6 years." And again, "The psychological consequences of an inferior missile status could be devastating."

This is precisely the kind of irresponsible comment which does more psychological damage than we can calculate. It used to be that the great American game was keeping up with the Joneses. Now it is keeping up with the Russians. It is manifestly absurd to believe that any nation can stay ahead of any other nation in all categories. I am sure that we do not produce anywhere near as many drozhkies as the Russians, but who cares? Likewise, as long as we have a Defense Establishment which deters the Russians from attacking us and which will do so for the foreseeable future the possibility that we may be behind in one item of that defense should only bother those who are intent on spreading the psychology of fear among our people.

Nobody ever won a race by looking back over his shoulder continuously. We are ahead in practically every race we are running with the Russians, and we will remain so unless the panicmongers talk us out of it. One element in winning that race consists of maintaining a strong economy. It has always been the aim of the President to adopt an adequate posture of defense and at the same time maintain the enormous strength of the American economy. He has succeeded beautifully except in the eyes of some individuals who insist on looking at the head of a pin instead of the whole pincushion.

While I have often disagreed with your paper, I have never felt before that an attitude you have taken is so completely detrimental to the welfare of our people. I appreciate the candor with which you have always discussed issues, and the fact that you have always been keenly aware of the responsibility the free press of America owes to our people. It is my hope that you will reexamine your editorial policy in this matter.

Yours sincerely,

JOHN J. RHODES,
Member of Congress.

Resolution Honoring Dr. Malcolm Y. Colby

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. THORNBERRY. Mr. Speaker, Dr. Malcolm Y. Colby, a citizen of Austin, Tex., for many years, has just retired as professor of physics at the University of Texas after 34 years of dedicated and distinguished service in the field of higher education. During this period, Dr. Colby served as chairman of the department of physics at the university.

Indicating the high respect and regard which Texans have for Dr. Colby, the Senate of Texas passed a resolution by Senator Charles F. Herring, senator from the district in which I have the privilege of residing, honoring Dr. Colby.

The resolution as prepared by Senator Herring and as passed by the Senate of Texas is as follows:

"SENATE RESOLUTION 44

"Whereas the people of the State of Texas wish to acknowledge the debt they owe Dr. Malcomb Y. Colby, distinguished member of the faculty of the University of Texas, who has retired after 34 years of devoted service; and

"Whereby Dr. Colby served as chairman of the department of physics for many years; and

"Whereas in addition to his devoted service to the university, he was executive director of the War Research Laboratory during World War II which pursued research vital to the war effort and also served as counselor for the Oak Ridge Institute of Nuclear Studies from 1953 to 1957; and

"Whereas Dr. Colby has been a source of inspiration to the many thousands of students who have come under his tutelage and they in turn have been greatly enriched by that association; and

"Whereas the State has derived immeasurable benefits from the many years of dedicated service of this devoted educator; and

"Whereas it is the desire of the Senate of 56th Legislature of the State of Texas to acknowledge the contribution to education of this outstanding man: Now, therefore, be it

"*Resolved*, That when the senate adjourns today, it do so in his honor; and that a page in the permanent senate journal be devoted to the recording of this resolution; and be it further

"*Resolved*, That an enrolled copy of this resolution be sent to Dr. Colby as a token of deep appreciation for the services he has rendered.

"BEN RAMSEY,
"President of the Senate."

I hereby certify that the above resolution was adopted by the senate on February 4, 1959.

CHARLES SCHNABEL,
Secretary of the Senate.

Poison in Your Water—No. 11

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the CONGRESSIONAL RECORD an editorial appearing in the Washington (D. C.) Post and Times Herald of May 20, 1958, entitled "Troubled Water," which describes the reasons for continuation of full appropriation of $45 million to carry out the purposes of Public Law 660 of the 84th Congress as well as reasons for further increasing and extending that program.

Remember, this is the water that we drink.

The article is as follows:

TROUBLED WATER

It is astonishing that anyone in Washington with eyes—or a nose—could remain indifferent to the need for expanding pollution controls. The sludgy waters of the Potomac offer a shameful example of the kind of neglect of water resources that is now costing the United States an estimated $1 billion a year. Yet in some hidden sanctuary of the Bureau of the Budget a decision has been made to terminate the promising Federal water pollution control program by 1960 and then dump the problem in the laps of the States. This would reverse legislation already passed by Congress, with administration support, calling for a 10-year, $500 million incentive program to help communities develop sewage treatment plants.

Representative JOHN A. BLATNIK, author of the pollution control legislation, is properly outraged by this turnabout. Today, Mr. BLATNIK's House Public Works Subcommittee begins hearing on new legislation to double the present grants of $50 million a year—which would merely bring the program to the size originally contemplated. In the 2 years in which the program has already been operating, Mr. BLATNIK points out, $76 million in Federal funds has helped finance 930 projects. State and local governments have put up $274 million to match the Federal contribution—a ratio of $5 in local funds for each Federal dollar. Surely this is an impressive demonstration of how badly the Federal incentive program was needed.

There is great need to conserve and cleanse the Nation's precious water resources. The problem is particularly pressing the Washington area, where the Potomac has become, in Mr. BLATNIK's rueful phrase, "the best-dressed cesspool in the country." Mr. BLATNIK's efforts to expand and continue the cleanup program should win wide support in Congress, and perhaps persuade the administration to acknowledge more realistically a problem literally under its nose.

Address by the Honorable Rex Bell, Lieutenant Governor of Nevada

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks I include the address given by the Honorable Rex Bell, Lieutenant Governor of Nevada, at the Lincoln Day luncheon in Boise, Idaho, February 14, honoring the sesquicentennial birthday anniversary of Abraham Lincoln.

The address follows:

My friends, it most assuredly is a pleasure for me to be with you, my neighbors, and it is a distinct honor for me to be invited by you to make a Lincoln Day address, for we in this Nation need very badly to refresh our minds on, and dedicate our hearts to, those things for which Abraham Lincoln stood. Returning to that philosophy and to the foundations on which the Republican Party was built, our Nation can remain safe and strong, the haven of the oppressed, the home of free enterprise, and the leader among those who believe in the dignity of man.

I come to you from Nevada, the fastest growing State in our Nation; the State with fewer laws, fewer taxes, fewer restrictions than are to be found in any State in our Union of States. Like you in Idaho, we in Nevada face the future unafraid, because both States are rich in natural resources, both States abound in opportunity for anyone who will work, and both of us are on the threshold of an era of prosperity.

We are pioneer States, frontier States, States where the spirit, the courage, and the fortitude of the men and women who blazed the trails of our Western civilization still abounds. We live close enough to those trailblazers who settled our valleys, crossed our mountains and built our civilization in this frontier to understand that if we fulfill our heritage, if we follow the trials they blazed when they built a State from the vastness of these mountains, if we keep faith with them, we are building a Nation as they built a State, that will be at once an inspiration to those who will follow us, and a safeguard to those who share with us this American way of life.

Abraham Lincoln, too, was a pioneer. He shared the hardships of those who tilled the virgin soils of the West. It was in the log cabin of the early settlers that he first learned those traditions upon which the Republican Party was founded. Abraham Lincoln might have been even closer to us, for he refused the office of secretary and Governor of Oregon Territory, of which this great State was a part in 1849. Eleven years later he was nominated for the presidency on an anti-slavery platform as the standard bearer of the Republican Party. History tells us that 2 weeks from today, on February 28, the Republican Party will be 105 years old, for it was formed at Ripon, Wis., on February 28, 1854, and the first State organization of our party was at Jackson, Mich., on July 6, of that year.

Abraham Lincoln was the standard bearer of a 5-year-old political party, its first standard bearer when he was elected to the Presidency of the United States. Never before and never since has a political party had a leader as was the first presidential candidate elected under the banner of the Republican Party.

Through the century of progress of our great Nation since Abraham Lincoln was elected to the Presidency, our party has furnished our country many of its great leaders, and I will have to include among them Dwight D. Eisenhower, who ended the Korean debacle, who brought us peace, who has kept us out of war, and has given our country its greatest era of prosperity. Never in the years that he has been in the White House has Dwight D. Eisenhower sacrificed the principles of freedom and liberty enunciated by the father of our party, Abraham Lincoln. That is a record of which he, we, and all Americans can be proud and one which we, as Republicans, should carry to the farthest corner of this Western country.

Abraham Lincoln was a child of the prairies, of the wide open spaces. The story of his rail-splitting feats is well known, he furnished the foundation on which the tracks were laid to reclaim the wilderness with the iron horse. As his country expanded and became greater and stronger, so did Abraham Lincoln. He typified the spirit of the pioneer, the dogged determination to overcome every obstacle, the determination to make this a country where man might enjoy the benefits of his own labor, and where what he did, not what he had, was the factor that determined his standing in his community and his chapter in the great history of this Nation.

The principles he enunciated, the platform on which he was first elected, and his loyalty to his belief in the dignity of the individual are the principles of the Republican Party, the party he founded, and they are principles upon which rest the very life of the greatest Nation in the world.

My own Nevada was battle born. Lincoln needed the two votes of Nevada's first Senators and the wealth of Nevada's mines to keep this a unified solid Nation. He proclaimed Nevada a State in 1864, we of Nevada are extremely proud of the part, under the guidance and leadership of Abraham Lincoln, we have played in our country's history.

Boise was a city before Virginia City in Nevada was struck. Idaho and Nevada stand side by side physically and in the story of our development. We became great because of the wealth of our natural resources and the determination of our pioneers.

Both of our States have contributed strong men to the development of the West, and both have furnished our legislative branch of the Government with men who left an indelible mark on the history of our country. Your Senator William Borah, "The Dean of the Senate", is one who should not be overlooked when we seek to point to a champion of the people.

My friends, in many spots in our Nation the Republicans were defeated in the elections of last November. In my own State, we have a Democrat as governor, and most of the State offices now are filled by the members of the Democratic Party. As a matter of fact, I was the only one in State government who survived the landslide in Nevada. Don't take the setback of 1958 too much to heart. A century ago, in 1858, Abraham

Lincoln suffered an equally humiliating defeat at the polls. That is right, 2 years before he was elected to the presidency for the first time, Mr. Lincoln was defeated for the U.S. Senate.

Let us here and now take a leaf from the rule book of the father of our party. He did not cry about his defeat, he did not moan, he did not predict either the end of the world or the end of the Nation. He went to work. He went to the people. He carried the cause of freedom and the love of liberty to the average American in his home. He stuck defiantly and bravely to his platform, freedom and the dignity of man. Two years after going down to defeat at the polls in Illinois, he was elected President of the United States of America. He sacrificed neither his principles, which were the principles upon which the Republic Party was born, nor his faith in the people. He knew, as we who follow in his footsteps should know, that freedom flourishes in the environment of peace, but that to remain free, a nation must be prepared to fight for and defend that freedom.

In Idaho, as in Nevada in 1958, the Republicans lost ground. Indeed the same was true throughout the Nation, save in exceptional instances. My friends, you and I, and all of us must be ready for 1960. We must emulate the Republicans of 100 years ago. We are followers of, devotees of, Abraham Lincoln. History must repeat itself in 1960. Defeated and maybe I can say discouraged in 1858, Abraham Lincoln went out and fought, and in 1860 won the shining victory that has meant so much to our Nation and the whole world.

It is a challenge to you in Idaho, it is a challenge to us in Nevada, it is a challenge to Republicans in every State in the Nation. Can we meet that challenge? Will you, each and every one of you, rededicate your lives to your party, as in time of stress and trouble, you dedicate it to your government.

My friends, it is just that serious. The Republican Party is your government. The principles of Abraham Lincoln are the principles which have made this Nation strong, safe, secure.

Your job and mine is to prove this to the people, our fellow Americans, what our party has done for our Nation, our national security, and for them as individuals. I am not afraid of the judgment of my fellow Americans. Nor should you be, my friends. My only fear, your only fear, your country's only danger lies with us, you and me, Republicans, Americans.

Let you and I make a solemn pledge to one another. I'll take the State pledge of Nevada, which is, "All for our country"; you take the State pledge of Idaho, which is, "Exist Forever." Let us join those two pledges under a common banner, the banner of the Republican Party. If we can persuade enough Americans that the principles of Abraham Lincoln that saved this Nation of ours in one of its most severe crises, we can make it exist forever. If we can prove to the people of our Nation that the freedom, prosperity, and equality that they enjoy are the principles of Abraham Lincoln and the Republican Party, and they, like you and me, should be all for our country, then in 1960 we can return to the White House in Washington the standard bearer of the party of Abraham Lincoln, and indeed, my fellow Republicans, if we give all for our country it will, indeed, exist forever.

So let the spirit of the pioneers who built a nation from a wilderness give us the strength, the courage and the dogged determination to keep faith with the truly great father of the Republican Party, Abraham Lincoln. Your State leader, Governor Smylie, shows you that the Republican Party can win, does win, and will win in Idaho. His leadership should inspire you to go into the farthest corners of your great State to preach the gospel of your party, to expound the principles of the Great Emancipator, Abraham Lincoln. Study your leaders, remember William Borah and his inspired speeches in the U.S. Senate of which he was the dean when he died. Faith in your leadership, faith in your citizens, faith in yourself will carry your party to victory on every level in 1960.

Thumb through the pages of history, of your Nation and of your State. Your happiest days, the days of your greatest prosperity and progress and peace have been enjoyed when those dedicated to the principles of Abraham Lincoln sat in the White House. Just as truly and as bravely as the pioneers of Lincoln's day blazed the trails through your forests, established your communities that became your cities, fought your enemies and made Idaho a safe State in which to live, a good State in which to bring your children up in the American way of life, so you, inspired by their deeds, encouraged by what they accomplished, can go to your citizens of today and show them how closely this Nation's program of peace and prosperity, of equality and justice, is tied to the principles of Abraham Lincoln, and how, only with those principles to guide us, can we as a Nation of free people hope to live at peace with the world. We need not shed the blood of our sons and daughters on the field of battle to create a false prosperity or a false patriotism. We must be strong, we must be able to defend ourselves from all enemies, within and without. This we can do more readily and more safely if we are guided in our thinking by the principles of Abraham Lincoln. George Washington, the father of our country, created the American way of life. Abraham Lincoln saved it, and it is up to us, to you and to me, to preserve it.

Our task is not an easy one. But we in the West, still living on the frontier of opportunity, still close to the spirit of the pioneers, have the strength, the fortitude, and the ability to do it. Moreover, as Americans, we have a duty to perform, and that duty is to keep alive the American system of free enterprise, to preserve the dignity of our citizens, to offer opportunity to all to enjoy the fruits of his labor.

No clear thinking, honest American would change for 1 minute the motivating principles that inspired Abraham Lincoln to become one of the greatest liberators the world has ever known, a champion of all people. Those principles during the past century have seen kings and dictators overthrown and the entire world reach a new high in living. We, as a Nation are the envy of the world. We, as Americans, enjoy more freedom, a greater prosperity, a higher plane of life, than do the citizens of any nation. We paid a small price for that freedom. Humanity throughout the world struggles day after day to reach that goal, the goal that we sometimes hold too lightly. That goal was very simply stated by Abraham Lincoln as he stood on one of the battlefields of the war that preserved our unity as a Nation. I quote:

"That this Nation, under God, shall have a new birth of freedom, and that government of the people, by the people, for the people, shall not perish from the earth."

So, my friends, as I say goodbye to you for this time, let me remind you that you and I, as members of the Republican Party, the party of Abraham Lincoln, have a solemn duty, a difficult task, to perform. Each of us, keeping faith with our country, our party, and our leader, must dedicate ourselves to the task that he so nobly performed, the task of keeping alive the high principles of the party of progress, of prosperity and of peace, the Republican Party. No mountain is too high for us to scale, no river too swift for us to ford, no valley too wide for us to cross, no mining shaft too deep for us to invade to carry to the men and women of our great country the message of Abraham Lincoln and the principles for which he stood. If each one of us here tonight will do his or her part, if each of us will give the full measure of our devotion to this great cause, then on the centennial of Abraham Lincoln's election to the Presidency of the United States, we shall place in the White House a man of like faith, a man devoted to keeping this country peaceful and prosperous, where the dignity of man is preserved, and where people of all creeds and all faiths can live to enjoy the fruits of their labor, to educate their children, and hold in their hearts this thought from the second inaugural adddress of Abraham Lincoln:

"With malice toward none, with charity for all, with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in, to do all which may achieve and cherish a just and lasting peace, among ourselves, and with all nations."

They did it a century ago, my fellow Republicans, and we can do it again in 1960. We in Nevada are young as a State, you in Idaho are even younger. We have the strength, the enthusiasm, the vitality of youth. We can point the way. We can, by diligence, perseverance, honest effort and ceaseless toil become the leaders of our party. In us, and those like us, lies the hope of the party of Abraham Lincoln, indeed I might say, the hope of the Nation.

As the pioneers of 1860 won their fight, so can we, the pioneers of 1960, win ours. The principles are the same, the challenge is the same. A united and a prosperous family of States, marching forward proudly and unafraid under a common banner, the Stars and Stripes. Let us beware of the hammer and the sickle, let us protect ourselves from the inroads of a Socialist state. Let us keep America free, by keeping alive within our hearts and our borders the thoughts, the principles, and the inspiration that gave our party Abraham Lincoln, the Great Emancipator, the true and faithful preserver of the American way of life, the greatest the world has ever known.

Thank you for bearing with me. We are neighbors. Come to visit Nevada when you will. You of Idaho and we of Nevada have much in common. We both are suffering from growing pains, but together we can become increasingly important to our great Nation. We, of the Republican Party, the party of Abraham Lincoln, can do much to make the centennial of his first inauguration as important to our Nation as was his ascendency to the Presidency by returning to the White House in 1960 a man who stands steadfast under his banner, and four square for the principles for which Abraham Lincoln gave the last full measure of his devotion. That is your duty, that is my duty, and with God's help, we shall not fail.

I thank you.

Interparliamentary Union Holds Its 47th Conference in Rio de Janeiro, 1958

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 18, 1959

Mr. REED. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

Interparliamentary Union Holds Its 47th Conference in Rio de Janeiro, 1958

Introduction

The Interparliamentary Union which held its 47th Conference in Rio de Janeiro, July 24–August 1, 1958, is an international association which is presently composed of national groups from the parliaments of 55 nations. The object of the Union is to promote personal contacts between members of parliaments and to unite them in common action with a view to strengthening and developing democratic institutions; to advance work on behalf of peace and international collaboration; and to contribute to the development and progress of parliamentary institutions.

Part I. Historical Background

The Interparliamentary Union was founded in Paris in 1889. Its first conference was held in June of that year with the participation of 49 deputies representing France, Great Britain, Belgium, Denmark, Hungary, Italy, Liberia, Spain, and the United States of America. In 1892, meeting at Bern, Switzerland, the conference decided to set up a central organ under the name of the "Interparliamentary Bureau for International Arbitration." And in 1894 the fifth Interparliamentary Conference, held at The Hague, adopted the Statutes for the new organization.

The headquarters of the Union were in Bern until 1911, in Brussels from 1911 to 1914, in Oslo from 1914 to 1920, and since 1921 its headquarters have been in Geneva. The permanent secretariat is located at 6 Rue Constantin, Geneva, Switzerland.

Eighteen plenary conferences were held before 1914, and the Union was the guest during this early period of all the great capitals of Europe. From the Bern meeting onward, it met in the Parliament buildings and was soon welcomed by the heads of states and their Ministers. The first meeting on American soil was held at St. Louis, Mo., in 1904. By the time of the outbreak of World War I the Union counted 26 national groups and 3,500 members. Its influence gradually increased over the years, especially in Europe, and its proceedings were followed with attention in governmental circles.

Prior to World War I, during which its activities were suspended, the Interparliamentary Union devoted itself primarily to the cause of peace and international arbitration. After that conflict the Union broadened its activities and undertook, first, to study and seek solutions for all questions of an international character considered suitable for settlement by parliamentary action; and, second, it began to make suggestions for the development of parliamentary institutions with a view to improving their operations and enhancing their prestige.

The Second World War again interrupted the annual conferences of the Interparliamentary Union, but nevertheless the Geneva bureau maintained the structure of the organization. Following the conclusion of that conflict the Union resumed its labors, strengthened by the entry of national groups from 19 countries, some of which had recently obtained their independence. Beginning in 1947 12 annual conferences have been held in the following cities: Cairo, Rome, Stockholm, Dublin, Istanbul, Bern, Washingotn, Vienna, Helsinki, Bangkok, London, and Rio de Janeiro.

Composition and structure

In 1958 the Interparliamentary Union was composed of 55 national groups constituted within the parliaments of the following countries: Albania, United States of America, Argentina, Australia, Austria, Belgium, Brazil, Bulgaria, Burma, Ceylon, Chile, Czechoslovakia, Denmark, Finland, France, Federal Republic of Germany, Ghana, Great Britain, Haiti, Hungary, Iceland, India, Indonesia, Iran, Iraq, Ireland, Israel, Italy, Japan, Laos, Lebanon, Liberia, Libya, Luxembourg, Monaco, Netherlands, Norway, Pakistan, Panama, Paraguay, Peru, Philippines, Poland, Rumania, Spain, Sudan, Sweden, Switzerland, Thailand, Tunisia, Turkey, U.S.S.R., United Arab Republic, Vietnam, and Yugoslavia. Only groups formed within the framework of a national parliament, or a parliament as an entity, may become members of the Union.

Within the Interparliamentary Union each national group has its own rules, officers, and secretariat. Groups are expected to exert a continuing influence within their respective parliaments in favor of the general objectives of the Union, and to take steps to secure action on the resolutions adopted by the Interparliamentary Conferences. The national groups also make a financial contribution to the Union, in accordance with a scale fixed by the Interparliamentary Council. Apart from their participation in the general activities of the Union, the national groups are encouraged to develop their mutual relations with each other on either a bilateral or a regional basis.

Organizations of a regional character also function within the framework of the Union. Such is the case of the Northern Interparliamentary Union founded in 1907, which comprises the three Scandinavian Kingdoms, Iceland and Finland. This regional Union holds periodic meetings at which questions of mutual interest are studied, but its members are equally active in supporting the work of the Interparliamentary Union itself. After the Second World War a similar regional body was established within what is known as Benelux, uniting the parliamentary groups of Belgium, Luxembourg, and the Netherlands. At the 47th Conference of the Interparliamentary Union, held at Rio de Janeiro in July, 1958, it was decided to constitute a Pan American Parliamentary Group composed of the nations of the Western Hemisphere, subject to their approval, and also a Latin American Parliamentary Group.

Structurally, the Interparliamentary Union operates through the annual Interparliamentary Conferences, which are held in different countries each year on the invitation of their parliaments; the Interparliamentary Council; the Interparliamentary Bureau; the Executive Committee; and seven standing study committees.

The Conferences speak for the Union on all problems falling within their scope. They do so by adopting resolutions which the national groups are expected to bring to the attention of their respective governments and parliaments. The agenda of the Conferences are fixed by the Council. They normally include a debate based on a report prepared by the Secretary General dealing with recent developments in the world situation, and a study of specific questions chosen by the Council. Apart from their deliberative role, the Conferences give their opinion on proposed amendments to the Statutes and are competent to elect the members of the Executive Committee on the basis of proposals made by the Council.

Each national group is entitled to appoint, to attend a conference, a number of delegates equal to a number of votes allocated to it by the Statutes. Article X of the Statutes stipulates in this respect that each group shall have a minimum of eight votes, with supplementary votes added in proportion to the size of the group and the population of the country which it represents. Voting within the union is thus representative of parliamentary opinion. The right to vote belongs to members of the Union who are present in person. They exercise this right individually and the votes can thus be divided within a single delegation.

The Interparliamentary Council, which is the directing organ of the Union, consists of two members from each regularly affiliated national group. It is the responsibility of the Council to convene Interparliamentary Conferences, to fix their agenda, to approve the annual budget of the Union, to propose to the Conferences candidates for election to the Executive Committee, and to appoint the Secretary General. The President of the Interparliamentary Council is elected for a period of 3 years. He may be reelected for a further term of 2 years, after which he is no longer eligible.

The Executive Committee is the administrative organ of the Union and exercises the functions delegated to it by the Council in conformity with the Statutes. It supervises the work of the Interparliamentary Bureau, and is responsible for examining information received concerning the creation of new groups. The Committee is composed of nine members belonging to different countries. The President of the Council is ex-officio a member and President of the Committee. The eight other members are elected by the plenary conferences for a term of 4 years. The Statutes require that consideration must be given in these elections to the contribution made to the work of the Union by the candidate and his group and that an endeavor be made to ensure a fair geographical distribution.

The Interparliamentary Bureau is the secretariat of the Union. It maintains contact with the national Interparliamentary groups and encourages their formation. It is the responsibility of the Bureau to prepare the questions for submission to the Council and to the Conferences, and to organize all meetings held under the auspices of the Union. It executes the decisions of the Council and the Confernces. Its official organ is the Interparliamentary Bulletin, which appears four times a year in French and in English. In addition to its administrative tasks, the Bureau carries out, according to the instructions of the Council, a program of studies and publications. At the head of the Bureau is a Secretary General who is elected by the Council and who has under him a small permanent staff necessary to carry out the functions of the Bureau.

The work of the plenary Conferences is, as a general rule, prepared by the Standing Study Committees set up within the framework of the Union. There are seven of these committees as follows: Committee on Political and Organization Questions; Committee on Juridical Questions; Committee on Economic and Financial Questions; Committee on Non-Self Governing Territories and Ethnical Questions; Committee on Reduction of Armaments; Committtee on Social and Humanitarian Questions; and Committee on Intellectual Questions. These Committees, on which all groups are entitled to be represented, meet some months before the Conferences and draft resolutions for submission to the latter. For the examination of the questions appearing in their agenda, the study committees have before them documents prepared by members of the Union, by the Interparliamentary Bureau, or by international institutions particularly concerned with the subject.

The officers of the Interparliamentary Union are as follows:

Honorary President: Viscount Stansgate, D.S.O., D.F.C. (Great Britain).

President of the Interparliamentary Council and of the Executive Committee: Prof. G. Codacci-Pisanelli (Italy).

Members of the Executive Committee: S. Braga (Brazil), Erik Hagberg (Sweden), N. A. Mikhailov (U.S.S.R.), I. A. Mulla (Iraq), R. G. Senanayake (Ceylon), Col. Sir Malcolm Stoddart-Scott (Great Britain), M. Zarroug (Sudan), A. Wahab Khan (Pakistan).

Secretary General: André De Blonay.

Member groups: Albania, America (United States of), Argentina, Australia, Austria, Belgium, Brazil, Bulgaria, Burma, Ceylon, Czechoslovakia, Denmark, Finland, France,

Germany (Federal Republic of), Ghana, Great Britain, Greece, Haiti, Hungary, Iceland, India, Indonesia, Iran, Iraq, Ireland, Israel, Italy, Japan, Laos, Lebanon, Liberia, Libya, Luxembourg, Monaco, Netherlands, Norway, Pakistan, Peru, Philippines, Poland, Rumania, Spain, Sudan, Sweden, Switzerland, Thailand, Tunisia, Turkey, U.S.S.R., United Arab Republic, Vietnam, Yugoslavia.

Meetings and activities

Since its first meeting in Paris in 1889, the Interparliamentary Union has held 47 conferences of which the most recent was that in Rio de Janeiro in July 1958. The annual plenary meetings of the conference are open. The meetings of the Council and of the standing study committees (twice yearly) and of the executive commitee (three times yearly) are closed. In 1959 the Union will meet in Warsaw and in 1960 in Tokyo. The seven standing subcommittees met at Nice in April 1957 and in Geneva in the spring of 1958.

Since its creation the Interparliamentary Union has examined, studied and debated most of the major problems of international relations. Up to 1914 the Union focused its efforts upon the promotion of arbitration and the rule of law in relations between states. Since World War I the Union has concerned itself with the development of international relations, the codification of international law, the reduction of armaments and the promotion of international security, economic and financial problems such as the control of international trusts and cartels, economic regional agreements, access to raw materials, and currency convertibility; the situation of non-self-governing territories, including the representation of the native population in the deliberative assemblies, and the development of trade unions and labor organizations in nonmetropolitan territories; questions of social policy such as immigration and emigration problems, unemployment, the regulation of hours of work and vocational training, and the refugee problem; also cultural exchanges as a means of international understanding, and the removal of barriers to the unimpeded exchange of information; as well as the development and improvement of representative political institutions and parliamentary practices.

The activities of the permanent secretariat of the Union at Geneva include the technical examination of all international questions suitable for settlement by parliamentary action, the preparation of reports for, and the organization of, the annual conference and Council sessions, as well as the production of Union publications.

Publications

The publications of the Interparliamentary Union include the following:

1. Proceedings of Interparliamentary Conferences, published annually.

2. The Interparliamentary Union—Its Organization and Its Work, a 26-page brochure, Geneva, 1957.

3. The Interparliamentary Union: Statutes and Rules, Geneva, 1957.

4. The Annual Report of the Secretary-General.

5. The Interparliamentary Bulletin, a quarterly periodical which is the official organ of the Union.

6. Constitutional and Parliamentary Information, a quarterly review of constitutional law and parliamentary practice, published by the Association of Secretaries General of Parliaments with the collaboration of the Interparliamentary Bureau. Thirty-five numbers of this quarterly review have appeared to date.

Autonomous Section of Secretaries General of Parliaments

Founded in 1938 within the framework of the Union, the Autonomous Section of Secretaries General of Parliaments brings together the high officials of legislative assemblies.

The Section has its own organization, but its activities are financed from the Budget of the Union itself. The Statutes of the Section were adopted in Cairo in 1947. Its plenary assemblies and the sessions of its Executive Committee generally take place at the same time and in the same city as the Inter-Parliamentary meetings.

The object of the Section is to establish personal contacts between its members, to insure the regular exchange of information and documentation between them, and to encourage common study of the technical problems of parliamentary life.

The studies of the Section usually take the form of international inquiries, in which the secretariats of the different Parliaments take part. The following are among the subjects that have been treated: "The Administrative Organization of Parliaments"; "Parliamentary Immunity"; "Respect of the Law by Parliaments"; "Control of the Constitutionality of Laws"; "The Powers of the Chair in Legislative Assemblies"; "Parliamentary Committees"; "Delegated Legislation."

The Autonomous Section publishes, in French and English editions, a quarterly bulletin entitled "Constitutional and Parliamentary Information." This contains recent constitutional documents of different countries, as well as the results of inquiries conducted by the Section.

Under the direction of Lord Campion, former Clerk of the House of Commons, a comparative study, entitled "European Parliamentary procedure", was published in England in 1953, and was so successful that a French translation appeared in 1955.

The Section works in close association with the Union itself, which calls upon that body whenever it takes up a problem of parliamentary procedure.

Relations with United Nations and other international institutions

The Union maintains regular official relations with the United Nations Organization and its specialized agencies. It is one of the 10 nongovernmental international organizations upon which the Economic and Social Council has conferred category A consultative status. It also has consultative arrangements with the United Nations Education, Scientific, and Cultural Organization (UNESCO).

These links do not in any way limit the independence of the Union, but permit it to coordinate its activities with those of other international institutions, which have rapidly multiplied since the Union was created.

The Secretary General of the United Nations and the Directors General of the specialized agencies are regularly represented at the Conferences and working sessions of the Union, and cooperation also takes place at the secretariat level.

In addition, the Union maintains steady relations with regional assemblies of a parliamentary nature, such as the Consultative Assembly of the Council of Europe and the European Coal and Steel Community. It is also in contact with the Organization of American States.

PART II. AMERICAN PARTICIPATION

The United States of America was a charter member of the Interparliamentary Union and has participated in its activities since 1889. The 12th Conference of the Union was held in St. Louis in 1904, and the 42d Conference was held in the Capitol at Washington, October 9–14, 1953.

Every Senator and Representative in Congress is ipso facto a member of the American Group of the Interparliamentary Union. A former Member of Congress, who is or has been a member of the Council of the Union, may, on the recommendation of the American group, and the approval of the Council of the Union, become an honorary member of the group. A former Member of Congress who has rendered distinguished service to the Union, may, upon the recommendation of the American group and the approval of the Council of the Union, become an honorary member of the group.

The officers of the American group, according to its bylaws adopted in 1932, shall be a president, three vice presidents, a secretary, a treasurer, an executive committee of nine members of which the president of the group shall be the chairman and two members of the Council of the Union. These officers hold office for each Congress or until their successors are elected.

In 1958 the officers of the American group were the following:

President: Hon. DANIEL A. REED.

Vice presidents: Hon. HAROLD D. COOLEY, Hon. A. WILLIS ROBERTSON, Hon. ALEXANDER WILEY.

Secretary: Hon. HENRY O. TALLE.

Treasurer: Hon. W. R. POAGE.

Executive committee: Hon. ALBERT GORE, KATHARINE ST. GEORGE, JOHN M. VORYS, ANTONI N. SADLAK, THOMAS C. HENNINGS, JR., JOHN J. SPARKMAN, PAUL H. DOUGLAS, W. ROBERT POAGE, and DANIEL A. REED.

Council members: Hon. HAROLD D. COOLEY and DANIEL A. REED.

The bylaws of the American group define the duties of its officers and provide for its meetings and activities. The group shall meet at least twice a year, one such meeting being the annual meeting of the group which shall be held on the third Monday of January.

Although all members of the U.S. Congress are ex officio members of the Interparliamentary Union, the American group is composed of a score of members who have taken an active interest in the union and its work. This group is organized with its own bylaws, and it is normally from this group that delegates to the annual conferences have been designated by its president.

For many years the United States has made an annual contribution to the Interparliamentary Union. This contribution now amounts to $18,000 a year. Under an act of the 85th Congress an appropriation of $33,000 annually has been authorized, $18,000 of which shall be for the annual contribution of the United States toward the maintenance of the Bureau of the Interparliamentary Union; $15,000, or so much thereof as may be necessary, is authorized to assist in meeting the expenses of the American group for each fiscal year. This appropriation is disbursed on vouchers approved by the president and executive secretary of the American group.

PART III. THE RIO DE JANEIRO CONFERENCE

The United States was represented at the 47th Conference of the Interparliamentary Union, held at Rio de Janeiro, July 24 to August 1, 1958, by a delegation composed of 4 Senators, 7 Representatives, and former Senator Homer Ferguson, of Michigan. The senatorial delegates were A. S. Mike Monroney, Francis Case, John D. Hoblitzell, Jr., and J. Allen Frear. The delegates from the House of Representatives were Henry O. Talle, chairman, acting for Daniel A. Reed, Hale Boggs, Kenneth B. Keating, W. Robert Poage, Katharine St. George, Antoni N. Sadlak, and Michael A. Feighan. Dr. Franklin Dunham served as secretary general of the American group and Dr. George B. Galloway as secretary of the delegation. Dr. Carl Marcy, chief of staff, Senate Committee on Foreign Relations, and Dr. Charles J. Zinn, law-revision counsel, House of Representatives, accompanied the U.S. delegation as observers. Col. Charles R. Roderick, Maj. James M. Brower, and Maj. Sidney Kern (medical officer) served as Air Force attachés to the delegation and Mrs. Christine Gallagher as an attaché to the secretariat.

During the conference Representatives TALLE and POAGE represented the American group on the Executive Council of the Union

in the absence of Representatives COOLEY and REED.

Representatives of the American group on the standing study committees were as follows: Committee on Political and Organization Questions, Mr. KEATING; Committee on Juridical Questions, Judge Ferguson; Committee on Economic and Financial Questions, Mr. MONRONEY; Committee on Non-Self-Governing Territories and on Ethnical Questions, Mrs. ST. GEORGE; Committee on Reduction of Armaments, Mr. CASE; Committee on Social and Humanitarian Questions, Mr. BOGGS; Committee on Intellectual Questions, Mr. FEIGHAN.

The Rio Conference, first of the IPU meetings ever held in South America, was attended by representatives of 47 Parliaments. The Conference was held in the Chamber of Deputies of the Brazilian Parliament and was opened on July 24 by an address of welcome from the President of Brazil, Hon. Juscelino Kubitschek. Prof. G. Codacci-Pisanelli (Itely), President of the Interparliamentary Council, presided at the opening sessions. Mr. Ranieri Mazzilli, Speaker of the Brazilian Chamber of Deputies, was elected President of the Conference.

Conference agenda

The first 2 days of the meeting were devoted to general debate on the Secretary General's report. This report dealt in a comprehensive and objective manner with the multifarious developments of international relations in the various parts of the world during the past year.

Following the general debate on the Secretary General's report, the Conference devoted 4 days to the detailed consideration of four topics which had been scheduled for consideration, as follows:

1. "Principles Governing the Investment of Foreign, Private, or Governmental Capital in Countries in Process of Economic Development."

2. "The Strengthening of Peace: (a) The Problem of Atomic Weapons and Nuclear Tests. (b) The Possibility of Establishing an International Police Force."

3. "Cultural Relations Between Countries and Freedom of Information: (a) Cultural Agreements and Their Role in Improving Relations Between Peoples. (b) National and International Aspects of Freedom of the Press and Information."

4. "The Development of Representative Assemblies in Non-Self-Governing Territories."

Under the rules of the Conference each participating group was entitled to two 7½ minute speeches or one 10-minute speech on each agenda topic. The spokesmen for the United States during the debate on the Secretary General's report were Representatives Talle and ST. GEORGE. On the topic of capital investment abroad Representative Talle also spoke for the American group. Our second speaker on this topic was to have been Senator MONRONEY, but his legislative duties in Washington delayed his arrival at the conference beyond the day assigned to this topic. On the topic of "Strengthening the Peace" the American spokesmen were Representatives POAGE and KEATING. On "Cultural Relations Between Countries and Freedom of Information," the U.S. speakers were Representative BOGGS and Senator CASE. On the subject of "Representative Assemblies in Non-Self-Governing Territories" our speakers were Representatives FEIGHAN and Sadlak. Their speeches are reproduced below.

The seventh day of the Conference was devoted to meetings of the several standing study committees mentioned above. And the final day was taken up with the reports of the study committees and the voting on the resolutions which had been drafted by the Inter-Parliamentary Council. At the conclusion of the Conference on August 1, Judge Ferguson voiced the thanks and appreciation of the congressional delegation for the hospitality of the Government and people of Brazil and evaluated the achievements of the Conference.

Some high spots of the Rio Conference

The Rio Conference was marked by several dramatic episodes. On the first day, as soon as the opening ceremonies were concluded, the chief Soviet delegate, Alexander P. Volkov, a deputy of the Supreme Soviet, raised the Middle East theme on a point of order. On behalf of his delegation he offered a resolution condemning United States and British aggression in the Middle East and insisting that the Middle East question be added to the Conference agenda. On the previous evening the Council of the Union had voted down a Soviet proposal for a resolution demanding measures to safeguard peace in the Middle East. But the Soviet delegation reopened the subject at the plenary session on the first day of the Conference. This proved to be merely a tactical maneuver to gain the spotlight.

The Soviet delegation, which made repeated efforts during the Conference to obtain at least a full debate on, if not approval, of a resolution demanding the withdrawal of United States and British troops from Lebanon and Jordan, failed in that endeavor.

Along with assertions that Moscow had unilaterally halted nuclear weapons tests, the Soviet group made the Middle East question a major propaganda theme in the Conference. In a farewell speech on the final day the chief Soviet delegate, Mr. Volkov, said that he "regretted" that the meeting had failed to say anything about this "most acute problem of the day."

On the final morning of the Conference delegates from 47 Parliaments on both sides of the Iron Curtain unanimously approved a resolution urging the speedy resumption of big power disarmament talks, preferably within the United Nations, stressing that one of the most urgent aims would be the ending of nuclear weapons tests under proper international control.

They also approved a resolution calling for the establishment on a permanent basis of an international police force. This proposal was opposed, however, by the Soviet Union and Soviet satellites as well as by Yugoslavia and a number of individual delegates. The vote was 371 to 104 with 50 abstentions.

In all its resolutions the Conference addressed an appeal to the national parliaments belonging to the Union to urge their governments to carry out the Rio resolutions.

Over the opposition of the British and Australian groups and a majority of the French delegation, the Conference approved an "anticolonialist" amendment by Chile to a resolution on the development of representative assemblies in non-self-governing territories.

In this connection one of the most dramatic events of the Conference was the address by Congressman MICHAEL A. FEIGHAN, of Ohio, who spoke on the draft resolution concerning the development of representative assemblies in non-self-governing territories. Mr. FEIGHAN called attention to "the new colonialism," under the yoke of which, he said, "a long array of politically mature and well established nations, which today are non-self-governing, have been deprived of their free political institutions and whose representative parliamentary bodies have been destroyed." Mr. FEIGHAN charged that "this new colonialism, this new imperialism, has forcefully incorporated no less than 20 once free, democratic and independent nations into its empire. This new imperialism," he said, "seeks to accommodate the rising tide of nationalism by spuriously proclaiming that these nations are independent." After calling attention to the recent popular uprisings in three of these non-self-governing nations—East Germany, Poland, and Hungary—Mr. FEIGHAN proposed that the draft resolution "be amended to reflect the urgent need for developing procedures whereby the people of these once free and independent nations might be accorded the opportunity, under the supervision of the United Nations, freely to determine the substance as well as the form of their government." Subsequently, Mr. FEIGHAN'S amendment was considered at length in the standing committee having jurisdiction of that subject, but further action on it was defererd to the Warsaw Conference next year.

The Rio Conference also unanimously approved a resolution urging greater international cultural relations and exchanges. The Soviet bloc and French Communist deputies abstained on sections of this resolution on freedom of the press and information.

Another development of special interest to the nations of the Western Hemisphere was a special meeting held during the Conference and attended by members of the delegations of the parliamentary groups from the Argentine, Brazil, Chile, United States of America, Haiti, Panama, Paraguay, and Peru. This meeting was called to consider the desirability of the formation of a regional Pan American Parliamentary Group within the framework of the Interparliamentary Union. It was argued that the formation of such a Pan American Parliamentary Group would improve the participation of the Western Hemisphere at the meetings of the Interparliamentary Union and, furthermore, that it would provide a medium for the advance study of the topics on the agenda of the annual conferences of the Union. It was urged, on the one hand, that the new regional group should be confined to the nations of Central and South America and, on the other hand, that it should include the United States and Canada. The first viewpoint was expressed by spokesmen from the Argentine and Chile. The chairman of the United States Group assured those present that the United States group would not be offended if it were not invited to participate in a new Pan American parliamentary body. It was finally decided to call together both a Pan American and a Latin American Parliamentary Group, subject to the approval of their respective governments, and that both groups should meet in Lima, Peru, if possible, within 90 days after the conclusion of the 47th Interparliamentary Conference. There is no assurance that the Interparliamentary Union will accept the affiliation of any limited regional group. In 1956 an attempt was made to organize such a group in the Far East, but it never received recognition as an affiliate of the Union and was subsequently disbanded.

However, an American Interparliamentary group representing all the countries of the Western Hemisphere, apparently, is looked upon favorably by the Interparliamentary Union and a call has gone out to form such a group at Lima, Peru, meeting to take place March 5–10, 1959. The U.S. group has been asked to send at least one voting delegate.

Resolutions adopted

"I. On the Necessity To Convene a Summit Conference To Relax International Tension

"The 47th Interparliamentary Conference—

"Noting the urgent need to lessen the threat of a new war and to improve the prospects for a lasting peace;

"Considering that the fulfillment of this task largely depends on statesmen of all countries and above all on those of the great powers;

"Wholeheartedly supports the idea of holding, after adequate preparation, a summit conference of representatives of states to discuss the most urgent international problems in the interest of easing international tension;

"Calls upon the parliaments of all countries to take the necessary measures facilitating an early convocation of such a conference.

"II. The Principles Governing the Investment of Foreign Private or Governmental Capital in Countries in Process of Economic Development

"The 47th Interparliamentary Conference—

"Recognizing the fact that some countries in process of economic development, more especially those which have recently achieved their independence, have not adequate capital to carry out the task of developing their economic resources to the full;

"Conscious of the reality that, within the next few years, proper development of many countries of the world toward economic independence will require investment of vast amounts of foreign capital, and realizing that no nation alone is capable of properly financing either the funds or goods required to carry out such a program over many years, which would be the best means of securing solidarity between the developed and underdeveloped countries;

"Recognizing the fact that assistance to underdeveloped countries must always be provided in the interests of the indigenous peoples themselves and must therefore be free from strings and conditions which in any way limit the sovereignties of such peoples;

"Considering that foreign capital, private or governmental, must serve as an auxiliary source for financing the economic development of underdeveloped countries while the basic role for providing such facilities belongs to their own resources, and only in the latter case can the economically underdeveloped countries genuinely insure the independent development answering their national interests;

"Considering that loans and financing, either through international sources, government to government, or private investment at fixed terms and at reasonably low bank rates, for the building up of basic resources and facilities, and for the development of industry, are the best means of achieving a mutually beneficial result;

"Appreciating the assistance which has been forthcoming through the specialized agencies of the United Nations and through various bilateral aid and loan programs, but regretting that these programs have been uncertain as to their continuation and scope, thereby making long-range planning and practical financing difficult;

"Realizing that an essential preliminary to large-scale investment is the carrying out of financial and technical studies of projects and resources;

"Conscious of the decision taken by the United Nations at the 12th session of the General Assembly in December 1957 to set up a special fund specifically for such preliminary surveys to facilitate new capital investment;

"Conscious of the need to follow up such surveys in appropriate cases by the large-scale provision of financial aid and long-term loans at low rates of interest, by means of international banking mechanisms, through existing auxiliary organs of the United Nations, on a government-to-government basis or in other ways;

"Conscious also of the need to create an atmosphere of mutual confidence between lending and borrowing countries, its lack having heretofore prevented as adequate an increase as desirable of the flow of capital to the underdeveloped countries;

"Calls upon parliaments of all members of the IPU to urge upon their governments—

"1. That the fullest support should be given to the work of the United Nations in this field;

"2. That, wherever required, financial and technical surveys and studies of projects and resources be provided to the less developed countries with a view to enabling their development along healthy and sound lines;

"3. That multilateral financing of long-term development projects of underdeveloped nations is to be recommended over such financing on a bilateral basis;

"4. That, wherever feasible, such financing should be arranged through the International Bank for Reconstruction and Development and/or through other international banking institutions to be established for such purpose, either as auxiliary organs of the UN or otherwise;

"5. That the conclusion, between all the countries concerned, of an 'International Code of Investments' defining the conditions of equitable treatment for both lenders and borrowers, should at the same time be sought for the protection of private investment;

"6. That respect of the provisions of this code be assured by recourse of private investment, in case of dispute, to an international court of justice and guaranteed by the creation of an International Fund set up under the auspices of the United Nations.

"III. The Strengthening of Peace

"(a) The Problem of atomic weapons and nuclear tests

"The 47th Inter-Parliamentary Conference—

"Conscious of the overwhelming desire of all peoples for an honorable and lasting settlement of the grave differences that intensify distrust, anxiety and tension between nations;

"Believing that the continuing accumulation of armaments of all types, nuclear and conventional, represents a serious threat to security and peace; and

"Noting the profound concern of the peoples of the world about the continuing nuclear weapons tests;

"Believing also that nuclear energy should be developed exclusively for peaceful purposes;

"Taking into consideration the urgent necessity of eliminating all harmful consequences of nuclear tests for human life and health;

"Stressing the great responsibility for the people's future which rests with the Parliaments of various states and with the Inter-Parliamentary Union;

"Recalling the resolution adopted unanimously by the 45th Interparliamentary Conference at Bangkok in 1956;

"Reaffirming in particular the belief that, pending the conclusion of a comprehensive disarmament agreement, including measures of conventional and nuclear disarmament and the reduction of armed forces under effective international inspection and control, attention should be given to the possibility of agreeing on the first installment of internationally controlled disarmament which could be put into effect with the least possible delay;

"Deeply regretting that no resolution containing proposals which were in harmony with that belief, submitted to the 12th Regular Session of the General Assembly of the United Nations, commanded unanimous support;

"Taking into account also that the cessation of nuclear tests might slow the arms race and would further a solution of the entire problem of disarmament;

"Appeals urgently to parliaments of all members of the IPU to recommend to governments in the strongest possible terms that speedy action be taken to secure resumption of disarmanent negotiations, preferably within the framework of the United Nations, and that one of the most urgent aims of such negotiations should be to secure without delay the cessation, under proper international control, of nuclear weapons tests.

"(b) The possibility of establishing an International Police force

"The 47th Interparliamentary Conference—

"Believing that the institution of a permanent International Police force charged with the task of insuring collective security is highly desirable;

"Is of the opinion that the establishment of such a force should be effected under the aegis of the United Nations;

"And urgently appeals to all parliaments represented within the Union to recommend that their respective governments take all possible steps to establish an International Police force on a permanent basis.

"IV. Cultural Exchanges Between Countries and Freedom of Information

"(a) Cultural agreements and their role in improving relations between peoples

"The 47th Interparliamentary Conference—

"Recognizing the importance and growing volume of international cultural relations, as well as the interest which is shown in their development, and with the object of reaching a better understanding between different countries so as to facilitate the establishment of favorable conditions for peace and for durable friendship between them;

"Stressing the need for eliminating all obstacles which hamper the freedom of cultural exchanges;

"Considering that men living in all countries of the world, by reciprocal appreciation of their cultural achievements and by assimilating the best and most progressive of them in the various national cultures, can learn to understand more completely and deeply the life of other peoples, to respect their originality and national traditions, and to enrich each other spiritually;

"Upholding the resolutions adopted by the General Assembly of the United Nations on February 21 and November 28, 1957, stating that wider international cooperation in cultural and scientific matters must be encouraged by agreements and other means, and that no effort should be spared to achieve those noble objectives;

"Taking note of the resolution adopted by the 44th Interparliamentary Conference on the conditions for a true peaceful coexistence between the nations and the resolution adopted at the Ninth General Conference of UNESCO;

"Appeals to all Interparliamentary groups to work for the realization of the UNESCO project on mutual appreciation of cultural values of countries of the East and West;

"Invites all Interparliamentary groups to contribute to the furtherance of regular intellectual exchanges between states as a means toward the conclusion of bilateral, regional, and multilateral agreements on cultural and scientific relations, and also on other forms of cultural exchanges, such as visits and sojourns of students, pupils, and young workers;

"Recommends the creation of administrative bodies and special parliamentary groups for the promotion of a reciprocal policy of cultural relations in those countries where such organs do not already exist;

"Hopes that the member groups of the Inter-Parliamentary Union will use their influence on their respective governments in the sense of the present resolution.

"(b) National and international aspects of freedom of the press and information

"The 47th Interparliamentary Conference—

"Desiring to safeguard the right to freedom of expression and opinion as defined in article 19 of the Universal Declaration of Human Rights;

"Recalling the previous resolutions adopted on the subject by the Interparliamentary Union, the United Nations General Assembly, particularly on November 3, 1947, and the Ninth General Conference of Unesco,

"Declaring that this liberty implies the right, either active or passive, to information through radio, film, television, as well as by books, gramophone records and the press itself;

"Considering that it is of importance to guarantee more effectively the free exchange of objective and nondistorted news, the protection of sources of information, the liberty of movement of foreign correspondents and the physical, social and spiritual security of personnel in the information services;

"Believing that it is necessary to guard against the maltreatment of news by a more equitable distribution of those means which guarantee the full right to information, impartially disseminated, by the development of professional techniques and by national and regional information bodies, which act as important auxiliaries in promoting economic and social progress in those countries which are lacking in this respect, as well as by the creation of councils, both national and international, for purposes of control and arbitration, and designed to bring about respect for different shades of opinion and to eliminate all abuses and rectify errors;

"Stressing the necessity for encouraging the development of intellectual exchanges, the formation of specialized personnel, the creation of educational centers and the consolidation of scientific, cultural, technical and sporting links;

"Affirming the desire to continue its efforts toward the removal of obstacles hampering the free flow and integrity of information;

"Condemning the use of false news which would be its very nature encourage hatred and provoke war, or would lead to the use of nuclear energy for other than peaceful purposes;

"Appeals to its member groups to have adopted in their respective parliaments the necessary measures for a free exchange of news, of information and publications between research institutes, libraries and cultural associations, as well as the free circulation of educational material and travel of persons journeying for journalistic or scholarly ends;

"Invites the representatives of the different countries to approach the competent authorities with a view to putting an end to all restrictions on the exchange of ideas, particularly by aiding in the intensification of action already taken by United Nations organs and specialized agencies in the technical field, and to achieve durable cooperation between the Governments and the professions in question;

"Requests that everything possible be done, either by adherence to international agreements or modification of national laws, to facilitate, in conditions of loyal reciprocity, exchanges of information likely to serve the cause of international peace and promote better understanding among nations as well as among individuals;

"Resolves to appeal to the members of the Union to adopt, in their respective parliaments, the necessary measures to make means of communication accessible to all branches of opinion in such a way that information does not become a privilege or a way of controlling public opinion.

"V. The Development of Representative Assemblies in Non-Self-Governing Territories

"The 47th Interparliamentary conference—

"Believing that the progressive development of representative democratic institutions in non-self-governing territories is of the highest importance for the emancipation of the peoples of those territories;

"Underlining the importance of the obligations laid down in chapter XI of the Charter of the United Nations in which states administering such territories are required to 'develop self-government, to take due account of the political aspirations of the peoples, and to assist them in the progressive development of their free political institutions';

"Convinced that the aim of extending universal suffrage to all non-self-governing territories is directly in line with the ideals and aims of the Interparliamentary Union;

"Appeals to the National Parliamentary Groups of the States responsible for the government of such territories to promote and encourage within their respective parliaments legislation which would have as its object the building up of truly democratic assemblies in non-self-governing territories;

"And proposes:

"1. Rejection of all forms of colonial rule and subjection exercised by force upon the independence and freedom of another country;

"2. Solidarity with all colonized countries which have already obtained their freedom, as well as with all who still fight for their autonomy;

"3. Establishment of an international procedure which would guarantee to peoples desiring to become free of foreign tutelage that the substitution of foreign authorities by self-government would not be detrimental to human rights and the institutional forms of coexistence;

"4. Necessity for those governments, and particularly their parliaments, to be formed as the result of free elections—the only way in which legitimate power can be conferred and the people represented."

GENERAL DEBATE ON THE SECRETARY GENERAL'S REPORT

Hon. HENRY O. TALLE (United States of America). Mr. President, fellow delegates, ladies, and gentlemen, this is indeed a very proud moment for me, a moment which I regard as something of the order of a day of fulfillment. From my childhood days I read about South America and her facinating history and her remarkable people. Seven years ago I had the opportunity to visit every country in this great continent, and I was so pleased with all I saw of resources, and especially of the people, of this great country that I redoubled my efforts in the hope that the day might not be far away when the countries in this great continent would be a stimulating force in the Inter-Parliamentary Union. I must therefore say to Senhor Braga that I owe him a very great debt of gratitude for his remarkable endeavors in this field.

I want to say "thank you" for myself and for the delegates of the United States of North America to everyone who has had a part in making this conference possible; and I bring to you the cordial greetings of my dear and beloved friend, DANIEL A. REED, of New York, who is serving his fourth year as president of the U.S. group. For very good reasons it is not possible for him to appear here, and so I speak on his behalf in bringing to you greetings and all good wishes for the improvement and lasting future of our great organization.

I should like to say that when your distinguished President who addressed us in an inspiring manner this morning visited the Capital of the United States he left an excellent impression and we hope that he will return to us, for we are glad to have him as a visitor.

It would, of course, be very easy, were there time for it, to rhapsodize about the beauty of this country and especially this city, your beaches, your buildings, and all of these beautiful things we see by day and night, and, of course, it would be very easy to speak in hushed tones about the reverence which is exuded by the sacred statue of the Redeemer high on your mountain top. There is not time for that and I will proceed with my message.

The people of Brazil and, indeed, all of the Latin American countries, and the people of the United States of North America have many common historic ties. All of us were colonists of European powers, most of us share the traditions of a struggle for independence, we adl ere to the same spiritual and moral principles and we share the same aspirations. We all have republican governments, and our constitutions are similar. In many ways we share a common ambition for the New World from which so many vigorous ideas have sprung. Indeed, today we are equal partners in a 21-nation organization, the Organization of American States, and we are good partners, friends, and neighbors. President Eisenhower once characterized our Pan American system, and I quote, as "the most successfully sustained venture in international community living the world has ever known."

I must, at this point, say "Thank you," to our Secretary General and his staff. The task they perform is an exceedingly difficult one, they do their work well. Obviously not all of us can be pleased with everything we read in this remarkable report, but I should not like to compete with him in his difficult work. In the Interparliamentary Union the cultivation of better understanding between nations is the ideal for which we strive. To achieve such understanding we must largely rely on the free flow of information within our respective states, and among our states.

I am immensely pleased to find on the agenda two topics which interest me very much. In the first place, national and international aspects of freedom of the press and information. Having devoted many years of my life to the field of education, I am also deeply interested in cultural exchanges, another item on the agenda. At no time in our country has it been so easy for the American citizen, indeed any citizen, to acquire information and wider knowledge of the world and deeper understanding of its problems. He can sit in his easy chair and listen to discussions of the critical issues by some of the country's most astute thinkers. By such listening he can evaluate and compare. This is true not only of my own country but of many other countries. Referring specifically to my own, there are about 11,500 daily and weekly newspapers and about 6,000 weekly, monthly, and quarterly periodicals, there are 2 nationwide press associations, there are 4 radio networks, 3,000 radio and television stations. These media are not in any single ownership by no manner of means; the ownership is widely diversified and there is no monopoly of ownership or control. Under our own Constitution Congress is prevented from interfering with freedom of speech, there are various State constitutions which stipulate that every citizen has the right to speak freely on any subject matter whatsoever, and the history of freedom of the press of the United States antedated the adoption of the U.S. Constitution.

I regret that there is so little time, but I do not want to take time from anyone else and so I close with cordial greetings to all of you and look forward to a very happy conference.

Hon. KATHARINE ST. GEORGE (United States of America). Mr. President and fellow delegates, those of us who come from the Western Hemisphere are especially proud and happy to be here at the first Conference ever to be held in one of our great sister Republics of South America. The friendship and hospitality of the Government and people of Brazil will long be remembered by all members of this Inter-Parliamentary Union, but

especially by those members who belong to other American Republics.

Again this year we come to the Conference fortified by the report of our distinguished Secretary General. I have now attended three of these Conferences and I am more amazed today than ever at this report and all that it covers. Almost every detail of the history and the politics of the nations who are members of this Conference is covered. It is true that world history is moving with great rapidity today and that some extremely significant events have happened since the report was written. At the very opening of the report the Secretary General writes:

"Considering the world situation from the point of view of relations between the great powers an impression of stability is gained, albeit of a superficial nature only. No sign can be seen of any sustained rapprochement, but neither has any direct initiative been taken affecting a status quo which, for the time being, the parties concerned seem to have tacitly accepted."

This situation has changed for the worse and it is devoutly to be hoped that out of the deliberations of this Conference we can achieve a "modus vivendi" that will gradually bring the nations of the world to a true belief that peace cannot be achieved without understanding and tolerance. All nations yearn for peace and it is for us who are members of this Conference to strive mightily for this end.

The Report deals at some length with the problems of atomic tests. Here misunderstandings still prevail and are perhaps those most conducive to disaster. In this field real discipline and self-control must be created. It is impossible to expect one side to abandon tests until positively assured that the other side will do likewise. This is a poor time and place to indulge in demagoguery, and it was disappointing yesterday to hear accusations that the United States and Great Britain were threatening to use atomic bombs. We know of no such threat but we do know that the present head of the Soviet Union said: "We will bury you," to an interviewer from the West. This may have been meant as a joke, but some of us may not find it very funny.

The situation in the Middle East is threatening, but American and British troops are in Lebanon and Jordan only because they were called upon by those two small and free nations for the protection which had been promised them in case of need. We are taking nothing from Lebanon or Jordan. We will not murder people to whom safe conducts have been given. We will help them to maintain their freedom, at their request, because we gave them a solemn promise to that effect and we will keep that pledge. As to oil interests, it is almost silly to mention them. The United States and South America have enough petroleum products to supply the free world for years, if not centuries, to come.

The fact that so many nations today are mere satellites is disheartening in the extreme. The Report quotes Mr. Spaak in reference to NATO in the following words:

"The day when there were no longer any discussions between them would be the day when, having accepted one government as leader, the other governments would be no more than mere satellites—and the alliance would have no further reason for existing."

Again we are confronted by the fact that words do not mean the same thing to all people. Even such words as peace and freedom are not the same in all languages.

Our Secretary General is impartial in his thinking and his writing. This, of course, brings us sometimes to the philosophy of "a plague on both your houses," which is not what we enjoy hearing even though it may be good for the soul.

This report is a great document not only today but for the future when many of us, we hope many of a younger generation, will read and study it with interest and profit as a true and impartial picture of our times. The report also includes the preliminary documents that make up the agenda that we, in this year of grace 1958, considered of the greatest importance.

Since our last Conference in London the clouds that menace and surround parliamentary governments all over the world have not lifted. On the contrary, they have become blacker and more dangerous. On that occasion I spoke somewhat pessimistically about the future of our parliamentary systems. I regret that very little has happened since the London Conference to alter any of these opinions. One thing did happen, however, at our Geneva Conference, which I feel was encouraging, and to which I intend to address myself at this time. On this occasion the Committee on Non-Self-Governing Territories, presented in the name of the Committee a resolution on "the Development of Representative Assemblies in Non-Self-Governing Territories" and this item has been put on the agenda for this Conference. Now, why can we feel that this resolution is an encouraging sign? First, because it shows the world that we believe in representative government as the ultimate toward which all peoples strive. Secondly, because we believe that representative government is capable of growth and improvement. And this is perhaps the most important part of all. Any philosophy, whether of government or of any other science, that becomes static and incapable of change or growth is destined to wither and die.

Finally, I would recommend to you the words of a former President of my country, Herbert Hoover, who said recently in Brussels:

"We must unceasingly strive by all peaceable means to make the world safe for representative government. From representative government alone can come respect for your dignity as men and women, your flowering as individuals, your rights to a rising chance in life, to self-expression, and to security from sodden uniformity."

Foreign investment in underdeveloped countries

Hon. HENRY O. TALLE (United States of America). We are gathered today to consider basic issues relating to the role of foreign investment in economic development. I submit that the most direct and significant point of reference for the formulation of a set of principles of foreign investment is to be found in the last four words of the topic of this session. The principles we arrive at will depend in large measure upon our understanding and interpretation of the phrase "process of economic development."

There is the totalitarian road to development. Countries that follow this path seek to advance industrially at the expense of the freedom and liberties of their peoples. Through propaganda, subversion, and more recently, through ostensibly favorable credit terms, they pursue international policies designed to weaken and undermine the independent sovereignty of other nations.

Very different is the democratic process of development based on individual freedom to work, to spend, to save, and to invest. With the demands of modern life and unsettled world conditions, the governments of democratic countries have come to play a much larger role than in earlier periods in promoting economic progress. But this role continues to be nourished in the traditions of free institutions.

All countries, from the most industrially advanced to the relatively backward, are confronted with the problem of obtaining an adequate supply of savings for capital expansion, without which economic progress is not possible. It is to the interest of all the nations of the free world, since they are economically interdependent, that favorable conditions are created for tapping the sources of savings at home and abroad with which to assure economic growth. These conditions must meet the varying needs of countries in different states of development.

The foreign economic policies and programs of the United States recognize the importance both of the principle of interdependence and the principle of diversity of countries in various stages of economic development.

In the interests of our own economy and those of the rest of the free world, we have endeavored to stimulate foreign investment through such a governmentally owned corporation as the Export-Import Bank. Our oldest public institution in this field, it has loaned over $9 billion for development purposes in more than 50 countries. These loans, both to private borrowers and governments, have helped finance, on a sound business basis mutually beneficial to borrower and lender, power-generating installations, transportation facilities, manufacturing plants, and the extraction industries. Only recently the lending authorization of the Export-Import Bank was increased by $2 billion.

The United States is proud of the role it has played in promoting the flow of foreign investment through its participation in the International Bank for Reconstruction and Development and in strengthening the international currency system through its membership in the International Monetary Fund. The World Bank has successfully promoted the international flow of capital for productive projects either by lending funds directly, guaranteeing loans made by others, or by participating in such loans. The gross total of loans that the Bank has made to 46 countries amounts to $3.5 billion.

Closely affiliated with the World Bank is the International Finance Corporation. It was established in 1956 to overcome two limitations on the Bank's ability to finance a greater number of private development projects—the lack of equity investment in projects and the requirement that loans made to a private firm be guaranteed by the government of its country. With the removal of these obstacles, the International Finance Corporation aims to demonstrate that soundly conceived private investment projects in less-developed areas can be sufficiently attractive to stimulate a much larger flow of private capital into these areas.

About a year ago the United States set up the Development Loan Fund to extend long-range financing to underdeveloped countries. The Fund is not in competition with private investment, nor is it competing with the Export-Import Bank and the World Bank. It aims to facilitate the financing of meritorious developmental projects that have difficulty in obtaining the necessary funds. Many of the less-developed countries have a limited capacity to service dollar loans on the terms required by the International Bank and the Export-Import Bank. Under the more flexible terms of the Loan Fund, repayments can be made in local currencies as well as dollars. It can operate with greater flexibility not only because it recognizes the necessity of repayments in terms of local currencies, but because it can also finance either private or governmental projects on an adjustable basis for as long as 40 years.

This brief review of the major governmental programs to stimulate the flow of investment into developmental projects serves to remind us that a variety of financial tools, public and private, has been proved necessary to meet diverse capital needs. But experience has also shown that in the interests of all of the countries of the free world it is imperative that the economic growth of the underdeveloped areas be ac-

celerated. Such advance depends not only on the readiness of the more industrialized nations to expand the flow of capital to these areas, but also on what the peoples of these countries do for themselves. Their progress depends on the adoption of measures which would encourage investment from inside as well as from outside the country. I have in mind control of inflation, planning for balanced economic growth and administrative and legislative actions that permit the inflow of capital, equipment and services and the outflow of reasonable earnings.

The technically less advanced countries appreciate more than ever before the importance of capital investment in promotion of economic progress. They frequently place their main hope for such progress on the obtaining of capital from abroad. But the flow of capital depends on the existence of certain basic political and social conditions without which private investment cannot operate. In addition, capital requires technical and managerial skills for effective utilization, a working force that is adaptable to changes in technology, and the development of adequate marketing and credit institutions.

The more advanced industrial nations must also provide more favorable conditions for expanding the role of private domestic investment in underdeveloped areas. The United States has taken a number of steps in this direction. These include the maintenance of information and counseling services for potential investors, as well as strengthened government staffs overseas, equipped to understand the importance of foreign investment. The International Cooperation Administration, which provides insurance against loss arising from inconvertibility of local currency earnings, expropriation and war risks, has been steadily expanding its guarantee program. The Government has also negotiated an increasing number of bilateral treaties designed to protect more adequately the interests of private investors. It has also provided tax incentives for overseas investment, although more can be done in this field.

In closing, I should like to refer briefly to the draft resolutions relating to the agenda for this session. The recent events in the Middle East point up all the more the need for strengthening the economies of underdeveloped areas, especially those which have recently achieved their independence. The draft resolution calls upon the Parliaments to adopt the principle of multilateral financing of long-term development projects of underdeveloped nations as against such financing on a bilateral basis. The implications of Resolution No. 3 are far-reaching. The proposal involves the establishment of another international organization with subscription of a substantial amount of funds by many different countries. There are many practical difficulties in the creation of additional institutions for multilateral financing, which require further study if we are to build solidly. Also, may I remind you that there are many experts in the field of foreign investment, including many in the countries receiving investments, who are equally convinced that in the present stage of assistance to underdeveloped areas the bilateral approach has so much merit that it should not deliberately be consigned to a place of secondary importance, as is implied in the draft resolution before us. I, therefore, suggest for your consideration that this resolution be modified to provide for further study of the subject.

The problems of atomic weapons and nuclear tests

Hon. W. R. POAGE. Mr. Chairman, fellow delegates, everyone seems to agree that it would be highly desirable for all nations to suspend further atomic tests, and indeed to agree to forego the use of nuclear weapons. I think we can also agree on the desirability of greatly reducing and eventually eliminating all of the military establishments of all types and character throughout the world. In fact, my own country, the United States of America, at the close of World War II, demobilized more than 10 million men. No nation has ever carried out such an extensive demobilization, nor has the Soviet Union, the only other great power with such a large establishment, demobilized to a comparable extent, even though more than a dozen years have now elapsed. We do not know the exact size of the Russian military establishment today, but it is undoubtedly comparable, or even larger than the establishment of all the balance of the world combined. Possibly this tremendous manpower is locked up in unproductive work, because the communistic rulers feel that they do not need to devote the skills and labor of this great force for the improvement of the standard of living of their people. In my country we feel that we need to devote the labor and the skill of our young men to constructive undertakings—to the further improvement of the standards of living of our people and of all the people of the world.

Indeed, it seems to us that, desirable as it may be to limit the testing and the use of atomic weapons, it is even more desirable to reduce the wasteful use of manpower through the maintenance of conventional weapons.

The United States of America has repeatedly expressed its willingness and desire to restrict all types of armaments—both atomic and conventional—but no intelligent person could expect or want us to abandon any weapons without some dependable assurance that the U.S.S.R. will do likewise, and will do it at the same time. Nor do we ask of the Soviet anything which we are unwilling to extend to them. We would no more think of asking the U.S.S.R. to accept our unsupported promises to abandon weapons than we would accept their unsupported promises.

We recognize that the whole buildup of men and weapons throughout the world is the result of lack of confidence in the sincerity and good will of our neighbors. We hope that the time may soon come when all people will feel as secure against their neighbors as I believe the United States and the people of Canada feel, each as regards the other, but until that ideal situation arrives, there can be no substitute for full and unlimited inspection, to assure the compliance of mutual promises. Such acceptance of mutual inspection is an absolute prerequisite to any effective disarmament, or any control of either use or testing of atomic or nuclear weapons.

Nor is it any answer to say that one of the great powers says that it will forego the use of testing of any type of weapons but demands that its possible victims should accept its unsupported promise. This is particularly true in the face of a long record of the use of force wherever and whenever it seemed expedient. And the very refusal to accept the principle of unrestricted inspection can do nothing but strengthen those doubts.

Let me repeat: the United States of America welcomes any practicable program of mutual control of our reduction in all kinds of armaments, but the control must be mutual. We invite complete inspection of our own arms, even of our atomic development, but that inspection must be mutual. Nor does the United States of America wait until it has just completed its annual series of atomic tests and then suggest a period of suspension of such tests. Such obvious insincerity can do nothing but increase the determination of all other countries to see for themselves that all promises are being fulfilled.

Mr. Chairman, it is not my desire to emphasize or widen this mistrust, but I feel that the people of the world should clearly understand that mere words will never take the place of deeds. There have been charges of aggression hurled at my country and at Great Britain at this very conference. These charges stem from the fact that the two great powers have carried out their commitments to protect two small nations from destruction. Of course, we recognize that it would have been far more desirable had the United Nations gone to the protection of these small countries, but the very people who condemn us have stood in the way and refused to allow action by the United Nations. The United States and Great Britain stand ready, as we have always stood, to move out of Lebanon and out of Jordan any day the Soviet is willing to let the United Nations protect these lands. Did Russia make any such offer when she moved troops into Hungary? Let the small nations of the world judge the large powers by their actions, not their words, and let the small nations recognize that it is the military power, and especially the atomic power, of the United States of America, which stands between them and the type of aggression we have witnessed in Korea and Vietnam. We of the United States will not impose our rule on anyone. Ask our neighbors. Ask Canada. Ask Cuba. We want to hold no people under our control. Ask the Philippines. We want to engage in no armament or atomic race. We want to beat our swords into plowshares but we can only do so when we know that others are doing likewise.

We challenge the sincere cooperation of the U.S.S.R. to join in a real, completely inspected program of disarmament We will meet you halfway, but we have no intention of disarming ourselves without absolute assurance that others are doing likewise.

Establishing international police force

Hon. KENNETH B. KEATING, of New York. The possibility of establishing an international police force is a particularly pertinent and timely topic for the troubled times in which we live. Perhaps never before in the history of the world was there greater need for calm, objective, and broadminded thought on this possible avenue for helping to achieve a more just and secure international order.

Not only is this topic timely. The place in which it is raised is—in a twofold manner—an eminently suitable one for such a discussion. First, as representatives of the legislative bodies of our respective nations, each of us is in a strong position to urge directly the participation of our governments in some kind of an international police group. Second, in no other region on earth are the lessons of international security better exemplified than in Latin America.

Indeed, all the peace-loving nations of the world would do well to examine with care the experience of the nations of South America in carrying out their self-imposed system of inter-American policing. Operating through a collective defense pact, commonly known as the Rio Treaty, and through the machinery of the Organization of American States, this policing program has been in large measure both effective and generally acceptable. By means of voting sanctions, of dispatching investigating committees, and of careful use of military observers, the nations of Latin America have successfully nipped in the bud a number of potentially incendiary situations among nations of this area.

One reason the Rio Treaty has operated so successfully is that it provides a flexible system of inter-American policing which tailors the means to the situation. The fact that sanctions can be imposed up to and including the use of collective armed forces has had the effect of eliminating the danger of aggression among the neighbors of this section of the world. In addition, the

Americas have coordinated their policies to defend themselves against any extra-hemisphere threat. Since the end of World War II no other nations in the world have enjoyed the freedom from fear of aggression from their neighbors and the world as have the Americas.

When the United Nations was organized in 1945 procedures similar in many respects to the inter-American system were envisaged for maintaining peace. The U.N. idea, based on certain fundamental principles, provided procedures for peaceful settlement and for arriving at decisions to enforce the peace. This idea also anticipated the creation of forces to maintain the peace when the use of force became necessary.

It soon became apparent, however, that there was a fundamental division within the United Nations between nations which cherished their independence and desired a stable international order, and the power ambitions and aggressive ideology of the Soviet bloc. This expansionist combination succeeded in subverting and taking over a long list of independent governments. The result was that political consensus, the necessary base for any international policing action, was absent in the world community. Attempts to create world collective security by agreement among the great powers were thus doomed to failure from the start.

However, repeated efforts were made to gain approval of some sort of worldwide army to help maintain order and security. Whenever fighting has started or is threatened in some sector of the world, agitation has begun afresh for the creation of a U.N. army to be dispatched to the scene to calm the troubled situation. These proposals always revive whenever—as in the instance of Korea, Hungary, Egypt, or the present Middle East crisis—the need becomes too obvious and too urgent to ignore.

One extremely useful precedent has been provided in the case of the United Nations Emergency Force, which has done so much to maintain stability and peace in areas of acute tension between Egypt and Israel. The relative success of this Force in patrolling the uneasy cease-fire has drawn praise from many governments. Its long-range value, however, can only be measured in terms of the use to which the time gained will be put to solve the complex problems afflicting that area, and the use to which we can put the experience gained by this adventure in international policing.

The 13 years of experience in the United Nations has demonstrated conclusively that politically speaking, it is a house divided. A gulf separates those nations which believe in the U.N. Charter principle of independence and those which in practice deny that principle—which really believe in a Communist world hegemony, controlled and directed from Moscow and Peiping. The Soviet Union has demonstrated it will do all within its power to exclude from its captive domain any international policing action, even to the extent of barring an investigating committee, such as in the case of Hungary in 1956.

Most recently, of course, the Soviet conspiracy has blocked efforts to organize and dispatch a U.N. peace force to the troubled Middle East, in an effort to calm the potentially explosive situation there. However, this barrier to world unanimity on an international police force should not discourage us. We should not regard the opposition of the Soviet Union to these peace efforts as an insurmountable barrier. We should press forward with all the vigor at our command to gain support for this principle from all men of good will who sincerely desire peace. On the other hand, I believe we are completely justified in questioning the motives of those nations of the world who, by their intransigent attitude, have repeatedly blocked attempts to create the international force which may well represent a key to the future peace of the world.

The United States has repeatedly demonstrated its willingness to participate in an international army for peace. The Congress of the United States today is in the process of officially going on record as approving this principle.

Certainly recent developments in the Near East provide sufficient demonstration of the tremendous need for some sort of a peace force. It should, of course, be under the control of the United Nations, ready to move instantly in case of an international emergency at the request of a member government which believes itself threatened by outside aggression.

In a world contracted by speedy communications, in a world in which even the smallest nations possess the terribly destructive weapons of modern war, any international disturbance—however localized—can spread like a plague and thus present a real threat to world stability. The only feasible answer to this challenge to the peace of the world is to provide a U.N. force capable of so spreading a U.N. mantle over an embattled state as to inhibit—if not directly to prevent—a coup d'etat, infiltration by indirect aggression, or other untoward pressures from outside the nation, such as we have witnessed recently in the Near East.

A U.N. police force need not be a huge, all-powerful army. It might not number more than 50,000 or 60,000. It might perhaps be found best to establish a firm nucleus at all times centered under one command, with other forces in the individual countries, available upon call.

It is my firm conviction that the smaller nations of the world must form the backbone of any international force. This will prevent the bigger powers running the risk of being dragged into a nuclear conflict which could doom all mankind.

Such an international police army could not—and should not—fight wars. It could not prevent isolated assassinations planned by outside aggressors such as we have recently witnessed.

But a permanent U.N. police force can serve as an effective deterrent to hostilities, could be a focus for the moral opinion of the world, and could serve numerous practical uses in observation, patrol, and guard duty between potentially hostile states.

Certainly, in the light of the dangers inherent in man's vast technological and material progress, we must search with imagination and foresight for the answers to the enigmas of world peace. Today we have too little of either—at a time when we stand in desperate need of both.

There has been sufficient study and experience concerning an international police force. There is plenty of evidence to show how great a factor it could be in preserving peace. No nation of good will can in good conscience oppose the creation of such a force.

The time is running short. Each new crisis brings us closer to the potential horrors of a world war III. The next international brush fire may set off that worldwide conflagration if the nations of the world do not rise to the occasion.

A permanent United Nations police force provides a new, decisive means by which the nations of the world which sincerely believe in peace can provide the machinery to quarantine regional conflicts and thus better insure their solution. The resolution before us provides a tangible means for each of us, in behalf of his people back home, to signify support of this key means to preserve the peace of the world. I urge each of you, in your respective countries and respective legislative bodies, to work for this goal. It is one of the strong, sure hopes for the peace for which all men of good will hope and pray.

Cultural exchange and freedom of the press

Hon. HALE BOGGS (United States of America). Mr. President, fellow delegates, the story of Brazil excites sympathetic understanding and respect and admiration from all citizens of the United States. Here the struggle for independence and freedom was much like that struggle in my country. Indeed, like the struggle of free nations everywhere.

Yes, Mr. President, we of the United States are proud to be here with our old friends, the great people of Brazil. We salute our years of uninterrupted friendship.

Brazil and her sister American states—north and south—constitute the greatest regional area for mutually profitable investment and trade. Such mutual confidence as has been demonstrated hemispherewise could well be the pattern for world understanding.

It is this philosophy of mutuality, without sacrifice of any nation's individuality, which is at the heart of our deliberations for a world anchored in peace, in freedom, in progress, and in prosperity for all. To this philosophy Brazil has made tremendous contributions, showing magnificent leadership, particularly in the vital field of international law.

In discussing cultural exchanges and freedom of information I think that I can say without being immodest that the United States has been a major force in the world for the promotion of both concepts. We are attempting to take to heart the admonition of H. G. Wells when he said: "Human history becomes more and more a race between education and catastrophe." I hope, too, that you will agree that these exchanges have planted the seeds of amity and understanding among peoples and are of immense potential good in preventing that ultimate catastrophe of which Mr. Wells spoke.

The United States has concluded negotiations with the Soviet Union expanding exchanges of information and ideas and of technical, scientific and cultural delegations between the two countries. Only recently the Soviet Union made one of its highest cultural awards to a brilliant young pianist from Texas, and American audiences, on their part, applauded enthusiastically a very skillful Russian ballet group from Moscow. The Philadelphia Symphony has been in Russia and another famous Russian ballet is expected in the United States early in 1959. Under the new program a top-flight delegation of American educators has already visited the Soviet Union and studied its educational structure throughout. Soviet educators are now to visit the United States in turn. The agreements contemplate programs by American industry to be offered to the Soviet Government for sale or for exchange through the Department of State of the United States. A meeting this summer in Moscow is aimed at implementing this phase of the negotiations. There is contemplated an exchange of groups of specialists in industry, agriculture, and medicine.

Cultural exchange in our time is the most fruitful and the most effective form of education and perhaps the most indispensable, in the atomic age. How are we to estimate the immense value to international goodwill and international education resulting from the program of scholarships identified all over the world with the name of the United States Senator from Arkansas, J. WILLIAM FULBRIGHT? Who can say how much good has been accomplished by 33,000 Fulbright scholars from 39 countries in 10 years? This is probably the largest educational exchange in the history of civilization.

The Soviet Union, we are told, has put its mightiest thrust behind the education of Soviet youth. It is my conviction that an educated people, no matter how indoctrinated will demand freedom. Police state doctrines are ultimately doomed in an educated society. Moreover, if the exchange programs do anything, they throw into open contrast the philosophies of the Soviet and Western World. Once that competition of ideas is

free and unrestrained I have only the most optimistic prophecies for the future. What we seek is not coexistence in an atmosphere of atomic hostility, but understanding in an atmosphere of mutual trust.

In the minutes remaining I should like to turn to freedom of the press. Freedom of the press cannot be dissociated from free government. There is no such thing as one without the other. Even benevolent despotisms, however altruistic, cannot abide a free press. Free government—government by consent of the governed—cannot exist without a free press. Unless public expression of private views is untrammeled and unintimidated, the heartbeat goes out of government by the people. Total freedom sometimes leads to abuses, of course. But as between the death of free government and journalistic abuses, which are in any event under free government easily counteracted, the choice is clear. The Constitution of the United States, which is the basic law of our land, asserts in the first of the 10 amendments known as the Bill of Rights, that Congress shall make no law abridging freedom of speech or of the press. With us this is sacred and inviolable. It is the keystone of our democracy. President Franklin D. Roosevelt gave this principle a worldwide significance when he solemnly told the Congress of the United States that of the four freedoms the first is freedom of speech and expression—everywhere in the world.

To the American mind freedom of speech and expression everywhere in the world cannot be separated from free government. We believe that the citizen is free—subject to laws of libel, slander and obscenity, and of sedition and national security—to say and print what he likes for or against government, his own and others. Because the United Nations Convention on Freedom of Information went too far, in their opinion, it was rejected by the Soviet bloc. And precisely because, in the view of my Government, it did not go far enough and might be used as an instrument for the restriction of information, the United States also opposed the convention.

In America the struggle for a free press goes on ceaselessly. It sometimes becomes necessary to fight against forces seeking to stop the flow of information from government and about government to the people. But we have a long-established tradition of vigilance, and no public reaction is so swift as that against any effort to impede the flow of information to the people. Congressional committees are constantly vigilant to efforts to suppress information.

And so, Mr. President, it is my conviction that together—cultural exchange and freedom of the press and information—hold within themselves the key to a free world of free men living in an atmosphere of mutual understanding and peace, under enlightened democratic governments freely chosen by them and governing with their consent.

National and international aspects of freedom of the press and information

Senator FRANCIS CASE (United States of America). Mr. President, ladies, and gentlemen of the Conference, if the desires of mankind are what we have heard expressed, the people of the world do not want an atomic war—they do not want any war.

The men and the women who have spoken here have spoken as one on that point. They have differed only on the ways in which we can make the desire for peace come true with liberty and justice for all.

Of all groups of men and women who might be brought together, this Conference of members of parliamentary bodies should be the most accurate in reflecting what is in the hearts and minds of men and women everywhere because each of us comes as the representative of a constituency. Most of us are elected by the votes of that constituency, but whether elected or appointed, each of us is here to speak for the people we were chosen to represent.

To this Conference, then, of parliamentary delegates, I speak on freedom of information with the conviction that on this freedom all other freedoms depend.

To this Conference, I would say that the right to know the truth is a right of the people and is not a proper monopoly of any government.

Our agenda item No. 5 divides the topic into two parts: Exchanges of Culture, and Exchanges of News as Information. I address my remarks to the latter—the exchange of news at home and abroad.

In passing, however, I testify to the good that is accomplished by the exchange of cultures.

It was good for the people of my country to learn of the appreciation accorded in Russia to a great pianist from the State of Texas, Mr. Cliburn. It has been good for the people of my country to learn of good sportsmanship and courtesy when athletes from my country compete with athletes of other lands, regardless of political ideologies. And I trust the ladies at home will forgive me if, in Rio de Janeiro and this atmosphere of Latin American beauty, I confess there may be dividends for international appreciation from the victory by lovely Miss Colombia, in the competition for the title of "Miss Universe" held in the United States of North America only a few days ago.

Such exchanges of culture and skill, of talent and beauty to increase understanding among the people of the world.

The free exchange of other news and information, however, sometimes runs into trouble. This happens most often when the news relates to political programs and ambitions.

Those governments which see the state as the goal of every endeavor are inclined to seize control of information as a tool for the attainment of their ends regardless of the imprisonment which that decrees for honest, clear-minded judgment. Those one-man governments who dare not trust the people with the truth deprive the people of the facts to which every citizen has a right. This practice defeats the hopes in the hearts of mankind for freedom and understanding.

My country's independence began with a declaration that governments are formed to bring life and liberty and to permit people to pursue happiness. We hold that the state belongs to the people, that people are not the chattels of the state.

Consequently, we believe that the people are entitled to have uncensored news. When Premier Khrushchev wrote his letter to President Eisenhower about the situation in the Middle East, a few days ago, the newspapers of my country were free to print every word of the Khrushchev letter. The radio and the television carried whatever portions of the letter they desired to use and that their time permitted. The people of my country reached their judgments on the basis of the statement itself, and in the light of past events in Warsaw, Leipzig, and Budapest, as they had been freely reported insofar as the facts from those places were permitted to get to the world.

Someone once said that religion was an opiate for the people which I do not accept. True religion brings hope and purpose to human life. But there is something which does drug justice and put freedom to sleep. That is the sugar coating of selfish political opinion in the name of news by governments which denies to their people the free exchange of information with other peoples of the world.

There is no colonialism so enslaving as that which imprisons the minds of men and makes them the mental chattels of the state.

As Mr. Philip Klutznick, U.S. representative to the General Assembly of the United Nations, said as lately as December 6, 1957:

"The freest and fullest flow of information is basic to a democratic system of government. * * * In time of peace it is never safe to trust any man or institution of men with the power to decide for others what is good and what is bad information * * *. There may be times when the majority will be mistaken * * * but * * * the truth eventually becomes apparent and right judgments will be made."

Mr. President, ladies, and gentlemen of the Conference, on the 14th of December 1946, the General Assembly of the United Nations resolved that: "Freedom of information is a fundamental right, and the touchstone of all the freedoms to which the United Nations is consecrated."

Therefore, I would wish that this Conference of the Interparliamentary Union "urge that the free exchange of information be recognized as a right of the people and not as a property of any government."

Those who themselves are the mouthpieces for the people in representative government should be the first to proclaim the importance of the freedom of information. Unless the door is open for the free flow of news, we can never be sure of what is truth. The people must have their right to know recognized if there are to be governments of the people, by the people and for the people.

Draft resolution concerning the development of representative assemblies in non-self-governing territories

Hon. MICHAEL A. FEIGHAN, U.S. Representative from Ohio. The quest for peace engages the attention and efforts of men of good will in all parts of the world. All humanity is today beset by strife and tensions which, if allowed to persist, will plunge the world into the disaster of another war. This is the overriding challenge of our times. The question before all of us is: How can we remove the strife and tensions which give rise to war?

One of the outstanding causes of strife and tension is injustice. That is, injustice against people and nations.

In our times it is injustices against entire nations which cause unrest on a scale unparalleled in the history of mankind and thereby retards the winning of a lasting peace. The demand for genuine, representative self-government is heard from the people of all nations who are today the victims of colonialism or imperialism in any form.

The old colonialism is giving way to the rising tide of nationalism as the empires of the past are becoming reconciled to the need for a new world order in which all nations shall govern their own affairs and live at peace with their neighbors. This reconciliation carries with it the high responsibility for assisting the people of the old colonial territories in the task of building free political institutions which will assure representative parliamentary bodies. Only through the exercise of a universal vote, free and secret ballots, the right of multiple political parties which take their case to the electorate at fixed intervals, and parliamentary bodies which adhere to the right of the opposition to dissent, can such free political institutions be built and preserved. In turn this requires responsible local leadership which is responsive to the will of the electorate.

This, then, is the challenge which confronts both the statesmen of the administering power of the non-self-governing territories and the people of such territories. It is a common task in which both interests must assume equal responsibility. There is sufficient good will on all sides to assure success once the objectives are clearly de-

fined and a time set for the accomplishment of the task.

Significant and praiseworthy steps have already been taken by the administering powers in many of the non-self-governing territories. In some, democratic and representative parliamentary bodies are in the process of forming, others are undergoing adjustments to make direct representation of the people a reality. In some the tempo of constructive change is not keeping pace with the popular demands of the politically awakened people. But in practically all these territories the need for a change is recognized and the reconciliation which accompanies it provides the necessary basis for a bright and orderly future.

Turning to the new colonialism, one immediately sees under the yoke of this new imperialism a long array of politically mature and well-established nations which today are non-self-governing, which have been deprived of their free political institutions and whose representative parliamentary bodies have been destroyed. These ancient and proud nations, surely no less than the newly awakened nations of Asia and Africa, are worthy of the considerate and continuing interest of this Conference.

During the past 40 years this new colonialism, this new imperialism has forcibly incorporated once free democratic and independent nations into its empire. This new imperialism seeks to accommodate the rising tide of nationalism by spuriously proclaiming that these nations are independent. However, by its own definition the new imperialism limits this independence to hollow form while the substance of the state, that is the very life of the state and its people, is completely controlled by an alien, unwanted and predatory power. Clearly, no nation or territory can be self-governing unless the people therein exercise complete control over the internal affairs of the nation and are undisturbed masters of their destiny. The record of the past 40 years demonstrates that the people of these non-self-governing nations will never be satisfied with national independence which is limited to meaningless forms. So long as they are deprived of the essential substance of national independence, which is the right to govern their own affairs free from alien control or direction, they will continue to exercise the only opportunities open to them to dissent, that is, by internal revolts and freedom revolutions.

Within the past 5 years we have witnessed three outstanding expressions of violent dissent by the people within the orbit of Russian influence. In 1953 there was the mass uprising in East Germany in which the workers and peasants sought to throw off alien rule. This was followed in 1956 by the popular revolts in Poland in which all the people of Poland were in sympathy. Then in October of 1956 the entire Hungarian nation, workers, peasants, soldiers, intellectuals and even some of the new ruling class rose up in a bloody revolution which resulted in the restoration for 5 historic days of national independence in substance as well as in form. All the people of the world know that it took a major military campaign by the Red army to return Hungary to the status of a non-self-governing nation. Time does not permit a full recount of the many popular uprisings which have taken place over a period of many years in Ukraine, Georgia, Turkestan, the Baltic States, and in other non-Russian nations. However, the implicit warning carried by these events urges us to find an honorable remedy to end the human strife and dangerous international tensions which they create.

To that end I propose that the draft resolution now before this Conference be amended to reflect the urgent need for developing procedures whereby the people of once free and independent nations which have been reduced to the status of non-self-governing territories shall be accorded the opportunity, under the United Nations supervision, to freely determine substance as well as the form of their government. Such steps would be in accordance with the spirit and the letter of the United Nations Charter.

Allow me to make one point clear, beyond any doubt. I do not include in my proposal the Russian nation itself which, as is well known, is only one of many nations which will make up the Soviet Union and its population constitutes a minority. It is strictly an internal matter for the Russian people to determine whether their nation is self-governing. This is not a concern of this Conference or should it be a concern of the United Nations.

It has always appeared to me to be grossly unjust that in any consideration of the colonial or dependent territory problem that the burden is placed only upon the old colonialism, which as I have said has largely reconciled itself to the inevitable changes taking place in the world. The new colonialism, the new imperialism carries with it a far greater threat to the winning of the peace. Surely the non-Communist world in and of itself cannot expect to eliminate the dangerous international tensions which give rise to war. These tensions can be eliminated only by an equal amount of good will and desire for changes on the part of the ruling class of the new colonialism. That is, changes which accord with the freely expressed will of the people. The cause of peace and amity among nations requires that this burden be borne by all forms of colonialism and imperialism.

To that end I urge this Conference now and in the future to give equal consideration and attention to the problems of non-self-governing nations as that given to non-self-governing territories.

The development of representative assemblies in non-self-governing territories

Hon. ANTONI N. SADLAK (United States of America). Mr. President, in behalf of the delegation from the United States of North America I wish to emphasize some actual results, some recent accomplishments from our encouragement in the development of representative assemblies in non-self-governing territories. My remarks will, I hope, confirm that we mean whatever we say when the United States participates in the attainment of this worthy goal by a territory. Our deeds, I feel, will speak better than volumes of words on this process of self government to the territories.

Before I make specific mention of the examples, may I stress an obvious truth concerning all territories; namely, that the people of the territories demand freedom because they are not now free and because the governing powers have made them aware of the Western traditions of freedom, of democracy, and of the wealth that has come from industrial civilization.

Often, however, the people of the self-governing areas do not realize that democracy developed slowly in the West over several centuries as the people gradually won greater freedom for themselves and learned how to use it responsibly so that the freedom of their neighbors was not threatened. Today the non-self-governing areas cannot be told to wait 300 years for freedom to come to them. Many demand it now. Others will soon add their voices to the call for liberty. But we know, too, that democracy will probably not work unless the people can receive some training in the democratic process before they become completely self-governing. Thus, democracy today faces a difficult and deeply trying period and, I trust, we parliamentarians have a like and equal and similar understanding of the definition and meaning of the word "democracy."

After all, the representative assembly is one of the most important devices available in trying to solve this seemingly impossible problem of how to create as it were, "instant democracy." The representative assembly provides an opportunity to give the people of the territory experience in the elective process, in enacting laws and administering the nation without giving them full responsibility and power all at once. As it becomes apparent that each new grant of power is used responsibly, the governing nation should increase the powers of the representative assembly and thus gradually bring the territory to self-determination by peaceful means.

May I here insert my complete, unqualified endorsement of the proposed amendment of my colleague, Mr. FEIGHAN, of the United States, who cites his concern and vigorously protests the deprivation of once free, independent nations which successfully attained complete freedom, and have been reduced to the status of non-self-governing nations by a new colonialism or imperialism.

Now for my examples: The Philippine Islands became independent in 1946 by the mutual consent of the Filipinos and the Americans after a lengthy process in which more and more power was gradually extended to a representative Filipino assembly. Today the Philippines are a republic with a working democracy, and have an outstanding delegation here in Rio. They also maintain a close and friendly relationship with the United States. On the other hand Puerto Rico rejected independence from the United States and chose to become a commonwealth in 1952. Puerto Rico has the same autonomy in local affairs as one of the United States and its citizens are also United States citizens, but it neither contributes much to the Treasury of the United States, nor has voting representation in our Congress. The Puerto Ricans are free to change their status and apply either for full statehood in the United States, or to become completely independent. Finally, I would point out that Alaska has just been made our 49th State and the people of Hawaii are also seeking statehood rather than independence. I cite these examples, my fellow delegates, to demonstrate that the development of representative assemblies in non-self-governing territories does not necessarily lead to the independence of the territory or become a device for the expression of hatred toward the governing power if a territory does choose independence. Much depends on the character of the past relationship between the territory and the governing power and the compatability of their interests.

The United States is even beginning the processes of self-government on the 2,000 scattered islands of Micronesia in the South Pacific, which we hold under a U.N. trusteeship agreement. Thus far we have given the islanders a sense of unity that they have never experienced previously. The natives of the more than 1,000 Marshall Islands govern themselves under American guidance by a system of elected officials and a two-house congress, with the upper chamber consisting of hereditary nobles. A constitution is now being drafted for the Ponape district of the Caroline Islands and these same things are taking place for the first time elsewhere in Micronesia which has known only rule by foreign powers for hundreds of years. The goal of the United States is an independent Micronesian federation. I might add that the United States has even permitted the natives of Okinawa and the Bonin Islands to assume a significant degree of local self-government even though these are strategic trusts which we hold under the Japanese Peace Treaty and which will one day be returned to Japan.

In conclusion, I would like to stress once again what the United States feels to be one of the central truths of our time. The peoples of the non-self-governing territories are

demanding self-determination in ever-increasing numbers today and if they are to develop as democracies rather than as totalitarian governments, the Western nations must speed up the process of laying the basis for democracy including the development of responsible representative assemblies. Encouragement from the Interparliamentary Union could play a significant part in increasing the number of such assemblies. I hope this will be one result of our meeting here this year.

And, Mr. President, permit me to take this opportunity to express my deep appreciation for the courtesies, for the warmth, and genuine reception by our Brazilian hosts. For me and mine I say—Muito obrigado, caros vizinhos.

Farewell remarks by Hon. Homer Ferguson, United States of America

Hon. HOMER FERGUSON, United States of America. Mr. President, I would like to say a few words to the delegates before I am compelled to leave. Our delegation is required to return to the States because Congress is in session and important matters are on. May I have the permision of the chairman and the delegates to say a few words.

The CHAIRMAN. Yes.

Mr. FERGUSON. Mr. President, fellow delegates, and friends, I first want to thank the delegates and the Interparliamentary Union for the fact that they have named me as an honorary member of this organization. I spent many years while in the Senate of the United States as a delegate to these meetings and I valued that privilege highly. I met my old friends here again and, being greatly interested in foreign policy, it is a great honor for me to be an honorary member of this organization; and may I compliment the Secretary General on his marvelous report to the delegates.

As we depart from this famous and fabulous city, this happy and historic land, we want to voice our great appreciation of the wonderful hospitality of our Brazilian hosts. I know you all agree with me as delegates that nothing has been left undone to minister to our pleasure and to our comfort. We are deeply grateful to everyone who has been responsible for the arrangements of the facilities for this Conference. The reception last evening at the Yacht Club was to all of us the brilliant climax to our visit. We shall always remember this hospitality.

The discussion and the debates of the 47th Conference have revealed, I think, a wide consensus of agreement among the delegates of all nations regarding the matters of expanding capital investments abroad under appropriate conditions, the need of strengthening and implementing the peace of the world, the value of cultural exchanges between nations and the acquisition and defense of freedom of information, as well as the importance of pushing ahead with the development of representative political institutions in the non-self-governing territories.

This Conference also has demonstrated by its own performance its belief in the essential role of the legislature in the conduct of public affairs, whose high function in our respective countries is, I believe further, to make the laws, and to make them by elected representatives of the people who are to be governed by those laws, to watch and control the conduct of elected executive officials and, as far as humanly possible, to represent and carry out the will of their constituents.

Mr. President, we think that one of the principal values of this Conference has been the opportunity we have had for forming closer person-to-person contacts between the lawmakers from many lands. We find that differences of language, culture, and political institutions are overshadowed by our basic common needs and aspirations. Above all, in our opinion, we have the humanity question, we have to consider the souls and aspirations of our people. And so, Mr. President, I know we are going to return to our respective homes with hearts full of gratitude to the Government and the people of Brazil, with deep understanding of each other's problems and viewpoints and with renewed faith in the value of representative government in the world today.

May I wish you all Godspeed in your return to your respective homes.

A Wisconsin Tribute to Carl Sandburg, Edward Steichen, and Fredric March

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1959

Mr. REUSS. Mr. Speaker, the State of Wisconsin, with its worldwide reputation as producer of the best cheese, milk, butter and—of course—beer, sometimes gets insufficient credit as the producer, or at least contributing producer, of great men.

I am prompted to mention this subject by the memorable appearance in this Chamber, on the occasion of the 150th anniversary of the birth of Abraham Lincoln, of the renowned poet and biographer, Carl Sandburg, and the famous actor, Fredric March; and by an article in the Washington Post of last Sunday telling of the coming trip to Russia by Mr. Sandburg and his brother-in-law, artist-photographer Edward Steichen, as cultural ambassadors for our country.

All three of these distinguished gentlemen are Wisconsin sons—one by birth, and two by past residence. Wisconsin is proud of them, and regards them as her own.

Edward Steichen began his artistic and photographic career in Milwaukee, where he was sent in 1888—at the age of 9—to be educated. His artistic appreciation and mechanical ability were developed there, and at the age of 15, he was signed as a 4-year apprentice with the American Lithographing Co., of Milwaukee. He supplemented his meager income by drawing program designs, painting watercolors, and becoming unofficial photographer to all picnics and outings in the vicinity.

He organized the Milwaukee Art Students League and directed activities as its president. The league employed instructors, held art classes, and exhibitions. His apprenticeship over, Steichen was promoted to the drafting room, and because of his talent for designing posters, he was soon earning $50 a week.

Steichen divided his spare time between the artist's palette and the camera. His experiments in photography, then hardly recognized as an art, gained as much recognition as his painting.

After having his photographs accepted by the Philadelphia Photographic Salon, and some by the Chicago Art Institute, Steichen gave up his job, took his savings, paintings, and photographs, and about the turn of the century left Milwaukee to pursue his art studies in New York and Europe.

Carl Sandburg spent several years in Milwaukee in the early 1900's, gaining a good deal of practical political experience, and adding to his store of knowledge about men.

Sandburg worked for a year as district organizer for the Wisconsin Socialist Party, and from 1910 to 1912 was secretary to Mayor Emil Seidel of Milwaukee. He was associate editor of System Magazine in 1913, before moving on into the newspaper world in Chicago.

Fredric March was born in Racine, Wis., in 1897, educated in the Racine public schools, and graduated from the University of Wisconsin in 1920. It was at the university that he became interested in the acting career upon which he embarked professionally soon after his graduation, and during which he has given the world so many great performances.

Life in Wisconsin had a profound influence on the directions, the philosophies, the talents, the careers of these three outstanding Americans. It is appropriate for Wisconsin to call them her sons, and for the people of Wisconsin to delight in their accomplishments.

Mr. Speaker, under leave to extend my remarks in the RECORD, I submit the following article from the Washington Post of Sunday, February 15, 1959, by Jean White:

SANDBURG, STEICHEN TO EXPLAIN MAN'S UNIVERSALITY TO RUSSIANS

(By Jean White)

Two of America's most distinguished men of arts and letters are ready to go overseas this summer to take the message of the universality of "The Family of Man" to Russia.

The two—Poet-Biographer Carl Sandburg, 81, and Artist-Photographer Edward Steichen, 79—will make a striking pair of cultural ambassadors for the United States.

"The Family of Man," the moving camera testament to mankind created by Steichen from 503 photographs, already has been seen by more than 5 million persons around the world. On tour overseas, it has become one of the most successful shows mounted by the U.S. Information Agency. Everywhere the exhibit has gone, in 28 countries, it has been drawing record crowds.

WILL GO TO MOSCOW

The trip of Sandburg and Steichen, at the invitation of USIA, will take them to Moscow for the premier of "The Family of Man" in the Soviet Union.

The photographic exhibit will be one showcase of a big American fair in Moscow's Sokolniki Park to display the technological, educational, and cultural accomplishments of this country. USIA hopes to open the $5 million show around July 4 for a 6-week stand.

In turn, the Russians are to stage their own exhibit in New York City's Coliseum this summer. The exchange of fairs comes under a cultural-exchange agreement signed last year.

Sandburg, who was in Washington last week to address Congress on the 150th anniversary of Lincoln's birth, spoke enthusiastically about his plans to go to Russia with "The Family of Man." As a part-time traveling troubadour, he feels deeply that the photographic collection has something very important to tell.

KINSHIP OF FAMILY

"The people of Russia will be able to feel their kinship to the whole family of man

over the earth," the poet explained in his rich, mellow voice and then paused in thought.

"It's the great epic poem about mankind that mankind everywhere can read and feel. The realities are before their eyes and need no translation * * * It isn't an exhibit of photographs or prize pictures. It's what the camera saw, and you are there where the camera is and you see life. The theme is that people shall see people and people of one country shall see people of another country."

That, from the testimony of personal letters and newspaper comment overseas, is what "The Family of Man" has accomplished on its tours of Asia, Africa, South America, and Europe.

In India, the Bombay Chronicle wrote of its visit: "The greatest single thing the United States has done for India. Not money, not the wheat, not the gift packages. But the exhibition of 'The Family of Man.'"

PRAISE FROM ALL LANDS

In Japan, Mrs. Chimi Baba, president of the Osaka Housewives Association, wrote: "I saw the real meaning of the words of the United Nations Charter."

In South Africa, a Johannesburg Sunday Times writer commented: "I am writing this under the spell of an exhibition that could change the face of South Africa if it were seen and felt and understood by the right people * * * and I say it could change the face of South Africa because no human being seeing it and understanding its message could ever hold race hatred in his heart again."

In Guatemala, Indians came from the mountains to see the exhibit. In sophisticated Paris, the French press turned to superlatives to praise the show. In Seoul, Korea, 420,000 persons came to see the exhibit.

Steichen, with sensitive soul and artistic eye, combed through 2 million photographs before choosing the 503 that best "mirrored the essential oneness of mankind throughout the world." Under his guiding hand, the work of 273 photographers from 68 countries became a moving human document.

The USIA has put nine duplicate versions of "The Family of Man"—first created by Steichen for the Museum of Modern Art—on the road. Three wore out on the heavily booked circuit. The other six still are on tour.

DEDICATED TO DIGNITY

The original dedication of "The Family of Man," in Steichen's words, was "to the dignity of man."

For the Moscow exhibit, he now is planning an addition to express that dedication through the life of one of the greatest Americans, Abraham Lincoln. And no one can speak more eloquently of Lincoln than his traveling companion. For his mighty Lincoln biograhpy, Sandburg won a Pulitzer prize in history and then added one for poetry a few years later.

To be added to "The Family of Man" for the Moscow showing is Steichen's own deeply sensed photographic rendering of the Lincoln life mask in the Meserve collection.

Steichen took the photograph the year Sandburg published "The War Years" of Lincoln's life. For two months the artist-photographer, searching for artistic truth, studied the mask. Often he arose at night to light a candle to study the play of light and shadow on the bronze mask.

Sandburg and Steichen make a remarkable set of brothers-in-law (Sandburg has been married to Steichen's sister, Lillian, for 50 years). Sandburg, the white-haired goat raiser, and Steichen, the handsomely bearded delphinium breeder, also should prove a winning pair of personal ambassadors for the United States.

FULLER BRUSH MEN

"We'll be Fuller brush men," said Steichen, a merry light in his blue eyes.

"Together, side by side, we'll go," intoned his poet companion.

And then added the guitar-playing Sandburg mischievously: "I think I'll go off and take some lessons on the balalaika when we're in Moscow."

When he received the USIA invitation last fall to go to Moscow with "The Family of Man," Sandburg said he answered with alacrity—"Yes."

"The Family of Man," he explained, "is so important."

"All these themes are universal. They run through the 500-or-so-odd photographs like the recurring themes of a symphony. Certain important events in the life of people everywhere are there: love—love is there; weddings, birth, food, children at the breast of the mother; then growth, the growing of the child, school; work—work everywhere—if they don't work they don't eat; and then play, children around the world playing ring-around-the-rosy in the same way; quarrels, wars, dancing—everywhere they dance; death, hunger, hope, fear, dreams. Here is set forth all."

Senator Thomas H. Kuchel

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. HOSMER. Mr. Speaker, California's now senior Senator, THOMAS H. KUCHEL, is rising to new prominence in the affairs of the Nation. The Kuchel story was recounted in an article by columnist William Broom, syndicated recently in the Long Beach Press Telegram and other newspapers.

Text of the Broom column is as follows:

NEW TOM KUCHEL EMERGES AS KNOWLAND'S SHADOW RECEDES

WASHINGTON.—In 5 short months, Senator THOMAS H. KUCHEL has stepped out of the shadow of ex-Senator William F. Knowland into the bright sunshine of political prominence.

KUCHEL's climb was compounded of many elements. But the major of these was an adroit ability to arrive at the proper place at the proper time. And to disagree without making enemies.

There's a growing suspicion on Capitol Hill that KUCHEL's political skills have been underrated. A case for that view can be made from the record. Since Knowland's footsteps disappeared over the horizon toward his ill-starred gubernatorial campaign, KUCHEL has:

Won election as GOP whip in the Senate, the No. 2 position of responsibility in that body's party leadership.

Captured after vigorous infighting, a seat on the Senate Appropriations Committee, from which all money and therefore much power flows.

As a perquisite of his whip's job, been included in the select band of legislators who have the President's ear at weekly White House meetings.

Emerged as a chief spokesman, if not a leader, of the Senate's GOP liberals who advocate a new image for the party more attractive to the electorate.

Bolstered by those accomplishments, KUCHEL now speaks with more confidence and authority. Californians will get a glimpse of the new KUCHEL when he returns next week for about 10 days of speechmaking in connection with the party's Lincoln Day celebration.

These will urge the California GOP to cast away all antilabor bias in its effort to reclaim its fortunes and may even go so far as to blame right to work support for a big share of the 1958 reversals.

A roundhouse swing also is in the arsenal for Senator BARRY GOLDWATER of Arizona, who recently offered the view that liberals ought to get out of the Republican party. GOLDWATER's remarks left the liberals less than happy and KUCHEL's speeches probably will offer their first public rebuttal.

Chance and the elephantine eminence of Knowland kept KUCHEL in the background during his first 5 years in the Senate. Even the alphabet served to deepen the obscurity. On Senate rollcalls, KUCHEL's name followed that of his senior, so that his vote often sounded like an echo of the then GOP Senate leader. When they voted differently, Knowland invariably seemed startled.

Knowland's departure was the signal for feverish KUCHEL activity. With the senior Californian now out of the picture, it was obvious the Republican leadership in the Senate would be reshuffled.

KUCHEL made no overt move—a practice, incidentally, which has marked his intraparty political career—until GOP candidates fell like wheat in a hailstorm in November. Then he started working both sides of the street, gaining commitments for the whip's job from liberals like GEORGE AIKEN of Vermont and CLIFF CASE of New Jersey, and conservatives such as MILT YOUNG of North Dakota and GOLDWATER.

Later, GOLDWATER withdrew his support, and a pronounced chill set in on relations between the two westerners.

Throughout the bitter jockeying over the leadership jobs, KUCHEL never let an opportunity pass to point out that California will soon be the largest State in the Union and that the GOP should include a member of its fast-receding western representation in the leadership.

With California Republicans threshing about for new leadership, the question of KUCHEL's role naturally arises. Thus far, he has kept silent; but he is aware that he and Vice President NIXON are the only statewide officeholders still on their feet. The relationship between the two has never been particularly close, but neither have there been any clashes.

If KUCHEL follows past practice, he probably will wait for an opportunity to come to him. But meanwhile, he shows every indication of wanting to impress his brand of progressivism and friendship for labor on the new California elephant.

Farm Situation

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. COAD. Mr. Speaker, for the past several years the American farmers have patiently endured an unhealthy condition existing in the agriculture industry. This condition is general in its nature and could be said to be caused by many

different factors or combination thereof, which have been allowed to creep into the industry through an unsympathetic administration of the farm programs as written in the law.

Much has been said and written about this situation and we are all aware that a farm problem exists but one of the best reports I have read on the actual depth and breadth of the deterioration of the farm economy was compiled by E. E. Manuel, president of the George State Bank, George, Iowa. Mr. Manuel's report was made a part of the annual report to the stockholders of the George State Bank. The report follows:

FARM SITUATION

(By E. E. Manuel)

Farmers of the Nation have suffered a loss of income of more than $20 billion in the first 5 years of Mr. Benson's tenure as Secretary of Agriculture.

When this administration came into power in 1953, Benson took over a farm program under which for 11 consecutive years—1942–1952, inclusive—our farmers had enjoyed their greatest prosperity in history. Farm prices in each of those 11 years were at or about 100 percent of parity. During these years, our consumers bought food at fair and reasonable prices. Mr. Benson in 5 years, with the backing of the President, has reduced this program to a shambles.

Here are the figures on the deterioration of farm income under Mr. Benson, taken from the books of the Department of Agriculture:

Total realized net income of farmers (after deducting agricultural production expenses from the total of cash income from farm marketings, Government payments to farmers, value of home consumption of farm-produced foods, and computed rental value of farm dwellings):

Five pre-Benson years

1948	$16,057,000,000
1949	13,789,000,000
1950	13,185,000,000
1951	15,158,000,000
1952	14,416,000,000
Total	72,605,000,000

Five Benson years

1953	$13,899,000,000
1954	12,201,000,000
1955	11,470,000,000
1956	12,111,000,000
1957	10,840,000,000
Total	60,521,000,000

The Department records show that during the last 5 Benson years farmers produced and sold 11 percent more food and nonfood products than in the 5 years, 1948–1952, inclusive. Had our farmers been paid for the larger volume of food and nonfood products marketed in the last 5 years at the same rate as in the 5 years preceding, their net income would have been $80.5 billion or more than $20 billion more than they actually received under Benson.

If farm prices, instead of declining, had increased in proportion to all other prices during these last 5 years, farmers' income would have been much more even than $80 billion. However, under Mr. Benson's constant pressure for lower farm prices, the income aggregated only $60,521 million.

Those who seek an excuse for the farm income debacle in the last 5 years often resort to a contention that prior to Mr. Benson's tenure farm prices were influenced and sustained by the demands of the post-World War II years and by the Korean conflict. It should be pointed out that the demand for feed has been greater in these last 5 years than in any similar period in history, and consumers, during these 5 years, purchased 11 percent more products of our farms than during the 5 preceding years. The difference between the Benson years and previous years is that before Mr. Benson took office the farm program was in sympathetic hands and supplies were kept within reasonable balance with market outlets; while in these recent years Mr. Benson has been tearing down the program, telling both producers and consumers that farm prices are too high, with the result that farmers have suffered a loss in income of at least $20 billion.

Here is a brief summary of the last 5 years, comparing 1957 to 1952:

Farm prices: Down 16 percent.

Farm parity ratio: Down 18 percent.

Realized net farm income: Down 25 percent, lowest point since 1942.

Purchasing power of that farm income: Down 29 percent, lowest since 1940.

Farm debt: At a record high of $22.6 billion.

Farm population: Declined from 24,283,000 in 1952 to 20,396,000 in 1957.

In 1957 the returns to farmworkers for their labor and management reached a low of 69 cents an hour, while the average wage of industrial workers climbed to a high of $2.07 an hour.

Moreover, farm surpluses have trebled, increasing from $2,452 million in 1952 to more than $7 billion today.

Apropriations and authorizations to the Department of Agriculture for all purposes amounted to $6,794 million for fiscal 1958, whereas all such appropriations and authorizations for all the 5 years immediately preceding Mr. Benson's tenure—including the Korean conflict—amounted to only $7,391 million; and employees in the Department of Agriculture have increased more than 17,000 since 1952—from 67,406 as of December 31, 1952, to 85,107 as of January 1, 1958.

Since Mr. Benson began to bring down farm prices 5 years ago, farm income has dropped about $1 billion a year, the cost of farm programs has increased by about $1 billion a year, farm debt has climbed about $1 billion a year, and farm people have been leaving the farms at the rate of about 1 million a year.

It is my opinion that we, who are directly dependent upon farm income, should tell our story—tell two true stories: First, the Benson story; second, the story of the years of agriculture's rise from the great depression to a place of parity and equal economic stature with labor, industry, and business—until the time Mr. Benson took over.

The story of agriculture (pre-Benson) is an account of triumph of the parity principle—agriculture's magna carta. This is the story of 20 pre-Benson years.

Farm income multiplied sixfold, sevenfold, and eightfold in those two decades. As stated previously, for 11 consecutive years prior to 1953, the average prices paid to farmers were at or above 100 percent of parity. Rural people became able to buy the conveniences and comforts hitherto available only to our citizens in the cities. The blessings of electricity were taken to the rural areas. Farmers became financially able to mechanize their farms and to apply new sciences, to bring the blessings of food abundance at low cost to the consumers of the Nation. Now, with the means to do it, farmers devoted their energies to the restoration and conservation of the Nation's most precious resource—the soil. Prosperity on the farms created greater markets for industries in the cities, made jobs, and kept factory wheels turning.

The output per farm worker doubled in those 20 years, and now each farm worker feeds 20 persons. This new efficiency in agriculture made available to American families more and better food for an expenditure of a smaller percentage of their total income than in any other period in history. Although retail prices have increased while farm prices declined in the last 5 years, the average hourly wage of industrial workers will buy twice as much food as in 1929.

Costs: The Commodity Credit Corporation supported the prices of major storable crops for 20 years prior to 1953, and at the end of these two decades this program actually showed a 20-year profit of $13 million. For those 20 years, the CCC programs, for all crops, including a number of perishables, lost only $1,064 million, and CCC investments in surpluses on January 1, 1953 (inventory and loans) amounted to only $2,452 million.

In contrast, during the 5 Benson years, due primarily to the unsympathetic administration of the farm program, CCC deficits in farm price support operations have amounted to four times as much as was lost in the preceding 20 years—or, more than $4 billion in the last 5 years compared to slightly more than $1 billion in 20 years. Meanwhile, CCC investments in surpluses have increased threefold, from $2,452 million in 1052 to more than $7 billion in the most recent report.

It is indeed a melancholy record that Mr. Benson has compiled in the years he should have been the chief champion of our farm people before the Nation. And in my opinion, the worst seems yet ahead. The handwriting is on the wall. Out of his great and dedicated drive for lower and lower farm prices, based upon an extraordinary theory that a poor price will make better income, Mr. Benson has set the stage for an even greater farm debacle within the next 2 years. The reduction in price supports will encourage larger crop outputs as farmers seek to make up in volume what they lose in unit price—all these factors clearly foreshadow these distressing developments: Farm surpluses will mount to a new record high; farm program costs will climb to new heights; meat animal prices and the income of feed and livestock producers will decline sharply. We may see hogs selling at $10 or $12 per hundredweight, and we surely cannot forget the $9–$10 prices of just a couple of years ago. Farm debt will set a new high record. And finally, unless an effective farm program is developed by the next Congress and put into operation in spite of Mr. Benson's objections and threat of veto, farm income will establish a new postwar low, and the effects will be felt not only by our farm people but also by the Nation's total economy.

As you probably know, there were two or more agricultural bills passed by the House and the Senate during the last 5 years to improve the parity ratio for farmers, but they were vetoed twice by the President, so Congress was confronted with the reality that it must give Mr. Benson further price cutting powers or he would impose such short-acreages upon cotton and rice crops as to mean ruin for many farmers and many communities which depend on production of these crops for their economic existence. It was in this situation that the top brass of the American Farm Bureau Federation brought forward a proposition to kill the parity principle completely and thus destroy the very foundation of the farm program. Mr. Benson endorsed legislation embracing the farm bureau proposal. It would have provided price supports for major crops at 90 percent of the average market prices of the previous 3 years, thus removing farm prices entirely from any fair relationship to costs and prices in the rest of the economy and providing a price-support system for farmers at approximately 10 percent less than they could expect to get in the marketplaces anyway. I certainly do not believe the parity killing proposition introduced by the headquarters officials and employees of the American farm bureau in any way whatsoever represented the thinking

and the will of the good farm people who are members of that great organization.

Edward A. O'Neal, late president of the federation, was one of the principal architects of the program to bring farmers into a parity position in our free enterprise economy. He personally welded the farm interest into a united front and was the great leader of agriculture in those pre-Benson days. I cannot believe the present members of that organization would deny and defame the philosophy of Ed O'Neal, destroy the advantages his dedicated life brought to agriculture, and work against their own interests by repealing the parity concept, on which all of agriculture's aspirations and hopes are founded.

The Senate passed S. 4071, embracing the farm bureau proposal to kill the parity principle for cotton, corn, rice, and feed grains. The Senate took this action when it seemed that this was the only way to gain enactment and White House approval of a bill to forestall devastating acreage cuts in 1959, which was the major objective of the sponsors of S. 4071.

However, when this bill came to the House for its consideration, the committee unanimously opposed the destruction of the parity principle. Democrats and Republicans stood solidly against this. The House would have no bill at all if it would destroy parity. The committee of the House won the confidence and support of the Senate, and parity was put back into the law, but of course at a lesser percentage. But the principle was retained with all its dignity and as the foundation on which the subsequent Congresses will rebuild a farm program, fair to farmers and consumers alike, when we can have in Washington a Secretary of Agriculture and an administration that is sympathetic to the principle and cause that the farm families of this Nation have a right to be equal partners in the rewards and blessings of free enterprise and are entitled to a parity position in this Nation's growth and prosperity.

The bill is not what farmers desire or want. The bill is not what any friend of agriculture wanted. It is an offspring of necessity and of the veto power. It protects producers from something worse in 1959, but unless it is repealed or changed it will create greater problems in the years ahead.

The farm program, based on the parity principle, was erected out of an awareness in the Congress that agriculture is the only major element of our total economy that has no device outside of the help of the Government to pattern its production to market needs; that farmers have no way of measuring what should be their individual contribution to a balanced national supply of food and fiber without Government help; that farmers have virtually no bargaining power in the commerce they conduct; that agriculture is the only major industry that does not set its prices to cover costs and reasonable profits, but goes into the marketplace and asks: "What will you give me?"

National propaganda has been trained against the operation of an effective farm program. Four great myths have been planted on the farms of America and have yielded a crop of confusion, uncertainty, and doubt around the future of agriculture. Mistrust has been created among farmers themselves in their own program: (1) Farmers are told that lower prices will solve their problems—prices going down each year; (2) farmers are told that increased efficiency will solve their problems, but efficiency in production has not solved but has intensified the farm problem; (3) farmers are told that movement of people out of agriculture will solve their problems—that is, the problems of those who are left. This, in my opinion, is very dangerous, because the farm family in these United States is actually the backbone of our democracy; (4) farmers and the Nation at large are told that the price-support program is responsible for surplus farm production. But farm output is too great for available market outlets primarily because the technological revolution in agriculture, in the absence of a sympathetically administered farm program, is increasing total output faster than commercial markets can absorb it. I am not too sure but that the abundance of food and fiber in the United States probably is the best insurance policy we could have to avoid war, especially in our present situation with Russia.

As I have said and now repeat again; The land is the source of life itself. Its ownership by fewer and fewer individuals is a dangerous thing. All history testifies to the upheaval, the decline of nations and of peoples, where control of land was concentrated in the hands of a privileged few and the many were denied its access and possession.

Mr. Benson has used his office and his time, not as a chief spokesman for and champion of agriculture; but to sow the seeds of prejudice among city people against our farmers; he has aligned one farm group, one crop, one region against another to divide and confuse our farm people; he has turned the power of government against the small farmer, condemning him as inefficient and unworthy of a place on the land.

When a Minnesota farm wife asked Mr. Benson, "What shall we do?" he replied, "Find other employment."

The unemployment lines and relief rolls in the cities now are packed with people who once enjoyed security and a good life on our farms. I just heard over the radio last night that our unemployed right now aggregates over 4 billion which is about the same number of unemployed during the recent recession of 1958.

The American free-enterprise system was built upon a foundation of free and independent and numerous family-operated farms and I think the Nation needs to take a fresh free-enterprise look at the family farm. It will be a sad day for America if giant corporate farmers supplant our family system in agriculture.

Free enterprise does not live on profits, interest, and rentals alone. It prospers by the incentive to every young man that by devotion to his job and good management of his affairs, some day he may be his own boss—may own his own farm or business.

It is my feeling and my fear that by the proportion we reduce the number of individual units of enterprise we weaken the American individual free-enterprise system; and it is my conviction that for agriculture we cannot afford to substitute a hired hand, corporate-managed system for the independent, free-enterprise family farm operation.

We must protect the agricultural establishment that serves this Nation so well. We cannot forfeit our farmers to an alien philosophy of concentration and bigness.

We must begin in the next Congress to repair the damage that Mr. Benson has done—to build a new and effective farm program with parity as the basic concept.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

REPRESENTATIVES WITH RESIDENCES IN WASHINGTON

Appendix

Senator Neuberger's Return to the Senate

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, February 19, 1959

Mr. HILL. Mr. President, we are happy that our colleague, the distinguished junior Senator from Oregon [Mr. NEUBERGER], has returned to us. We rejoice that he is with us. His return has been made possible because of his fortitude and his courage, and because of the knowledge gained and the progress made in medicine through medical research.

Senator NEUBERGER is an outstanding leader in fighting the battles for more medical research and for the health of our people. He has noted that the United States now spends more on chewing gum and permanent waves than on cancer research.

Inspired by Senator NEUBERGER's return and the distressing condition of Secretary Dulles, and by the fact that every 2 minutes a man, woman, or child in the United States dies an agonized death from cancer, we must press forward all the more relentlessly to advance the cause of medical research, which is our hope and our promise to find the answer to the crippling and killing diseases that have baffled and plagued mankind through the centuries.

I ask unanimous consent to have printed in the Appendix of the RECORD several editorials on Senator NEUBERGER and his return to the Senate.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald, Feb. 13, 1959]

MR. NEUBERGER'S RETURN

It is altogether gratifying to see that Oregon's likable junior Senator has been able to return to his chores at the Capitol after a courageous bout with cancer. Despite his ordeal, DICK NEUBERGER'S spirits remain chipper, and it is characteristic that he is seeking to turn his private misfortune into an affirmative public purpose. Long before he was stricken, Mr. NEUBERGER had been an eloquent advocate of increased Federal aid to medical research. Now, through the caprices of fortune, Mr. NEUBERGER speaks with poignant personal authority that ought to help bestir his colleagues to greater action against the disease which has felled such noted Senators as Vandenburg, Taft, McNary, Neely, and McMahon. Mr. NEUBERGER points out that he owes the prospects for his recovery to the fruits of the medical laboratories. He also notes that the United States now spends more on chewing gum and permanent waves than on cancer research. The campaign to alter this situation ought to win new support.

[From the Arizona Daily Star, Feb. 11, 1959]

LONG ILLNESS MAKES ONE THINK

A generation ago, when tuberculosis was rampant in this area, patients even formed a club and had a camaraderie among themselves. One of the things they most often said was that one never developed a philosophy until he had been ill over a long period.

Modern advances against tuberculosis have virtually licked that disease; but the comment still applies to sufferers from other ailments. A recent evidence of it comes in the Associated Press story from Portland, Oreg., interviewing Senator RICHARD L. NEUBERGER, who said that after his long and apparently successful bout with cancer he did not know where his future career might lie except that he feels a great obligation to further medical research.

It was less than a decade and a half ago that DICK NEUBERGER came in from Alaska, a husky, vigorous captain who was to feel keenly the confining and often frustrating experience of serving in the Pentagon. Time passed and he made what to many would be a fortune, writing books and magazine articles. He married a lovely woman, Maurine, who joined him in a political career which began in the Oregon Legislature and which now has taken him to the junior senatorship from Oregon. This career suddenly went under the knife and the cobalt gun when it was found that NEUBERGER had cancer.

"It would be almost impossible for me now to get angry over a political difference," NEUBERGER, who had plenty of chance to think while he was wondering whether he would die, told the AP. That change in his personality makes politics seem less attractive, even though "I'm always going to be a Democrat."

But like many others who have undergone long and fretful illnesses, who have suffered pain and worry, NEUBERGER has come out of it with a feeling that the medical research which apparently has saved him from an early death should be broadened to save others. He has gone through what he describes as "a maturing experience."

[From the Oregonian, Feb. 5, 1959]

SENATOR'S RECOVERY

Senator RICHARD L. NEUBERGER will return to the Senate next week with a confident report from his physicians that his cancer operation and radiation treatment have been successful. Oregon's citizens join his doctors in gratification that he can resume his normal activities.

One of Senator NEUBERGER'S declared goals is to influence the United States to take leadership in calling for an International Medical Year comparable in organization and scope to the recently concluded International Geophysical Year. The purpose would be a worldwide attack on the diseases, some of obscure or unknown causes, which still assail mankind everywhere despite remarkable progress in medical and surgical research and practices.

This is one field of endeavor in which international politics, fears and ambitions should give way to the common aim of health and security. The Geophysical Year broke down some barriers among the nations. The Medical Year could do more. Thus it could serve a valuable purpose in discouraging mass destruction by war, as well as making man's normal lot easier to bear. Senator NEUBERGER'S own frightening experience with cancer gives him the insight to lead.

[From the Oregon Journal, Feb. 6, 1959]

OREGON PEOPLE WISH SENATOR WELL

Senator RICHARD L. NEUBERGER will return to Washington, following an extended and intensive course of radiation treatment, with the good wishes of the great majority of the people of Oregon, including those who differ with him politically.

It is the best of news that his doctors have stated their belief he is cured of the malignancy which not many months ago threatened his career.

The Senator is the first to say that his experience in the valley of the shadow has helped to mature him and to some degree change the direction of his life. It is fair to add that NEUBERGER had begun to mature in Washington long before he was aware of the malignancy.

He returns to the Senate with interest intensified in medical research. He feels that what has happened to him is almost a mandate to help hasten the day when others can be assured of a cancer cure. He plans to stimulate interest in an International Medical Year, a project he has urged in the past.

NEUBERGER'S interest will not be lessened, we suspect, in countless other projects on which he has spent his energy in the past. But he believes in his own mind his greatest contribution now can be in the medical field. Certainly medicine is an area where all the nations, including Russia, can cooperate, as they have done in the recently ended International Geophysical Year, with lasting gains in understanding as well as medical advance.

In the last session of Congress, Senator NEUBERGER expended himself to the point of exhaustion. His many friends will hope he now recognizes that his illness must of necessity put some limitation on his future activities and that he cannot work as hard as he did before without jeopardizing his health.

The Senator has not decided whether to seek reelection in 1960. But whatever his future he will have a great contribution to make. He must guard his future by taking reasonable care of himself.

[From the Eugene (Oreg.) Register-Guard, Feb. 6, 1959]

BACK TO WORK

DICK NEUBERGER, whom even his enemies call DICK, is going back to work, back to Washington where a unique challenge awaits him. So well has the cancer been arrested that Oregon's junior Senator now speaks of himself as "recovered" from the malignancy discovered last August.

Naturally, his interest in medical research, always strong, was increased as he underwent a long series of radiation treatments and contemplated the miracles of science which enable him to be alive and well today. He has indicated now that he will press even harder for Federal help in the many research projects that are focused on cancer. And he can speak, as no other Senator can, from the heart and from his own experience as one might have fallen, as Senator Robert Taft fell a few years earlier, to the ailment.

He will make another contribution, too. He is nationally known figure, probably held in higher esteem elsewhere in the Nation that he is at home. And there he stands, a man who licked cancer—by the grace of God and radiation. Thus he will be an inspiration and a symbol of hope to millions.

[From the Greater Oregon, Feb. 13, 1959]

BACK IN WASHINGTON

Our newspaper staff joins with more than a million other Oregonians in thankfulness that our Senator RICHARD NEUBERGER is fully recovered from his recent illness, and is now back at his desk in Washington, D.C.

Our Senator's physicians report that his cancer operation and the radiation treatments for the past several months have been entirely successful and that he can now resume his duties at our National Capital without any injury to his health.

Senator NEUBERGER is one of the greatest Senators Oregon has ever had.

One of Senator NEUBERGER's declared goals is to influence the United States to take leadership in calling for an International Medical Year comparable in organization and scope to the recently concluded International Geophysical Year. The purpose would be a worldwide attack on the diseases, some of obscure or unknown causes, which still assail mankind everywhere despite remarkable progress in medical and surgical research and practices.

This is one field of endeavor in which international politics, fears, and ambitions should give way to the common aim of health and security. The Geophysical Year broke down some barriers among nations. The Medical Year could do more. Thus it could serve a valuable purpose in discouraging mass destruction by war, as well as making man's normal lot easier to bear. Senator NEUBERGER's own frightening experience with cancer gives him the insight to lead.

Pope John XXIII and His Role in Resisting Persecution During World War II

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES

Thursday, February 19, 1959

Mr. NEUBERGER. Mr. President, understanding among religions and among nations is one of the great hopes for enduring world peace.

A most heartening article has been written by Mr. William Zukerman describing how Msgr. Angelo Roncalli, during World War II, played a major role in helping thousands of Jews to escape from the butchery and tyranny of nazism to a haven in Palestine.

The episode takes on special significance today because the former Msgr. Angelo Roncalli is now Pope John XXIII, spiritual leader of the world's 496 million men and women of the Catholic faith.

I ask unanimous consent, Mr. President, that the article from the Jewish Newsletter by William Zukerman, entitled "A Story of Good Will: What Pope John XXIII Did for the Persecuted Jews of Europe," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A STORY OF GOOD WILL: WHAT POPE JOHN XXIII DID FOR THE PERSECUTED JEWS OF EUROPE

(By William Zukerman)

This is a story of good will which was enacted during World War II. It seems worthwhile retelling now because it is also the story of a man of great goodness and compassion who has now been elevated to the position of one of the world's great leaders who affect the course of history—Pope John XXIII.

During World War II, Msgr. Angelo Roncalli who is now Pope John XXIII was the papal nuncio in Istanbul, Turkey, a highly important diplomatic post during the war because Turkey was then one of the few neutral countries in Europe. The period was also the darkest in the persecution of European Jews, when hundreds of thousands of them from all over Nazi-occupied territory were being daily deported to concentration and death camps in Poland for extermination.

The Jewish Agency of Jerusalem, which made desperate efforts to remove as many Jews as possible to Palestine, had then concentrated most of its work in Istanbul for the same reason. The head of the immigration department of the agency, Chaim Barlas, who was in charge of that work, had many occasions to meet the present Pope, and he now relates some little known historic facts about the role that Monsignor Roncalli played in that rescue work which throw a fascinating light on the personality of the new Pope.

THOSE MOST TRAGIC YEARS

Among the many pious and good Christians who have helped the Jews during those most tragic years of Nazi persecution, Monsignor Roncalli stands out above others, states Barlas in an article in Davar, official organ of the Israeli Government party Mapai (reprinted in the New York Zionist daily, Journal-Tog Dec. 9).

From the very first meeting with Monsignor Roncalli, Barlas writes, he felt that he was in the presence of a lofty personality whose interest in the Jewish tragedy of the time was not merely formal and superficial. He was deeply and sincerely moved by the suffering of the Jews and showed an eagerness to be of help in every way possible.

"It would often happen that when I would tell him some sad news I had received from Poland, Hungary or Slovakia, Monsignor Roncalli would fold his hands in prayer and tears would appear in his eyes," Barlas writes.

PRESENT POPE IN ACTION

He would always follow with profound interest the tragic stories he was told; he would ask all the particulars, which he would carefully mark down in his own hand. He would never turn over these matters to his secretary or assistant, but would personally attend to everything that had to be done and that he could do.

Barlas describes three important interviews he had with the present Pope in times of great emergency which show the greatness of the man in action. One day Barlas received an urgent report about the planned deportation of all Jews from Slovakia to the death camps of Poland. The Premier of Slovakia at the time was a Catholic priest named Tiso. There were many interventions to save the Slovakian Jews, but they did not help.

Barlas then appealed to Monsignor Roncalli as a last resort. The nuncio received the Jewish representative, as always, with warm friendship and sincere readiness to be of help. As he read the telegrams which Barlas had brought with him, he became greatly disturbed and called out in despair, "What is to be done?"

Barlas then suggested he should appeal directly to the Pope and ask the Holy Father to intervene. Monsignor Roncalli immediately agreed. A few weeks later reports arrived from Switzerland and Bratislava, the capital of Slovakia, that the deportation order had been considerably eased.

A second emergency arose when a report arrived about the planned deportation of Bulgarian Jews. Before coming to Istanbul, Monsignor Roncalli had been papal nuncio in Sofia, and it was, therefore, natural for Barlas to appeal to him for help once more. This time the man who is now Pope John XXIII, after hearing the report, sat down at his typewriter and personally typed a telegram to some friends in high position in Sofia, asking them to do everything possible to avert this deportation.

Barlas relates that he was deeply moved by the promptness and personal interest of the man; that he told him that this telegram would become a historic document in the dark period of the Jews. "If the telegram will accomplish anything," the nuncio replied modestly.

There can be no doubt about the accomplishments. The order for the deportation of the Bulgarian Jews was revoked. They were sent instead to provincial cities in Bulgaria, and thus the entire Jewish community of Bulgaria was saved from death.

The third intervention took place later when the Jews of Hungary were threatened with similar deportation. This time it was Cardinal Spellman who, through the intermediacy of Roncalli, intervened. The cardinal had come to Istanbul for a 1-day visit with the papal nuncio. Barlas asked Monsignor Roncalli to arrange an interview between himself and the cardinal in order to ask him to intervene. Monsignor Roncalli readily agreed to act as an intermediary and carried out his mission with much grace.

When Barlas arrived the next day at the nuncio's home, the house was filled with high diplomatic and church dignitaries who were waiting to see Cardinal Spellman. To Barlas' amazement, he was among the first to be ushered in to see the cardinal. Monsignor Roncalli himself introduced him as "a representative of the Jewish Agency in Jerusalem" who has come on an important mission.

The cardinal listened attentively to Barlas' plea and promised to do everything he could. Barlas was later told by the American Ambassador to Turkey, the late Lawrence Steinhardt, that the cardinal's intervention was successful in averting the deportation.

Milk Prices Cut Severely Under Benson Program

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, February 19, 1959

Mr. PROXMIRE. Mr. President, on the subject of the prices actually received for milk, I have received a letter and factual records which tell with exceptional clarity and force the story of the tragic decline in returns to Wisconsin farmers during recent years.

Mr. and Mrs. L. J. Totten, of Route 1, Box 95, Delavan, Wis., operate a typical family-sized farm, located in one of the best dairy sections of America's dairyland; and this family has been selling milk to the Chicago market, for fluid consumption. The prices quoted, therefore, represent relatively good prices, in comparison to those received by farmers

who sell milk to be manufactured into butter, cheese, and other products.

These records show that the prices received by farmers for their milk have declined sharply—more than 25 percent—since 10 years ago. At the same time, it should be remembered, the farm family's cost of living has been increasing, just as the cost of living of other families has been increasing.

Mr. President, this letter and the records which accompanied it, which tell the story of what the Benson program has done to Wisconsin dairy farmers' incomes, should have the attention of every Member of Congress. Therefore, I ask unanimous consent that it be printed in the Appendix.

There being no objection, the letter and tabulation were ordered to be printed in the RECORD, as follows:

LETTER TO SENATOR PROXMIRE AND GOVERNOR NELSON

FEBRUARY 3, 1959.

Our farm is really a description of thousands of Wisconsin dairy farms. It is 120 acres, in size, and composed of rolling prairie, 19 acres of hilly woodland and cut up into small fields, with a gravel ridge through it. This was adapted, by nature, to dairying and the type of farm that has made Wisconsin a dairy State, the type which the rabid anti-agriculturist Benson, is destroying. We are typical of uncounted numbers and it is our wish to show how Benson's policies really operate. After studying the attached statistics (all backed by our own records), you will agree that we are not receiving a handout from the Agriculture Department but being deprived of basic freedoms.

It is our belief that the bulk of the 4½ million unemployed reflect farmers pushed out of farming. It is to be remembered that farmers who have lost their work do not have seniority in unions and are the last to be put to work when so many are unemployed.

The attached statistics show a month-to-month report of what Wisconsin dairy farmers have actually been paid for their milk, since 1948. This is for grade A, so you can imagine how others have fared. Newspapers report one figure paid while our milk checks show another. It is to be understood that the figures shown represent 3.5 milk (a strong argument for fixing that butterfat content to the consumer per Wisconsin's bill). For as much as half a point below that test we are penalized about 7 cents per point. The 3.5 milk is skimmed of two points of butterfat in Wisconsin (much more elsewhere) before it is sold, adding to butterfat surplus. It is understood that the test above 3.5 rates the same amount of increase per point.

In the past, we wrote Benson regarding dairying. We got a reply to one of our letters (from the Wisconsin Agriculture Department) telling us all about brucellosis. (We had cleared our herd years before at our own expense.) This seems typical of the situation.

You will readily see that to figure dairy farm prices on prices paid recently would be intolerable. The drop from last April is also plainly seen. Dairies, however, have paid less but raised prices. Another increase was announced last week in Milwaukee papers. In the same period companies like Borden, National Dairy Sales, etc., have had the highest profit periods in their history.

From 1947 to 1958 our personal and real estate property tax, on the farm, has risen 400 percent. Our school tax 700 percent. Suburban residents are crowding our schools and the farmer's land is carrying the load, while only the farmer pays personal property tax. Illinois residents pay personal property tax. Why not Wisconsin residents? We lived there (Illinois) many years and feel it a fair way to raise taxes. The class of people who pay only income tax are filling the schools. Has it been considered?

During this same period, that our income has been so drastically reduced, it is interesting to note the amount services and supplies, to us, have risen. We advocate the cause of democracy, yet farming in this country, under Benson, is reverting to the old feudal state. When corporation farming becomes a reality, throughout our land, the feudal state will have arrived. Farming has never been a way of life since the pioneer period, when the farmer was self-sustaining. As soon as he raised crops for export and to build factories it became a business, not a way of life. Businessmen are buying farms everywhere; then putting as much money as possible into them, pulling up trees, refencing, erecting new buildings, etc., and taking farm operations as a loss on income tax returns, thus building up land empires from money that should be paid into the State and U.S. Government as business profits on city income. (It is in our neighborhood, too).

A congressional investigation of the Agricultural Department itself is warranted. Who is actually getting all this $8 billion? Because of our biased publicity, city people often think a farmer gets a big fat subsidy check each month from the Government, which he spends for Cadillacs to pull his manure spreader. Everything written always states that subsidies are used to support "the artificially high prices of farm products." Does not the attached show the lie? They are actually forcing abnormally low prices and thinking men must admit the only thing that has held back runaway inflation is the farmer subsidizing the Nation's food bill in lost income. It is not the farmer who farms for a living who creates the surpluses; it is the wheat and cotton barons, etc., the business friends of our present administration.

We know the stockpile of agricultural products was first built as a patriotic gesture during World War II, by hard labor. After the war was over other war materials were scrapped but farmers are still paying, in lost income. Each night half the world goes to bed hungry. Our surplus food is a blessing that could save the world for democracy, if America would use the common sense of our forefathers who established this country as a democracy.

Farmers protested at the polls but are still told that small farmers must get off the farm. Do the Republicans want 10 million unemployed in the country?

You have our sincere wishes for a successful term of office.

Respectfully,

LYMAN AND MAUDE TOTTEN.
Mr. and Mrs. L. J. Totten.

DELAVAN, WIS.

Prices Wisconsin dairymen received for milk 3.5 test on Chicago market (proof can be furnished)—Grade A milk

[1] In 1954 had to send milk for several months as grade B as an inspector did not approve of our new well. He had originally approved the design. This was same year had built a $2,000 new milk house and bought a $700 cooler.
[2] Price received for milk sold in excess of base. We are forced to set base for 3 months in fall but it is in effect for 4 months. We must set base at the time of year when pasture is always the shortest.

NOTE.—Above prices are not net to farmer. We have a 5 cents per hundredweight check off to PMA; 2 cents less because of zone, pay hauler for taking milk to milk depot (plus 3 percent of hauling charge as tax for using the public roads). The premium Pure Milk Association pays on a farm of our size would amount to less than $10 a month.

Address by Hon. Hugh G. Grant on School Integration in the South

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, February 19, 1959

Mr. THURMOND. Mr. President, the Honorable Hugh G. Grant, former United States Minister to Albania and Thailand, made a most enlightening address in Atlanta, Ga., on February 11, 1959. I request unanimous consent that this address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow citizens of the South, the South's resistance forces against the conspiracy to force racial integration in the public schools and elsewhere are in retreat.

The front battlelines in Virginia against race mixing in the public schools have crumbled. The Old Dominion's strategy of massive resistance has collapsed, leaving only six Southern States with segregated public schools, Alabama, Florida, Louisiana, Mississippi, Georgia, and South Carolina. True, there's only limited or token integration in the schools in the South, but when the bars are down the floods will follow. There's talk of "local option" as a solution, but this spells disaster, too.

Georgia appears to be pinpointed for the next major assault, following two Federal

court edicts—mixing the races on the Atlanta trolleys and banning racial bars at Georgia State colleges, with a threat of integration of Atlanta's public schools next September. As the Georgia General Assembly adopted new defensive measures, some authorities predicted that Georgia's battlelines against race mixing would also crumble under the impact of court decrees, as they have in Virginia.

Both Virginia and Georgia appear to be headed for the ultimate abandonment of their public schools. This has resulted in a rising tide of opposition in both States on the part of many white people who do not appear to be willing to pay this price for the retention of segregation. This was reflected at the State level in the remarks of Governor Vandiver's house floor leader, Frank Twitty, indicating the possibility of both segregated and integrated public schools in Georgia.

This opposition to closing the public schools was also reflected at the national level in Senator HERMAN TALMADGE'S switch from his previous sponsorship of private schools, as a means of blocking integration, to his proposal of a constitutional amendment. Said the Senator: "The destruction of public education in an entire region of our Nation would be an unparalleled catastrophe."

The result—the white people of Georgia and her sister States of the South are in a deep fog. There is much confused thinking. Retreat, retreat could mean ultimate defeat. What led up to this deplorable state of affairs?

The answer—the failure of the leaders of the resistance movement in the Southern States to adopt a unified plan of political action—the failure to face up to realities.

For a period of nearly 5 years billions of words have been written and spoken against the infamous sociological, unconstitutional segregation decisions of the Supreme Court and the unwarranted collaboration of the executive branch of the Federal Government.

Ninety-six Senators and Representatives in the Congress from the South issued the "Southern Manifesto" against the usurpation of the Constitution by the Federal judiciary and then filed it away in the congressional archives.

In the States, conferences were held on interposition—nullification of the unconstitutional Supreme Court edicts. Interposition resolutions were subsequently adopted by the legislatures of practically every Southern State and then filed away in the archives of the States.

Georgia has an interposition resolution, approved March 9, 1956, by the overwhelming vote of 218 ayes and 1 nay. Two excerpts reveal its purpose as follows:

"That the State of Georgia has the right to operate and maintain a public school system—and her rights in this respect have not in any wise been delegated to the General Government—that said decisions and orders of the Supreme Court of the United States relating to separation of the races in the public institutions of a State as announced and promulgated by said Court on May 17, 1954, and May 31, 1955, are null, void, and of no force or effect."

Was this resolution and others like it simply flamboyant gestures? So it would appear, since practically every official act against racial integration so far has been a delaying action, involving legal quibbling, subterfuge, even denial in the Federal courts on the part of State officials that the question of race has entered into the methods and policies of the State in maintaining segregation. Questions about the morality of the applicants for admission to State colleges have been raised as justification for barring the Negroes. Elaborate tests and measurements have been established under certain State public school placement laws. A new Georgia law provides for low age restrictions for admission to State colleges. In brief, all sorts of devices have been framed to prevent integration but race, which is the fundamental factor, has not been mentioned or has been denied as a factor. These measures will not insure the maintenance of segregation. They serve only to postpone the evil day. Furthermore, they are negative and, indirectly, constitute a surrender of the sovereign State to the unconstitutional edicts of the Federal judiciary.

Surely the time has come—the hour is late—for the officials of our States to assert boldly and with forthrightness, in court and out of court, that the State has the constitutional right to separate the races within its boundaries, if it chooses to do so. This is interposition, which has ample historic precedent, and it is significant that the cases have not been restricted to the South. (Read "The Sovereign States," by James Jackson Kilpatrick.)

Finally, we don't need an amendment to the Constitution of the United States. Since 1791, we have had the Bill of Rights with its famous article X, "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people." What more do we need to justify nullification of the unconstitutional decrees of the Supreme Court and its agents, the Federal judges?

Let one, or two, or three southern governors—say, the chief executives of Georgia, Alabama, and South Carolina, backed by their respective legislatures, stand up and proclaim to the Federal usurpers of the constitutional rights of the sovereign States—and to the Nation—"We are going to keep our institutions functioning and segregated as heretofore. That is our constitutional right. That is in conformity with the law of the land."

Such direct political action would bring the millions of grassroots folk throughout the South, who believe in the separation of the races, out of the fog. It would serve to alert the people of the entire Nation to the fact that State sovereignty is not yet dead, is very much alive. It could turn the tide. Let's try it, my fellow citizens.

Reds Dedicated to Violence

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 19, 1959

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting article written by Dr. Ruth Alexander, and published in the New York Sunday Mirror of February 8, 1959. Dr. Alexander is a keen student of current affairs, especially in the field of international relations. Under the heading "Reds Dedicated to Violence," Dr. Alexander gives us information and suggestions which will be of great interest to the Members of the Senate and to the country as a whole.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REDS DEDICATED TO VIOLENCE
(By Dr. Ruth Alexander)

Conceivably, the United States may go down in history as the first great nation to be the passive spectator of its own destruction.

The Communists are fighting us in unbroken continuity on four fronts—political, economic, ideological, and military. But, by all odds, their greatest victory has been to sell us on the idea that they want peace. Their influential apologists here have successfully equated peace with nonshooting war.

But let's look at the record. In this tinderbox world, there is no such thing as an unimportant war, and in the 13 years since World War II, 18 important wars have occurred.

In every one, the pressure or the presence of Communists was involved, directly or indirectly, officially or unofficially. Each of these wars constituted a grave risk to us and our allies with whom we are inextricably identified. Because of this, we contributed men and munitions directly, as in Korea, or to our allies, as in other areas. Hence, we, as an integral part of the free world, have been involved in 18 shooting wars. What's peaceful about that?

It has become customary to call old-fashioned wars limited wars, as opposed to total unlimited war of the nuclear variety. But limited war does not mean small wars and some of these 18 limited wars demanded significant military operations and caused tragic destruction of American lives. Yet, because we must, of necessity, recognize the primacy of nuclear retaliation in major wars, we tend to brush off limited wars as brush fires of no importance and to provide inadequate forces and equipment with which to fight them.

Limited war is new only in the sense that it now serves as a convenient device for Communists to conquer the world piecemeal, on a military basis, where subversive tactics fail. Obviously, there is an enormous area of conflict between the cold war, itself a dangerous and false concept, and allout nuclear war. Within this area, any aggression against any member of the free world involves immediate risks for the United States militarily, and forces to meet these risks instantaneously are imperative.

Do we have these forces? If not, why not?

The piecemeal destructiveness of limited wars can be as devastating in the long run as the immediate destruction of nuclear war. Both darken our horizon and peace is but an illusion in this century of violence.

The sooner we recognize that communism is irrevocably dedicated to permanent revolution on a global scale, the better our chances for survival. Otherwise, our placid indifference to our predictable fate will cast us in the suicidal role of spectators at our own destruction.

South Carolina's Young Man of the Year

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, February 19, 1959

Mr. THURMOND. Mr. President, the South Carolina Junior Chamber of Commerce has selected as South Carolina's Young Man of the Year the distinguished editor of the Orangeburg Times and Democrat, Mr. Edward H. Sims.

Mr. Sims is a noted and able author of the recent book "American Aces," a story of fighter pilots in World War II. Mr. Sims is a most outstanding young man and is very deserving of this fine honor. I ask unanimous consent that an editorial which appeared in the State, a newspaper of Columbia, S.C., on February 18, 1959, commending Mr. Sim's selection, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MAN OF THE YEAR

South Carolina's Young Man of the Year is Edward H. Sims, editor of the Times and Democrat in Orangeburg.

A World War II fighter pilot with many missions to his credit, he is author of "American Aces," a book which was published and went into extra editions in 1958. It is of particular significance since technical developments probably have made aerial dogfighting a thing of the past.

Ed made several trips across the Atlantic and into the Pacific to interview individual heroes for his book, and it is the most authoritative work in its field. He flew his own plane to gather some of the information in this country.

He has a long list of civic achievements and is listed in "Who's Who in America." He heads Editor's Copy, a syndicate that supplies more than 500 newspapers, and the Sims News Service of Washington.

The State takes special pride in the statewide honor conferred upon him by the junior chamber of commerce as he also heads this newspaper's Washington news bureau.

Talmadge Farm Plan

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 19, 1959

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the editorials entitled, "Why Pick on the Farmer?" from the February 6, 1959, issue of the Moultrie, Ga., Weekly Observer; "Talmadge May Prove We Can Learn From History," from the February 5, 1959, issue of the Baxley, Ga., News-Banner; "Just as Communistic," from the February 6, 1959, issue of the Lavaca County Tribune of Hallettsville, Tex.; and the column by Hon. Joe F. Combs in the February 6, 1959, issue of the Beaumont, Tex., Enterprise.

There being no objection, the editorials and article were ordered to be printed in the RECORD, as follows:

[From the Moultrie (Ga.) Weekly Observer, Feb. 6, 1959]

WHY PICK ON THE FARMER?

Secretary Benson has done it again. He appears determined to reduce the economy of agricultural sections with arbitrary price support decisions within the scope of his administration.

While the Government is giving lip service to a program for bolstering all forms of economy, Secretary Benson is working overtime on methods of figuring parity which will mean loss of farm income running into many millions.

If there is any form of the national economy which needs stabilizing at a fair level, it is agriculture. Farming has been something of a redheaded stepchild which has been forced to take the brunt of drastic actions.

The national farm program was conceived and put into operation in the mid-1930's when it became evident that agriculture was the backbone of the country's economy. A soil conservation program, acreage controls and other measures were put into effect in a move to stabilize agriculture and give the farmer a fair share of the trade dollar. Much progress was made, even though farmers were forced to give up their freedom and adhere strictly to various practices, allocations, and quotas. This they accepted, however, in the hope of achieving a good balance.

Growers still would prefer to be on a free enterprise plan, but they have recognized the economic factors involved in the natural law of supply and demand, and have cooperated to the best of their ability.

Secretary Benson, in the face of a figured formula which has ruled for years, suddenly has come up with a new way of figuring parity which will mean tremendous losses to farmers.

Why pick on the farmer when every effort is being bended to give the economy impetus rather than strangle it? Instead of giving an ear to the farm program proposed by Georgia's Senator TALMADGE, Secretary Benson is taking a drastic course of action to reduce supports and income. It won't be done, however, without bitter protest from the agricultural areas.

[From the Baxley (Ga.) News-Banner, Feb. 5, 1959]

TALMADGE MAY PROVE WE CAN LEARN FROM HISTORY

Senator TALMADGE may prove by his farm bill entitled the "Agricultural Income Equalization Act of 1959," that we can learn from history. A similar bill, then known as the Domestic Allotment plan, by a Republican administration was refused in the twenties and the greatest depression of all time followed.

Like the Domestic Allotment plan, Senator TALMADGE's plan is designed to accomplish basic controls with a minimum of redtape. It has five easily understood points as follows:

1. Eliminate all acreage controls and Government loans.

2. Assign each farmer growing basic commodities a domestic production quota based on his average production for the preceding 5 years.

3. Guarantee and pay to each farmer a sales price support of the difference between the price he receives for his domestic production quota and 100 percent of parity.

4. Require each farmer to submit a bill of sale with his application for sales price support payments.

5. Impose a maximum of $25,000 on the amount of sales price support that any individual farmer may receive.

Senator TALMADGE states that agricultural marketing experts have estimated that the program he has proposed would save the taxpayers between $2 billion and $3 billion a year and would accomplish the following:

It would let the farmer plant what he wants and sell it has he pleases.

It would take the Federal Government out of the business of buying, storing, and selling farm commodities and place the responsibility for marketing with the farmer and private enterprise where it belongs.

It would guarantee the farmer his proportionate share of the national purchasing power and restore agriculture to a free enterprise, competitive base.

It would end the accumulation of the national farm surplus which has glutted the Nation's markets and stagnated its economy.

It would make the national farm program an estimable budget item which would remain relatively stable over the years.

It would mean lower prices to both the consumer and industry and would put American agricultural products, both raw and processed, back on the world markets at competitive prices.

It would give the farmer protection equivalent to labor's minimum wage and industry's tariff.

And it would mark a new and fresh start which would get away from the stereotyped concepts and failures of the past.

[From the Lavaca County (Tex.) Tribune, of Feb. 6, 1959]

JUST AS COMMUNISTIC

Nothing would benefit the farmers and the whole country more than free farming with direct subsidies, the plan already before the Congress.

This is urged by Congressman W. R. POAGE, of Waco, in the House, and by Senator HERMAN TALMADGE, of Georgia, in the Senate.

The plan is very simple:

1. Take Government out of farming.

2. Domestic allotment would be assigned to every farm, based on the 5-year average of his crop.

3. On this allotment the farmer would get a direct payment, the difference between the market price and the 100 percent parity.

4. He would only submit his sale receipt for the bales sold to get his direct payment.

5. The amount would be limited to $25,000 per farm.

Senator TALMADGE mentioned how a Mississippi planter got in 1 year more than a million dollars. Another, in Kansas, got over $600,000. That's also where most of this money went—to a few percent of the big planters.

Right along the farm programs were slanted for the benefit of the commercial farms—which prospered, while the small farmers were driven out. They talk of their inefficiency, of the marginal farmers, etc. If so, why did they take from them the cotton acreage when they never produced any surpluses and needed every acre to make a living?

President Eisenhower in his farm message is quite right: the farm policies benefited only the commercial farms. This because of the triumvirate: The Extension Service, Farm Bureau, and the agriculture colleges, as Arthur Schlesinger, Jr., tells also in his 'The Coming of the New Deal."

As also the Houston Chronicle comments, "These are, in actuality, private corporate organizations which are increasing their riches at the expense of the taxpaying workingman"—while the small farmer is sacrificed.

The triumvirate blames it on mechanization and other excuses. Did these take the cotton acreage away from the small farmers?

Are the farm machines any excuse for piling the farm people into the cities and producing unemployment of millions, wrecking the country?

As declared by Senator LONG, of Louisiana: "Unless something is done along the line suggested by the Senator from Georgia, millions of small farmers, the backbone of America, will be forced out of farming."

A better plan than the $25,000 limit would be in limiting direct payments to so many bales per farm. Any other allotment would again make small farmers the chief victims. Even if limited to 50 to 100 bales, would it not be cheaper than the present hopeless and destructive spending?

A real menace is in the idea that it's good for the country to drive farm people into the cities, denying them, by allotments, their

right to make a living on the land; then calling them inefficient.

Right from the very beginning, what the farmers and the country needed was very simple, as Senator TALMADGE and Congressman POAGE show—just free farming and direct payments, as also a reimbursement for tariff.

Throwing farmers back to where they were, selling at the market price and buying at the protected prices, would lead to nothing better than was the big depression of 1929.

Favoring only big-scale farming, subsidizing it through producing surpluses, is just as communistic as what goes on behind the Iron Curtain.

[From the Beaumont (Tex.) Enterprise, Feb. 6, 1959]

ENTERPRISE FARM CORNER

(By Joe F. Combs)

The farm program will have special attention by the present Congress and some sort of legislation will most likely come out of the caucuses and conferences being held both in Washington and throughout the farm belt.

One of the most interesting developments so far is the bill introduced by Georgia's Senator HERMAN TALMADGE and cosponsored by Senator OLIN JOHNSTON of South Carolina. These men are both from important agricultural regions and it stands to reason that they are representing the feelings and sentiments of their constituencies when they introduce or support legislation of any kind.

The writer has not seen this bill. From press reports it appears that it provides for some of the things that were included in the old Brannan plan, advocated by certain politicoes in the Truman administration.

However, on first thought the Talmadge bill sounds fairly reasonable and it may gain support. It is in conflict with the suggestions made by the American Farm Bureau Federation in their recent national membership meeting in Boston.

This need not necessarily cause any alarm, since the Farm Bureau has taken some peculiar stands in recent months. That is, peculiar to those of us who do not exactly understand what they are driving at.

Some of their recent public utterances, for example, do not explain themselves. The official newsletter of the Farm Bureau says among other things, in discussing the Talmadge bill, "But the biggest objection of all will come, for obvious reasons, from the American taxpayer."

The trouble with the Farm Bureau statement is that it implies that farmers are on one side and taxpayers on the other, the latter being the payers and the former being the receivers. That is manifestly unfair to farmers, all of whom are taxpayers.

It stands to reason that if the biggest objection comes from taxpayers then the farmers will be entering the biggest objection, for they are taxpayers. The writer questions the right of any farm organization to profess to speak in that manner for farmers.

To be frank about it there is entirely too much loose talk about farm programs and too little to back it up. What we need is a workable farm program and not a lot of ballyhoo.

Briefly, here is what the Talmadge bill would do, judging from the press reports that have come to my attention. It would assign to all farmers who grow basic commodities a domestic production quota, in pounds, bales, or bushels.

It would eliminate price support loans and eliminate acreage allotment. It applies to rice, wheat, corn, peanuts, cotton, and tobacco, and provides compensatory payments only on the domestically-consumed portion of each commodity under its regulations.

That doesn't appear to be such a grave threat to taxpayers, as compared to the multibillion program of the present. It may be that the writer cannot form a fair appraisal with the information at hand. But it looks as of now, that it might be possible to amend it to include ideas advanced by leading rice men a few years ago, as regards the domestically consumed portion of each commodity. In seeking a way out of the present predicament, farm leaders will do well to look into every proposal in an effort to find something better than we have.

Oregon Daily Journal, of Portland, Lauds Senate Leadership of Senator Warren G. Magnuson, of Washington

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, February 19, 1959

Mr. NEUBERGER. Mr. President, on December 15, 1958, the Oregon Daily Journal, which is published in my home community of Portland, paid high tribute to the able senior Senator from Washington [Mr. MAGNUSON] as being the Member of this body who has accomplished more constructively for the Pacific Northwest than any other.

Because I share this favorable opinion of the influence and prestige of our distinguished colleague, Senator WARREN G. MAGNUSON, I ask unanimous consent to have the editorial printed in the Appendix of the RECORD. I feel certain it will elicit similar endorsement from many other Members of the Senate who have been impressed with the diligence and effectiveness of Senator MAGNUSON.

I particularly desire to confirm what the Oregon Journal's editors have written about the tolerance, patience, friendliness, and understanding of our friend, the Honorable WARREN G. MAGNUSON.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

"MAGGIE'S" INFLUENCE ON CAPITOL HILL

Whatever one may think of Senator WARREN G. MAGNUSON, Democrat, of Washington, there are few who question his ability to get things done for his constituents.

Those who heard him at the Thursday noon luncheon session of the Inland Empire Waterways Association convention can better understand why he has this capacity.

Senator MAGNUSON has views on water resource development which are very similar, we suspect, to those of the senior Senator from Oregon.

Yet he freely concedes the right of other people to have different views, and he does not call them names for thinking differently than he does.

He is a stanch defender of public works spending for water resource development, and he can present convincing figures as to why such spending is good business, not only for this region but for the country.

Yet he recognizes the place which private utilities have in our economy. And he counts private utility executives among his personal friends.

Douglas McKay is a bad name in some Democratic circles, but MAGNUSON was able to speak of "my good friend, Doug McKay" (who was sitting in the audience).

MAGNUSON predicted that the administration may attempt, because of budget problems, to cut back on the construction schedule of some Northwest projects. He said he thought this would be foolhardy and would seek to resist cutbacks which he thinks will mean economic loss in the long run. But he did not rant and rave or accuse the administration of trying to put the Pacific Northwest in an economic straitjacket.

He said there are some things in the Corps of Engineers 308 review report with which he disagrees, but he did not criticize the engineers. Instead, he gave them credit for doing a thorough, competent job.

The Journal has not always agreed with Senator MAGNUSON. It has sometimes thought his diligence in behalf of Seattle was at Portland's expense.

But it has recognized that no other figure in Congress now is more influential in obtaining funds for Columbia basin resource development which benefit Oregon as well as Washington.

(This is not intended to belittle the growing influence of Oregon's Senator RICHARD L. NEUBERGER, attained in the relatively short time he has been in Congress.)

MAGNUSON's accomplishments, it must be acknowledge, are due in part to his membership on the important Senate Appropriations Committee, but he gets things done too by not being a prima donna, by getting along with others and by conceding the fact there is room for all kinds of people with all kinds of ideas.

New Industry in Montana

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, February 19, 1959

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD an article entitled "Start of Scobey Firm Brings New Industry to Northeast Montana," published in the Poplar (Mont.) Standard of recent date.

The article points out how energetic individuals in my home State are starting successful, practical, and needed new industries. I am proud of their accomplishment.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

START OF SCOBEY FIRM BRINGS NEW INDUSTRY TO NORTHEAST MONTANA

Another small business with growth potential for Montana.

Incorporation of the Montana Air-Reel Co., of Scobey on November 27 culminated several years of effort to find a local manufacturer for a Montana invention to serve regional agricultural markets.

The story goes like this, a Rudyard farmer named Curt Phillips invented an attachment for combine harvesters to replace the old bat type reel, which is inefficient when used in short grain. Jet blasts of air on the air-reel force the grain toward the cutting bar and thence, into the combine. The air-reel meets an age-old problem of harvesting by preventing the loss which occurs at the cutter bar when cutting short grain.

WIND-REEL PROVES UP IN FIELD

Actual performance records in the field show average savings of 1.5 bushels of wheat per acre, and two bushels of barley, accord-

ing to Charles Bowman, assistant professor of agricultural engineering at Montana State College. Bowman became interested in the product after Phillips contacted the endowment and research foundation at MSC for help in improving and marketing the product. The MSC team undertook an extensive testing and feasibility study of the product, especially emphasizing its performance in actual harvesting operations.

Finding the wind-reel, as it was then called, a product with potential, the MSC people and the owners of the patent endeavored to find a manufacturer for the product. A midwestern manufacturer was found, but the search was continued for a manufacturer closer to the primary marketing area in the Great Plains.

At the same time, a small Montana manufacturer of another agricultural product was looking for other products to make and sell.

GRAIN BLOWER MADE IN FINE BUILDING

The Truck Grain Blower Co., had been started in 1930 by G. E. and E. J. Schlechter of Whitetail to manufacture their device to blow grain into storage bins and boxcars. An excellent 5,800-square-foot concrete building was built in Whitetail in 1941 and equipped with modern machine tools to manufacture the product. The firm was purchased in 1954 by Harold and Stella Barenz, and the office was moved to Scobey.

The new owners expanded markets to include materials-handling operations all over the country. The blower, renamed the Montana Grain and Feed Blower, is now in regular use from Oregon to New York. Specialized uses include delivery of sawdust and other building materials into two-story broiler houses, handling of bulk salt, and elevating dry ingredients to the mixer in a dog-food factory in Brooklyn. Advantages of this blower over other materials—handling methods are straight-up delivery, nonseparation of ingredients and almost complete lack of damage to pelleted feeds.

STATE BOARD ARRANGES MEETING

Both parties—wind reel and truck grain—blower had contacted the State planning board about their problems. Acting in a liaison function, the State planning board sponsored a meeting in Helena on November 18. From this meeting arose the new Montana Air-Reel Co.

The owners emphasize several positive features of a semirural Montana location for their manufacturing operation:

1. Large quantities of surplus labor are available from October through May, when seasonal farming operations shut down.

2. Much of this labor is mechanically skilled and permanently resident.

3. There is good transportation and a major market within a few hundred miles.

4. Small towns make good places to live.

The State board said, "We wish this new firm good luck. It's another attempt to provide more employment opportunities in Montana by making a product for local and national markets. This is a small business that may grow into an important agricultural implement company."

USIA Cultural Spree

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Thursday, February 19, 1959

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most informative and thought-provoking article by Hon. Eugene W. Castle, of New York—banker, author, world traveler, and one of the Nation's most knowledgeable authorities on the excesses of the U.S. foreign aid and propaganda programs—entitled "A Transfer of Funds," which appears in the March 1959 issue of the American Mercury.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A TRANSFER OF FUNDS

(By Eugene W. Castle)

When the Congress responded again to the urgent pleas of President Eisenhower and Secretary of State John Foster Dulles and voted new billions for mutual security, it assumed that these vast sums would be used exclusively to safeguard the United States from the menace of world communism.

The Congress and 175 million American taxpayers were unaware of the fact that the funds demanded to defend our country against world communism would be utilized, in part, to promote cultural exchange with the Soviet Union.

Now it has been revealed that, with the approval of the President, $3,600,000 of mutual security funds have been transferred to finance the building of an American exhibit in Sokolniki Park, in the heart of Moscow. This exhibit is to open on July 4, 1959. It is, perhaps, a strange coincidence that the U.S. Department of Commerce spent exactly this amount to produce U.S. trade fairs in not 1 but 18 different locations throughout the world last year.

However, Mr. George V. Allen, the fourth chief press agent to head the U.S. Information Agency since Mr. Eisenhower became President, was selected for his present post chiefly because the White House urgently needed a skillful fund promoter to confront hostil and suspicious congressional appropriations committees.

According to Congressman OTTO PASSMAN, Democrat, of Louisiana, Mr. Allen tried to obtain $7,200,000 for the forthcoming Moscow jamboree to be charged in full to the American taxpayers. But, Assistant Secretary of State Christian Herter, who usually responds to White House demands, would not go along with this excessive request and all too obvious open handed switch of mutual security funds. Mr. Herter firmly rejected USIA Director Allen's $7,200,000 demand, backed by the power and prestige of the White House, and the State Department official insisted that the taxpayers could not be imposed upon for more than $3,600,000 to bring the American way of life to all the free citizens in the very heart of godless Russia.

Also, it should be recalled that 100,000 of these very same Soviet citizens stormed the American Embassy in Moscow several months ago and broke every window in our diplomatic establishment in the Red capital. Many of these same citizens are likely to be our guests in Sokolniki Park next July.

Simultaneously with the staging of the American exhibit in Moscow, the Soviets will stage a similar fair in New York. An eight-man delegation, headed by Deputy Trade Minister I. G. Bashahov, left Moscow, November 29, to complete plans here for the presentation of a favorable picture of the abundant and peaceful Soviet way of life. The Soviets, however, are not building an exhibition hall but will lease two floors of the Coliseum in Columbus Circle, New York.

Most of the $3,600,000 to be expended for this newest cultural relations project in Moscow will be utilized to pay for the building to house the exhibits. At the close of the fair's 6-week run, the Soviets will get the building (paid for by the American taxpayers) at a price which will only represent a fraction of the construction cost. Provision for the Russian acquisition of the building was concluded in Washington, D.C., November 9, but no purchase price was mentioned in the agreement. Under Secretary of State William S. B. Lacey, who was originally responsible for the consummation of the now highly questionable cultural exchange agreement between the United States and the Soviet Union, finalized January 27, 1958, was the first to report that the American exhibition hall will go to Russia and at a price that they will determine. It is possible, too, that this newest multimillion-dollar cultural spree may, in the end, prove to be the wrong exhibit, in the wrong country, to the wrong people at the wrong time. This is so because, on November 10, Khrushchev announced to the world from Moscow that the deadline—for the United States, British, and French forces to leave West Berlin—would be about July 1, 1959. Three days later, on July 4, 1959, the U.S. Government-sponsored fair is scheduled to begin a 6-week run in Moscow.

A staunch foe of our Government's mutual security and cultural excesses, Congressman PASSMAN, has challenged the improper use of mutual security funds to promote Russia, rather than to defend the United States, as Congress intended. Mr. PASSMAN, a member of the House Appropriations Committee, in a letter to C. Douglas Dillon, Under Secretary of State for economic affairs, protested against dillydallying with funds in a manner not intended by Congress.

Mr. Dillon, replying to the Congressman's protest, contended that construction funds had to be committed now and that there was no time to go before Congress to request an extra or supplemental appropriation to cover the Moscow fair.

Mr. Dillon is now the principal White House proponent for an additional billion dollars, over last year's appropriation, for the new foreign aid budget to be presented to Congress in January. He stated that the only money immediately available for this project is $300,000, left over from the 1957 appropriation for an American exhibit in Gorki Park, Moscow, a previous cultural exchange project, which failed to materialize.

"In view of the impossibility of securing supplemental funds through the normal appropriation procedures," Undersecretary Dillon stated, "the executive branch proposes to utilize the authority of section 451 of the Mutual Security Act of 1954 as amended, to finance the cost.

"This use of mutual security funds, while entirely appropriate under the above cited authority, is considered to be exceptional. We do not have any additional plans for such financing of similar programs, and it would be our intention to continue to finance exhibitions under the appropriations for the President's special international program."

Undersecretary C. Douglas Dillon did not mention the fact that the $3,600,000 for the Moscow fair was transferred from the mutual security fund almost at the same hour that President Eisenhower issued a stern directive to all Government department heads ordering them to cut their respective budget requests to the bone because of the serious inflationary dangers resulting from the $12 billion deficit now confronting the Nation.

Our Progress in Ballistic Missiles

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, February 19, 1959

Mr. PROXMIRE. Mr. President, the President of the United States, a few

weeks ago, referred to the deep concern many of us share over this Nation's apparent lag in missile development; he called it hangdog humiliation.

This was an unfortunate and inaccurate description of what is really and simply a facing up to an important problem. This was the subject of an excellent editorial published in the Friday, January 30, issue of the Milwaukee Sentinel. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RIGHT TO ASK

President Eisenhower used an unfortunate phrase in his press conference Wednesday when he said Americans have no cause for hangdog humiliation over our progress in ballistic missiles.

We could not agree more. But where is the hangdog humiliation? We have seen no evidence of it.

By inference, it is bound to be accepted as an administration label on responsible men like Senator STUART SYMINGTON who are genuinely concerned by what they believe to be a dangerous lag in our missile development against that of Russia.

Although there is undoubtedly an undertow of politics in the differences between Senator SYMINGTON (a not-so-dark presidential horse) and the administration, the Missouri Democrat is neither hangdog nor petty faultfinding. He speaks with a background experience of former Secretary of the Air Force.

The President's remark was in reference to Premier Khrushchev's statement that Russia now has intercontinental ballistic missiles in production. The Russian words Khrushchev used could be taken to mean either serial or mass production.

The main point is that ICBM's, according to Khrushchev, are in production. On the record, Soviet announcements of missile or rocket developments have been found to be accurate. In addition, it is much more in the interest of our security to take it as a fact than to dismiss it as an idle boast.

In contrast, Hanson W. Baldwin, military writer of the New York Times, reports that our first operational Atlas missile is now programed for July. Assuming that the Soviet Premier was announcing a fact, there is obviously a lag.

How serious it is, we do not pretend to know, nor do we dispute the President's assertion that remarkable progress has been made in catching up.

Spendthrift panic is not the answer. Neither is equating honest criticism with hangdog humiliation. We are confident that the administration's program is designed to give us a missile deterrent strength to Communist conquest. We are equally sure that Senator SYMINGTON, and men like him, have the right to question whether the program is good or fast enough.

Indian Welfare

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, February 19, 1959

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Where Infants Die," published in the Ogden Standard-Examiner of January 15, 1959.

The editorial supports the bill (S. 56) introduced by me and cosponsored by a number of other Senators, which would authorize the Public Health Service to provide basic sanitation facilities on Indian reservations.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHERE INFANTS DIE

Senator JAMES E. MURRAY, Democrat, of Montana, announced in the Senate last week that Senator FRANK E. MOSS, Democrat, of Utah, and other Senators had joined with him to introduce a bill for Indian welfare. The bill authorizes the Public Health Service to provide basic sanitation on Indian reservations. The Indians favor the bill, and so does the administration. So do all informed American men and women. The reasons are plain.

The U.S. Public Health Service reports that more than a fourth of the Indian babies born in the Dakotas and Nebraska die before they are a year old. Most of the deaths occur in the first months as the babies are taken from the warmth and safety of hospitals to the cold and often unsanitary homes.

The Indian rate for tuberculosis is four times higher than the rate for the general population. The death rate of gastroenteric diseases is six times greater, from influenza and pneumonia four times greater. Indians for the most part are too poor to provide sanitary facilities and decent homes.

We wish the Senators interested in improving the Indians' health would investigate charges that hunger often prevails among Indian groups. It is fantastic to think that impoverished Indians, including children, can go hungry in this land of great food surpluses, but such appears to be the case, to our shame.

Views of McMinnville (Oreg.) News-Register on the Nation's Agricultural Program

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, February 19, 1959

Mr. NEUBERGER. Mr. President, the crucial question of a sound farm program has troubled many of us. We are worried over a policy which spends nearly $5 billion for direct payments to the growers of six so-called basics, and which passes by the vast majority of the Nation's farmers—especially the small family-sized farmer who is most in need of succor.

I have done some speaking on this issue in my home State, and I am pleased that a thoughtful and analytical editorial on these speeches was published in the McMinnville (Oreg.) News-Register of December 5, 1958.

Because many Members of the Senate share my desire to have a new farm program which would be less costly to the taxpayers and more fair to average farmers, I ask unanimous consent that the editorial of the McMinnville News-Register be printed in the Appendix of the RECORD—and I would call particular attention to its approval of the two-price plan for wheat, which would not only lower support costs but also channel wheat into feed uses at a price which poultry raisers can afford. This editorial is especially timely now because the distinguished Senator from Kansas [Mr. CARLSON], an outstanding leader in farm legislation, has just introduced his bill for the domestic parity wheat program, and I am pleased to have been invited by him to be a cosponsor of the bill.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR NEUBERGER'S FARM POLICY

It is said that some persons, on being given responsibility, grow—others just swell. We think that the first part of this description applies well to Oregon's junior Senator, RICHARD L. NEUBERGER. If he keeps moving in his present direction he will reach McNary-like stature.

This was impressed upon us once again by a report in the Oregon Farmer about a speech NEUBERGER made recently to the annual meeting of the Pacific Northwest Farm Council. He urged a thorough revamping of our national farm policy and charged that continuing crop surpluses, record U.S. Department of Agriculture budgets and the lack of any help for the majority of farm families spells out the dismal failure of the present basic Federal farm program.

NEUBERGER pointed out that of the six basic supported crops—corn, cotton, wheat, tobacco, rice, and peanuts—only wheat is grown in this region. "And the absurdity of this conception of what is basic," he said, "is illustrated by the inclusion of peanuts and tobacco, while such necessities as meats, vegetables, and fruits are not deemed worthy of Federal attention."

NEUBERGER suggested that wheatgrowers of the Northwest would benefit far more from a truly bold and imaginative trial of the domestic parity or so-called two-price plan, than from continuous desperate, annual manipulations of parity price support levels and production control quotas under the established program. He indicated that this plan would both help to eliminate the tax costs of the present program and would make lower-priced wheat available as feed to benefit farmers who raise chickens, turkeys, and livestock, as well as the region's wheat farmers.

"To my mind," said the Senator, "a meaningful social policy for farms, must focus on people rather than products, on farm income rather than farm prices. Not only is farm income the point of real significance to farm families, but it is also obvious that a program which stresses farm prices can be divisive between farmers and city consumers."

According to the Oregon Farmer's report, Senator NEUBERGER suggested further that "in the current period of great technological change, both in agriculture itself and in food processing for consumption, the true test of a program for any branch of agriculture should be that it aids farm families—individually or cooperatively—to have the access of capital, the stable markets and the insurance against unforeseeable natural or economic blows, that are needed to keep the family farm operation the basic producing unit in modern agriculture."

It is our opinion that certainly the present farm program is catawampous and that Senator NEUBERGER is moving in the right direction. He may not have a hold on the entire answer, but at least he is reaching for the right end of the stick.

Forty-ninth Anniversary of the Boy Scouts of America

EXTENSION OF REMARKS
OF
HON. FRANK J. LAUSCHE
OF OHIO
IN THE SENATE OF THE UNITED STATES
Thursday, February 19, 1959

Mr. LAUSCHE. Mr. President, throughout the Nation last week, February 7 through 13 to be specific, the 49th anniversary of the Boy Scouts of America was celebrated with proper and impressive ceremonies and activities manifestly appropriate in recognition of that good and constructive organization.

Of coincidental significance, I wish to invite the attention of the Senate to a very impressive assembly held in the public square in Newark, Ohio, and in which participated 600 uniformed Boy Scouts from central Ohio, where an American flag bearing the 49th star representing the admission of Alaska into the Union was briefly displayed by a Boy Scout honor guard, with special permission.

The master of ceremonies, Common Pleas Judge Charles R. Holtsberry of Newark, Ohio, who is Boy Scout counselor on citizenship of the Newark troop, was told by representatives of the Ohio press witnessing this impressive ceremony that to their knowledge, this was the first ceremony in Ohio, and probably in the Nation, wherein the new flag bearing the 49th star was displayed for such a dual commemorative purpose.

Belatedly, but manifestly not lacking in importance and significance, I ask unanimous consent to have printed in the Appendix of the RECORD this very commendatory article on Boy Scout Week which has been called to my attention by the National Council of Boy Scouts of America, of New Brunswick, N.J.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BOY SCOUT WEEK

Founded in 1910 the Boy Scouts of America is 49 years old. Today nearly 5 million boys and adults are participating in the Boy Scout program and, since 1910, the number of boys and adults who have been or are now members totals more than 28 million.

Starting in the United States in the early years of the 20th century, when the frontier period had drawn to a close, Boy Scouting, based on many of the frontier concepts which had welded the United States of America into a hardy and resilient nation, faced a tremendous period of development, industrialization, urbanization, growth, and scientific exploration. These years have perhaps been the most unique in all history.

Each period in history has its special challenge for youth, and today this challenge is as complex as the complicated world in which we live. It is not the purpose of Boy Scouting to remove the hurdles from the pathway of youth, nor to lessen the challenge which confronts them. Rather, it is the purpose of Scouting to help boys recognize the challenge and accept it, to surmount the hurdles.

What is this challenge, and how can we help boys meet it? Isn't the challenge today to live productively in a world of science and rapid change? Movement and change are two elements that characterize the period in which we live. These factors will have a profound effect upon all of us, but particularly upon youth.

We must help youth see that in today's world change must be sought, not fought. We must help youth become adaptable and flexible as they are confronted with change. We must help youth develop inquiring minds—the urge to explore new fields of thought and action. These qualities of thought and spirit are needed by all young Americans who grow to manhood in today's world, and especially in the exploration of new worlds of engineering and science.

But as we strive to meet this challenge we must recognize that it is not our function to determine which boys should undertake scientific careers. However, we should open doors for all boys to have experience in science-related fields and help those who have strong interests to seek and obtain the guidance of local experts in scientific fields.

More than ever before, all boys need the help and encouragement of capable adults in exploring the worlds of work and learning.

It is of the utmost importance, therefore, for boys to learn to understand adults and to learn new and better methods of working with adults. Adults, on their part, must learn to relate themselves to youth and to understand the changing needs of youth.

There is another great challenge today. Although boys live in a rapidly changing world, they need a type of moral stability that can only come from a personal scale of values. This cannot be merely imposed upon them. It must be a way of thinking and living which they build for themselves with the guidance and help of thinking adults.

Boy Scouting has the program, and through the sponsoring bodies of America—120,000 of them—it mobilizes the facilities and the leadership necessary to help youth meet these challenges. Scouting begins with the Cub Scout program, where 8-, 9-, and 10-year-old boys have an opportunity to explore such science-related subjects as radio, machinery, photography, aircraft, electricity, mechanics, conservation, and wheel power.

Cub Scouting also contributes significantly to a wholesome attitude toward adults. This starts at home where Cub Scouts and their parents participate in the program together. The contacts with adults gradually widen as the Cub Scouts work with den mothers, den dads, and other Cub Scout leaders. Through intelligent use of the ideals of Cub Scouting, boys begin to strengthen their code of ethics, a first step toward the development of a stable scale of values.

The Boy Scout program, for boys 11 to 18, opens doors to a much wider exploration of science-related subjects through the merit badge fields—agriculture, astronomy, automobiling, aviation, machinery, metalwork, mechanical drawing, photography, botany, chemistry, electricity, geology, radio, soil and water conservation, surveying, weather, and zoology, to name a few.

Merit badge requirements are constantly being brought up to date with the help of outstanding authorities in special fields. Through the merit badge counseling system boys can be brought into contact with fine local men who are authorities in their fields.

The exploring program, for young men of high school age, goes still further in opening doors in career possibilities. Explorer activities are self-initiated, planned, and carried out by the Explorers themselves, with the help of adult advisers and consultants. This is the age when a job future and the need to make a job choice are of paramount importance. Exploring leads young men toward the development of special interests, radio, archeology, the sciences, visits to industrial plants and laboratories, sessions to spotlight careers, all of which bring them into contact, through advisers and consultants, with adults who can help them develop such interests.

Local experts give Explorers valuable technical advice, and help them develop productive working relationships with interested adults. Thus Exploring provides a new adult-youth relationship, with emphasis on adult coaching. Such a program also gives Explorers opportunities to test their rapidly forming scales of values. This is important when boys are in their final transition to adulthood.

The world has changed a lot since Boy Scouting was founded in the United States a half century ago. The frontier concepts of those days have changed to new frontiers in speed, in scientific change, and in space.

So, in this Boy Scout Week, the 49th anniversary of a great movement which has touched and influenced the lives of more than 28 million boys and adults, scouting is equipped to assist boys to explore this new world and to help them acquire the character habits which will make it a wholesome world in which to live.

The Boy Scout program needs your help as adult members of the community. It needs your financial support, your undertsanding, and your help as leaders, advisors, and as consultants in special fields of interest.

Use of Dairy Products

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, February 19, 1959

Mr. PROXMIRE. Mr. President, a few days ago the Milwaukee Journal paid a high and well-deserved compliment to Dr. George W. Calver, the chief medical officer in the Capitol. The Journal editorial complimented the vigor and fitness of the Members of the Senate, too, and noted—quite properly—that Dr. Calver deserves at least some of the credit. Certainly each one of us is grateful to Dr. Calver for the conscientious concern with which he helps to guard the health and fitness of members of the legislative branch of our Government.

The Journal editorial, however, was somewhat inaccurate on one point—namely, in stating that "Dr. Calver is telling Congressmen to avoid cream and butter." I have checked with Dr. Calver, who tells me that this is not his general advice to his patients. In fact, only in special, individual cases in which the patients are sufferng from specific problems of high blood cholesterol content does Dr. Calver warn his patients to avoid foods having a high content of animal fat and hydrolized vegetable fats, as well.

Specifically, Dr. Calver tells me, he advises patients to avoid all rich foods, such as gravies, sauces, fried foods, and so forth. He emphasizes that vegetable fats, when used in the preparation of foods, such as in frying, become hydrolized, and, therefore, contribute as seriously to the blood cholesterol problem as do animal facts. Finally, Dr. Calver emphasizes that it is the manner of life of the individual patients—rather than the characteristics of these foods—that is the determining factor as to whether they should avoid them. The fact of

the matter is that fats are extremely high in energy—much higher than are proteins or carbohydrates. As Dr. Calver says, if a man is digging ditches or engaging in some other strenuous form of activity and exercise, he will readily burn up as much energy as he can consume; but a man who spends long hours of work at a desk, with little exercise, does not require a high-energy diet.

I am sure the Milwaukee Journal's editorial writer was being primarily facetious when he suggested that Wisconsin politicians might wish to suppress sound medical advice concerning the effects of diet upon health. Neither Wisconsin's dairy industry nor Wisconsin's official representatives would be party to encouraging individuals who have special health problems to consume foods which are not good for them. But on the other hand, it is important to have a clear and fair picture of precisely what the facts are—as fully as they are known to responsible medical authorities. Without this clarification, I fear that the Milwaukee Journal's editorial may have left its readers with a completely unintended, but nevertheless false, impression of the true health considerations in respect to dairy products. The fact is that milk and milk products are wholesome, nutritious, and health-giving foods; and any suggestion that this is not so would be a greater disservice to the American public than even to the dairy farmers.

Mr. President, I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DANGEROUS DIET ADVICE

Watching the United States Senate in action recently we were struck by the physical vigor and trimness of the Members of that venerable body. Many of them had obviously been dieting. Many of them showed the results of exercise. Even 90-year-old Senator GREEN, Democrat, of Rhode Island, seemed physically spry—resulting in part from the fact that he walks to work every day and takes other forms of exercise.

Credit for some of this physical fitness must go to Dr. George W. Calver, resident physician to Congress. He's a great man for exercise—says a Congressman should take a brisk hour's walk before breakfast. And he's a great man for dieting, too. But he's going to have some trouble with Wisconsin's congressional delegation.

Dr. Calver is telling Congressmen to avoid cream and butter. He tells them they can eat oleomargarine. If these are requirements for physical fitness, Wisconsin's delegation won't carry off any fitness prizes. A diet restriction like that would be treason.

And it might—in Wisconsin—even be political suicide.

Electing Fighters for Freedom

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 19, 1959

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a column published in the February 1959 issue of the South Dakota Bureau Farming. It is entitled "How I Helped Elect Fighters for Freedom," and was written by Mrs. Ernest Telkamp, Route 1, Brookings, S. Dak. The article won for Mrs. Telkamp the national award in competition among farm bureau women.

Mrs. Telkamp points out how, as a farm wife she activated herself in politics as vice chairman of a county committee of one of our great political parties. She does not mention the party in her article, as is appropriate, because the South Dakota Farm Bureau, as is true of all good farm organizations, is not engaged in politics in a partisan manner. However, I can add parenthetically, here in the confidence of the Senate Chamber, that Mrs. Ernest Telkamp is a Republican county vice chairman in the Republican county of Brookings, S. Dak. And—I should add—she is a mighty good and effective worker and leader.

She points out in her article something which I believe all of us would like to have our constituents read, namely, the responsibility of a farm wife to activate herself in the public affairs of her community and to participate in the activities of the party of her choice in a capacity of leadership. It is a most inspiring article, and certainly merits the award which it received. Therefore I should like to call it to the attention of my colleagues by having it inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW I HELPED ELECT FIGHTERS FOR FREEDOM

(By Mrs. Ernest Telkamp)

A few short months ago party platforms were quite uninteresting to me. The two words sounded dull; words which would require much study about tiresome issues of which I thought I knew little.

Then I was appointed the woman member of our State's Farm Bureau resolutions committee. I sat at these meetings hearing resolution after resolution from the counties being read. There was discussion after each reading. I awoke to the fact that laws were created by us, the people, about things that were near us, things that we wanted changed for the betterment of ourselves and our communities. These laws weren't dull. I found that I had opinions about them, even a small degree of knowledge about some. I found that it was a pleasant feeling to have a meeting of minds in this committee, out of which came betterment for mankind.

I began to realize that the type of people I was associating with mostly, had a common philosophy of life. This was synonymous with my idea of Americanism. This idea I was ready to go to bat for. It also fit in with my religious beliefs. I had always believed that America was God's gift to a people that sincerely desired to worship Him. A people that were trying to live by His precept "Love thy neighbors." Making resolutions to become laws that would help these neighbors was a way of being a good American.

Soon after this I was asked to become county vice chairman of a political party. I spent the summer working, almost full time, organizing the county women of this party to get out the vote.

Survey cards, with places to mark if the voters needed assistance of any kind to vote, were taken from house to house all over the county. Coffee parties were held in most every precinct to interest more people. Amendments and party platforms were explained at these. More coffee parties were held to introduce the candidates. Rallies, dinners, and picnics were the order of the day. Publicity was used wherever possible. Absentee ballots were sent, registration was urged, ballots were taken to sick people and folks in rest homes. On election day transportation and babysitters were furnished. Workers through the county called neighbors and urged them to vote.

Meanwhile the campaign had been progressing. Accusations and counteraccusations were being hurled at us through all mediums. I began to realize that a party platform wasn't hard to understand when it was interpreted as laws that my neighbors and I would have to live by. I found that the choice lay in a self-government with a competitive enterprise under which the God-given rights of men are protected or a centralized government which controlled and supported the people. The knowledge that this kind of government would control me and my helpers gave us a double incentive, to work for the candidates we believed would give us the kind of government we believed in, and to get out the vote—the vote for free American government.

Judge Oscar C. Dancy, "the Country Judge From Texas," Reflects Credit on His State

EXTENSION OF REMARKS
OF
HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, February 19, 1959

Mr. YARBOROUGH. Mr. President, down in southern Texas people will tell you the initial "C." in the name of Oscar C. Dancy stands for "Concrete." They mean it as a compliment.

They mean that Oscar C. Dancey, who calls himself "just a country judge from Texas," is a man of the highest principles and ideals and has never wavered from his beliefs.

The people of Cameron County and of Texas have a right to be proud of Judge Dancy. This man has served them faithfully and unselfishly for almost 27 years.

All example of his devotion to duty is the fact that he is at his desk and working by 5:30 a.m. each day.

But it is the type of work he does that distinguishes this great men. Today, there are more than 360 miles of all-weather, class A highways in Cameron County, which contains only 857 square miles in all. One of the men mainly responsible for this is Judge Oscar C. Dancy. What makes his interest in highway development unusual is that he does not drive an automobile himself.

Since Judge Dancy took office, about $10 million has been spent on various public works in his county.

The judge has been active in other development projects for the good of his home area and the good of the State. For example, he has been extremely active in projects for the conservation of our natural resources, particularly in irrigation and other water problems

which have beset Texas and the Southwest.

Another thing I particularly value from Judge Dancy in his wise counsel. I am proud to say that the judge and I have been friends for many years, and his advice and wisdom have often helped me in making decisions. I value his friendship highly.

Mr. President, as a tribute to Oscar C. Dancy, the "country judge from Texas," a man of character, wisdom, and farsighted and unselfish service, I ask unanimous consent to have printed in the Appendix of the RECORD the well written article "The Country Judge From Texas," written by Clarence Laroche, and published in a recent issue of the San Antonio Fxpress magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE COUNTRY JUDGE FROM TEXAS

(By Clarence Laroche)

"I have absolutely no business to warrant such a call," the polite white haired gentleman told the young woman secretary, "but I just want to meet a county judge who spent more money than I did."

The young lady made a brave attempt to present the usual cold front to would-be callers, but she was completely disarmed by the warm, frank glow of the elderly but rugged man. The hard lines on her face thawed and melted into a smile. She asked the gentleman to wait while she checked.

In a few minutes, the President of the United States walked out, face beaming and arm outstretched, as he grabbed for the hand of Oscar C. Dancy, "the country judge from Texas."

"I meant what I told that young lady," Oscar Dancy explained later. "Harry Truman, as county judge of Jackson County, Mo., is the only county judge who outspent me when it came to putting out public funds. Of course, Truman had a bigger and richer county, and the reason I came in second is because I've been doing my spending over a quarter of a century."

After comparing notes that morning, Harry Truman and Oscar Dancy found the former had spent $20 million in bond money during his terms as county judge while the latter had spent about $10 million.

Down in the Rio Grande Valley, they'll tell you the "C" in Judge Dancy's name stands for "Concrete." The quip is a tribute to the judge who has been a pioneer in road construction not only in his own country and section but in the State as well. Today, Cameron County has a total of 363.32 miles of all-weather class A highways, and Oscar "Concrete" Dancy is key figure who helped bring that program about.

Oddly enough, this man who has brought about a great modern paving program to his county and section has never himself driven over the highways he helped build. He has never owned an automobile and has never learned to drive one.

But the lack of an automobile has not stopped this ex-North Carolinian. If anything, the walking he has been reduced to, played a role in keeping him healthy. Despite the exercise, he gets lifts either by regular bus service or by friends. He is usually home by 5:30 in the evening and in bed by 8 p.m. Next morning, if you should happen to be in the Texas Cafe about 5 o'clock, you will probably see one of the waiters looking through the big plate glass up the street. He will turn, draw a cup of coffee and place it before a nonexistent customer. A minute later, Judge Dancy will come through the door and sit before the coffee. He's at his desk in his office at the courthouse by 5:30 a.m.

His trips are frequent to Austin, Washington, and other cities where important measures and policies are formed. Phoenix and Denver, Albuquerque and El Paso know him from the Reclamation Bureau meetings he has attended in regard to valley water projects. He knows his way around Austin about as well as Mayor Tom Miller, and long ago threw away his guide to the Nation's Capital.

In fact, it was at a Washington congressional committee hearing that his "country judge from Texas" tag took hold. His extreme air of honesty and straightforwardness caught fire with a newspaper reporter, who promptly tagged the judge with the colorful—but very fitting—sobriquet in a report of the day's committee activities.

It is this same air of frankness, coupled with his complete honesty and integrity, that have contributed to his success as a politician, helping him to retain his office almost continuously for almost 27 years. The lone break in this long tenure came in 1932.

"It seems I got blamed, along with Hoover, for the depression," the judge explains wryly, "and was forced to take an involuntary leave of absence for a couple of years." It is noteworthy that he was returned to office in 1934 and has been in office ever since.

Still in full harness after over a quarter of a century as Cameron County judge, Dancy is definitely a throwback to a type of statesman of a century ago. In fact, one of the major compliments recently paid him was the reference to him as a "backwoodsman." He considers that a tribute.

Today, at an age when most men become conservative in both their physical and mental attitudes, "the country judge from Texas" refuses to take things easy. He has an open mind, is tolerant and would be classified as a liberal. Franklin Delano Roosevelt, he believes, was the greatest President the country ever had; he's wholeheartedly in favor of many New Deal projects and philosophies, and is bitterly against any attempts by big business to run the country. He is equally as bitter against communism and its potential menace to America.

Senate Seniority System Defeats Good Government

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, February 19, 1959

Mr. PROXMIRE. Mr. President, the question of committe domination by the South, through the seniority system, which I have discussed on this floor, has been dealt with in clear and comprehensive fashion by the Milwaukee Journal, one of the leading newspapers of the Nation, in an editorial published on February 10. I ask unanimous consent that the editorial, entitled "Senate Seniority System Defeats Good Government," be reprinted in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATE SENIORITY SYSTEM DEFEATS GOOD GOVERNMENT

If you question the accuracy or justice of Senator PROXMIRE's protest against southern Democratic domination of Senate committees as a result of the seniority system, study this list of committees and chairmen:

Space, JOHNSON, Texas; Agriculture, ELLENDER, Louisiana; Appropriations, HAYDEN, Arizona; Armed Services, RUSSELL, Georgia; Banking and Currency, ROBERTSON, Virginia; Finance, BYRD, Virginia; Foreign Relations, FULBRIGHT, Arkansas; Government Operations, MCCLELLAN, Arkansas; Interior and Insular Affairs, MURRAY, Montana; Interstate and Foreign Commerce, MAGNUSON, Washington; Judiciary, EASTLAND, Mississippi; Labor, HILL, Alabama; Post Office and Civil Service, JOHNSON, South Carolina; Public Works, CHAVEZ, New Mexico; Rules and Administration, HENNINGS, Missouri.

There is not a chairman from the Northwest, the Great Lakes area, or the Middle West. Yet Georgia, Virginia, and Arkansas each have two. Some of these southern Senators are well qualified. Some are not.

Here is why the South does not want to break with the Democratic Party (as is often threatened) or carry the segregation fight too far. It would only risk losing its vast influence in Congress.

The seniority rule—some call it senility rule—provides that committee members rank in accordance with years of continuous service and that the member of the majority party having the longest uninterrupted service shall be chairman.

It's a bad system. It can put time serving incompetents in chairmanships. It frequently keeps the best men out of top jobs. It mocks principles of responsible party government. It is contrary to the idea of a legislature responsible to the electoral mandate.

PROXMIRE's proposal for geographical distribution of chairmanships is no answer, of course. The accident of geography no more assures competency than that of seniority. Committee chairmen should be chosen on the basis of all-around ability—nothing else. But, even as PROXMIRE, we have no illusions that changes will be made.

Seniority provides an escalator for all. Get on it, stay on it, keep moving up and you eventually reach the top. Senators may hate it at first. But they come to like it after a term or two.

Legislative Program of the National Federation of Independent Business

EXTENSION OF REMARKS

OF

HON. JOHN SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, February 19, 1959

Mr. SPARKMAN. Mr. President, it has been my privilege as chairman of the Senate Select Committee on Small Business to work with many good organizations that are interested in the problems of small business. I am sure that other Senators have found, as I have, the recommendations of these organizations to be extremely helpful in connection with the needs of small business. Among these is the National Federation of Independent Business.

The federation's president is Mr. C. Wilson Harder. Its legislative vice president is Mr. George Burger, whom I believe most Senators know. He is an eager and aggressive advocate for small business.

Recently these gentlemen, George Burger and Wilson Harder, presented to

me the federation's legislative program for 1959.

While Senators may not agree with every item of the program, I feel sure that they will agree with most of the recommendations. Therefore, I ask unanimous consent that the program be printed in the Appendix of the RECORD.

There being no objection, the program was ordered to be printed in the RECORD, as follows:

LEGISLATIVE PROGRAM OF THE NATIONAL FEDERATION OF INDEPENDENT BUSINESS

To Members of the 86th Congress:

We think you will be interested in the following measures. Federation members have already sent their signed mandate ballots to Congressmen during the last congressional session favoring action on these matters which need your attention:

Stronger enforcement of antitrust laws which promote fairer price competition and break up monopoly-creating mergers.

Enactment of law requiring manufacturers who sell through factory-owned stores and independent dealers, to put their independents on the same overall buying basis as their stores.

Further tax revisions to provide bigger depreciation allowances on new and used equipment bought by small business, to provide encouragement for building private retirement plans, to secure same tax benefits for unincorporated businesses equivalent to those granted corporate enterprise.

Enactment of laws requiring fairer dealings by unions with small business.

Curtailment of Government competition with small business.

Enactment of strong fair trade laws.

Require cooperatives to pay taxes on same basis as privately operated independent business competitors.

Reduction of Government redtape and reporting burdens on independent business.

Further streamlining of rules to give small firms a fairer share of Government contacts and Government financing help.

Provide stronger representation for small business in Congress by making the House Small Business Committee permanent, same as the Senate Small Business Committee.

Educational Revolution

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES

Thursday, February 19, 1959

Mr. STENNIS. Mr. President, recently there has been a great deal said about our educational program and what should be done to strengthen it and to remedy some of its so-called defects. Many suggestions have been made, including the introduction of bills which would grant a great number of scholarships, and dealing with other phases of the program.

I have in my hand an article published in the Wall Street Journal of Tuesday, February 17, 1959, entitled "Education in Revolution—Indianapolis Aims To Restore Excellence to High Schools."

I have stated publicly many times that I thought changes must be brought about first in the living rooms from which the children come, and right on up through grammar school, high school, and college.

The editorial, I am sure, does not have all the answers, and I do not approve of all the points it makes; however, I am sure the suggestions which are made in the article will go a long way toward making worth-while contributions to our program.

I call it particularly to the attention of Members of Congress, and also to the attention of the people of the Nation. I therefore ask unanimous consent that the article may be prnted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD as follows:

EDUCATION REVOLUTION—INDIANAPOLIS AIMS TO RESTORE EXCELLENCE TO HIGH SCHOOLS

(By John Chamberlain)

INDIANAPOLIS, Ind.—Shortridge High, one of Indianapolis' eight high schools, has an old tradition of excellence. In the past it has sent as many as 70 percent of a senior class on to college.

Today, amid changing population patterns in this city of 460,000, Shortridge's share of college-bound students is no longer what it used to be. The local board of education does not like the trend—which is even more pronounced at other Indianapolis high schools. But instead of deploring the laziness of modern students, the board is busy doing something about the situation. With the diploma credit system being upgraded as a starter, Indianapolis is in the throes of an educational revolution designed to restore excellence to its old standing as a desirable commodity. This contrasts with the effort imputed by critics to the progressive, to adjust everybody to mediocrity.

At Shortridge High the revolution cannot go fast enough to satisfy the principal, Dr. Hadley, who remembers the great days of his school. Through years of general apathy about classical tradition, Shortridge has continued to offer courses in Greek and in Hebrew. Since not enough students normally elect these subjects to justify them in the budget, the principal has used ingenious makeshifts to keep them in the catalog. The Greek teacher remains on the payroll by conducting classes in Latin. The Hebrew teacher is a local rabbi who lacks the requisite Indiana credits in educational methodology; he remains on the payroll by virtue of a special certificate which waives the usual board of education teacher requirements.

Shortridge is forced to battle for its ancient tradition because, as a comprehensive high school, it must take IQ's as they come, whether low or high. What saves it is the system known as multiple track. In its English courses, for example, the students are grouped in five separate levels in accordance with their abilities. In a top English class you will hear a boy offering such obiter dicta as "The whole science of war is logistics"—this as a response to a question about Emil Ludwig's biography of Napoleon.

Teachers at Shortridge use their common sense in shuttling back and forth between older methods of instruction and the modern encouragement of learning by doing, which means letting the student set the class pace. A day's assignment of the literature of Puritan New England, for example, will allow for plenty of student talk about the Puritans. But the practice of letting students conduct their own class will be interrupted from time to time as the teacher takes off on some old-fashioned information-giving. At Shortridge the teacher is not only on tap, he is also occasionally on top.

CONCESSIONS IN SCIENCE

Science at Shortridge must make some concessions to the lower IQ student who wants to take his math as general arithmetic and his biology as life science. But multiple track again saves the day for excellence: the brainy student can choose the advanced placement programs in math and science, doubling up on intermediate algebra and solid geometry in 1 year, and taking analytical geometry and calculus (the ordinary college freshman math course) as a senior.

Dr. Herman L. Shibler, Indianapolis' general superintendent of education, believes in ability grouping and enriched programs for students of high aptitude ratings. At Shortridge they have even managed to exceed the range of Dr. Shibler's permissiveness. They have done this by establishing voluntary after-hours classes in the great books of the Western World.

The fact that Shortridge offers good courses, however, has not exempted the school from the general leveling atmosphere which causes even first-rate human material to pick the easy way. In Indiana, the State minimum requirements for the ubiquitous general diploma are set at 16 units, only 9 of which have to be taken in such basic subjects as English, math, and history.

There is no State compulsion in Indiana to take a foreign language—and high school math need be no more than a review of grade school arithmetic plus some instruction in household budgeting and the art of balancing a checkbook. Even in Shortridge it has been possible for a bright boy or girl to laze through 4 years of driver training, home economics and other concessions to the rage for life adjustment.

Inasmuch as some students in any general educational profile are all but ineducable, there can be little argument against the Indiana State minimum. But the local Indianapolis school board observed a year or two ago that the minimum was tending to become synomymous with the maximum. Local high school graduates, armed only with the general diploma units (no foreign language, no solid geometry or trigonometry), were going on to the State universities—and flunking out.

Some members of the local board decided the college preparatory courses must be changed even before sputnik woke the United States up to the need for better training in fundamentals. Within a year there were some drastic innovations.

The first thing to fall was the general diploma system. To Ralph Husted, an Indianapolis Power & Light Co. official who is currently the head of the school board, it seemed pointless to award the same certificate to a boy who had met the rigorous standards of the Latin and Greek curriculum at Shortridge High and a boy who had all but majored in basketball at one of the other Indianapolis high schools. Mr. Husted offered the idea of the differentiated diploma as a cure which was intended not only to reward the student but to prod Indianapolis parents into making Johnny pick more difficult subjects.

The differentiated diploma idea strikes hard at the basic noncompetitive fetish of the progressive educators. It implies a hierarchy of educational values. But to General Superintendent Shibler, though his own training had been in modern methodology, the break seemed worth making. Accordingly, the new system of rewards went into effect last September without a hitch.

NEW ACADEMIC COURSE

Beginning with the high school class which will be graduated in 1962, the Indianapolis student who wishes to take the academic course must enroll for more of the basic academic subjects—English, French, algebra, physics, etc.—and, what is more, he must maintain a C-plus average in them. Upon completion of 18 units of work (two more than State minimal requirements) at considerably better than passing average, the student will receive the academic diploma.

Separate diplomas will be given for the fine and the practical arts courses and the semi-

vocational courses (17 units of work required), and for the general course (16 points, without algebra or a foreign language). In case the academic course student fails to maintain the C-plus average throughout 4 years, he will qualify only for the general diploma.

Besides taking more compulsory courses and being held to a higher standard of marking, the college-destined Indianapolis student may shortly be faced with more difficult work. At any rate, the Indianapolis School Board has ordered a far-reaching reevaluation of local curricula. Instead of calling in professional educators from the teachers' colleges to pass muster on the instruction from the standpoint of educational method, the school board has asked professors from Indiana liberal arts colleges to rate the courses on the basis of their content.

It is still too early to get a line on the results of the investigation. But the school board hasn't waited for the report on Indianapolis English classes to make some changes in the teaching of English rhetoric. Last September the board added 20 new English teachers to the high-school faculties and asked that the average English class be reduced from 35 to 20. With more teachers and smaller classes, the schools were able to start a theme-a-week program which is designed to restore English composition to its old high estate.

There are other innovations in the making at Indianapolis. Students in local high schools may take a bona fide course in economics (not a mere social-study smattering), using a good text by Fred Fairchild and Thomas Shelley or by J. H. Dodd. With funds raised by Indianapolis private industry, high school teachers have recently been sent to M.I.T. for summer mathematics and science courses.

MERIT PAY FOR TEACHERS

Finally, the Indianapolis school board is looking into the feasibility of paying local teachers in accordance with their merit. There is still a good deal of opposition to this particular idea, but it will not be abandoned until (and unless) the school board is satisfied that it would create too much bad blood among Indianapolis' 3,200 teachers.

Indianapolis offers merely one instance of the yeast that is currently rising in the educational world. Though the results of the differentiated diploma system won't be known for a year or so, it is already attracting attention elsewhere. The advisory committee of the Ohio State Board of Education, for example, has recommended looking into the desirability of separate diplomas for academic and vocational degrees.

What Indianapolis has at least done is to return the spotlight to the idea of encouraging excellence. It has resolved to spread the Shortridge High tradition to all of the Indianapolis schools. And this in itself is a far more important phenomenon than anything that may happen to be written on a diploma.

Tax Relief for Small Business

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, February 19, 1959

Mr. SPARKMAN. Mr. President, S. 1011 is one of four small business tax relief bills which I have introduced this year. This bill would compel the Internal Revenue Service to accept the decisions of the Federal courts as binding on the Service unless it appeals those decisions.

Recently, I received a letter which illustrates quite well the need for S. 1011. The letter was written to me by Mr. George L. Scott, Jr., Alabaster Lime Co., Alabaster, Ala. I ask unanimous consent that the letter may be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ALABASTER LIME CO.,
Alabaster, Ala., February 10, 1959.

Hon. JOHN SPARKMAN,
U.S. Senate,
Senate Office Building,
Washington, D.C.

DEAR SENATOR SPARKMAN: I note from a press release, dated February 9, that you have introduced three bills in the Senate which are designed to help small businessmen, and I am very grateful for your interest in this matter. I am, of course, interested in all three of the bills but am particularly interested in the one at this time that would compel the Treasury Department to accept court decisions in tax matters or take appeal.

We have been in a controversy with the Internal Revenue Service for several years in connection with the method of taking percentage depletion on limestone, and several months ago we filed a claim for a refund which we think is due us, based on several court decisions. So far, this claim has been denied and I presume it would be necessary for us to go to the trouble and expense of entering suit to recover this money, which seems very unfair and very unnecessary. I am enclosing a copy of these decisions with which you are, no doubt, familiar and some of the cases involved are similar if not identical to ours. You will note a recent case decided in the U.S. District Court for the Southern District of California, involving a case for the California Portland Cement Co. in which the court decided in favor of the taxpayer. This company manufactures portland cement, lime, and crushed limestone, and the court ruled that the stone, when calcined and sold as lime that the percentage depletion should apply on the lime and not limestone, as lime was the first finished product.

Our principal business is manufacturing lime, although we sell some limestone most of which is a byproduct and which is too small to be burned on our kilns. We are contending that the depletion allowed on the stone, when calcined, should apply on lime and it is not marketable until calcined.

As you are well aware it becomes increasingly difficult for small manufacturers to compete with national concerns as through pricing policies, reciprocal deals, and other devices, they have advantages which small concerns do not enjoy, and in our particular industry there is much more lime produced today than there was 20 years ago, although there are not near as many companies now in existence. Some of them have gone out of business through bankruptcy or have been purchased by larger concerns and the tendency for this situation seems to get worse.

I thought this information might be helpful to you and I again assure you that I appreciate your efforts along this line.

Yours very truly,

GEORGE SCOTT, Jr.

Collegiate Nurse Training

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mrs. GREEN of Oregon. Mr. Speaker, it is not only yesterday's headlines about a new weather satellite, the headlines of a few months ago about artificial planets, the fantastic growth and increasing complexity of our techniques of production which give evidence of an everchanging world. The arts of death, it is true, are rapidly making science fiction novels read like historical romances. But, thanks to the efforts of thousands and thousands of unsung men and women, the arts of life are advancing, too.

Today's nurse, though imbued with the same spirit that led Florence Nightingale to the Crimea, and Clara Barton to the battlefields of the Civil War, must operate in an entirely different context. In a former era, the American nurse gave baths, changed bed linen, cleaned up the hospital wards and performed other such vital but nonprofessional labors. It was not every many years ago that a nurse was not authorized to even give injections. But today the heroic figure of the woman—and man—in nurses' white symbolizes not only a person who is willing to give of her time and energy to care for the immediate needs of the sickroom, but in addition a person whose professional, technical, and scientific training is of a quality comparable with that of any profession.

Today's nurse cannot be a high school graduate, whose spirit of applied Christianity alone qualifies her for this service. She is a skilled technician in the war against disease. In her hands any of our own lives may rest some day soon. To her education we should give careful and conscientious study.

Mr. Speaker, on the opening day of this 86th Congress, I introduced a bill—H.R.1251—designed to assist in meeting the serious shortage of college-trained nurses. Today, in a nearby legislative body, a similar bill is being introduced by an American statesman whose leadership in the fight for adequate health facilities for the American people is unexcelled—the distinguished and able senior Senator from Minnesota [Mr. HUBERT HUMPHREY]. I have asked leave of the House to address myself to this legislation, and to the needs which prompted it.

The National Defense Education Act of 1958, within its own compass, was a major step forward in meeting the needs of American higher education. But the victory gained by the passage of that act was not solely in terms of its substantive content. It was equally significant as a symbol of the recognition by the Congress and by the American people that higher education is a vital part of this Nation's strength. I do not

refer solely, or even mostly to our military strength, although this is not unimportant. The 1958 act indicated to the Nation and to the world that we again asserted the Jeffersonian belief that an uneducated nation could not long be a free nation. This belief has been a keystone of the American system since our birth as a nation. It is as demonstrably true today as it has always been.

But the National Defense Education Act of 1958 did not have an even effect on all types of higher education. It emphasized science and mathematics, at the expense of other disciplines; and in terms of the context of the bill, this was perhaps justified. But there remains a shadow field, at the margins of science, as that term is used. There remain the healing arts, medicine and nursing. These are not considered as scientific fields within the meaning of the National Defense Education Act. Yet they are professions in which the paraphernalia and techniques of science are of the greatest importance. And they are fields which we must develop for the same reasons that we must develop the fields of science and mathematics. Our national supply of college-trained doctors and nurses—and especially the latter—must be strengthened if we are to meet the demands of the time, if we are to be adequately prepared for the possible needs of a civil defense emergency, if we are to meet the health needs of an evergrowing Nation.

The bill to which I address myself provides for grants-in-aid for the construction of teaching facilities for nursing education at the college level, in the amount of $20 million per year for each of 5 fiscal years; for grants-in-aid to help meet the costs of collegiate nursing instruction in the amount of $10 million per year for the same period, for $10 million yearly for scholarships for college training of nurses, both those just entering the profession and graduate nurses, and for the creation of an advisory committee appointed by the Surgeon General, to assist in the administration of the act. The bill contains appropriate safeguards against the intrusion of Federal control into the field of curriculum, personnel, and administration of the collegiate schools.

What evidence have we of a need for such legislation? To fully explain the desirability of an act such as I have proposed, it is necessary to speak at some length about the present state of nursing education.

In the first place, it is a surprising and sobering fact that of the 430,000 professional graduate nurses in the Nation in 1956, only 30,000—some 7 percent—have bachelor's degrees from an accredited college. One and five-tenths percent of the total number of nurses have master's degrees. In spite of the excellent working of Public Law 911, which the Congress enacted in 1956, the general picture has not changed. The latter act, designed to equip graduate professional nurses for supervisory duties, through assistance in the obtaining of master's degrees, has been less successful than was hoped, largely because of the serious shortage in some areas of nurses who have baccalaureate degrees, and who would thus be eligible for work on advanced degrees.

In the fields of teaching, administration, and supervision the picture is even more discouraging. In these three areas of nursing activity, where one might legitimately expect the percentage of nurses holding bachelor's degrees to be very large, the statistics indicate that only 22.4 percent are actually so prepared. In the very field of nursing education, where the possession of a college degree might legitimately be considered as absolutely essential, we find that only 77 percent of the nurses involved hold bachelor's degrees. I ask unanimous consent that two tables, showing the percentages of degree-holding nurses be inserted at this point in the RECORD, together with explanatory material from the U.S. Public Health Service.

TABLE 1.—*Estimated number and percentage of active graduate nurses holding academic degrees, in the United States, 1952 and 1956*

Degrees held	Number		Percentage	
	1952	1956	1952	1956
Total	374,600	430,000	100.0	100.0
No degree	343,750	393,600	91.8	91.5
Bachelors degree	27,050	30,000	7.2	7.0
Masters degree [1]	3,800	6,400	1.0	1.5

[1] Includes an estimated 75 nurses in 1952 and 125 in 1956 who hold doctorates.

Source: 1952 figures, "How many nurses have college degrees?" by Eugene Levine, Nursing Outlook, January 1954, p. 23; 1956 figures, table 2, this article.

TABLE 2.—*Estimated percentage of active graduate nurses holding academic degrees, by field of nursing, in the United States, in 1956*

Occupational field	Number of nurses				Percentage of nurses		
	Total	Holding bachelors degree	Holding masters degree	Holding no degree	Holding bachelors degree	Holding masters degree	Holding no degree
All fields	430,000	30,000	6,400	393,600	7.0	1.5	91.5
Hospitals	265,800	14,700	2,200	248,900	5.5	.8	93.7
Directors	11,400	2,600	1,300	7,500	22.8	11.4	65.8
Supervisors and assistants	23,900	3,100	600	20,200	13.0	2.5	84.5
Head nurses and assistants	44,000	2,800	200	41,000	6.4	.4	93.2
General duty and others	186,500	6,200	100	180,200	3.3	.1	96.6
Public health	27,200	6,900	1,300	19,000	25.4	4.8	69.8
Supervisors	3,100	1,400	800	900	45.2	25.8	29.0
Staff nurses	24,100	5,500	500	18,100	22.8	2.1	75.1
Nursing education	10,400	5,300	2,700	2,400	51.0	26.0	23.0
Industry	17,000	800	100	16,100	4.7	.6	94.7
Doctors' offices, private duty, and other	109,600	2,300	100	107,200	2.1	.1	97.8

Source: Figures shown in this table are estimates based on published and unpublished sources. A description of the methods used in making these estimates and a list of source references can be obtained from the Division of Nursing Resources, Public Health Service, U.S. Department of Health, Education, and Welfare.
From Nursing Outlook, vol. 6, December 1958.

Explanation of sources of data used in table 2 of article "How Many Nurses Now Have College Degrees?" published in Nursing Outlook, vol. 6, p. 689, December 1958

Occupational field	Source of data
Hospitals, all categories of personnel.	Survey of 682 hospitals in the United States, conducted by the Division of Nursing Resources, Public Health Service, in the early part of 1958. The 682 hospitals represent a random sample of the 6,158 hospitals in the United States listed by the American Hospital Association.
Public health	Based on reports received from State health departments in the United States, as of Jan. 1, 1957. Tabulation prepared by Division of Public Health Nursing, Public Health Service.
Nursing education	Based on a 1957 survey of teachers in nursing education programs conducted by the American Nurses Association, a 1956 survey of schools of nursing conducted by the National League for Nursing, and on data collected in State surveys of nursing needs and resources conducted by Division of Nursing Resources during years 1955 to 1958.
Industry	Based on reports gathered by State health departments, Jan. 1, 1957, by occupational health program, Public Health Service.
Doctors' offices, private duty, and other.	Projected from data collected in State surveys of nursing needs and resources conducted by Division of Nursing Resources during years 1955 to 1958.

In an effort to meet the growing needs for college-trained nurses, the nursing profession itself, in the best traditions of American professionalism, has undertaken rigorous self-analysis, and has established a system of priorities, which I ask unanimous consent be printed at this point.

STATEMENT OF PRIORITIES—ADOPTED BY THE ANA BOARD OF DIRECTORS, FEBRUARY 1959

The ANA is concerned with providing the best possible nursing service for the American people. If this is to be accomplished, there must be an adequate supply of qualified professional practitioners of nursing.

The members of the association believe that the public must share in the responsibility of providing adequate financial support for nursing education.

Through its 1958–60 platform, the association is committed to promote legislation which will provide public funds for research, scholarships, and continued improvement in nursing education. At this time, primary needs for public support are in these two areas:

1. Traineeships, or scholarships for nurses in advanced programs preparing for teaching, administration and supervision.

2. Expansion of collegiate programs in nursing through assistance with costs of construction and instruction; and through scholarships for students in supplemental and basic programs leading to the baccalaureate degree.

The first of these has been partially fulfilled by the passage of Public Law 911. The objectives stated in the second priority can be met, at least in part, by the subject legislation.

What are the needs that have called forth this bill? Why are we especially in need of college-trained nurses? In view of the fact that we have managed to get along with a nursing profession in which only a tiny fraction are college trained, why do we now emphasize this type of training instead of asking for assistance, if assistance is needed, for the traditional hospital-based nurse training facilities? These are all questions which may legitimately be asked, and they are questions which I hope the distinguished Committee on Interstate and Foreign Commerce will put to the nursing profession when this bill is brought up for hearings.

But let me, from the information I have at hand, briefly discuss the needs for more nurses and the reasons why training at the college level is urged by the leaders of the nursing profession.

The most reliable figures available indicate that the number of professional nurses in the Nation today is at an all-time high. In January 1956, there were about 430,000 professional nurses employed in the United States. This figure shows a ratio of 259 nurses to every 100,000 population. In a past era when few Americans could afford hospitalization, and even fewer availed themselves of it, this might have been an adequate ratio. But today the situation is vastly different. In 1957, 13 out of every 100 Americans went to a hospital. The growth of hospital insurance, the increasing public concern with health, the growth of other demands on the nursing profession such as industrial nursing, public health nursing, and similar nursing activities outside of the hospitals, the increase in the number of hospitals themselves, the prolonged demand for nurses by the Armed Forces—all these factors have combined to bring the supply of trained professional nurses below the demand. The need for additional nurses is well documented and undeniable. At the insistence of the profession itself, the standards for nurse training, both in and out of the colleges, have been kept at a high level. This fact, of deep comfort to members of the public, whose very lives may some day rest in the hands of a trained nurse, has kept the supply of nurses from growing as it otherwise might.

With the growing gap between the public demand for nursing services and the limited supply of professional nurses, our hospitals have had to resort to varied techniques to fulfill their mission. The priceless skills of the professional nurse have had to be rationed, as it were, and the nonprofessional aspects of what were once the duties of the nurses have had to be handed over to nurses' aides, to practical nurses, and to hospital orderlies. But even with these techniques of stretching available skills, the need for professional nurses remains unfilled.

But, as I suggested earlier, why is it necessary to demand college training when the hospital-trained nurses now comprise such a vast portion of the profession?

Let me say first that no question can be posed as to the great work being done by hospitals in training nurses, nor as to the quality of the work done by these nurses. They are not second-best, they are not in some shadowy area of competence. The professional nurse today, whether hospital trained or college trained, deserves the highest praise and the deepest admiration of her fellow citizens. They are not overpaid by any stretch of the imagination, and they are far from underworked. For most people, the constant strain of the nursing profession, the intimacy with death and disease, the responsibilities that fall upon these dedicated men and women, put nurses in the same category as the members of other professions whose choice of a lifework can only be attributed to the overriding power of conscience and the will to self-sacrifice on behalf of humanity that characterizes, for example, the clergy, or the underpaid school teacher. It is not from any dissatisfaction with the caliber of the work being done by the average nurse today that the nursing profession itself has urged the expansion of college training programs.

First, the nurse today is being called upon increasingly to perform work of a scientific and technical nature which is a far different thing from the job given to the nurse of a generation ago. Let me quote from an article appearing in the New York Times of August 25, 1957, written by Wayne Phillips, a journalist of several years' experience on hospital staffs:

> Besides the basic subjects she is expected to have studied in high school—biology, chemistry, mathematics—the professional nurse today must have a good foundation in anatomy, physiology, microbiology, and nutrition. Through training in the specific needs of different types of patients, she is introduced to the principles not only of simple medicine and surgery, but also of urology, neurology, geriatrics, pediatrics, obstetrics, orthopedics, psychiatry, sociology, gynecology, opthalmology, and otolaryngology. And she must learn the techniques of her profession as practiced in public health and clinical and industrial nursing as well as in hospitals.

The registered nurse today must prepare medications, assist at surgery, and carry out professional duties which not very many years ago were restricted to the medical profession itself. Here is the basic reason for the demands of America's nurses that the newcomers to the profession be encouraged and enabled to pursue their education to the collegiate level.

Today's nurse is doing a magnificent job for inadequate salaries, on the basis of preparation which is not always able to keep up with the increasing complexities of the nurse's job. She is being given more and more responsibility of a supervisory and educational capacity. The demands for a broader based, more professional training program are urgent. The willingness of the persons engaged in the profession is manifest. The time for action, Mr. Speaker, is now.

Mr. Speaker, in the days since H.R. 1251 was introduced, I have received from nurses' associations and from nursing educators, considerable mail in support of this bill. I ask unanimous consent that selections from this mail be printed at this point in the RECORD.

FEBRUARY 14, 1959.

The Honorable EDITH GREEN,
House of Representatives, Washington, D.C.

DEAR MRS. GREEN: District 12 of the Idaho State Nurses Association wishes to inform you that we are very much in favor of bill H.R. 1251, Collegiate Nursing Education Act.

Will you please send me a copy of the bill?

MRS. BARBARA JOHANSEN, R.N.,
Legislative Committee, Route 1, Jerome, Idaho.

NEW YORK STATE NURSES ASSOCIATION,
Albany, N.Y., February 17, 1959.

Hon. EDITH S. GREEN,
Old House Office Building,
Washington, D.C.

DEAR MRS. GREEN: I am writing to you on behalf of the New York State Nurses Association in support of H.R. 1251, the Collegiate Nursing Education Act of 1959.

It is a well recognized fact in this State that if we are to meet the nursing shortage we must have better qualified teaching and administrative personnel as well as more students entering the nursing profession. If we can increase the number of students entering baccalaureate degree programs we will have taken a step toward remedying both the shortage in bedside nursing and teaching personnel as graduates of these programs may either remain in bedside nursing or in less time than it takes graduates of diploma school programs to prepare themselves for teaching and administrative posts.

The board of regents of the University of the State of New York being cognizant of the nursing shortage appointed a nurse resources study group for the purpose of surveying nursing personnel resources and needs and facilities in professional nursing education. These studies have now been completed, the first one published in 1956, the second only just released and now awaiting publication. Copies of both of these studies are enclosed for your information.

Acting on the recommendations of the nurse resources study group, the regents sponsored the following bills in the State legislature:

Senate Int. 1846, Brydges; Assembly Int. 2563 D. B. Lawrence: It would amend sections 601 and 611 of the education law, to establish 150 additional regents scholarships for basic professional education in nursing, to be awarded on statewide basis to pupils having highest standing on State list arranged in order of merit regardless of residence. The measure, which was referred to the Senate Finance and Assembly Ways and Means Committees carries an appropriation of $46,200.

Senate Int. 2429, Brydges; Assembly Int. 3091, Brady: Adds new section 626, repeals section 613, education law, to change and extend provisions relating to scholarships for advance professional educational nursing to provide for 60 regents fellowships for teachers and administrators of nursing, with awards to be based upon competitive examinations and entitle holder to $2,500 if income is $1,000 or less, and if income exceeds such amount, award shall be diminished by $1 for each $4 over $1,000, with no grant to be less than $500; provides for payments, fixes conditions of awards and appropriates $132,000. Assembly Ways and Means Committee.

Comment: Under the present law, New York State annually grants 30 State scholarships for advanced nursing education. Each such scholarship is for $750 for 1 year of study.

While both of these measures, if passed and signed into law, would be of tremendous assistance to us in this State they would not nearly meet the real need as evidenced in the reports of the nurse resources study group, so you see that even though on a

State level we are making every attempt to secure financial assistance we also need the kind of help proposed in your bill.

We are, therefore, urging you to do all in your power to secure passage of H.R. 1251 not only because it will help to prepare more nurses but because it will be reflected in the kind of care the public deserves.

May we also take this opportunity to thank you for your interest in our profession. Having had the pleasure of hearing you address our group in Washington last year we now feel more than ever indebted to you.

With all good wishes, I am,

Sincerely,

KATHERINE E. REHDER, R.N.,
Executive Director.

ALABAMA STATE NURSES' ASSOCIATION,
Montgomery, Ala., February 17, 1959.

Hon. EDITH S. GREEN,
Old House Office Building,
Washington 25, D.C.

Dear MRS. GREEN: As executive director of the Alabama State Nurses' Association, I wish to express the appreciation of Alabama nurses for your interest in nursing education and your efforts in expanding opportunities for this education in colleges and universities throughout the United States in the introduction of H.R. 1251 in the House of Representatives to authorize a 5-year program of grants and scholarships for collegiate education in the field of nursing. Members of the Alabama State Nurses' Association are cognizant of the vital need in this State for the expansion of collegiate educational facilities and for scholarship assistance.

There is a critical need in Alabama for qualified teachers, supervisors and consultants in nursing if the people of the State are to receive optimum nursing care. Because of the high cost of education and the relatively low salaries in the nursing profession few Alabama nurses can afford to leave their jobs for an extended period of time, obtaining their advanced preparation on a sporadic, piecemeal basis—night classes combined with full or part time employment. According to a recent survey 25 percent of the active nurses in Alabama have earned some credits toward a degree. Every available scholarship on the baccalaureate level is being used and requests for additional scholarship assistance are frequent.

Preparation beyond the basic level is generally considered necessary for nursing education, public health nursing, occupational health nursing, anesthesia and certain levels in institutional nursing. Alabama nurses, however, have been handicapped in securing nursing education to fit them adequately for positions in these fields as indicated by the results of a 1958 Study of Nursing Needs in the State. In the field of nursing education 5 percent are shown to have no preparation beyond the basic level while 29 percent have some hours toward a degree. Approximately 25 percent of the public health nurses, 64 percent of the institutional nurses, 67 percent of occupational health nurses and 20 percent of the anesthetists have no additional education beyond the R.N.

There are two collegiate nursing programs in the State, one at the University of Alabama headed by Dr. Florence Hixson as Dean, the other at Tuskegee Institute, where Mrs. Lillian Harvey is Dean. Both of these schools have limited facilities at present, a problem, which will naturally be emphasized as the student body increases.

Alabama during the past year was unable to use several of the traineeships granted under title II of Public Law 911 as we did not have graduates holding baccalaureate degrees eligible for admission to the master's program.

Assuring you of the full cooperation of the nurses of Alabama, I am,

Sincerely,

MRS. WALTER BRAGG SMITH, R.N.

KANSAS STATE NURSES' ASSOCIATION,
Topeka, Kans., February 16, 1959.

Hon. EDITH S. GREEN,
Old House Office Building,
Washington, D.C.

DEAR MRS. GREEN: We are pleased to learn of the bill you are introducing in the House of Representatives which will provide grants and scholarships for collegiate education in the field of nursing. We appreciate your concern and your practical efforts to provide opportunities for programs in nursing education in colleges and universities throughout the United States.

The University of Kansas, department of nursing, is the only collegiate program for nursing education in Kansas. One of the great needs at this school is for qualified faculty to teach the students seeking entrance to the program. This year there were more applicants for this particular school of nursing than could be accepted with the limited number of faculty for the school of nursing. We believe that this bill which you are introducing will assist directly with this critical need in our State.

Sincerely yours,

HULDA O. WEGENER, R.N.,
Executive Secretary.

THE CONNECTICUT
STATE NURSES' ASSOCIATION,
Hartford Conn., February 13, 1959.

Representative EDITH S. GREEN,
House of Representatives,
Washington, D.C.

DEAR MRS. GREEN: We are a constituent of the American Nurses' Association and speak for the graduate nurse population in Connecticut. In this State there are 15,000 active practitioners in professional nursing. Because of the demands of our numerous urban centers, nursing in Connecticut presents a complex picture.

We have just learned through the American Nurses' Association that you have introduced H.R. 1251, to authorize a 5-year program of grants and scholarships for collegiate education in the field of nursing, and for other purposes.

We should like to express sincere appreciation to you on behalf of the nurses of Connecticut for this fine evidence of your public interest. Favorable action on this bill will benefit not only nurses but through them, all citizens in the United States. To increase our schools by at least 40 percent in the next decade and to meet increased demands for nursing service, we too, concur with you that favorable consideration be given to this bill.

We in Connecticut feel very strongly as to the need for such a law. At present we have only two collegiate schools of nursing in our State, the University of Connecticut under the guidance of Dean Carolyn L. Widmer (who is also the president of the Connecticut Nurses' Association) and the University of Bridgeport under the leadership of Dean Marth P. Jayne.

Two additional collegiate schools in Connecticut have closed because of lack of funds, one connected with a liberal arts college (St. Joseph's) and the second a post baccalaureate program at Yale. We in Connecticut have felt the loss of these schools most keenly. Although we know we need 33 percent of our people prepared on a bachelor's level in Connecticut, only 10 percent of our students are enrolled in schools with bachelor's level preparation.

Nursing studies in Connecticut have shown that present faculty members of several of our nursing schools are inadequately prepared for teaching. And not only is there a shortage of teachers, but there is a shortage of qualified supervisory personnel and of professional registered nurses in Connecticut also. The public health nurses in our State ranked 39th nationally in a 1957 survey made by the USPHS in the number of nurses in public health positions who have had at least 1 year of approved preparation in public health nursing.

We are grateful for the Federal traineeships granted in the last legislative session. These have been helpful, but they are only the beginning. Because our need is so great we in Connecticut are taking every opportunity of improving our local area—we have introduced a bill in our 1959 State legislature asking for scholarship aid to registered nurses on a baccalaureate level—but we also need Federal assistance.

We must have well-prepared faculty in order to increase our student nurse enrollment. If we can do this, we can thus offer optimum care to the increased number of patients our ever-increasing lifespan and growing population presage.

We hope sincerely that it will be possible for you to lend your support for an early hearing. We, in turn, shall be happy to submit more detail as the time for the hearing approaches.

Sincerely yours,

ELEANOR LUNDBLAD, R.N.,
Executive Secretary.

COLORADO NURSES' ASSOCIATION,
Denver, Colo., February 16, 1959.

Representative EDITH S. GREEN,
House of Representatives,
Washington, D.C.

DEAR MRS. GREEN: The Colorado Nurses' Association is vitally interested in your bill, H.R. 1251, and is most grateful to you for your interest in the nursing profession. Nursing education is greatly in need of the help that interested and willing persons such as you can give, and we're deeply appreciative.

Since the introduction of your bill, we have discussed it with the directors of the baccalaureate programs in nursing in this State, and all have expressed the same problems.

These boil down to the extreme need for well-qualified teachers and supervisors, and for funds to obtain facilities and instructors to provide these people.

The directors in Colorado feel that persons with adequate preparation in curriculum-building, in supervision, in present-day concepts of how to teach, are sadly lacking, and that the present Federal traineeships help only the students, not the schools of nursing, since the tuition does not begin to meet the cost of obtaining such adequately prepared personnel.

Those with whom we have discussed the situation feel very strongly that there should be a pool of baccalaureate degree people, from which can be prepared in the master's program the teachers, administrators, and supervisors so badly needed. They believe that such a program might encourage a survey of the present master's degree curriculum which presently seems lacking in a number of areas, especially those of outright teaching methods and certain clinical areas, as well as administrative techniques.

We have in Colorado three schools of nursing offering baccalaureate programs. Following is a list of these schools with the names of the directors of the programs. We believe that you will hear from these people, too, about their needs.

Mrs. Henrietta Loughran, Dean, School of Nursing, University of Colorado, Boulder, Colo.; Miss Louise Golden, Director, School of Nursing, University of Denver, Denver, Colo.; Miss Margaret Metzger, Director, Division of Nursing, Loretto Heights College, Loretto, Colo.

A check with the director of public health nursing in Colorado brought to light the fact that only about 50 percent of the public health supervisors have degrees, and only about 45 percent of the staff nurses in local health units are graduates of degree programs although 80 percent of these nurses have public health preparation. The great need in Colorado is for trained public health nurses for the rural areas. About 4 percent of the Colorado population has no generalized public health nursing service whatever. We were told that about 12–20 qualified public health nurses could be used throughout the State, particularly in the rural areas.

Again, we express our very great appreciation for the work you are doing on behalf of the nursing profession, and assure you of our cooperation and help wherever possible.

Very sincerely,

MARGARET LEWIS,
Chairman, Committee on Legislation.

TENNESSEE NURSES' ASSOCIATION, INC.,
Nashville, Tenn., February 16, 1959.

Hon. EDITH S. GREEN,
Old House Office Building,
Washington, D.C.

DEAR MRS. GREEN: Those of us present at the ANA conference on legislation in Washington last year still recall your stimulating keynote address with enthusiasm. It is with much satisfaction that we have learned of your introduction of the Collegiate Nursing Education Act of 1959 in this session of Congress.

Since a resurvey of nursing needs and resources in this State in 1955 revealed our critical shortage of adequately prepared nursing personnel, we have been working diligently to bring about solutions to some of our problems. At the moment we have two bills in the State legislature and a third to be introduced. Because of this activity, we have certain reports containing data about nursing needs in Tennessee that will interest you. Also, this information will indicate to you that the enactment of your bill, H.R. 1251, would help to meet the health needs of this particular State.

We deeply appreciate your continued interest in nursing and your willingness to work for expanding opportunities in nursing education in colleges and universities. If we can be of any assistance to you, please let us know.

Sincerely yours,

MARY ELIZABETH DUNN,
Registered Nurse.

Forty-first Anniversary of Restoration of Independence of Lithuania

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, February 19, 1959

Mr. PROXMIRE. Mr. President, Monday marked the 41st anniversary of the restoration of the independence of the nation of Lithuania.

This normally happy occasion is cloaked in sadness, for this is a nation enslaved—not just dominated and controlled, as in the case of the satellite countries, but a nation actually seized and forcibly incorporated into the Soviet system.

Let the indomitable spirit and abiding hope of the Lithuanian people serve as an inspiration to us all, for here is a nation, only slightly larger in size and population than West Virginia, that has been subjected to two of the greatest tidal waves of tyranny in our times, the columns of Nazi Germany and the armed might of Soviet Russia.

As we of the United States have already joined with the Lithuanian people in refusing to recognize the illegal annexation of that country by Russia, let us join with them today in solemn observance of their independence day and in prayerful hope for future freedom for Lithuania and all subject peoples in the world.

Mr. President, I ask unanimous consent that, in observance of this anniversary, a resolution unanimously adopted early this month at a mass meeting of American citizens of Lithuanian descent in the city of Racine, Wis., be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

LITHUANIAN AMERICAN COUNCIL, INC.,
Racine, Wis.

RESOLUTION

Whereas Lithuania, ancestral home of millions of American citizens, is and has been since 1940, under the occupation and subjugation of Soviet Union; and

Whereas the resistance to this Russian oppression has been carried on constantly and continuously by the Lithuanian people; and

Whereas no real peace or security can be achieved in the world while the entire Eastern Europe remains subjugated by the Soviet Union; and

Whereas America joins with Lithuanians everywhere in reasserting the God-given right of all men to be free: Therefore be it

Resolved, That this mass meeting of loyal Americans of Lithuanian descent of this community commemorating the 41st anniversary of the restoration of independence to Lithuania urges the Government of the United States not to trust the talks of peaceful coexistence of the Soviet Union leaders while at the same time unarmed American planes are attacked and personnel killed by their order; and be it further

Resolved, That this mass meeting express its sincere gratitude to the executive and legislative branches of our Government for its efforts to aid all people seeking freedom from communism; and be it finally

Resolved, That this mass meeting urges the Government of the United States to insist on withdrawal of Soviet troops, free elections and restoration of liberty to Lithuania, Latvia and Estonia to implement existing treaties, if a summit conference is called in the near future.

GEORGE KAPOCIUS, *Chairman,*
STANLEY P. BUDRYS, *Secretary.*

The Government's $10 Billion Gift to the Private Banks Last Year, and How Such Gifts Can Be Stopped

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. PATMAN. Mr. Speaker, last year the Government of the United States made a free gift of slightly more than $10 billion worth of U.S. Government securities to the private commercial banks of this country.

This will be a surprising statement to some people. If the Government gave away $10 billion under most of the methods of gift-giving, the country would hear a great deal about it, and we would normally debate such a matter in this Chamber at considerable length.

The statement is, however, in no sense a surprise to people versed in the banking system. This sort of thing has happened many times before. Indeed, the amount of the gift of last year is well known in banking circles.

Now, of course, using the term "gift" may seem to exaggerate the matter, because the methods by which $10.4 billion of interest-bearing securities were transferred from the Treasury of the United States into the vaults of the private banks are slightly complex. If this were not so, then, of course, the general public would already know about the matter; and we could expect that a great number of people would be considerably exercised about it. But the term "gift" is literally correct. The Government of the United States gave away these bonds and other interest-bearing securities just as surely as if a convoy of trucks had hauled them from the Bureau of Engraving and Printing directly to the vaults of the private banks.

The more exact amount of this gift is $10,410 million. It was made in several lots between November 27, 1957, and November 26, 1958. The source of my figure is the Federal Reserve Bulletin for January 1959, page 33. This is an official publication of the Board of Governors of the Federal Reserve System, and it is available to all Members as well as to the general public. By reference to page 33, one may see that at the end of November 1957, all commercial banks in the United States held $56,910 million in U.S. Government obligations. A year later, at the end of November 1958, these banks held $67,320 million of Government securities. Thus the commercial banks increased their holdings of these obligations by $10,410 million within the 12-month period.

Before coming to the mechanics of how the Government put this $10.4 billion of Government securities into the hands of the banks, let me point out how the gift was distributed among the banks.

First, all classes of commercial banks shared to some extent in this gift. These include the New York and Chicago banks, the Reserve city banks, and the country banks. But 72 percent of these securities went to only 2 percent of all the banks in the country. And consider this—$2.3 billion went to only 18 New York City banks.

Now, how did the commercial banks of the country acquire this $10.4 billion of Government securities?

In a nutshell, they created the money with which to buy them. They created new money in this amount on the credit of the United States, which cost them not one penny. The Federal Reserve System gave the banks the wherewithal to create the money, and this meant that the banks could create the money automatically.

GOLDSMITHS OF OLD MANUFACTURED MONEY

More specifically, the Federal Reserve gave its member banks additional "reserves," and because of the fractional-reserve system on which the commercial banks operate, this meant that the banks could create several dollars of new money for each dollar of new reserves.

Now, for those who may not know about the fractional-reserve system, and how money is created under it, let me point out the elementary principles.

The best way to understand the fractional-reserve system is to begin with the operations of the goldsmiths who were the forerunners of our modern banking system.

There was a time—before there were any banks—when people who had gold usually took the gold into the goldsmith and left it with him for safekeeping. When a man left his gold with a goldsmith, the goldsmith would, of course, give the man a receipt, or claim check, for his gold. This receipt was supposed to mean that the depositor could come back and get his gold at any time. The receipts were transferable, so anyone having possession of a goldsmith's receipt was supposed to be able to present it to the goldsmith and obtain the gold.

What happened, of course, was that people who had these receipts found they could use them as money. In other words, people passed them from hand to hand in commercial transactions, without going back to the goldsmith to obtain the actual gold.

Furthermore, the goldsmith soon learned that the people holding these receipts rarely came in and asked for the gold, so he discovered that he could issue more receipts than he had gold. In short, the goldsmith began making "loans," and issuing receipts to people who had no gold on deposit. These receipts went into circulation as money, just as though the goldsmith had enough gold to back them up.

Each goldsmith was operating on the probability that all the people holding his receipts would not come in at one time and demand the gold.

As experience proved, the goldsmith could usually issue receipts in amounts several times the amount of the gold in his vault. The gold in his vault served the purpose of what today is called the bank's reserves. At least a little gold had to be in reserve to cover the possibility that some of the people holding his receipts would come in and demand the gold.

A pamphlet recently circulated by one of the big business associations claims that experience proved these goldsmiths could safely issue $10 in receipts for every dollar of gold. This is presumptive history, however, and is part of the bankers' current campaign to sell the idea that their own required reserves can safely be reduced to 10 percent. Actually, no one can say just how long the odds were that the old goldsmiths could safely play on. But we do know that this system of fractional reserves has given a great deal of trouble throughout its use. Most of the banking reforms and regulations which had been added over the years—including the Federal Deposit Insurance System—have been designed as safeguards against the trouble this system can cause.

PRIVATE BANKS MANUFACTURE MONEY

Today the private commercial banks create money in the same way as did the goldsmiths of old. The banks receive their reserves from the Federal Reserve System—not in the form of gold, but merely as bookkeeping credits. The actual gold is owned by the U.S. Government, buried at Fort Knox, and the Treasury simply issues certificates to the Federal Reserve System to back up whatever money the Federal Reserve System creates.

The Federal Reserve System operates on a fractional-reserve system, too. Under present law it can create money up to $4 for each dollar's worth of gold, or gold certificate. Under present Federal Reserve regulations, the private commercial banks can, in turn, create $7 on each dollar of reserves received from the Federal Reserve System. So, the potential money-creating ability of the whole banking system is $32 for each dollar's worth of gold—$4 created by the Federal Reserve plus $28 created on these $4 by the private commercial banks.

In considering how the commercial banks create money today, we must keep in mind that most of the money in use is in the form of bank deposits. This is what is sometimes called checkbook money.

Each time a commercial bank makes a loan or invests in a security, it creates money. It creates new deposits to the account of the person who receives the loan or sells the security. But the bank does not, of course, make any offsetting reduction in my account, your account, or the accounts of any other depositor. The bank that makes the loan may not, of course, be the same one to enjoy the increased deposits. The new deposits may go to some other bank or banks. But deposits in the banking system as a whole are increased. Furthermore, the person to whom the loan is made may immediately pay out the funds, but someone else's deposit account is increased, so the result is the same. New money has been created. The making of a loan or the purchase of a security by a commercial bank creates new money by that amount.

FEDERAL RESERVE GIVES PRIVATE BANKS RAW MATERIALS FOR MANUFACTURING MONEY

Last year, the percentage of deposits which the Federal Reserve System required its member banks to keep in reserve, on the average, allowed the banking system to create money up to $7, approximately, for each dollar of bank reserves.

As a part of its antirecession program of last year, the Federal Reserve System gave its member banks additional reserves on three different occasions. In February, the Federal Reserve Board reduced required reserves of all member banks by one-half of 1 percent. This gave these banks $491 million of added reserves, on which they could create new money at the rate of 7 to 1. In other words, on the basis of these added reserves the banks could create up to $3.4 billion of new money—by making loans or purchasing securities in this amount.

Then, at the end of March and the beginning of April last year, the Board reduced required reserves another one-half of 1 percent. This gave the member banks more reserves, amounting in this instance, to $495 million. This one-half of 1 percent reduction was also given to all classes of member banks.

Finally, later in April, the Board made another reduction for the banks in New York and Chicago and in the Reserve cities—which accounts for only 5 percent of all the member banks. This time the Board passed over the country banks. Reserves of banks in New York and Chicago were reduced by another 1 percent, and reserves of the Reserve city banks, by another one-half of 1 percent, giving these banks additional reserves of $462 million, which meant they could expand the money supply up to another $3.2 billion.

All of these reserves handed out to the member banks last year came to a total of $1.5 billion, on which the commercial banking system could create new money in an amount up to $14.5 billion.

In addition to these reserves which the Federal Reserve System gave the banks through reductions in required reserves last year, the System also gave these banks other great quantities of reserves through the System's Open Market Committee. But for our present purposes it will not be necessary to discuss these.

It is enough to point out that the $14.5 billion of money-creating power given the banks through reductions in their required reserves were substantially all used by the banks to acquire and hold an added $10.4 billion of U.S. Government obligations.

PRIVATE BANKS SHOULD NOT BE GIVEN USE OF THE GOVERNMENT'S CREDIT TO LEND TO THE GOVERNMENT

The official reason stated for giving out these reserves is that they were intended to help the banks meet business needs for credit. Actually, there was no expansion of business loans during the year, but rather a reduction of $1.5 billion. The money which the banks created was, as I have indicated, substantially all used to acquire interest-bearing obligations of the United States. If these obligations draw interest at an average rate of 3 percent, it will mean that this $10.4 billion gift to the banks will cost the taxpayers about $350 million each year in interest payments, plus, of course $10.4 billion if and when the debt is retired.

Now, I doubt if many serious students of our banking system object to the practice of allowing the private banks to create money to be used to meet the credit needs of business. True, the Federal Reserve has the power to create the money, and to some extent uses it. But when money is created through loans to business or individuals, some risk is involved. The creator of the money assumes a risk in making the loan, and this

is a matter which should be left to private banking decisions. We would not like the Federal Reserve System, a Government-owned agency, to have the job of deciding for which companies or individuals money will be created, and for which would-be borrowers money will not be created. It is better to delegate the Government's money-creating power to the private banks and let them use it for these purposes—within limits, of course, and with proper safeguards.

Personally, however, I have never been able to see any reason for allowing the private banks to create money on the credit of the United States to purchase interest-bearing obligations of the United States. In the purchase of U.S. Government obligations there is no function to be performed in separating the good credit risk from the poor credit risk. And the Government's credit which backs up its interest-bearing obligations is no better or worse than its credit on which the money is created. Finally, in creating money to buy Government obligations, the private banks perform no service for the Government which the Government cannot perform for itself—and without incurring interest charges.

Consequently, I am proposing that Congress take action to eliminate the abuses in this system which resulted in giving away $10.4 billion last year.

Recently I had a note from the research director of a large organization who asked for details about my proposal for eliminating the abuses in the private banks' use of the Government's power of creating money.

I have written the gentleman on this subject, and I hope the Members will be interested in my proposal. Certainly this abuse is no small matter. The $10.4 billion gift to the private banks last year was, for example, about the same as the total Federal deficit expected in the present fiscal year. As another example, it is a great deal more than the cost to the Government of all the farm price-support programs in the whole quarter-century such programs have been in effect.

Consequently, I invite the Members' attention to my letter as follows. I have not asked permission to use the gentleman's name, so I omit that.

FEBRUARY 17, 1959.

DEAR SIR: Thank you for your note of February 11 concerning my proposal for raising interest-free funds.

Let me put the matter in its proper context. First of all, let me emphasize that Government securities should, to the maximum extent possible, be paid for out of savings. This means that every effort should be made to sell the securities to individuals and groups who have the money to pay for them, such as individuals, insurance companies, savings banks, pension funds, and so on. In other words, the securities should be sold to anybody and everybody except the commercial banks. Ideally all securities should be paid for out of savings, except to the extent that increases in the money supply are desirable to meet the needs of the economic system.

The practice in recent years has been, however, to sell a large percentage of the new security issues to the commercial banks, which means that the private banking system creates the money with which to buy these securities. For example, in 1958 the Federal Reserve gave member banks additional reserves sufficient to allow them to create up to about $14 billion of new money. About $12 billion was actually created; and $10 billion of this was used by the banks to increase their holdings of interest-bearing Government securities.

In every practical respect we can say that the Federal Government made a gift of $10 billion in Government securities to private banks last year; and this gift, which cost the private banks nothing, will cost the taxpayers about $300 million a year to meet interest charges.

The Constitution reserves to Congress the power of creating and regulating money. There is no doubt about this. The power upheld in the legal tender cases decided by the Supreme Court in 1871 and 1874, and upheld again in the New Deal gold clause cases of 1935.

Congress has, however, delegated this power. It has delegated it primarily to the Federal Reserve System. And it has given the Federal Reserve System authority to delegate the money creating power, within wide limits, to the private banking system. The power to create money is inherent in the fractional-reserve system of the commercial banks and this system is authorized by law. More specifically, however, the Federal Reserve has authority to change, within limits, the fraction of reserves on which the banks may operate. At present, money can be, and is, created both by the Federal Reserve and the private banks. The Federal Reserve may give private banks additional reserves, which automatically allows these banks to create money—at the present time up to a maximum of $7 per dollar of additional reserves.

Or the Federal Reserve can itself create the money in any of several ways. Its principal mechanism is the Open Market Committee, which operates a trading center at the New York Bank. The Open Market Committee may buy Government securities, in which case the Federal Reserve System gives the private banks added reserves in exchange for them.

I have dwelt on the mechanics for this reason. My suggestion, that when money is created to buy Government bonds it ought to be created by the Federal Reserve, is frequently met with the statement that it would be much more "inflationary" for the Federal Reserve to buy a given quantity of bonds than for the private banks to do it. Such statements are only intended to confuse the issue. The statement would be entirely true if the Federal Reserve simply bought the bonds and took no action to offset the added reserves given the private banks, but it is not sensible to think that it would not take such action. It could, for example, use its everyday mechanism of raising reserve requirements to offset the effects, or even more than offset the effects.

My point is that I can see no reason why the private banks should be allowed to create money on the credit of the United States to buy interest-bearing obligations of the United States.

The Federal Reserve System is owned by the Government and its income, including the interest received on Government securities, flows back into the Treasury. At least its net income, after expenses, flows back to the Treasury. Its principal expenses are about $130 million a year for free services—such as cashing checks—to the private banks.

The simplest and the most practical way of accomplishing what I propose is to pass an outright prohibition against commercial banks increasing their holdings of Government securities beyond what they have held in a base period—say the date on which the prohibition is passed. In order to take care of changes in the asset positions of individual banks, the prohibition would need to contain a proviso for individual adjustments. In other words, an individual bank could be allowed to acquire more Government securities as its capital account is increased.

In addition, another new authority would be needed. While the Open Market Committee can purchase and hold an unlimited quantity of Government securities, it must purchase these from the open market, not directly from the Treasury. The Federal Reserve Board, on the other hand, has authority in law to purchase securities directly from the Treasury, but this is limited to a maximum of $5 billion and, furthermore, this authority is intended for use only on a temporary basis. The Federal Reserve Board should then be given enlarged authority for purchasing Government securities directly from the Treasury.

Sincerely yours,

WRIGHT PATMAN.

Troubles Galore That Only Work Will Solve

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. SILER. Mr. Speaker, the unemployment, underemployment, depressed economy, distressed families, all existing in various parts of our country at the present time, should engage our earnest attention and demand our best legislative talents until these problems are all solved by the Congress for the permanent benefit of our people.

My own bill, H.R. 3696, would tend to solve all these problems successfully, in my opinion, through bringing work into the affected areas. And work, not gifts or doles, is what our people need. Besides, my bill would require no appropriation whatever. Not one dime would the taxpayers have to put up to place my bill in operation. Still further, my bill would require no added bureaucracy. Not one added Federal employee would the taxpayers have on their payroll through operation of my bill.

And now, as an indication of the severe need of work and the existence of want in some of these depressed areas, I invite you to read the following article appearing in the Louisville Courier-Journal on February 17, 1959, written by John Ed Pearce about Harlan County, Ky. The article is as follows:

TROUBLE, HUMAN MISERY HANG OVER COAL CAMPS

(By John Ed Pearce)

Until a year ago, the Reverend Willard E. Smith spent his evenings visiting the sick or preparing Sunday's sermon for his Baptist church at Ages, a small mining town near Harlan. But these days Mr. Smith has little time for meditation, and his evenings, like his days, are spent in good works of a different sort. Seldom does he finish his evening meal before there is a knock on the door, and then Mr. Smith sighs, knowing the nature of the call, and feels again the helplessness that he has come to know so well.

The door opens on a spare figure in overalls and worn, shapeless jacket, hunched against the cold of the rain-whipped evening.

"Evening, Tom," says Mr. Smith.

"Howdy, preacher," the man replies, his voice the soft twang of the mountains. "I was wonderin' if you * * * if you had anything. * * *"

He hesitates, not wanting to put into words his plea for food, and Mr. Smith, knowing this, interrupts.

"I'm sorry, Tom. We just haven't received anything. There's some volunteer firemen from Louisville coming with some things next week, but right now * * *. Your commodities gone?"

"We got some flour," says Tom (he pronounces it "flar.") "And some of that dried milk."

FIVE DOLLARS, FIVE CHILDREN

Once a month Tom lines up and draws his ration of surplus commodities from the county welfare department—some flour, corn meal, rice and dried milk, and occasionally some butter and cheese. According to Federal calculations, these are worth about $5.20 a month. Tom has five children at home.

"The young uns," he says, "they * * * I was hopin'."

Beyond him, a car splashes down the worn road to Harlan, a momentary invasion of light and sound in the quiet, dark coal camp, and when it is gone there is only the sound of the cold wind and the dim bulk of mountains looming black against the wet sky.

Five years ago the coal towns around Harlan throbbed at night with noise and light. There were 13,000 men working in Harlan mines then, each bringing home from $22 to $27 a day, and there was money for new cars and good food and things for the house. The kids had new jackets and blue jeans and there was money for black skirts and bobby socks and for picture shows and the juke boxes.

But now the camps are in trouble. Since 1954 mine employment has slowly dropped (though it bounced back some in 1958) to about 5,500. Some of the big outfits, like Peabody, have shut down and moved away, and along the hollows around Evarts the camps—Verda and Shields, Benito and Kenvir—are idle.

To make matters worse, there is unemployment nationally, and where 5 years ago laid-off miners could go north to look for work, today laid-off factory workers are coming home to Harlan from Detroit and Hamilton and Gary and Cleveland, to draw their unemployment pay for 26 weeks and then join the long lines of job seekers. No one seems sure how many unemployed men there are in Harlan just now. The unemployment office says 2,700. State Representative Nick Johnson says 6,781, and his estimate seems more likely correct.

For Tom and his hungry children and the thousands of others like them are victims of deep changes in our national technology. Private homes have switched from coal to gas for heating. Railroads have gone to diesel. European countries are mining their own coal, and only the continued expansion of the electric-power industry keeps the coal industry in its presently static condition.

Competition for the tightening markets is keen. Only efficient producers, who can afford costly machinery, can survive. And Harlan operators, having no access to water transportation, are caught between high shipping rates and rising costs of production forced on them by John L. Lewis' increasing contract demands. It is this squeeze that has forced them to consider nonunion operation, and today the threat of a prolonged strike in the Harlan field hangs grimly over the coal camps, adding to the despair of men like Mr. Smith and the hungry members of his congregation.

For these men know that their troubles lie deeper than the greed or hostility of operators or union officials. Efficient production demands mechanization of the mines. Higher union wages, in the years following World War II, forced even small operators to replace men with machines, and today a man using modern coal-mining equipment can produce as much coal as 10 men did before the war. It will take a tremendous expansion of the coal industry to reemploy the nine men thus replaced by machines.

In the meantime, men like the Reverend Willard Smith struggle to solve a problem to which there is no local solution. Since December 4, as head of the United Church Relief, Mr. Smith has distributed 120 tons of food and clothing, and whatever cash has been contributed by fellow Kentuckians. But now he finds his supplies exhausted, just at a time when a new demand threatens.

"Come in, Tom," he says wearily, and the man steps reluctantly in from the wet porch. "I think I can find you a can or two of something."

He goes through the kitchen and returns with some cans of beans and a single can of tomatoes.

"It's about all we have left of the donations," he says. "I'm sorry."

Tom accepts them gratefully. Mr. Smith is a man of the Lord, but Tom knows that he is lying, and that the cans of food came from Mr. Smith's own pantry. He knows, too, that Mr. Smith cannot afford to give them, for the church can no longer afford to employ a full-time preacher, with so many of its congregation out of work, and Mr. Smith now runs a garage to make a living, though he spends most of his time "out begging," as he puts it, for food for his hungry people. But then Tom has five children at home, and they are, as he says, awful hungry. They've had nothing but flour biscuits and dried milk for 3 days.

SUFFERING HERE AT HOME

Mr. Smith sags into a chair and wipes his rimless glasses. He is a heavy-set, middle-aging man with thinning blonde hair. The trials of his fellow men have hit him with the shock that people feel who come into social work late in life, unprepared for its desperate realities and unable to view suffering objectivity.

"I tell you, they come up to me and they say, 'Preacher, we gotta have something down our house to eat,' and you see those children's hungry faces, and the women with tears running down their faces, all tired and beaten and hating to have to ask for things, and I tell you, I don't sleep nights. My wife, she keeps my records and helps me out, and last night she just sat down at the table and cried."

There may be reasons why, in this land of farm surpluses, the people in the coal camps must starve. Secretary Benson may have sound fiscal reason for insisting that the surplus commodity program be used not as a relief measure but as a means of balancing our warehouse surplus. But the reasons are not convincing in Harlan County.

"I just can't believe that Kentuckians will let other Kentuckians starve to death," says Mr. Smith. "I know that our economy here in the coalfields can't be righted with food and clothes. We need a lot of things. But right now we need help for hungry, cold people."

Let's Not Forget Power of Faith

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Fred Sparks in the New York World-Telegram and Sun, of Friday, January 30, 1959:

LET'S NOT FORGET POWER OF FAITH
(By Fred Sparks)

Pope John XXIII has called the leaders of different Christian denominations to meet and discuss church unity. Perhaps it is presumptuous for a layman, but I pray if they meet they unite for the deepening ideological war against the Communist anti-Christ.

This could take precedence over ancient schisms. On this every minister and priest can unite in brotherly dedication.

The struggle against the regimented atheist is the most important item of free man's business in this century. Politicians might compromise with communism. Men of God, never.

To our shame the religous factor has been neglected recently as opponents of communism concern themselves with economic and political issues. Is the materialist forcing us to battle on this ground?

True, the Soviet and Red Chinese campaign against God has moved off page one, from violent killings to a more subtle slow death. This because Communists in absolute power no longer fear churches within.

Russia profits by allowing several kept, show churches to operate for foreign observation. They're kept because the minister is a public employee like a postal clerk. His sermons are censored.

China's Mao Tse-tung uses his kept show church to advertise his tyranny. He allows Moslems to tell the story of the prophet Mohammed—if they also tell the story of the prophet Marx. Church Christmas displays can feature Mary in the manger—next to Lenin in Red Square.

Today's naive American tourists are led by the hand like so many school children to witness Sunday services at a Moscow-kept show church. Then these innocents return, insisting communism allows religious freedom. They recall the blind man who grabbed the elephant's tail and said: "An elephant is shaped like a snake."

Tragically, few substantial voices are raised to give the lie.

A massive international conclave of Christian leaders could put the free world back on the spiritual level in its defense against creeping communism.

Flood Stresses Dam Need

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

[From the Bradford Era]

FLOOD STRESSES DAM NEED

As angry, icy waters swept destructively through western Pennsylvania's river towns and on down the Ohio, the public was reminded again that the flood-control program undertaken for this area 22 years ago is still incomplete.

In the aftermath of the historic flood of March 1936, the Federal Government planned a system of integrated dams and reservoirs extending into the headwaters of the Allegheny and the Monongahela Rivers.

Much of the work has been completed, with enormous benefits to the residents and

industries along the rivers. Army Engineers have constructed 10 dams and reservoirs in western Pennsylvania, 8 of them above Pittsburgh.

But one of the most important links in the chain of control remains to be forged. That is the Allegheny River reservoir above Warren, more commonly designated as Kinzua Dam. Congress first authorized this project in 1938 and a year ago appropriated $1 million to begin construction.

Work has been obstructed, however, by a long and tenacious fight against the project by various interests, including the Seneca Indians, who argue that the reservoir would deprive them of land in violation of a treaty. Valuable time is being lost pending a Supreme Court review of lower court decisions sustaining the Government's right to take the land in the public interest. The Indians would, of course, be compensated like any other American citizens whose property is taken for public purposes.

We are not prepared to argue the extent of which the flood's crest at Pittsburgh—29.21 feet—or at any other point along the Allegheny or Ohio might have been diminished if Kinzua Dam were in operation. That can be left to the estimates of the experts.

It is safe to say, however, that Pittsburgh and other communities would have suffered much greater damage this week if the Government had not undertaken its program 22 years ago. It seems equally plain that danger will remain until the program is completed.

The most important project in the uncompleted part of the flood-control system is Kinzua Dam. Anyone who doubts the urgency or the importance of completing the system needs only to look at the swollen rivers rolling ominously through the Allegheny and Ohio valleys.—Pittsburgh Post-Gazette.

One Hundred and Thirteenth Anniversary of Milwaukee, Wis.

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, February 19, 1959

Mr. PROXMIRE. Mr. President, one of the great cities of our Nation, and the largest community in my own State of Wisconsin, the city of Milwaukee, recently celebrated its 113th birthday anniversary.

The milestone was appropriately observed by an editorial in the Milwaukee Sentinel, a newspaper whose 122d birthday will be celebrated this summer. I ask unanimous consent that the Milwaukee Sentinel's editorial entitled "113 Years Old," which was published on Monday, February 2, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ONE HUNDRED AND THIRTEEN YEARS OLD

Saturday was the 113th birthday anniversary of the city of Milwaukee. Incorporated on January 31, 1846, Milwaukee has grown from a village of less than 10,000 population to the 13th largest city in the United States with a population of over 700,000 and an area of some 80 square miles.

Yes, Milwaukee has grown in size and population and commerce and wealth, and it will continue to grow in these respects in the years ahead.

But the thing that makes the Milwaukee Sentinel—founded June 27, 1837, and thus 8½ years the city's senior—most proud at this birthday observation is the fact that Milwaukee, with all its growth, has retained a paramount interest in human values.

For all its size, it has retained the warmth and friendliness of the small town. Perhaps more than anything else, this is what makes Milwaukee unique.

Happy birthday, Milwaukee.

A Bill To Amend the Internal Revenue Code of 1954 To Encourage Basic Research in Science by the Allowance of a Tax Credit for Contributions and Other Expenditures for Basic Research in Science

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I have introduced today a bill to permit an allowance of a tax credit for contributions and other expenditures for basic research in science. The bill which I propose would provide a tax concession with respect to contributions to universities and nonprofit organizations for basic research in science as well as a tax concession to industry for basic research in science.

The tax concession in the case of contributions to universities and nonprofit organizations would take the form of a credit against tax to the extent of 90 percent of the contributions made with a further limitation that the credit shall not exceed 5 percent of the tax. In the case of basic research activities by industry the credit would be limited to 75 percent of the expenditures with a further limitation that the credit shall not exceed 3 percent of the tax.

It will be recalled that the report to the President on basic research by the National Science Foundation, dated October 19, 1957, indicated that the Nation's basic research effort must be substantially increased. This bill, I believe, would give effect to the recommendation made by the National Science Foundation by providing increased financial resources for basic science research on the part of universities and other nonprofit organizations as well as providing a positive encouragement to similar efforts on the part of industry.

It is my firm conviction that encouragement of basic research by inducing contributions to organizations covered under this bill and by encouraging industrial expenditures for such purpose is preferable to a system of governmental grants. Under the provisions of the bill interference in research programs by the Federal Government would be kept to a minimum. In the case of contributions to universities and nonprofit institutions, there would be no interference in that under the bill a determination of what consfitutes basic research in science would be left to the conducing institution. In the case of expenditures by industry the bill would provide for the establishment of a certifying authority consisting of a board of eminent scientists appointed by the President on the recommendation of the National Science Foundation. Thus, there will be preserved in the Federal participation in the program, the point of view of the active scientific researcher rather than the point of view of an administrator of a Government agency.

It is my conviction that favorable action on this legislation designed to enhance basic scientific research in the United States would do much to assure the maintenance of our country's scientific and industrial world preeminence and is in the interest of fostering the improvement of humanity and the cause of peace.

Life Insurance Company Income Tax Act of 1959

SPEECH
OF
HON. HOWARD H. BAKER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 4245) relating to the taxation of the income of life insurance companies.

Mr. BAKER. Mr. Chairman, I support the bill H.R. 4245. I do not contend that it is a perfect bill.

I was a member of the subcommittee which conducted hearings on the bill last fall. I know that we did our best in the subcommittee. I know the full committee has done its best to develop a bill which was fair to all segments of the insurance industry and to the policyholders and to the Government.

I hope this bill works. I hope it will be fair and equitable to all concerned. It is the best we could do, at least at this moment.

It was my privilege to be one of the principal advocates and sponsors of the provision in the bill which allows a deduction against operating gains for nonparticipating insurance equal to 10 percent of the increase in life insurance reserves attributable to such nonparticipating life insurance. It is my belief that this proposal will help stock life insurance companies to accumulate appropriate surplus and capital account that are necessary to provide solvency and financial strength to a growing insurance company.

In addition to this 10 percent adjustment it is possible that other similar adjustments should have been included in

this bill. However, I am sure that I speak for the entire committee membership when I assure my colleagues in the House that the Committee on Ways and Means will continue its study of this problem and will watch carefully the impact of this legislation on the life insurance industry and its policyholders.

I yield back the remainder of my time, Mr. Chairman.

Proposed Senate Committee on Water Resources

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, February 19, 1959

Mr. NEUBERGER. Mr. President, impressive support has come for the resolution submitted by the two able Senators from Montana [Mr. MURRAY and Mr. MANSFIELD] to establish a Senate Committee on Water Resources.

The latest evidence of this support is from one of Oregon's outstanding editors, former Gov. Charles A. Sprague, editor of the Oregon Daily Statesman in Salem, as expressed in his column of February 11, 1959. I think all Senators will be interested in the views of ex-Governor Sprague, as they apply to the Murray-Mansfield resolution for a Senate committee devoted exclusively to water resources.

I ask unanimous consent, that the article written by Charles A. Sprague be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IT SEEMS TO ME

(By Charles A. Sprague)

Senators MANSFIELD and MURRAY of Montana have introduced a resolution to set up a Senate Committee on Water Resources. It would be composed of three members each from Committees on Interior and Public Works and two from the Committee on Interstate Commerce which reviews fishery legislation. The resolution authorizes the Commission to make studies on the following:

"(a) The character and extent of water resource projects that will be needed to be in operation between the present time and 1980 in order to supply the water use requirements of population, agriculture, and industry, including but not limited to navigation development and hydroelectric power generation, and with appropriate provision for flood control, and the realization of recreational and wildlife values.

"(b) The character of legislation that may encourage the adoption of new technical methods and improved process for increasing the usefulness of available water resources, including but not limited to weather modification, evaporation reduction, desalination of saline and brackish waters, seepage control, waste-water salvage, and the application of nuclear energy."

Previously America's waters have been run through many filters, both public and private. President Truman set up a committee, headed by Morris Cooke of Philadelphia, to study and report on our rivers. President Eisenhower set up a cabinet committee with the assigned task of tracing the use of waters from the mountaintops to the ocean. After much delay its report was submitted, which was the end of that. Resources for the future gave water resource problems a prominent place in its program for the Mid-Century Conference in 1953. The Hoover Commissions and their task forces studied and reported on the role of government in water resource development and on the designation of administrative responsibility therefor. Many private bodies and groups have wrestled with the problem of insuring an abundance of water for domestic use, farming and mining and manufacturing. The Montana Senators now propose a congressional inquiry, with a report to be made by 1961.

One thing is true; we can't increase the available supply of H_2O. The oceans have vast quantities of water, but it is salty. Ice covers at the poles lock up water in frozen form. Many humid areas have an excess of water, while deserts are parched for lack of it.

Another thing is true: water is used over and over again. It is not "consumed." Its form may be altered—it may go up in water vapor—or it may be contaminated; but in the natural cycle it comes back suitable for human use.

The real problem is one of obtaining water at low cost for use where people want to use it.

What has developed is a sharp conflict over how to use our waters and who shall use them for special purposes. Much of this controversy heads up in Congress or in administrative agencies like the Department of Interior, the Federal Power Commission, the Department of Agriculture. Similar controversies arise in States as groups become rivals for control of the use of water.

Whether the Senate committee can do much more than update the data and rehearse the proposals over water control is doubtful. If it could just write a satisfactory law dividing the authority between the States and the Federal Government that would be a worthwhile accomplishment.

So maybe the Senate should have its turn at the waterholes of the Nation, to see if it can find how to satisfy the growing demand for water at reasonable cost.

Spending and the Taxpayers' Dollar

EXTENSION OF REMARKS
OF
HON. ELMER J. HOFFMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. HOFFMAN of Illinois. Mr. Speaker, the public is becoming more and more conscious of the necessity for curtailing excessive expenditures by our Federal Government, thereby paving the way for balancing the budget.

In this connection, I commend to the attention of our colleagues the following editorial by Lowell Nye, editor of the Harvard Herald of Harvard, Ill.:

ARE YOU GOING TO LET IT GO ON?

(By Lowell Nye)

Two big spending bills breezed through the U.S. Senate during the weekend past—both of them far beyond the "balanced" budget offered to the Nation by President Eisenhower. One was $2½ billion for housing and the other $465 millions for airport subsidy. Three billion dollars—just like that.

Senator PAUL DOUGLAS, Democrat, of Illinois, voted for the housing bill; Senator E. M. DIRKSEN, Republican, against it. Thus Mr. DOUGLAS demonstrates that he was not sincere when he championed the cause of economy in his utterances of the past few months.

If the Democrats in the Senate, led much too ably by LYNDON JOHNSON, of Texas, are doing all this merely to put a Republican administration on the spot so that some of this action will have to be vetoed, they are being completely irresponsible. They are betraying their trust to the Nation.

Do the people care? Is it the lot of this country to go through wild, unbridled inflation, merely because we won't write letters to our Congressmen and Senators asking them to vote no on this senseless spending?

Fortunately, the people still have a chance. Both measures referred to above now go to the House, where the citizen has more influence. Your new Congressman for this district is ELMER J. HOFFMAN, House Office Building, Washington, D.C.

We are finding out—if we are capable of learning anything at all—that this policy of reckless U.S. spending is coming right back to our own pocketbooks. More money for postage; more money for social security; more money for income tax; as we say, right out of paychecks and our checking accounts and our billfolds. Can you deny it?

Major Amendments Needed in Davis-Bacon Act

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. ROOSEVELT. Mr. Speaker, I join with my able colleague, the gentleman from Rhode Island [Mr. FOGARTY], in offering a bill to amend the so-called Davis-Bacon Act, relating to the payment of prevailing wages on Federal construction work. A companion measure is being introduced today in the other body by Senator HUMPHREY, of Minnesota, and Senator MCNAMARA, of Michigan.

This law was first enacted in 1931, and was considerably revised in 1935 to represent what was then a comparatively effective instrument for preventing the purchasing power of the Federal Government from undermining existing labor conditions in the construction industry.

Since 1935, however, experience has revealed many drawbacks in the framework for administering the Davis-Bacon Act. In fact, changing conditions in the construction industry, and in the methods of Federal financing, has required a new look at the way the act operates today. That is the purpose of this bill; namely, to provide a basis for taking a new and more realistic look at the Davis-Bacon Act.

May I say at the outset, that major defects in the Davis-Bacon Act have become apparent over the years.

FIRST. ADMINISTRATION

It has been shown time and time again that the Secretary of Labor does not possess the necessary authority and responsibility to see that the Davis-Bacon Act is properly enforced. No right to

enter and inspect for violations now exists, as it does under similar labor standards laws such as the Walsh-Healey Public Contracts Act and the Fair Labor Standards Act, granting the Secretary of Labor full power to investigate to see that there is compliance with these laws. Furthermore, the Davis-Bacon Act now fails expressly to charge the Secretary with the duty to find violations and to bar contractors from Government work for the prescribed 3-year period. Instead, these powers rest with the contracting officer or with the Comptroller General, with resulting failure in effective enforcement because of diffusion of responsibility.

SECOND. WAGE DETERMINATIONS

Since 1935, the Secretary of Labor has confined himself to determining the basic hourly wage rate as the only prevailing rate required by the act. Nowadays, however, this basic hourly wage rate falls far short of reflecting the actual hourly labor costs on construction jobs. Collective bargaining agreements throughout the industry now cover many additional payments for the welfare of workers—payments which did not exist in 1935. For example, most agreements in many areas of the country now provide for payments, on an hourly or payroll basis, to health and welfare funds, in order to provide much needed sick and hospital and medical benefits to construction workers and their families. Payments are also frequently required for pension funds, for vacation funds and for supplementary unemployment benefit funds. Many agreements also require payments to various training funds of direct benefit to journeymen and apprentices whose skills are the lifeblood of the construction industry and the mainstay of those who depend upon this great industry for their livelihood.

Recent surveys have shown that the payments to these funds are not only a substitute for direct wage increases which workers would otherwise have received as a part of their basic hourly wage rate, but in addition, that these payments now are a very large part of the hourly wage costs in the construction industry.

In the plumbing and pipefitting branches of the construction industry alone, there are funds in more than 68 of 100 cities surveyed by the U.S. Department of Labor. Payments to these funds run as high as 46½ cents per straight-time hour or as high as 12 percent of the basic hourly wage. Other crafts in other cities have negotiated even higher payments.

These payments cannot be ignored or discouraged because they exist to benefit workers for whom they are made. Yet they are ignored and discouraged. In fact they are completely overlooked in the present administration of the Davis-Bacon Act; the Department of Labor is telling the various contracting agencies that the prevailing rate, in one area after another, is as much as 12 percent less than the actual rate. Thus the Department of Labor is extending an open invitation to outside contractors to bring low wages and cheap labor into higher wage communities because these lower labor costs give them a successful bidding advantage on Government work.

This type of unfair wage competition was the very reason for the enactment of the Davis-Bacon Act in the first place. It is the purpose of these amendments to upgrade the act so that it will once more carry out its original purpose.

THIRD. OVERTIME AND PREMIUM PAY

Going hand in hand with fringe benefit payments are overtime and premium pay provisions now prevailing in most labor market areas across the country. These payments and all overtime, Sunday or holiday work were practically unheard of on Government work in 1935. Both the depression and the rigid 8-hour law combined to restrict all work to straight time hours during the normal working day.

But times have changed. The construction industry has been booming ever since the beginning of World War II and the 8-hour law has been waived on Government work wherever time and one-half is paid for overtime work each day. Common practice in almost all major cities in the country has been to pay double the straight time rates for overtime work and for work on Saturdays, Sundays, and holidays. These practices provide still another aggravating factor which the Labor Department has ignored in determining the prevailing wage rate under the Davis-Bacon Act.

FOURTH. COVERAGE

Today, and for more than 25 years, the Davis-Bacon Act has only covered direct construction contracts of the Federal Government. All other types of federally assisted construction have not been protected by the Davis-Bacon Act, except in those cases where the act has been extended to cover special Federal aid programs. Examples of this type of extension are the Hospital Survey and Construction Act—grants to States and local organizations for hospitals—the Federal Airport Act—grants to local agencies for airport construction—and various Federal housing acts—insuring loans or otherwise aiding multiple housing projects constructed locally. These extensions have been made largely on a "hit or miss" basis.

When the Davis-Bacon Act first became law, Federal aid to local construction did not exist the way it does today. At that time it was not important to cover all federally assisted construction. Nowadays, however, a very large share of the Federal construction dollar is spent by means of various types of grants, loans, payments, or guarantees given to local agencies of one type or another, and it has become increasingly necessary to cover these types of construction expenditures on a fair and permanent basis in order to make the Davis-Bacon Act once more fully operative in accordance with its original purpose.

To remedy these many defects, the bill I am introducing has four major objectives. They are:

First. To broaden the coverage of the present act to include: (a) All nonfarm construction in excess of $25,000 in value, at least one-third of which is financed by Federal funds, loans, payments, grants, or contributions; and (b) all federally insured or guaranteed loans for the purpose of financing any nonfarm construction program other than housing developments of less than 10 units.

Second. To modernize the term "prevailing wage": The Secretary of Labor would be required to predetermine, and Government contractors would be required to pay, not only the prevailing hourly rate as presently specified in the Davis-Bacon Act but also prevailing contractor payments to (a) health and welfare funds, (b) retirement funds, (c) vacation funds, (d) apprenticeship funds.

Third. To put hours of work and overtime on a prevailing basis: The Secretary of Labor would be required to predetermine, and Government contractors would be required to pay, the prevailing overtime rate for each construction craft on a daily and weekly basis including prevailing overtime practice on Saturdays, Sundays, and holidays.

In addition, as a minimum requirement, contractors would be required to pay not less than time and one-half for hours worked over 8 per day, over 40 hours per week, over 5 consecutive days, and on Saturdays, Sundays, and holidays.

Fourth. To centralize enforcement and create a construction appeals board: under this particular amendment, the Secretary of Labor would have (a) Authority to make uniform enforcement procedures for all Federal Government contracting agencies; (b) direct power—including the use of subpena—to investigate violations; and (c) authority to apply violation penalties, including authority to black list.

In addition, this bill provides for the creation of a Construction Appeals Board, appointed by the President, consisting of one representative from the public, one from contractors, and one from labor. This three-man independent board would be required to review and issue, as expeditiously as possible, final decisions on appeal from the (a) Secretary's wage predeterminations; and (b) the Secretary's findings of violations.

These four major amendments are necessary so that Federal money will not be used to destroy prevailing wages, hours of work and working conditions and to eliminate the present bidding advantage of unfair contractors in those areas where union building trades conditions are in fact the prevailing practice.

An Address on Brotherhood

EXTENSION OF REMARKS

OF

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 19, 1959

Mr. CUNNINGHAM. Mr. Speaker, one of the leaders and outstanding workers

in the field of human rights and understanding in the State of Nebraska is a young man of boundless energy and enthusiasm by the name of Neil B. Danberg.

Mr. Danberg is regional director of the National Conference of Christians and Jews in Omaha, and is active in working with the city government in its efforts to promote understanding and tolerance of all people.

Recently Mr. Danberg addressed the students at Westside High School in Omaha and spoke of the work of the NCCJ and Brotherhood Week, sponsored by this organization. Under leave to extend my remarks I include Mr. Danberg's address, and I recommend it to my colleagues and to all the readers of this RECORD:

ADDRESS BY NEIL B. DANBERG, REGIONAL DIRECTOR OF THE NATIONAL CONFERENCE OF CHRISTIANS AND JEWS, DELIVERED AT CONVOCATION, WESTSIDE HIGH SCHOOL, OMAHA, NEBR., FEBRUARY 17, 1959

Today, with the whole earth a single neighborhood, we must find a way to realize in concrete terms our ideal of brotherhood. The distance between the ideal and reality can be measured in the numerous injustices that plague society. Injustices reinforce prejudices and discriminations. They are supported in the main by a mass of indifferentism and lack of concern. Persons who keep saying there are no problems show this height of insensitiveness.

On the other hand a person like myself who is constantly working with human relations problems may gain a perspective that overlooks the countless thousands who are good neighbors in daily experience. Each year, the National Conference of Christians and Jews makes three good neighbor awards in Omaha. The hundreds of nominations attest to the fact that many unknown persons do go out of their way for their fellowman. Their moral insight of compassion brings justice.

I am glad that in this school many have joined in our intergroup youth work. During the past year we centered our attention on the Indians living on reservations in our State. In our Nation's history no other racial group are forced to live apart on reservations. Here the moral wrong of segregation has taken its toll. The reservation at Macy, Nebr., has been described as one of the most destitute in the entire Nation.

Our youth group has made trips to the reservation. We have entertained the reservation youth both here in Omaha and at the State university in Lincoln, Nebr. Through this modest program many of you have come to know the modern Indian. The myths and misconceptions about the Indian of today have been dispersed. The stereotypes and prejudgments about the Indian, Negro, and other groups are tested out against a background of reality. Experiencing that it is not wrong to be different and feeling secure enough to be free to differ. Unity in diversity is possible as freedom is given in the programs of creative decisions on the part of the participants.

Through such experiences an awareness and sensitiveness to the needs of our neighbor is gained. At Christmastime 52 families on the reservation were directly aided by NCCJ. A workshop was held in the fall to deal with the lawless aspect of the Macy community. Unfolding are a host of opportunities for service, for action, toward correcting injustices.

Congressman GLENN CUNNINGHAM has recently lent his support to correcting the overcrowding on the reservations. Similar work and projects are carried out with other racial and religious groups. Intergroup youth is a widening horizon for its participants.

In our State, hate literature has hit an alltime high, an anti-Semitic editor keeps up his devisive writings, discrimination in employment drains off talent and serves as a gate stop for incentive. These and other problems make mockery of the religious truth that proclaims the fatherhood of God and the brotherhood of man.

We need to enlist more in our roll of persons of good will who work at various means to correct injustices. I am glad that on this Brotherhood Week that here in this school we have such a roll.

Brotherhood is more than a luxury, more than platitude, it has become a practical necessity. We have been increasing our control over the forces of nature but man has not learned to love his neighbor.

Why are men quick to believe the worst about their fellow man, to hold on to misconceptions, to accept injustices? I have found in countless talks given about our Indian neighbors that most persons do not want to accept their responsibility because it would make them feel guilty or uncomfortable.

Perhaps this is one of our tasks today, to present enough information at various levels to make people uncomfortable in prejudice and to make persons take responsibility for acts of bigotry.

Translating this great ideal of brotherhood into life is our great task, our main unfinished business that becomes everybody's business; peace and freedom itself depends upon it.

Speech by Hon. Barry Goldwater, of Arizona, at the Annual Saginaw County Lincoln Day Dinner

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 19, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to submit the speech given in Saginaw, Mich., at the annual Saginaw County Lincoln Day Dinner by Hon. BARRY GOLDWATER, of Arizona. Senator GOLDWATER presented the citizens of Saginaw with a powerful explanation of the damage done to our State by a labor dominated and controlled State government. The results of Mr. Reuther's handiwork has been the destruction of the very thing on which his strength is based, the industrial job opportunities available in our State.

The speech follows:

SAGINAW LINCOLN DAY SPEECH BY SENATOR BARRY GOLDWATER, REPUBLICAN, OF ARIZONA, FEBRUARY 9, 1959

It is a real pleasure to be back in Michigan.

This is a State of great beginnings—of great achievements.

As a youngster in Arizona I remember reading about the energy and initiative, the inventiveness of Michigan.

For years I have been driving your great automobiles across rough desert trails. I have been giving them mountain road tests that would make your proving-ground courses seem like Sunday afternoon drives.

And they stand up to it.

Yes, it's a wonderful State.

As I flew in it seemed there must be thousands of lakes here.

Water everywhere.

When I think of what we could do in Arizona with some of this water.

Solidarity House and its landlord you can keep. Just let us have some of the water.

In this month, when we are thinking especially of the name of Lincoln, we Republicans look back to the origins of the Republican Party here in your State. You are citizens of Michigan; I know you love this State. But perhaps you will allow us Republicans from other parts of the country to look with some affection and pride toward the State where began the party of Lincoln—this party of ours which has stood from the beginning for liberty, for the concept of the individual as sacred, this party of ours which has always believed in the full exercise of citizenship rights, without obstruction, without surrender of any part of these rights to any person, or to any group.

I am proud especially to be talking to Saginaw Republicans.

As chairman of the Republican senatorial campaign committee, I watch political trends down into the counties and into the townships. In the recent November election, you Saginaw Republicans showed vitality and a comeback power that made us proud of you.

In most areas of the Middle West, the Republican Party did not sell itself to the voters. Here in the Saginaw area, you did, and you did it very well. In Michigan, generally, the Republican Party was much better than nearby States where, in some cases, the party lost a Senator, a Governor, and control of both houses in the State capitol.

Your candidate for governor, Paul Bagwell, fought a great battle to turn back a trend. He was backed by a party finance organization which did a great job in the face of adverse economic conditions, and by very effective staff assistance.

Above all, Paul Bagwell struck at a very real issue—the destruction of jobs in Michigan—a loss of jobs which has resulted from the flight of industry to other States. Gradually the realization has spread in this State that industry is fleeing from a hostile business climate created by a Democrat Governor's alliance with a powerful and ruthless union politician.

Was the issue effective? Well, Paul did not overcome this 10-year cumulative trend at a single blow, but he took on a Governor who ordinarily runs ahead of his ticket by a quarter of a million votes, and when Paul was through with him, he stood a poor fifth on the ticket.

Political observers were watching the Governor's race in Michigan with special interest. It was thought that the Governor, whose eagerness to be President is well known, would have to run a very strong race if he were to be considered a serious contender for the Democrat nomination in 1960.

Political observers were looking at this race as a sort of popularity index.

When the election was over, political reporters across the country looked at the Governor's poor result and then marked him off the list of Presidential contenders.

Just a week ago, in Washington, their judgment has again been confirmed. A nonpartisan research agency took a poll of all the Democrats elected to Congress to find what man these leading Democrats would like to see as Democrat candidate for president in 1960. Two hundred and eighty-three Democrat Representatives and 64 Senators were asked the question. The man who looked so eagerly toward the 1960 nomination before the race for the governor's chair now is favored by only two of these

hundreds of national leaders of the Democrat Party.

The fact is, there are seven Democrat Representatives and two Senators in all, nine Michigan Democrats in the Congress. There seems to have been seven who did not express a preference for your Governor.

I believe that is as close to the bottom as you can get, without an absolute zero.

Bagwell was a great candidate, and he had a sound issue.

He took on Walter Reuther's candidate for governor and cut him to size. A fifth-place man in his own state. The fact is, Paul Bagwell seems to have put Walter Reuther's candidate for president completely out of the running.

For this, Michigan citizens owe Paul Bagwell a great vote of thanks. The rest of us, across the nation, owe Paul Bagwell and you Republican workers an even greater vote of thanks.

Now let us look a little more closely at the issue you Republicans had here in Michigan.

On the face of it, the issue looks like a simple bread-and-butter problem, something directly connected with the everyday problems of anyone in Michigan who works for a living.

Some who thought about the importance of this issue went no further in their thinking. They saw that the issue was genuine, and also that it spoke importantly to every man and woman in Michigan who worked, or who depended upon someone who worked. This was enough.

Now I invite you to review again with me, briefly, the genuineness of this issue, considered as a purely economic matter, for a constant effort is being made by the union political propagandists and the Governor to blur and confuse these facts.

Let me say now that the issue here in Michigan has two major aspects, as I see it. On the surface, and very immediately, it is an economic problem—one, as I have said, which touches very directly every citizen of the State. Underneath, and more important, it is a profoundly moral problem—one which touches vitally upon the civil rights of Michigan citizens.

As I talk to you tonight I am reminded of an evening more than a year ago when I stood before an audience of Michigan Republicans in Detroit. Will you forgive me if I recall briefly several things I mentioned that night, because they seem just as pertinent now?

A few years ago, in Washington, as some of us were reviewing the economic trends of the country as a whole, we were paying special attention to the great economic expansion in the country during the period 1950 to 1956, after the Korean war and under the new Republican administration. This period was before the recent recession from which the country is presently recovering.

Now, looking again at the period of great national economic expansion, from 1950 to 1956, we find that 46 States, big and small, increased their number of factory jobs. Almost no State was so backward that it was not carried along by the tremendous expansion.

Only two States in that period lost factory jobs. One was little Rhode Island. The other, surprisingly enough, was Michigan, a great industrial State which we in the rest of the country had come to look upon as a leader, certainly not as a backward and weak State.

Let me remind you that 1955 was the greatest year for the production of automobiles in the history of the industry. The whole Nation was reaching hungrily toward Michigan for more and more automobiles and trucks. Even 1956 was one of the best years in history for automobile sales.

This enormous national demand was directed right at Michigan and should have produced an unprecedented prosperity in the State.

Why, then, did the exact opposite take place? Why, instead of a great gain in factory jobs, was there an actual loss in jobs?

What sickness in this State could be so acute that even a great economic "blood transfusion" from the rest of the Nation would still leave Michigan anemic?

What was so unique about this sickness that not one other lagre industrial State was affected? Why, too, were even small and relatively undeveloped rural States, with no industry like automobiles to attract a national demand, nevertheless increasing factory jobs, while Michigan limped along at the end of the procession?

There was something profoundly wrong with Michigan's economy. That was clear.

We looked with surprise at this State of Michigan, propped up on all sides by the greatest demand for automobiles in the history of the country. How could Michigan be the only State in the whole Middle West to lose factory jobs, almost the only State in this country?

This was almost unbelievable, but it was true.

Now I have, for some years, had a special interest in the State of Michigan. Five years ago a group of Michigan union men came to see me in Washington, because I was on the Senate Labor Committee. They asked for help in solving some of their problems. They told me their civil rights were being undermined by certain politically ambitious union leaders in Michigan.

Now these men were strongly loyal to their union's economic objectives. But they felt that meddling in politics was not the job for union leaders, and they were afraid that they would end up by jeopardizing their economic gains unless certain ambitious union leaders could be kept out of politics.

Deeper still, these men resented having their union-dues money diverted into political slush funds. They had to pay dues to hold their jobs, but they did not believe they ought to have to pay dues money which their union leaders would use for politics, sometimes for candidates actually opposed at the polls by their own union members.

This, the union men told me, was an immoral thing. This, they said, was a basic attack on their civil rights.

I was impressed by the sincerity of these men from Michigan. They were not crackpots or union soreheads. They were solid, family men, one of them a member of the United Automobile Workers for 18 years. As Senator CURTIS and I listened, we could see their problem was real, and it was important.

As I began then to study the Michigan situation, I became more and more struck by the fact that there were elements in your problem here which were national in importance. Since then I have followed developments here very closely. I am convinced now that Michigan is being used as a laboratory, a testing ground, for something new in America, something, in my opinion, that is potentially deadly. And I believe this statement is conservative, based on a compelling array of facts.

The methods used in Michigan, and the results of these methods on the economy and especially on the civil rights of Michigan citizens give us a preview. A preview of what we may expect if these forces in Michigan spread their methods to the rest of the country.

It is Michigan's problem now, but it threatens to be soon the problem of the Nation. In fact, it has already spread to many parts of the country, but only in Michigan do we see this thing in its mature form. We can study here not only cause; we can study some of the results. Not all the results, mind you, because you may have worse to come in this State, if some strong measures are not taken.

Now we are talking about results. Let us look again at the disastrous economic record of Michigan in recent years.

We know that Michigan was the only State in the Middle West, one of only two States in the whole Nation which lost factory jobs between 1950 and 1956. I would remind you again that this was a period of unprecedented economic expansion throughout the Nation. I would remind you again, too, that Michigan's greatest industry, automobiles, was receiving an unheard of stimulus from a prosperous Nation at the very time jobs were disappearing from the State.

While the whole Nation was going forward, Michigan was going backward.

Why?

I believe I know the cause. Paul Bagwell spelled it out. But in the heat of a campaign a picture can be blurred. Statements and counterstatements can lead to confusion, doubt.

The political campaign is over, and it is time now to review again the facts.

Even now there are those who would deliberately confuse this picture. There are those, I regret to say, who have much at stake in covering up or distorting the actual facts.

The simple fact is that industry is fleeing from Michigan. And new industry which the State needs so badly is avoiding the State.

This is no temporary condition. This flight of industry is so great and so swift that it more than made up for the enormous demands made upon the automotive industry in 1955 and 1956. Some people who wish to confuse this picture for political purposes have tried to blame Michigan's economic predicament upon last year's national recession. How do these people account for the very great loss of jobs at the height of the national boom, before there was any sign of a national recession?

Michigan's problem arose before the recession. When the recession came, Michigan was the worst spot in the country. And now, with the rest of the Nation climbing swiftly again, a professor in your State university predicts that Michigan will still continue to have a large pool of unemployed. And for how long? For an indefinite period of time.

Michigan's problem arises within the State itself. That is clear. The attempt to blame Michigan's problem on the national administration was a shoddy political trick.

Nor can the problem, it seems, be related to the large role which the automobile industry plays in the Michigan economy. If this were true the State should have made great increases in factory jobs when the auto industry was at its peak in 1955, 1956, and 1957, which were respectively the first, the fourth, and the third best years in more than a half century of the automobile business. Instead, as we have seen, Michigan was losing jobs at this time.

What then is the cause?

Is this flight of industry and jobs due to an attempt by industry to escape paying Michigan's high wages? Well, it may be true in some cases that a combination of high wages and fringe benefits have put some Michigan business out of competition.

Such is not the case with the major losses you have suffered. The great automobile industry is moving out of Michigan to Ohio and Indiana. These are not low-wage States. Ohio, in fact, was the third highest wage-level in the United States.

I have read that the automobile industry has built 29 new plants in Ohio alone since the war. The industry is certainly not moving to Ohio and Indiana to escape high wages.

No, except for a few marginal cases, wage differential is not the cause for this flight of industry and jobs from Michigan.

Now, finally, there are some who deny entirely that Michigan industry is actually leaving the State. They claim that the

whole issue is artificial. They say it is a trumped-up political issue, without any real substance.

Now I have received a very interesting study by Professor Jamison of the University of Michigan. Professor Jamison shows beyond question that Michigan, once a national leader, has, since 1948, been falling behind the Nation in many types of industry—in furniture manufacture, in pulp paper and paper products, in chemicals, in petroleum and coal products, in rubber products, in leather and leather goods, in stone clay and glass, in primary metal products, in fabricated metal products, in electrical machinery and in transportation equipment.

According to Professor Jamison's report, Michigan not only has lost leadership in industries for which the State was once famous. It goes far deeper than that, Michigan is steadily losing across a broad front, big industries, small industries, and across a broad range of manufacturing.

What is wrong with Michigan's economy is not limited to any special size or type of industry. No, this sickness is general.

Only a few miles from Saginaw you have a great chemical manufacturer, Dow, one of the greatest in the country. Once this was a Michigan industry. You know that this great company has expanded its facilities not so much in Michigan, but outside the State. So great has this outstate expansion been that now less than half of the total assets of the company remain in the State.

You all know this company. You know this outstate expansion to be true. Only recently in my study of your State did I learn of this fact.

No amount of political propaganda can hide facts of such magnitude and importance.

Now we have talked of industry leaving Michigan. What of industry searching for a location?

Is the sickness which is driving industry and jobs out of Michigan also keeping industry from coming into the State?

Since I last spoke in your State, somewhat more than a year ago, several studies have been developed which seem relevant. One was produced by an independent research organization in Chicago, Market Facts, Inc.; another was developed by McGraw-Hill Research for the magazine, Business Week. I found these studies told me a great deal about the attitudes of manufacturers toward coming into Michigan.

In each case the research organizations asked top manufacturing executives to list specific States they would consider if their company were going to select a site for a new plant.

The McGraw-Hill study received replies from 263 executives.

Now how did Michigan compare with other sites as a desirable plant site?

Of the 263 executives expresisng an opinion only 3 considered Michigan a first-choice location. Only 19 would give Michigan any consideration at all. When the size and importance and industrial history of Michigan is considered, I believe you will agree this reflects an attitude toward Michigan which could be disastrous to the economy of your State.

My own State of Arizona, relatively new in manufacturing, received almost twice as many first-choice mentions as did industrial Michigan.

Now let us turn to the Chicago study. Market Facts, Inc., interviewed 113 top manufacturing executives. They were asked to compare five Great Lakes States as desirable plant locations, Illinois, Indiana, Michigan, Ohio, and Wisconsin.

Market Facts asked the executives, as one question, to rate any one of the States as "worst." Do you know that every executive who gave a "worst" rating gave this rating to Michigan?

Now there is no doubt of the objectivity or the competence of either of these research organizations. Each has a national reputation, and each conducted their investigations with great safeguards to avoid bias of any kind.

Let us look at the opinions of these executives. Is there a possibility that their opinions would not necessarily be the same as their actions?

Well, there is a simple way to test their actions. We can look at actual plant construction in Michigan, and compare it with nearby States like Ohio and Indiana.

In the 2-year period, 1956–57, industrial contracts for construction in Indiana were a little short of $1 billion, $889,123,000. Ohio was larger with $921,678,000. This was a plant construction at the rate of $201 for each person in Indiana, $101 for each person in Ohio.

Michigan? Well Michigan's total plant construction in 1956 and 1957 was little more than a fifth that of Indiana or Ohio, and amounted to only $27 for each person in Michigan.

What does this mean to citizens of Michigan? It means that the plants not being built today will be the jobs that will die unborn tomorrow.

To the man looking for a job in Michigan today, this means no hope for new job opportunties tomorrow.

To the man who is paying taxes, the flight of industry and this failure of new industry to come into the States means this: The higher and higher taxes of Michigan will not be shouldered by a growing industry. The taxpayer will have to carry the additional burden which an expanding or incoming industry would otherwise have shared.

Now this is a bitter set of facts. And I hesitated long before deciding to address such an audience on facts which many of you must know better than I.

Yet I felt it might be useful for you to hear how these facts appear to an outsider—not entirely an outsider, I hope, since I have good friends in your State—but to one, not embrolled in the politics of your State, nor with any business interests here.

What facts I have seen convince me that your predicament is a matter not only of concern to Michigan but to the Nation. You are a great State, and what happens to you cannot be a matter of indifference to the rest of us.

Now, if you will be patient with me, I should like to proceed to the next step.

We have seen that the Michigan predicament is not due to the shore-lived national recession, nor to the dominance of one industry in Michigan nor even to the lure of low-wage structures in other States.

We have seen that the Michigan predicament is very real and that there is a widespread conviction in the rest of the country that Michigan is no longer a good place in which to expand or to enter with a new manufacturing business. The McGraw-Hill and Market Facts studies clearly substantiate the fact that these opinions are widespread among manufacturing executives whose job it is to locate plant sites.

It does no good to try to hide these facts. Such facts cannot be hidden.

A doctor who tells a patient with cancer that he is suffering only from a slight stomach ache, to forget it, and it will go away, is doing his patient no favor.

The doctor who tells his patient the cold truth about the cancer gives the patient an opportunity to take realistic measures for a cure.

Now I would not presume to take the role of doctor for the State of Michigan. You have men here in this State who have been telling you the hard truth about your problem. Men who know a great deal more about your State than anyone from the outside could ever know.

It is very difficult for men who live here, who love this State, who have known its greatness, to tell the hard story of its present condition. It takes courage, and it takes integrity.

It is easier by far, especially for men who have more ambition than integrity, to repeat the empty optimistic things. Easier by far, and more popular, to say it is just a little passing stomach ache, or to pretend even that it does not exist at all.

To have a leader who takes this line is to have no leader at all, if the sickness is really acute. Such leadership is a kind of betrayal of trust.

Paul Bagwell said the hard things to the citizens of Michigan. He ran better in the recent election, not worse, because of this. He did not win, but he ran better than any Republican gubernatorial candidate in years. He will win the next time, because he deserves to.

As a man of integrity, as a responsible leader, he spoke the hard truths. The citizens of Michigan can trust a man like that.

We come then to the big question.

We know the great natural advantages of Michigan. We know of the great resources, the power, the skilled men. We know Michigan industry is close to great natural markets.

None of these economic advantages has disappeared.

Now, what has happened in Michigan? Your State has not lost any of the great resources, the great economic advantages it had 10 and 20 years ago.

I'll say tonight again what I said in Detroit over a year ago:

What is wrong with this State is not economic. It is political.

Some politicians in your State have feared that the real facts—the truth—might become apparent to the citizens of the State. Not only have they, in turn, denied the problem exists, they have also set up false causes, and then, finally, they have turned to deliberate obfuscation.

They have tried to make this problem look mysterious. I have read how they set up study committees ostensibly to find out what is causing the disastrous Michigan decline, but I cannot believe they are actually mystified by this problem. They know all too well the cause.

Well-intentioned people seem to have lent their names to these committees and, without intending to do so, have helped politicians to keep alive the myth that this is a mysterious thing. What do these committees accomplish? They have one major, but unexpressed objective—"to take the heat off" the politician.

Now it is not actually very difficult to find out why industry is leaving Michigan, and why other industry is staying out of the State.

In each of these industrial organizations there is a small group of responsible executives at the top who make such decisions. They know why they decide one way or the other. There is nothing mysterious about the process.

And I can tell you this. Their decisions have nothing to do with political partisanship. In my own State of Arizona, both houses of the legislature have heavy Democrat majorities. Yet Arizona is the most swiftly growing State in the Union, industrially. At the same time Michigan was declining in the number of factory jobs, between 1950 and 1956, the State of Arizona was increasing 130 percent.

No, responsible business leaders cannot afford the luxury of party bias when it comes to economic decisions. It is their responsibility to go where the business will thrive, stay out of areas where the business will be harmed.

It is not because your State administration is Democrat. It is because the Demo-

crat Party in your State is a shell—merely a label—taken over by a special interest. That special interest is the United Automobile Workers. And I am not referring to the rank-and-file union members. I am referring to a few politically ambitious union leaders, men with a Socialist background.

These men own and operate the shell of a political party. They have retained only the Democrat label.

The key points in the party are manned by their crew. The machinery is fueled with union dues money from the general treasury of the United Automobile Workers.

This party in Michigan which still carries the label "Democrat" is so far to the left, so irresponsible, that even regular New Deal style Democrats find it very hard to accept.

Only last Friday Governor Docking, Democrat Governor of Kansas, made a public statement about the plight of Michigan. I saw the statement as reported in a Detroit paper. Docking said Michigan is completely broke because of a "bureaucracy" which has "run wild."

Now I ask you this, How bad does the situation have to be, for a New Deal Democrat to describe it as a bureaucracy which is running wild?

No, there is no mystery, no mystery at all, about the decision of business executives to move from this State, or to avoid the State, if they are already outside. No responsible executive could conscientiously expose his business to the hazards of a "bureaucracy running wild."

And I shall venture to suggest, furthermore, that businessmen would be better advised to avoid lending their names to committees set up to "take the heat off" leading politicians who are undermining a State's economy. May I suggest that such businessmen might better serve their State and their business by coming at once to grips with the real problem, which is political, and carrying the actual facts to the people. There is a responsibility to carry the whole story to the citizens of this State so that, better informed, they may make political decisions that are appropriate to the actual facts of their situation.

It can be understood why men in the business, for example, of selling industrial real estate might believe it in their short-run interest to obscure the real facts of Michigan's plight. It can also be understood why utilities executives whose rates are set by the State government, or leading educators on the State payroll, might find it difficult to resist an invitation from the executive office in Lansing to be listed on a committee, which is helpful to the public relations needs of the Governor.

How does any other businesman explain his presence on such a committee?

I have observed with interest the public statements of businessmen who declare their intention to get into politics. These expressions are very commendable. Businessmen, like all other citizens, should be informed and active citizens.

May I suggest as an elementary first step that these businessmen stop playing "footsie" with the forces of destruction? May I suggest that a little intestinal fortitude might be in order at this point?

Across America, in the fast-growing States, businessmen are getting into politics.

In my own State a successful businessman who had never held any political office ran for Governor and was elected Governor.

He fought a clean, hard fight, on principle. Imported union politicians threw everything they had at him and walked off the field with a bloody nose.

You are faced here in Michigan by a labor party, run by a small coterie of labor politicians, and disguised as the Democrat Party.

This political organization is completely ruthless and thoroughly irresponsible. The leaders of the organization make vital political decisions for this State, yet almost none of these decisions can be reached or influenced either by the voters, or by the union members.

Walter Reuther ran for public office only once. The voters had only one chance at him.

It was in 1937. Fresh from the violence of the sitdown strikes, flushed with victory, Reuther thought his prestige as a union leader could be transformed into political power.

Reuther and four other top officials of the union decided to run for city council in Detroit. And what happened? All were defeated.

Reuther ran 15th, out of 18 candidates. I don't know what was wrong with the three who ran behind him. They must have been objectionable in the extreme.

The union members in Detroit wanted Reuther as union leader; they rejected him as a political leader. This same Walter Reuther who could not be elected to the city council of Detroit, now goes to the national convention of the Democrat Party and exercises a veto over the nominations to the Democrat national ticket.

His is the hidden hand behind the policies in the State of Michigan which have brought this great industrial State to its knees, on the verge of bankruptcy.

The stranglehold of the labor politicians on the State of Michigan is a well known fact to businessmen across the country.

Just a year ago the representative of one of the greatest industrial organizations in America cleared the air—took all the supposed mystery out of this situation. The occasion was a meeting of industrial development people and manufacturers from five neighboring States of Illinois, Indiana, Wisconsin, Ohio, and Michigan.

This industrialist told how industry is searching all over the United States for good plant sites. In Ohio, his company has built no less than 19 new plants in the last 5 years. In Michigan they have built only one. They are not planning, he said, to build any more in Michigan.

When he was asked why his company had decided not to build further in Michigan, he said, "Because of your labor government."

There was nothing mysterious about this decision.

Nor is there any doubt that this one industrial decision alone cost Michigan tens of thousands of jobs.

It does not seem to me to be necessary to set up a committee in an effort to discover what this man meant.

It is there, on the face of it.

What is necessary, is that the people of Michigan be given the facts.

Representative government is only sound when the political decisions are made by informed voters.

The great State of Michigan is bankrupt.

The executive is asking for new taxes which are estimated to add $38 to $40 million in taxes to the burden already carried by business and industry. How many more industries will decide to leave because of this new tax burden, no one can say.

The supreme court of your State of Michigan is adding its own special kind of nightmare to the businessman. A former United Automobile Workers organizer, now a justice on your supreme court bench, has just written an opinion which may, in effect, compel industry to finance strikes out of unemployment compensation funds.

This is the final touch. To convert the unemployment compensation fund into a strike fund, financed by industry.

If this trend continues, I venture to predict an increase in the departure of industry from Michigan. As your budgets and your debt become steadily larger, the industrial base which should provide tax revenue will grow smaller.

You will have larger and larger budgets on a smaller and smaller industrial base.

The man whose birthday we are honoring once spoke of such a situation.

Lincoln put it this way: "As an individual who undertakes to live by borrowing soon finds his original means devoured by interest, and next, no one left to borrow from; so must it be with a government."

It was true when Lincoln said it; the same is true today.

Lincoln Day is a mighty good time for us to be honest with ourselves. We must face and acknowledge our problems—not only in Michigan but across the Nation—if we are to solve them.

I can think of no better resolution for today in Michigan than to carry out to the people this idea of the greatest Republican of them all.

You have a great worthwhile task. The future of your State is truly at stake.

The economic problems of this State have an evil political root and it might well be the dedicated purpose of you all here tonight, as citizens first, and secondly as Republicans, to root out this evil cause of your great State's present discontent.

Every natural economic advantage which Michigan ever had, it still has. The economic problem of Michigan originates in a perversion of Michigan politics.

The problem can only be cured by sound political leadership.

In the final analysis, each citizen will solve the economic problem of Michigan alone—in the voting booth.

I wish you well. For success you will need some of the firmness, the devotion to truth, the dedication we knew in Lincoln.

Your task is formidable.

But the energy, the spirit, the inventiveness that always has characterized Michigan—this has not left the State of Michigan. You have not exported your courage.

The character it took to build this great State, will not fail to meet the present challenge.

You can do it.

Across the Nation, we others who are proud to follow in the tradition of Lincoln will be with you in spirit.

A great responsibility rests on you here in Michigan. For what happens here today can happen to the whole Nation tomorrow.

A Joint Economic Mission to India

EXTENSION OF REMARKS
OF
HON. CHESTER W. BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 19, 1959

Mr. BOWLES. Mr. Speaker, I wish to include in my remarks the following joint statement issued today by the distinguished junior Senator from Massachusetts [Mr. KENNEDY], the distinguished senior Senator from Kentucky [Mr. COOPER], the gentleman from New Hampshire [Mr. MERROW], and myself concerning the concurrent resolution which we have joined in introducing in this body and the other body today:

We are today introducing in both the House of Representatives and the Senate a concurrent resolution urging our Government to take the initiative in consulting other nations of the free world, including

India, about the appropriateness and usefulness of a joint economic mission to India.

This is the great moment of assessment, appraisal, and forward planning for India as it seeks means to complete its second 5-year plan and to set in motion its third plan scheduled to begin in 1961.

There is a wide measure of support for these dramatic and critically important efforts, not only in the United States, but also among other nations of the free world. The 86th Congress, acting on a bipartisan basis in both Houses, can give timely assurances to India of our willingness to explore with other free nations all effective means for joint assistance to India in meeting her vital needs for long term democratic growth.

The text of the concurent resolution follows:

"Whereas the continued vitality and success of the Republic of India is a matter of common free world interest, politically because of her 400 million people and vast land area; startegically because of her commanding geographic location; economically because of her organized national development effort; and morally because of her heartening commitment to the goals and institutions of democracy: Now, therefore, be it

"*Resolved*: That it is the sense of Congress that the United States Government should invite other friendly and democratic nations to join in a free world mission to consult with India on the detailed possibilities for joint action to assure the fulfillment of India's second five-year plan and the effective design of its third plan; and that the Secretary of State report to the Congress on the feasibility of such a mission after consultation with interested governments and with the Republic of India."

Bank Credit Expansion and Inflation

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. BETTS. Mr. Speaker, readers of the New York Times may have noted a letter to the editor by Dr. Elgin Groseclose in the issue of February 3, 1959. Dr. Groseclose is a noted writer and recognized authority on economics. The American Banker was quick to note the analysis of bank credit which Dr. Groseclose treated in his letter to the Times and has acknowledged the recognition it deserves in the following editorial of February 6, 1959:

BANK CREDIT EXPANSION AND INFLATION—A MORAL ISSUE

In the letters column of the New York Times during the past few days an exchange of letters has appeared dealing with inflation from two radically differing viewpoints.

First appeared a letter from Professor Emeritus Alvin H. Hansen, of Harvard University in which he pointed out that a characteristic of the American economy is that wholesale prices have been rising for a good many decades, and the prospect that they may continue to rise a couple of percentage points more or less annually should not be regarded as abnormal or unduly disconcerting.

In reply there came to the Times a letter from Dr. Elgin Groseclose, also an economist of national stature, in which he discusses the Hansen thesis of complacency and remarks that "a disease is not the less serious because it is chronic."

Then in an enlightening discussion of the underlying causes of this disease, Dr. Groseclose puts the finger of blame upon our predilection for expansion of bank credit in a degree which has exceeded the rate of the Nation's growth. Commercial bank deposits, he notes, increased 17½ times between 1890 and 1930, while pig iron production rose 4½ times; exports 5 times, coal production 5 times, and freight traffic 5 times.

CREDIT UP; GOLD RATIO DOWN

The increase in bank credit was accompanied by a lessening of the ratio of our gold stock to bank deposits, which had dropped from 23.9 percent in 1880 to 20.4 percent in 1900, 14.2 percent in 1910, and 10.4 percent in 1930.

Other fuels than coal, of course, have entered our economy, and other metals besides iron and other transportation besides freight. But still the spread between the rate of growth of the 3 basic industries cited, which was 4 or 5 times in the 50-year period, and the 17½ times growth of bank deposits appears excessive. It is more than a coincidence that in the same period, prices of things were rising along with our supply of bank credit.

Dr. Groseclose does not pursue this point further, but any one familiar with the history of the years since 1930 knows that the expansion of bank credit since the devaluation of the dollar in 1933–34 has been at an accelerated rate, and that prices generally have more than doubled.

A dwindling of our gold ratio below 14 percent has been pointed to in the past as a danger sign, and so it proved in the early 1930's. Whether it may prove so again if present trends of bank credit inflation and gold outflow continue is one of those questions about which we can speculate but never surely predict.

Meanwhile, it is true that we progressively have monetized an increasing volume of capital credits in our banking system. Inflation has been the inevitable attendant effect. And we continue to do so in the degree that U.S. Government securities, other governmental bonds, stock collateral loans, mortgages, consumer credit, industrial long-term credits, and other capital loans, become part of our commercial banking structure in excess of the true savings balances of these banks. In Europe, after the inflations of the 1920's, the currency depreciative effect of wartime monetization of capital assets became recognized clearly as an evil which banking systems must avoid. But how easy it has been to fall back on the opiate of increase in bank credit as a substitute for increase in savings capital.

THE MORAL QUESTION

In his letter's close Dr. Groseclose writes: "Regardless of whether rising prices, with their stimulus to business venture, or cheapening prices, with the incentives to consumption and their distributive effects on the possession of goods, is the better condition for the economy, it seems to many that the issue must be decided on other grounds: any process that is morally dishonest cannot be good in the long run for the economy or for the people of the country, and deliberate inflation is morally indefensible.

In any case, we have again the historical record of the effects of the inflationary process in the repeated breakdowns of the credit mechanism, the successive panics, crises and depressions with their consequences of bankruptcies, foreclosures, unemployment, breadlines and social unrest. We may mention those of 1873, 1879, 1890, 1893, 1907, and that of 1930, to which many serious historians attribute the onset of World War II and its fatal consequences."

The points made by Professor Hansen and Dr. Groseclose are basic to the policy decisions which are being made in Washington this year. The President's new Committee on Inflation, which Vice President NIXON has been named to head, is throwing its weight on the side of a stable dollar and viewpoint which Dr. Groseclose voices. We do not believe that every thinking banker needs must uphold this new committee's hand.

A Bill Which Proposes Congressional Procedures for Handling Contempt of Congress Citations

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I have introduced today a bill which will amend section 194 of title II of the United States Code to provide in substance that all contempt citations which issue out of a House committee will be referred to the House Judiciary Committee for its study, recommendations and report to the House. Contempt proceedings are serious and should not be lightly entertained. If the present House procedures which treat them casually without adequate study are not changed the House will continue to find it difficult to have contempt citations enforced by the courts in judicial proceedings. The result will be that the investigating powers of the House will continue to be badly weakened. It is the basic prerogative of the Congress to investigate and legislate in legitimate areas of inquiry. This is not an unlimited right. It is subject to reasonable and necessary restraints which are contained in the same instrument which created this legislative prerogative, the Constitution. In its search for information it is necessary for the Congress to bring before its committee forums hundreds of citizens to testify and to relate their experiences pertinent to the legislative matter in question. If we in the Congress are to perform the duties prescribed for us by the Constitution, it is essential that we have the help and cooperation of all our citizens. We must have respect from the people for our congressional investigative committees for from a healthy respect comes the necessary cooperation. To gain this respect, we in the Congress must in turn respect the individual rights of all citizens who appear before our fact-finding committees to encourage the necessary rapport between the investigator and the witness. It is absolutely essential that we set up proper procedures that will strike a proper balance between committee rights and obligations arising from its legislative power and the rights and obligations of our individual citizen. The very nature of a contempt proceeding denotes disagreement between the investigator and the witness. This disagreement could be the result of one or many complex reasons. It could result from a disregard and disrespect for a duly constituted legislative investigative body. The question then arises what has occasioned this disrespect

for a particular committee. When allegations are made that a committee has itself violated the individual and constitutional rights of a citizen who has appeared before its committee then a legitimate point of inquiry is raised which forms a very important part of the bundle of facts leading up to the request by the committee for a contempt citation.

Is the citing committee an appropriate judge of its alleged abuse and disregard of the rights of the individual witness? I submit that it is not. Is it consistent with our basic sense of fair play to permit the accuser to try and find guilty the accused of an act which may have been the consequence of the accuser's act? To ask the question is to answer it. What then is the solution? A possible solution lies in a fair and impartial congressional review by an appropriate House committee. I submit that the House Judiciary Committee in this instance would be an appropriate committee for review. Under present House rules it is possible for the particular committee in question to come before the House with its request for the contempt citation of an allegedly recalcitrant witness to present the matter under a rule limiting debate where only one point of view is presented and to secure House action on such a serious matter without a full inquiry into all of the facts leading up to the committee's request for such citation. The allegation has been made that a particular House committee has violated House rules of procedure and disregarded the individual rights of the particular witness. Then it is appropriate and necessary for the House of Representatives to make inquiry into these charges to determine their validity or invalidity as the case may be. The House must determine for itself whether one of its committees has exceeded the bounds when a report and resolution for a contempt citation is presented to it by one of its committees. It should consider among other things, first, what are the limits of the constitutional authorities of the Congress to investigate; second, what is the extent of the jurisdiction that the House granted to the committee involved; third, has the committee followed the rules of procedure established by the Congress in conducting the investigation and which gave rise to the alleged contempt. The failure of the House of Representatives to thoroughly consider each request for a contempt citation has resulted in the judicial reprimands contained in the Watkins decision and the Arthur Miller case and others. The review of each request for a contempt citation by an impartial third party will make each of us more aware of the constitutional rights of our citizens who appear before our committees and the duties which they demand for their protection and preservation. It will then be self-discipline that will thwart possible congressional committee abuses rather than attempt by the judiciary to discipline the Congress. If this is done the constitutional rights of our citizens will be preserved and the dignity and integrity and powers of the Congress will be maintained. I earnestly suggest, Mr. Speaker, that my proposed bill will fill the obvious needs as above outlined. I am hopeful that the Congress will act upon this bill this year.

The Filibuster Debate—Barrier Against Steamrollers

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Thursday, February 19, 1959

Mr. THURMOND. Mr. President, in the January 8 issue of the Reporter there appeared an article entitled "The Filibuster Debate — Barrier Against Steamrollers." This most objective analysis was written by Mr. Lindsay Rogers, who has been the Burgess professor of public law and government at Columbia University since 1929. I request unanimous consent that this article be printed in the Appendix of the RECORD, since it makes a distinct contribution to the debates on this issue which took place earlier this year.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE FILIBUSTER DEBATE—BARRIER AGAINST STEAMROLLERS

(By Lindsay Rogers)

"The Senate of the United States is the only legislative body in the world which cannot act when its majority is ready for action." Thus Woodrow Wilson early in 1917 when a Senate filibuster killed his proposal to arm American merchant ships. The "little group of willful men" were successful only because we then had "short sessions" of Congress that had to come to an end on March 4. The check was not a catastrophe. The ships were armed under authority conferred by an old statute that had been forgotten.

In 1917 the Senate was powerless to end a debate so long as any Senator insisted on holding the floor, but debate can now be ended by a vote of two-thirds of the Senators duly chosen and sworn. It is this much debated rule XXII that the northern liberals hope to change in order to prevent southern Senators from using a filibuster to prevent the passage of drastic civil-rights legislation.

The northern liberals proposed two amendments. The first of these is that 2 days after a petition has been filed to end debate, two-thirds of the Senate present and voting may so decree. This is not very important; if such a cloture resolution were up, practically all of the Senators duly chosen and sworn would be present and vote. But the northern liberals have a further proposal; that 15 days after the filing of a petition to end debate, a majority of the entire Senate may so decree. Garrulity would still be permitted; each Senator could speak for an hour, but under such circumstances only the filibusterers would do so. Then a vote. No longer could a filibusterer interpose a veto as it is sometimes done in the past.

Such a change in the rule would, I think, be a mistake. Not so, says retiring Senator Irving M. Ives, Republican, of New York, who maintains that the principle of majority rule is at stake. It is only in the Senate of the United States, exclaims Senator CLIFFORD P. CASE, Republican, of New Jersey, that an opposition must be beaten down by physical exhaustion and where the medieval practice of trial by ordeal still survives.

With great respect to Senator IVES, the term "majority rule" is meaningless as he uses it. Does he want to amend the Constitution so that the Senate would advise and consent to the ratification of a treaty by a majority instead of a two-thirds vote? Is he uneasy because of the theoretical possibility that the minority which defeats a treaty (or a proposed constitutional amendment) might come from the 17 smallest States with a total population less than that of New York? Or that a Senate majority might be drawn from 25 States with a population of less than 29 millions? We elect Presidents not by a national popular majority or even plurality, but by counting the ballots federally; each State's presidential electors do the choosing. Fifty-one percent may be a numerical majority, but in many cases it is not the majority that our constitutional practices contemplate. Our Federal arrangements take account of what has been called "the gravity and the impact of the decision." Thus, when one great section of our country opposes a proposed decision, attention may well be paid to gravity and impact.

And when Senator CASE brands the Senate as the only legislative assembly in which verbal avoirdupois plays a role along with numbers, so what? The northern liberals have sometimes insisted on trial by ordeal. Senator PAUL H. DOUGLAS, Democrat, of Illinois, boasts that in 1954 he "spoke for 3 days against the offshore oil bill and in 1956 for 4 days against the natural gas bill. In each case, with my colleagues of the so-called liberal group, we kept the discussion going for approximately a month." Mr. DOUGLAS applauds "stunts such as Senator MORSE's record-breaking 22½-hour speech delivered without sitting down or leaving the chamber." The stunters were not attempting to prevent a vote from being taken. They simply believed that in these cases many of our colleagues were not fully acquainted with the real issues which were at stake. This is not a veto, Mr. DOUGLAS insists, but only an endeavor to educate Senators who were poorly informed. I would allow a substantial group of Senators who are well informed who come from a great section of the country, and who are united in purpose, to impose a veto unless two-thirds of their colleagues are prepared to overrule them.

BLOCKING THE STEAMROLLER

Gladstone called the Senate the most remarkable of all the inventions of modern politics, and it has remained remarkable in that, contrary to the fate of practically every other upper chamber, it has not become secondary and suffered a loss of authority either by constitutional amendment or by custom. It is the only legislative body in the world made up of representatives from commonwealths no one of which, without its consent, can be deprived of its equal representation and whose rights, even though steadily dwindling, still remain substantial. Where in other assemblies is there anything resembling our Senate's rule that its Members must not refer offensively to any State of the Union?

The filibuster is a weapon that the constitutional framers who constructed the Senate failed to anticipate but one that they would view with favor. "A dependence on the people is, no doubt, the primary control on the Government," No. 51 of "The Federalist" tells us, "but experience has taught mankind the necessity of auxiliary precautions." The framers sought to have "in the society so many separate descriptions of citizens as will render an unjust combination of the majority of the whole very improbable, if not impracticable." The filibuster is no more

than a modern auxiliary precaution against what one more than one-third of the Senators may consider an unjust combination of the majority; and I am not impressed when I am told that no other legislative body in the world allows a minority to have such a formidable weapon of defense.

With us the Executive holds office for a fixed term and never appears before the Legislature to account for his actions. Hence, it is an auxiliary precaution that there be some place in the congressional system at which a party steamroller will meet an effective barrier. The House of Representatives cannot serve this purpose. There, debate is often more severely limited and freedom of decision is more restricted than in any other legislative chamber in the world. A two-thirds majority can suspend the rules, and after 40 minutes of discussion, it can pass a measure with no opportunity to offer amendments. A special order from the Rules Committee can allocate time for debate between the majority and minority and require that the House can say only "Yes" or "No." Since the Senators number only 98 and show more qualities of prima donnas than do Representatives, they would refuse to shackle themselves as do Members of the House when they approve a special order from the Committee on Rules; Senators would insist that they be permitted to vote on amendments. But without the possibility of parliamentary obstruction—that is, filibustering—a party steamroller, driven by a President and party leaders, could on occasion move almost as ruthlessly on the Senate side as it does on the House side of the Capitol.

Thirty-odd years ago in a book called "The American Senate," which now occasionally enjoys what William James called the immortality of a footnote, I argued the case for the filibuster. I began the book during the Harding administration and finished when Coolidge was in the White House—the era of the Teapot Dome scandals. The Republican Party machine was then powerful enough to prevent any investigation by a House committee, and Republicans in the Senate were not anxious to uncover wrongdoing. The Republican leaders knew that Senator Thomas J. Walsh, of Montana, and other Democrats could hold up important business; hence they had to consent to the thoroughgoing inquiry that was demanded. As to whether the threatened filibuster that brought about this result was in the public interest, it is sufficient to remark that 3 out of 10 Cabinet members were permitted or pressed to resign, and that there were several indictments and 2 suicides.

Those desiring Federal civil-rights legislation talk a great deal about the high-handed behavior of a minority. The Southern Senators, it is charged, are able to defy not only a majority in the Senate, but a majority in the country at large. Probably a majority in the country at large is willing for more civil-rights legislation to be passed, but we must not forget that one of the main reasons the framers of the Constitution provided two Senators for each State, large or small, was precisely in order to protect the rights of sections against a majority in the country at large.

December 5, 1958, marked the twenty-fifth anniversary of an event on which the Northern liberals might pause to reflect: the end of national prohibition, which was, perhaps, in President Herbert Hoover's phrase, an experiment noble in motive but which was certainly a spectacular and disastrous failure. In 1918, when the State legislatures began to vote on the proposed prohibition amendment, saloons were illegal in approximately 90 percent of the area of the Nation, which contained nearly two-thirds of the population of the country. Temperance societies and the Anti-Saloon League (the most powerful pressure group that ever worked on Congress and State legislatures) insisted that aridity be complete. The drys marched to a battle that they won. Then they lost the war.

One concluding observation. Ours is the only major country with a two-party system where the laws that get on the Federal statute books, or that fail to get there, usually have bipartisan support and bipartisan opposition. In academic quarters one sometimes hears laments that American political parties are not "disciplined"; that their leadership is sometimes shadowy or undiscoverable, and that they do not present to the electorate clashing bodies of doctrine. But in a country as vast as the United States, with different sectional interests, a political providence has been good in seeing to it that a party majority does not pass party legislation which is opposed by a powerful and determined party minority; that on policies our parties prefer concessions to Pyrrhic victories. The filibuster is undemocratic if democracy means that anywhere, and particularly in a Federal system, any majority should be able to do what it wishes on any issue at any time. Do the northern liberals thus define democracy? Federalism was the means of forming the Nation and it remains the means of preserving it. Congress, as well as the Supreme Court, is the Federal system's manager, and a Senate filibuster, is well worthwhile if, on occasion, it prevents the congressional manager from being tyrannical.

Social Security Benefits Should Be Tailored to Current Conditions

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 19, 1959

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to include the text of an excellent editorial which appeared in the January 29 issue of the Gratiot County Herald, a weekly newspaper in my district, commenting on the social security program as well as one of the bills I recently introduced to amend the Social Security Act:

SOCIAL SECURITY BENEFITS SHOULD BE TAILORED TO CURRENT CONDITIONS

Congressman ALVIN M. BENTLEY took another look at the social security legislation he had introduced early in the present session of Congress and decided to withdraw it and substittue a bill incorporating only the second section of his original proposal.

The section which he deleted would have required all income, from whatever source, to be included in the earned income subject to limitation. The second section raised the maximum earned income of a person drawing social security benefits from $1,200 per year to $1,800.

What apparently happened was that BENTLEY felt that the social security program was primarily an insurance program, that an arbitrary and fixed retirement age was not sound or realistic and that there was a question of whether people of sound mind and body should be forced to retire from gainful employment upon reaching their 65th birthday, if they desired to avail themselves of the benefits of social security. He stated that his original bill was primarily for the purpose of focusing attention of Congress on what he believed to be inequities and unsound concepts of the present law.

In some respects we agree with him. But on the original purpose of the law, we must differ. We are in entire agreement with BENTLEY's action in withdrawing his original bill and introducing a bill which would raise the maximum amount a person could earn, while drawing social security, to $1,800.

The difference in the purchasing power of the dollar, from the date which the social security program was first adopted, to the present, would certainly justify such an advance.

Going back to the original purpose of the social security program, we must consider the conditions under which it was proposed and adopted in the thirties.

At that time unemployment was very high and, as we understand it, one of the chief purposes of social security was to take older men out of regular employment through old age benefits, in order to make room for younger men in the available jobs.

It wasn't merely a matter of setting up an insurance program as such, but was tailored to meet a very serious unemployment problem. That was the reason for limiting the amount a person could earn who had reached the age of social security eligibility. The amount he received for rents, investments, and so forth, had no bearing on his allowable earned income. Whether or not he was holding down a job and was earning more than $1,200 through this job or a combination of jobs and thus depriving others of gainful employment, was the determining factor.

We believe the same fundamental principles hold true now. In this way a person who has saved during his productive lifetime and made sound investments—in a retirement plan, in a farm, in rentable property, or in industry, is not penalized for his thrift and foresighted planning for his later years. And the present law encourages him to do just that—at least it does not discourage him from attempting to provide for his future. Such a program also enables older people to maintain a better standard of living and a higher rate of spending in their later years and thus remain a boon to the general economy of the Nation, rather than forcing upon them a marginal existence in which they might become public wards in the event of any unforeseen exigency.

On the other hand, we have never been able to justify in our minds the lifting of all restrictions on earned income when a person reaches the age of 72. Actually, there are probably few who would seek full-time employment at that age, and few of those who sought it would find it. But if the principle of encouraging men to drop out of the labor market at 65 is sound, we can see no reason for providing that they can reenter it at 72 and continue to draw social security.

In the light of the original dual purpose of the law, BENTLEY's new proposal to raise the maximum amount of allowable earned income for persons who wish to qualify for social security, takes care of the greatest weakness under present-day conditions. To remove any earned income restrictions would defeat entirely the one, and perhaps the most important objective of social security. It certainly would be a mistake under current unemployment conditions.

To prohibit any earned income would also be a mistake. In allowing a person to earn up to a set amount, less than that required for his entire support, the law recognizes that the social security program is a means of supplementing the income of those who have made some provision for their later years, and permits many to retire from the active labor market who would not be able to otherwise.

Another adjustment that may be warranted in years to come, particularly if the inflation spiral continues, is further increased benefits to retired and qualified workers.

There have already been several adjustments. Funds for such increases have come from larger payrolls and a higher taxable income. This year the taxable income was raised from $4,200 to $4,800 and the percentage of tax raised from 2¼ to 2½ percent for employees and employers. Further adjustments may be necessary in this regard; in fact, are already scheduled.

One other revision has been proposed that should receive thoughtful consideration, depending upon the effect of technological advances on the employment of available labor in the future. This is the matter of reducing the age of eligibility from the present 65.

No matter what the theoretical conclusions, some minimum age limitation seems mandatory from the practical standpoint. And if through automation, there develops what seems to be a permanent and abnormal surplus of labor, then perhaps lowering the eligible age for maximum benefits to 60 should be considered.

The Future of Junior Colleges in California

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. ULLMAN. Mr. Speaker, in an address before the California Junior College Association, Dr. Roy E. Simpson, superintendent of public instruction in the State of California, presented a strong case for the expansion of public junior community colleges.

I think anyone interested in the future development of American education will find Dr. Simpson's remarks of great value. Consequently, I commend it to my colleagues for their careful consideration.

The address follows:

THE FUTURE OF JUNIOR COLLEGES IN CALIFORNIA

(By Dr. Roy E. Simpson)

In the next few minutes I wish to discuss with you something about the importance of public junior colleges for higher education in California, their contributions to vocational education, and the record of success of junior college graduates who continue their schooling at the University of California. Throughout the Nation the public junior colleges of California have long been notable for the size of their student bodies, the range of their offerings in both terminal and preprofessional fields, the competence of their professional staffs, and the facilities for instruction provided by the districts which maintain them. Like all institutions of higher learning, the junior colleges are facing shortages of instructors, overcrowded classes, and difficulties in providing equipment and facilities for their laboratories, libraries, and shops.

The Liaison Committee of the Regents of the University of California and the State board of education has before it the recommendation for consideration for submission to its parent bodies that priorities for the establishment of any additional campuses of the university or State colleges should be predicated on the assumption that adequate junior college facilities have first been provided. Personally, I am heartily in favor of such a policy. Junior colleges are not engaged in competition with State colleges or branches of the university, but are an indispensable foundation for higher education in California. Already the public junior colleges are caring for three-fifths of all lower division students in California with the remainder distributed among the 4-year institutions as follows: on the campuses of the University of California, one-ninth; among the State colleges, one-eighth; and in all the private colleges and universities, one-sixth. Within the decade we are now considering the total number of high school graduates will double the 100,000 we had in June of this year. Since neither the State colleges nor the university considers expansion of their facilities to accommodate such tremendous increases in lower division students the responsibilities of junior colleges become evident. More State resources must be appropriated for facilities for urgently needed upper division and graduate studies as well as for local districts. The local districts must continue to assume a large proportion of responsibility for providing education in grades 13 and 14.

The need for junior colleges to serve densely populated areas where junior colleges have not been established can easily be demonstrated. Alameda County, for example, has only the junior college in Oakland immediately in the area although junior colleges are available in adjacent Contra Costa, San Francisco, San Mateo, and Santa Clara Counties together with the University of California at Berkeley and San Francisco State College. Only 42 percent of Alameda's high school graduates were continuing their education last year. Of these, 10 percent enrolled at the university; 8 percent at State colleges; almost 20 percent in junior colleges; and not quite 5 percent at private institutions.

By comparison, Orange County has three junior colleges and although it is more removed from the University of California at Los Angeles and slightly less so from the State colleges at Long Beach and Los Angeles, 54 percent of its high school graduates continued education in 1955–56. The distribution was 3 percent to the university; 4 percent to State colleges; 7 percent to private institutions; and 40 percent to junior colleges. It is clear that the doorways to opportunity for high school graduates to obtain a college education consist in large measure of the available junior colleges in proximity to their homes. Even in Fresno County where the State college is the single higher institution of prominence in the area the percentage of the county's high school graduates attending State college (18 percent) exceeds by only 1 percent enrollments in junior college (17 percent).

If opportunity for education beyond the high school is to become a reality in California, junior colleges must be established in such populous areas as presently lack them. Among these may be listed two centers in Alameda County: Berkeley and the Hayward-San Leandro Districts. Nearby are the Palo Alto and Sequoia areas which San Jose and San Mateo Junior Colleges have no facilities to serve. In Los Angeles County a tier of districts lying between Citrus, Mount San Antonio, Compton, Pasadena, and Los Angeles junior college districts denies junior college opportunities to high-school graduates from Arcadia, Monrovia, Alhambra, El Monte, Montebello, Whittier, and Downey. In San Diego County the Grossmont-Sweetwater area needs a junior college. And the Merced-Madera and Palm Springs-Coachella Valley regions likewise have no junior college readily available to their graduates.

The lack of junior college services in several of these regions is in no sense due to the indifference of the people to the advantages which would accrue from the establishment of junior colleges. The plain fact is that the initial capital outlay required for junior college facilities frequently is beyond the limited assessed wealth of many populous districts to provide. It will be to the interest of the State to assist in some way, perhaps through matching funds, such districts of restricted resources to acquire the means for offering junior college education. I have urged that such a change in the laws be made. Once a district has developed the facilities originally required, it can enlarge these through its own financial efforts and with the usual State apportionment for average daily attendance units continue to support instruction by the district's ordinary rates of taxation.

In this connection must be noted the service junior colleges provide in the fields of vocational education. Graduates of 2-year curricula who are thus made ready for immediate employment in general settle down in the area and become contributors to its annual earnings and assessed wealth. Training for employment is considered a part of the community services rendered by a junior college—its alumni who find work in the vicinity and make their homes nearby help to upbuild and develop the community served by the junior college. While students who transfer to 4-year institutions for professional education often fail to return to their home communities, the so-called terminal students continue to be assets to the junior college districts.

Special commendation is due the junior colleges for their pioneering efforts in work experience programs to give reality to vocational education. Through work experience students learn what employment demands of them not only in skills but in attitude and ability to concentrate upon continuous output over the entire working day. In April, 1954, members of the Los Angeles Association of Merchants and Manufacturers assessed the value of junior college trainees in their employ as follows:

Better prepared for jobs at which employed, 71 percent.

Better adjusted at outset for beginning jobs, 61 percent.

Positive advantages in securing promotion, 61 percent.

The vocational program of the junior college is more expensive than the straight academic programs. It is my feeling that the real strength of the junior college program lies with an expanded vocational program. If the costs are great, we must in some way provide funds for the expansion of the vocational program. We must not let the dollar control our educational effectiveness.

THE SUCCESS OF JUNIOR COLLEGE TRANSFERS TO CAMPUSES OF THE UNIVERSITY OF CALIFORNIA

Over the 5-year period, 1951–55, the junior colleges graduated more than 50,000 students of whom almost a quarter (24.51 percent) transferred to the University of California at Berkeley, Davis, Los Angeles, Riverside, or Santa Barbara. A study of the performance of junior college transfers entering the junior year at Berkeley in the fall of 1951 has been prepared by the office of relations with schools. Comparison was made between the persistence and achievement of junior college transfers and native students likewise entering the junior year in 1951. Junior college transfers who at the time they enrolled in junior college would have been eligible for admission to the University of California completed their fourth or senior year at Berkeley in the same proportion (77.9 percent) as students who had in 1951 entered the university as freshmen. They even had a slightly higher grade-point average overall (1.80 as compared with 1.73 for native students). Clearly the junior colleges as a whole provide satisfactory preparation for upper division studies and do as good a job as the university in the instance of students

whose high school preparation met university requirements for admission.

The study also gives parallel percentages for junior college transfers who originally could not have obtained admission to the university on the basis of their high school subjects and marks. For this group the figures show that the junior colleges also have done a competent job of salvaging and rehabilitating many of them to achieve well at the university. Five-sixths of these students originally ineligible for university admission upon transfer from junior college completed their senior year in the normal time. Their over-all grade-point average was 1.59, well below that of both native students and their fellow-transfers whose high school record had been sufficient to have warranted university admission in the first place. Nevertheless they were able to graduate from the university. Again, the junior colleges demonstrate that they do a capable and significant job of salvaging the late-maturing students. We must continue our efforts to more clearly define this relationship with the university to avoid confusion concerning acceptable transfer courses.

To sum up, the people of California have authorized three kinds of higher institutions to assure the education of their youth. The university and State colleges are charged to provide professional and occupational education, to conduct research and to encourage the pursuit of advanced studies. The numerous junior colleges are primarily and always centers of instructtion in which the great teacher finds scope for his genius and recognition of his capabilities in direction of learning.

A junior college is a local institution. It is responsive to community needs. The State assists in its support but imposses no restrictions to the variety of offerings for grades 13 and 14. These are limited in range only by employment opportunities and the aspirations and abilities of its students, and may be as rich as the financial resources of its district can afford. The governing board of the junior college district has original and financial authority to conduct the institution in such fashion as the electorate approve. A junior college operates to advance students in their post high school studies, to guide them into wise choices of vocations, and to build a firm foundation for lifelong learning in their chosen careers. Just as the 4-year institutions seek to attract scholars to explore the frontiers of knowledge, so junior colleges are centers of learning, intimately concerned for the communities which they serve but mindful of the issues confronting the Nation and holding fast to the enduring ideals humankind has found good.

CONCLUSIONS

The policy of the State Department of Education stated in other words recognizes and supports:

1. The uniqueness of the junior college. It is both a vertical and a horizontal relationship as it relates to secondary and college education.

2. That every high school should eventually be in a junior college district. Our laws should be so written to make that possible and effective.

3. That junior colleges should be established in a community before future state colleges or university branches are established.

4. That funds for capital outlay should be provided for qualifying junior college districts.

5. A bureau in the State Department of Education devoting full time to junior college problems.

6. An increase in financial support for apportionment purposes.

Finally, I want to express appreciation to your present officers for the very fine relationship that they have created with our department. Your State Department is anxious, ready, and willing to serve you. We want to work with you individually and as an association. Your very legal structure gives you the opportunity to continue to do great work for your communities. It is thrugh this community interest that your students develop and your junior colleges improve. These are not idle words. We in the State office believe in you. May that confidence be reflected in all that we say and do together.

Secretary of State John Foster Dulles: A Man of Great Character and Courage

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. LANE, Mr. Speaker, the Communists do not like John Foster Dulles.

That is the highest accolade that any man of the free world can earn.

For it proves that our Secretary of State is never confused, or intimidated, or taken in by the devious twists and turns of communism.

In the person of John Foster Dulles, communism is opposed by a man who never loses sight of the fact that genuine peace must be built on the twin foundations of freedom and justice.

His profound faith in the dignity of man speaks for the whole western world, and for the unsatisfied longings of the submerged human beings in Russia and China and elsewhere who look forward to the day of their liberation.

Our Secretary of State has given his mind and heart and spirit to this cause with a devotion that has seldom been equaled in history.

We admire Mr. Dulles; we need him; and we pray to God for his complete recovery.

I would like to add the following tribute to the thousands that are coming in. I ask unanimous consent to insert in the RECORD the following article by James H. Powers from the February 15 issue of the Boston Sunday Globe:

HE HAS WORLD'S TOUGHEST JOB—DULLES' ILLNESS THROWS SPOTLIGHT ON HIS TIRELESS LABORS TO CARRY OUT FOREIGN POLICIES AS PROBLEMS OF AMERICA MOUNT IN WORLD AT FLUX

(By James H. Powers)

The indefinite withdrawal of Secretary of State John Foster Dulles from active direction of the Nation's foreign policy has jolted official Washington more severely than any event since President Eisenhower underwent surgery in June 1956. It has also thrown the spotlight again upon what has been called the most difficult job in the world, that of charting course for the United States and her allies through one of the most hazardous periods in the annals of the West.

Mr. Dulles' hope to resume eventually his tasks will find echo among his fellow countrymen, whether critics or friends. Few occupants of his office have labored more tirelessly; none with greater self-dedication. Since the Organic Act of 1789 set up the Department of State, only four of his predecessors in that office have held the post longer: James Madison, John Quincy Adams, Hamilton Fish, and Cordell Hull, whose 13-year tenure set an alltime record.

TASK ALMOST IMPOSSIBLE

In this position many legendary figures in this history of the Republic either crowned careers or found a steppingstone to higher honors. For John Marshall, it was a way station to the Chief Justiceship of the United States. For Jefferson, Madison, John Quincy Adams, Martin Van Buren, and James Buchanan, it was preparation for the Presidency.

Talleyrand's unforgotten quip that "politics is the art of the possible," needs amendment when applied to the two highly political tasks confronting a Secretary of State at Washington: Direction of foreign policy under the President, and getting along with Congress. That is an assignment to exercise the art of the almost impossible, as Mr. Dulles and many a predecessor in his office have discovered.

Especially is this true when, as today, the powerful influence of the Presidency in shaping foreign policy is attenuated, whether because the incumbent in the White House is unfamiliar with the intricacies of foreign affairs, or because of his philosophy of government. Some Presidents, Grant for instance, frankly abandoned a task temperamentally uncongenial, merely invoking Executive power at appropriate times to sustain decisions made by the Secretary of State.

AUTHORITY PRESIDENT'S

That caused Grant little trouble because he happened to have an exceedingly able foreign policy director in Hamilton Fish. For other Chief Executives, the experiment unleashed many a sea of trouble. Especially in Congress. The storms swirling around Mr. Dulles on Capitol Hill, these past 6 years, are thus not without precedent. His immediate predecessor also faced them—with Mr. Dulles among the critics.

Strong Presidents, from Washington down, have jealously maintained the constitutional prerogatives of their office in relations with their Secretaries of State. Authority and responsibility for the Nation's foreign policy is, of course, actually theirs alone.

Jefferson bypassed his Secretary in deciding upon the Louisiana Purchase. Tyler conducted his own campaign to bring Texas into the Union. McKinley overrode a protesting John Hay to annex Hawaii. Yet the Secretary of State, whether left to do the real homework in foreign policy, reduced to the role of a mere subordinate, like Van Buren, or functioning in close harmony with a like-minded President expert and alert in foreign policy matters (like Madison under Jefferson) remains first among the select in the President's official family.

BURDENS OF OFFICE MOUNT

The burdens of the Secretary have multiplied fabulously since Jefferson inaugurated the long succession at the Department of State with a budget of $6,500 to pay for its operations. Today a Secretary of State rules over a small empire numbering close to 18,000 persons and reaching to the far corners of the globe, with a budget approximating $130 million.

He occupies the chair at the President's right hand at every Cabinet meeting, has precedence over all other Cabinet members at official functions, is the most intimate adviser to a Chief Executive, and has almost as much influence in the broad appropirations picture as the Secretary of the Treasury, owing to the range of his policy domain.

FUNCTIONS MULTIPLY

Though many functions originally assigned to the Department of State have long since been shifted to other Federal organs—responsibility for the census, for patents, for copyrights, and pardons—this country's world influence and its leadership role among the

free nations have multiplied new and more onerous duties for State. Inevtiably, the change has also multiplied Monday morning quarterbacks, in and out of Congress. That is an essential feature in the democartic process.

Mr. Dulles' strength and weakness lie in this: As troubleshooter extraordinary in foreign policy, his mistakes reverberate; his successes, in the nature of things, can be but temporary in a world at flux.

Sister M. Madeleva of Saint Mary's

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. BRADEMAS. Mr. Speaker, Sister M. Madeleva, C.S.C., is one of the most remarkable citizens of Indiana. She is a poet and a college president, a Catholic sister and a person of lively wit and humor.

For the last 25 years Sister Madeleva has been president of Saint Mary's College, Notre Dame, Ind., an outstanding college for Catholic women. Before coming to Congress, I had the great pleasure of serving on the faculty of Saint Mary's College in the department of political science. I came to know Sister Madeleva and to join her band of admirers throughout our country.

This week Sister Madeleva has published her autobiography entitled, "My First 70 Years," in which she describes her remarkable career. I am sure that many persons will be interested in reading the story of this noble and gifted sister. I should therefore like to include in the CONGRESSIONAL RECORD an excellent article by Walton R. Collins of the South Bend Tribune concerning Sister Madeleva and her new book.

SISTER MADELEVA CITES DREAMS, WORK

(By Walton R. Collins)

"I came to St. Mary's College (as president) at the all-low ebb of the depression, 1934.

"I found myself responsible for a school 90 years old, a great heritage, a magnificent campus, potentials in faculty and students to dream of and work with. The best qualifications I brought to my office were these: my ability to dream, my capacities to work."

So, nearly a quarter century of dreaming and working later, writes Sister M. Madeleva, C.S.C. in a slim, highly readable autobiography published by the MacMillan Co., New York.

Briskly titled "My First 70 Years," the book races through the nun's full and enormously varied life by means of vignettes and rough sketches which add up to a series of distinct impressions. Among them are Sister Madeleva's indefatigable energy, her enormous faith, her generous endowment of common sense and a God-given sense of humor which she is capable of turning upon herself.

The nun followed a curious and often exciting path to the offices she now occupies at the college for women located north of the city limits of South Bend.

STARTS IN WISCONSIN

The path started in the island city of Cumberland, Wis., in 1887, with the birth of Mary Evaline Wolff. It led through a girlhood marked by a joy in nature and the tentative unfoldings of a restless intellectual curiosity. It led to the mental and spiritual blossoming of college days, first at the University of Wisconsin and then at St. Mary's College, Notre Dame.

It reached a first plateau when Mary Evaline Wolff decided to take the habit of a Sister of the Holy Cross, and entered the order's novitiate on the St. Mary's campus.

Life's tempo picked up speed for Sister Madeleva. There were new degrees (master of arts at Notre Dame, doctor of philosophy at the University of California in Berkeley, and graduate study at Oxford University in England) and new jobs.

The jobs were teaching at Sacred Heart Academy in Ogden, Utah, where the student body was predominantly of the Mormon faith; teaching at St. Mary's College, Notre Dame; the presidency of the College of St. Mary's-of-the-Wasatch in Salt Lake City, and eventually the presidency of the college off U.S. 31 north.

TRIUMPHS, DEFEATS

There were also triumphs, defeats, and friendships, but this book concentrates on the friendships. Sister Madeleva at times sounds like a name-dropper as she recounts her contacts with the great and near-great in this country and abroad. She is not, of course.

Among those whose associations she obviously treasures are Father James Keller, Bernard DeVoto, Joyce Kilmer, Phyllis McGinley, Robert Hugh Benson, Edna St. Vincent Millay, C. S. Lewis, Sigrid Undset, and Evelyn Waugh. There are many more.

In this book, the poet-nun wisely shies away, for the most part, from attempts at detailed introspection into the motives and philosophies that have shaped her life. Such introspections, interesting as they might be, would be out of place in the fast-moving account of people, places, and events in "My First 70 Years."

There are, however, some hints. Typifying the love of nature she alludes to throughout the book is this passage: "I rushed into the Pacific for the first time, breathlessly confident that I could hold the entire ocean and it could hold me, each in the other's arms."

Her self-directed sense of humor (and her faith) comes out in this recollection:

"On the eve and the day of my first holy communion, I surprised my parents with the only signs of asceticism they ever saw in me. Like most good German families we always ended our day with our glass of beer. This evening I walked quietly over to my father and mother to kiss them good night. 'But you haven't taken your nightcap,' said my father in surprise, 'I don't think I care for any,' I said lamely. Mother helped me out. 'Let her alone,' she said, 'if she wants to do this.'"

The same lively humor crops up later when Sister Madeleva describes her first days as president of St. Mary's. She sets the stage by reporting a conversation she once overheard on a Great Lakes boat:

"Wife: Who runs this boat?
"Husband: The captain.
"Wife: What does he do?
"Husband: Nothing.
"Wife: Oh, but he must do something.
"Husband: No, he doesn't. He doesn't do a thing.
"Wife: Who does the work?
"Husband: The crew.
"Wife (still unconvinced): Well, I suppose there has to be someone to take the blame for things."

THIS IS MY STORY

Adds Sister Madeleva, "This is my story for the past 25 years—taking the blame for things."

Along with the blame comes the credit, of course, and the St. Mary's president's outline of her career lists more than is praiseworthy than blameworthy. She tells of the building of the college's new science hall and of its Moreau Hall fine arts center, a project obviously close to the nun's heart.

She tells of her educational aims and the trailbreaking decision to put theology in the center of the educational system at St. Mary's.

She reveals her personal courage in writing poems which she offered first to secular publications, to prove that a Catholic and a sister could write well enough for acceptance by the secular press and also because "I resolved not to permit mediocrity in my writing to be attributed to my religion."

RELIGION IS VITAL

Her religion, nevertheless, is a vital and basic part of Sister Madeleva's existence, and she doesn't have to say so in as many words. It is obvious in almost every paragraph of the book.

South Bend area readers will especially enjoy the autobiography's references to the two educational institutions, St. Mary's and Notre Dame, and that are the city's neighbors. Local people and events pop up regularly in the narrative.

Admirers and former students of Sister Madeleva and her work will enjoy the chatty reiminiscences and personal relations of the human being they have known.

Not even the casual reader will be disappointed in "My First 70 Years." Apart from all other considerations, Sister Madeleva's life is excellent material for an autobiography.

John Foster Dulles

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. ARENDS. Mr. Speaker, John Foster Dulles has the prayers of all of us. As I ofttimes have said, he has proven to be one of the greatest Secretaries of State this Nation have ever had. His knowledge of foreign affairs is unexceled by anyone, and, with unequaled courage, he has applied that knowledge for the maintenance of peace in the world and the advancement of freedom.

An editorial which appeared in the Minonk News-Dispatch, which is published in my district, expresses my sentiments, and I am sure the majority of the people of my district, with respect to this truly great American.

The editorial follows:

JOHN FOSTER DULLES

Too often we wait until a man has passed on to extoll his virtues and what he has done for his country and humanity. If there has been a public figure in our country during the past 50 years who has so unselfishly devoted himself to his country, it is John Foster Dulles, Secretary of State.

Here is a man up in his seventies devoting practically every hour of his time trying to get peace established in the world. His salary of $25,000 is about one-tenth of what he could make in his leisurely private law practice in New York City.

He has no political ambitions, and, to the detriment of his health—he has had two major surgical operations within the past 2 years—has traveled all over the world trying to get things settled. What success he has had remains to be seen, but at least we have been kept out of a shooting war for the

past 6 years. He has cemented closer relations with Britain, France, and West Germany to deter further aggressions by the Soviets.

There are few others who have given so much of their energy, time, and finances to try to help our country. He deserves much praise and commendation from the people of this country for his untiring efforts. He doubtless has made some mistakes in judgment, but they are few compared to what he has accomplished. He deserves the thanks of our Nation.

President Frondizi's Visit

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. HALPERN. Mr. Speaker, we have witnessed in the first month of 1959 a friendly and good will conquest of the United States by the scholar-statesman President of Argentina, Dr. Arturo Frondizi. Next month the Chief Executives of Eire and El Salvador visit Washington and other great cities of our Nation. These visits are far more important than mere junkets; they present to America the image of our allies and they present to our allies a proper image of the United States.

There were many special aspects of the visit of President Frondizi; first, he came in the wake of the publicized tour of Soviet Russia's Mikoyan, who tried to sell us on comradeship with the Communists. As the head of International Packers in Chicago, A. Thomas Taylor, said in introducing President Frondizi:

> We prefer the spirit of partnership offered by Argentina to the spirit of comradeship offered by Russia.

During his 10 conference-filled days in 10 cities, President Frondizi dispelled any lingering doubts in the minds of American business and industrial interests that we have anything to fear in the partnership he offers our investors in the development of the enormous resources of his country. As DeGaulle has done in France, as Britain's belt-tightening did after the war, so has Frondizi's austerity program impressed all of us with his dedicated determination to solve the economic problems of his country with a courageous disregard for the normal political perils.

Further, a group of 25 Argentine business and industrial leaders have come here to visit their counterparts in America, and they have candidly explained that most of them were opposed to Dr. Frondizi in his elections which made him President, but his courage since inauguration has so impressed them that they now find themselves in full support of his efforts to strengthen the economy of their country. Theirs is eloquent testimony to the Frondizi leadership.

All of this is of the utmost importance to our country, because we know the many shrewd moves of Soviet Russia to infiltrate not only the culture and government of countries in the Western Hemisphere, but also their economy. For a time, following the angry outbursts against us throughout Latin America at the time of Vice President NIXON'S trip to South America, we were shocked and shamed by the obvious weaknesses in our relations with our onetime good neighbors. President Frondizi has reassured us that at least in the southernmost anchorage of the hemisphere, we have strong and good friends who are eager to be partners with us.

Certainly, in this connection, the work of the State Department's Division of Protocol, under Wiley Buchanan and his Deputy Chief, Clem Conger, is to be highly commended. And, also, in passing, I would like to note another role in this fine presentation of a clear image of Argentina to the United States. I refer to the splendid public relations in the handling of the informational task of the Frondizi trip. I understand this was handled through Tex McCrary's public relations firm. He and his associate, Jerry Finkelstein, are to be commended for performing a valuable service to this country when they make available to the U.S. press quickly and concisely, all the necessary background information on the Government they represent.

We all know our failing as a nation to think of other nations in terms of individual images—nearly 400 million people of India are symbolized in Premier Nehru; France was almost anonymous until De Gaulle; England is the Royal Family and Sir Winston Churchill; and unfortunately, a few dictators have cast their shadows across the image of the whole of Latin America: Perón, Batista, Pérez-Jiménez, and still Trujillo. But now there is emerging a new image of Latin America: In El Salvador, José María Lemus; in Chile, Jorge Allessandri; in Mexico, Adolfo Lopez Mateos; in Venezuela, Romulo Betancourt.

And clearest image of all, reminiscent of our own Woodrow Wilson, is Frondizi of Argentina, who has in 10 days almost wiped out the memory of Perón. Of Dr. Frondizi it can be truly said: "He came, we saw, he conquered." This is a healthy victory for international public relations.

A Discouraging Sight

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. ADAIR. Mr. Speaker, it is important, I think, to know what responsible newspaper editors throughout the country are saying about the visit of Soviet Deputy Premier Anastas Mikoyan. Illustrative of such is an editorial from the Kendallville News-Sun which I include herewith. It brings to our minds again the caution which must be exercised in dealing with the Russian Communists.

A DISCOURAGING SIGHT

You can't expose a man to television cameras for a solid hour, as we did Soviet Deputy Premier Anastas Mikoyan, without learning a good deal about him. And what Americans saw and heard can hardly be a cause for cheering, or even modest hopes.

The real news was not what he said about Berlin, or Germany, or the cold war. It was the disheartening revelation of the Russian Communist pattern of thinking.

Magnified under the glare of TV closeups, this was a genuine shock. Terribly clear now is the fact that we are not just poles apart from the Soviet Union, but are traveling in totally different thinking orbits.

Mikoyan answered almost no question directly in his appearance on NBC's "Meet the Press." But it misses the point simply to say he ducked and dodged.

He offered answers which may seem perfectly valid to Russian Reds. By the Kremlin's accepted standard of double-think—turning facts upside down, giving them any meaning that suits purpose—it made sense to say we are at fault everywhere and Russia nowhere, not even in repressed Hungary.

Watching Mikoyan at work on TV you get the idea, however, that something more than double-think is involved. He seemed to turn almost instinctively from straight dealing on any topic—except thank you and goodby.

One could not help but be reminded here of documented diplomatic accounts of Russian diplomacy in the 19th century, long before the Communists gained power.

Western diplomats then were in wide agreement that Russian diplomats regarded lying, duplicity, broken promises, and all the other devices of distrust as the vital tools of their trade. The Russians were notorious throughout Europe as being totally untrustworthy.

No one imagines the Communists have any respect for truth. But in their formal practice of deception as the rule of life, they appear only to be compounding a duplicity already firmly fixed in the character of Russian Government.

As a Russian and a Communist, Mikoyan did not let tradition down.

He left us with the big question: How do you negotiate reasonably with men who believe that because they lie to gain their ends, everyone else must surely lie, too?

Three Kentucky Heroes

EXTENSION OF REMARKS
OF
HON. FRANK W. BURKE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. BURKE. Mr. Speaker, we have within the past week paid grateful and loving tribute to the memory of one of Kentucky's most heroic sons, Abraham Lincoln. It is altogether fitting and proper that we do this.

I believe, however, that in the frantic world of 1959 we tend to forget that heroes walk the earth, sail the seas and, yes, fly through the sky today.

Just as we approached the 150th anniversary of Lincoln's birth, all Americans were stunned into mute, fist-clenching righteous anger by the disclosure by the

State Department of the villainous assault by Soviet fighter aircraft upon an unarmed American Air Force transport plane last September. I shall not dwell upon the depths of infamy implicit in that base and cowardly crime.

Two of the members of the crew of the ravaged American transport plane were Kentuckians. These two young men are among those whose fate remains unknown. Sgt. Leroy Price was a native of Larue County, Ky.—of the very same neighborhood where Abraham Lincoln was born. Airman Joe L. Fields was a native of Cynthiana, in the beautiful bluegrass country.

As Lincoln was shot from the back by a mad assasin, so were the 17 crew members of the American transport plane shot from the back by mad assasins who gloated over their base crime.

As we paid tribute to Lincoln let us also honor these heroic airmen whose fate is unknown, but whose heroic devotion to duty is unquestioned.

Mr. Speaker, in the Louisville Courier-Journal of February 16, an article, datelined Hodgenville, Ky.—Lincoln's birthplace—depicts with simple eloquence the plight of the family of Sergeant Price. There are 16 other American families similarly injured. I insert that article at this point, and ask all to join with me in fervent prayer that the 11 members of this crew who are missing may soon be returned alive and well to their homes and their loved ones.

LARUE PARENTS FIGHT GRAY DESPAIR WHILE AWAITING WORD OF SON'S FATE

(By Alan Levy)

HODGENVILLE, KY.—The father works alone in his fields of corn and tobacco.

The mother irons when she wants to forget and tunes into every newscast when she remembers, which is nearly always.

Thus time trudges past for the parents of Air Force Sgt. Leroy Price, who may be alive or dead in Russia or may have been buried recently in Arlington National Cemetery.

Sergeant Price, 29, and another Kentuckian, Airman Joe L. Fields, of Cynthiana, were in an unarmed Air Force transport plane that was downed over Russia last September. The United States claims the craft was shot down by Soviet fighters.

The fate of 11 of the 17 crew members is still uncertain. Six bodies were returned by the Russians, but two of them were unidentifiable. Neither of the Kentuckians was among the four identified.

COLD WAR HAS BECOME A REALITY

"Sometimes I try to have hopes," said Price's thin-lipped, gray-haired mother as she skimmed her iron across a wet blouse. "But when I get to thinking, there really isn't much hope. If we only knew who those two were that they buried."

The missing sergeant's 52-year-old parents, Mr. and Mrs. Horace Price, live on their 194-acre farm in an isolated section of LaRue County, about 7 miles southeast of Hodgenville. They have no telephone, but they do have television.

"We used to watch a quiz show and all the cowboys," said the tall father in blue coveralls. "Now my wife seldom misses a news program."

The mother tried to express her mystification over the cold war. The continuing crisis once seemed remote to the rural couple.

TAPE RECORDING DIMMED HOPES

"Used to be we'd hear the local news, the farm news, or something," she said. "We'd listen to other news programs with half an ear, in case they mentioned the name of someone we knew.

"Now we listen for Leroy's name. The Air Force keeps us posted, but I listen in anyway just in case someone may have another scrap of information."

The case reappeared in the headlines recently when the State Department played a recording of voices that were identified as those of Soviet pilots sending Sergeant Price's plane into its death plunge.

"That tape made me lose hope," said the father.

"Seems like they're hardhearted people. They must know something. Eleven boys are over there dead or alive one."

The father clenched his hands and sat erect in a suddenly stilled rocking chair.

"You don't know nothing. You can't do nothing," he growled. "I say one minute I'm going to do something and then I say not. I get all sorts of ideas. I start thinking maybe they're not doing enough in Washington and I'll go look for him myself."

He relaxed limply in the chair.

"I wish I had some education so I'd know where to look and how."

The missing son was a 1948 graduate of Hart Memorial High School. He farmed with his father in Hart County for 2 years, then joined the Air Force and became a flight engineer.

WIFE AND TWO SONS LIVE IN TEXAS

Leroy married while in service and has two sons—Mike, 3, and Randy, 4—who reside with his wife, Marian, in Dallas.

"He was due out of the service in 1960," the father said. "He told me he wanted to come back here, rest a while, and then go back to farming. Maybe I'd be able to buy a farm for them."

The new uncertainty of this future dream is an ordeal for both parents. They have another married son. A daughter—Phyllis Jane, 14—died 3 years ago after a long illness.

"We sat by her bedside for 11 months," the father recalled. "When she went, we knew she was going and we knew where she'd went. But this with Leroy * * * it's all uncalled for."

When Leroy's 29th birthday neared recently, his mother did what she always does. She addressed a birthday card to him.

"Then I remembered that this time I didn't have any address for him," she said sadly.

The Constructive Negative

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. HIESTAND. Mr. Speaker, the following editorial appeared in the Richmond, Va., Times-Dispatch on February 15, 1959, and was written, I presume, by the distinguished Pulitzer Prize winning editor of that fine newspaper, Mr. Virginius Dabney. In this Congress, when so many Members must in good conscience vote against much of the legislation that comes to the floor of the House, this editorial is both timely and reassuring.

STRAUSS' CONSTRUCTIVE NEGATIVE

Long speeches are not remembered, except for an occasional highlight—a brief phrase that sums up the gist.

In reading over the speech delivered last Wednesday by Secretary of Commerce Lewis L. Strauss, we came across one such happy phrase.

The speech was about the evils of inflation, and its misguided advocates in Congress. We have read many such speeches and have ourselves published a few thousand words on the subject.

Nevertheless, we keep reading, or at least glancing through, reams of mimeographed copy, hoping to find some nugget of logic, which, repeated in print, might bring home the need of resistance to inflationary deficit spending and price-inflationary wage boosts.

We found one in Secretary Strauss' speech—a two-word phrase which expresses precisely why conservative Congressman must vote against, and why the President must veto, all nonessential spending. Said Mr. Strauss:

The word "no," used as a restraint on Government, appears in the original seven articles of the Constitution 26 times, and five times in the Bill of Rights. The Founding Fathers quite evidently had respect for the constructive negative.

We need to us it now—as a stoplight on those pressure groups whose fascination for deficit spending, unnecessary programs and government competition with private industry would scuttle prosperity, stunt economic growth and expose us to the disease of inflation.

The key phrase, of course, is "the constructive negative." This is the opposite of saying "no" because of a lack of intelligent concern for defense programs or other essential projects.

We commend Mr. Strauss' phrase to Congress. It expresses conservatism-at-its-best. It tells why we must oppose all deficit spending. Such spending would impose either more burdensome taxes, or a debt which a credit-depleted government would have to finance with inflated, printing-press dollars.

Davis Lee: Negro Editor States Case for Segregation

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. HUDDLESTON. Mr. Speaker, a few days ago Negro newspaper editor Davis Lee, who publishes a number of newspapers in New Jersey and other States of the Union, made a speech in an Anderson, S.C., church on the very pressing and serious integration-segregation controversy. This prominent newspaper editor struck out at those members of the Negro race who are causing the critical deterioration of race relations in the South by continuing to push for complete and absolute integration in the school systems in that section of the country. Lee's speech and a followup editorial which he wrote for publication in the Anderson Herald, a weekly newspaper he operates in Anderson, S.C., have received very favorable comments in the press throughout the South.

It is my privilege to insert in the Appendix of the CONGRESSIONAL RECORD a copy of an editorial which appeared in one of our weekly newspapers published in Birmingham, Ala. I commend this editorial for the careful reading of all

Members of Congress who really stand for justice for our Negro citizens.

DAVIS LEE: NEGRO EDITOR HITS INTEGRATIONISTS

Davis Lee, Negro newspaper editor, who publishes a number of newspapers in New Jersey and other States, is still trying to pound sense into the heads of members of his race by his forthright editorials against integration. In a speech in an Anderson, S.C., church and in an editorial in a paper he publishes there, he is quoted as saying:

"The liberals who are frothing at the mouth and shedding crocodile tears over the plight of the poor Negro in the South, will gladly offer him integration, but won't give him a job or provide his family with clothing or bread.

"Southerners won't want him to have integration, but they will gladly give him a job, and help him to clothe and feed his family.

"The liberals will open their schools to Negro children, but they won't hire many Negro teachers.

"The South will give the Negro his own school manned by teachers of his race, and all this without cost.

"There are forms of segregation that are degrading and humiliating, but to have one's own school and teachers is not one of them. Giving the Negro his own school and teachers is more in keeping with that concept of freedom, just and equal opportunity that the Founding Fathers had in mind than an integrated system of education."

Other excerpts include:

"In no section of the country does the Negro enjoy the educational, employment, and economic opportunities which he enjoys in the South.

"There are more Negro carpenters, bricklayers, and building contractors in North and South Carolina than there are in the 33 integrated States.

"Negroes cannot eat integration. They need jobs and opportunities to develop their talents, skills, and abilities in fields of their own choosing. The South is the only section in this Nation that offers such opportunities.

"If these liberals and agitators are the Negro's friend and southern whites are his enemies, then someone needs to protect him from his friends."

No doubt Lee speaks for a large number of southern Negroes. Unfortunately not enough of them are speaking out as Lee does against the so-called minority Negro leadership.

Airports and Philosophy

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. SPRINGER. Mr. Speaker, I append herewith an editorial from the Washington Daily News of Wednesday, February 18, with reference to a bill which will come to the floor sometime soon with reference to the philosophy with reference to appropriations for airports. The question will arise this year as to whether we, the Federal Government, are going to be responsible for safety facilities such as control towers, airways guides, weather information and other safety factors—or whether we shall continue to accept the responsibility for building air terminals, baggage and passenger facilities which are largely local and have nothing to do with safety:

AIRPORTS AND PHILOSOPHY

In the dispute between the Eisenhower administration and a subsidy-minded bloc in Congress over Federal appropriations for local airports, E. R. Quesada, the Federal Aviation Administrator, says the issue is philosophy, a way of government, and not just the money.

Airports and airport buildings, he argues, are community problems, so the communities should pick up the tab. Only the Federal Government can handle the safety facilities—control towers, airways guides, weather information. And it has it hands full with these.

But the philosophy involves money—the taxpayers' money. And when Washington takes the taxpayers' money and doles it back for local airport building, a big gob of it gets lost on the way. The cost to the taxpayers goes up.

General Quesada may argue philosophically with the subsidizers in Congress, but if he loses the battle, the taxpayers will pick up the tab, whether they want it or not.

Airports make money and can pay their own way. The U.S. Treasury is having trouble borrowing enough to meet expenses.

We hope General Quesada's arguments, philosophic or otherwise, are effective enough to block this handout. Because it's our money he's philosophizing about.

Federal Spending

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. HENDERSON. Mr. Speaker, again this year, the battle of the budget is about to be joined. Basic in this battle are the contending philosophies of enlarging the Federal role in our daily affairs as opposed to checking the expansion of Federal activities.

One cannot fairly question the sincerity of Members of Congress who express a philosophy of ever greater spending in Washington. However, I believe one must question where this process is leading us. Our Government does not produce or create the wealth of this Nation. It is wholly dependent upon our factories, our farms, and the efforts of those who create products from the abundance of raw materials. Too often, today, the Congress attempts to be all things to all people. This is a demonstration of the good and sometimes of bad aspects of the responsiveness of the Congress to popular pressures. Costly programs enacted without regard to how they will be paid for is an abdication of fiscal responsibility by the Congress. A consistent pursuit of such a policy in the affairs of this Nation, resulting in spending more than our income from already heavy taxes during times of peak prosperity, is, in my opinion, dangerous to the public interest.

This morning, I received a letter from one of my constituents which has impressed me deeply. I want to call the attention of the House to his remarks, since I believe they are an excellent statement of the responsibility of every member of Congress today. The letter is as follows:

Hon. JOHN E. HENDERSON,
House Office Building
Washington, D.C.

DEAR CONGRESSMAN: We, your constituents, apparently expect miracles from you.

First, we complain about taxes, taxes, taxes. They're too high. We ask you to see that they're cut.

Then we turn around and ask you for Federal aid for roads, Federal aid for education, Federal aid for this, Federal aid for that.

We don't make sense. We don't realize that when we ask the Federal Government to give us something, we're going to get the bill for it.

Yours is not an enviable position. We put you on a spot.

Since we won't use commonsense, I hope you will. Please help cut our taxes the only way it can be done—by cutting Federal spending.

Don't give us everything we ask for. Let's cut out some of this Federal aid and force us to return a lot of our governmental functions to the local level. Help us wean ourselves away from Washington, for the formula is getting too expensive.

Sincerely.

Preservation of the Tennessee Valley Authority Is Vitally Essential

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to include a resolution adopted by the 81st General Assembly of Tennessee, denouncing the report of the natural resources department of the U.S. Chamber of Commerce which proposed the dismemberment of the TVA.

The preservation and continuance of the Tennessee Valley Authority is vitally essential to the seven-State valley area and this attack by the U.S. Chamber of Commerce's natural resources department should be condemned.

The resolution follows:

HOUSE JOINT RESOLUTION 16

Whereas the U.S. Chamber of Commerce has issued a biased and inaccurate report entitled "TVA: What's Next?" which proposed that TVA be dismembered, dispersed, and its power facilities sold; and

Whereas the TVA Board promptly and categorically refuted the above report and denounced it as a misrepresentation of TVA and a disservice to the general public and the members of the U.S. Chamber of Commerce; and

Whereas the action proposed by the U.S. Chamber of Commerce report would destroy a great public agency whose retention and growth is vitally essential to the welfare of the seven-State valley area, and moreover, since a vast amount of its generated power is channeled into atomic energy and allied defense industries, its preservation and continuance is absolutely necessary to a strong and vigorous national defense program; and

Whereas it is proper that the 1959 General Assembly of the State of Tennessee take

action on this paramount issue: Now, therefore, be it

Resolved by the House of Representatives of the 81st General Assembly of Tennessee (the Senate concurring), That the report prepared by the U.S. Chamber of Commerce's natural resources department, as titled in the preamble hereof, be forthwith rejected and the action suggested by said report be condemned as unsound, unfair, and impractical in its attack on the Tennessee Valley Authority and indirectly upon the national defenses of the United States; and be it further

Resolved, That copies of this resolution be sent to the U.S. Chamber of Commerce, the members of the Tennessee delegation to Congress, and to the Board of Directors of the Tennessee Valley Authority.

Adopted: January 28, 1959.

JAMES L. BOMAR,
Speaker of the House of Representatives.
WM. D. BAIRD,
Speaker of the Senate.

Approved: February 4, 1959.

BUFORD ELLINGTON,
Governor.

Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. WILLIAM J. GREEN, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. GREEN of Pennsylvania. Mr. Speaker, Lithuania was declared an independent state on February 16, 1918, 41 years ago. Each year Lithuanians in the free world commemorate this occasion remembering their fellow countrymen held captive behind the Iron Curtain, who cannot overtly join in any celebration of this historic event.

The development and growth of Lithuania as an independent republic was brought to a tragic end in 1940 when this proud nation again fell prey to the superior force of the Soviet Union. Lithuania along with the other Baltic States was fraudulently annexed to the Soviet Union under the guise of a free election. A puppet government which does not express the will of the people was established.

The example of Lithuania is typical of Communist aggression. In every case the Communists have come to power by means of subversion and infiltration by Soviet agents and occupation of the territory by the Red army and political elements from the Kremlin. The Communists then enslave the people by threats and such inhuman means, wholesale deportations and forced famines.

What little information is obtained from behind the Iron Curtain clearly shows that the Communists in Lithuania and in other captive nations maintain a completely tyrannical rule over the people. Lithuanians can no longer enjoy freedom of expression or religion or any of the inherent rights of individuals. Free labor has been abolished as have all other aspects of individual enterprise. Under Communists rule, the family is no longer the basic unit of society. The state takes the major share of responsibility for the training of youth in order to insure their complete allegiance to the Soviet Communist Union.

These things could happen to all the free people of the world if we do not remain vigilant. Communism is a conspiracy which plans to conquer the whole world and bring all peoples under the domination of the Kremlin.

The people of Lithuania have never stopped wanting their national independence or remaining faithful to the ideals of the free world. But these people need our help and continued assurance of our sympathy and interest in their plight. Let us not forget the Lithuanians who have so bravely and steadfastly fought for freedom in the past and who depend on the friendship and solidarity of the free people of the world.

Reuther Dumps Principle

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the text of an editorial which appeared in the February 10 issue of the Detroit News and concerns Walter Reuther's proposal to impose import duties on foreign automobiles which would be equivalent to the differential between foreign and domestic wages:

LOOK WHO'S IN BED

We hope that Walter Reuther, proposing import duties on automobiles to protect American wages from cheap foreign competition, will have the grace to nod at least to his strange bedfellows.

We refer not only to some sturdy high tariff men in the National Association of Manufacturers but to the dead—the McKinleys and Aldriches, the Hawleys and Smoots, all the late misguided souls who stood against the march of progress and were buried by it.

Mr. Reuther, of course, is worried. Recovery has come to the automobile industry without reabsorbing many thousands of unemployed UAW members. Imported cars are making serious inroads on the American market. Worst of all American industry, including the automobile manufacturers, is investing even more heavily in factories abroad. This means both less domestic production for export and increased foreign production for sale here—a double squeeze on American jobs.

Mr. Reuther's proposed answer is an international fair labor standard—meaning uniform or roughly uniform wage scales in automobile factories everywhere so that no manufacturer would enjoy a material competitive advantage based on labor costs. To enforce such a standard he suggests import duties equivalent to the differential between foreign and domestic wages.

Despite the direct tie-up proposed between tariff rates and wage scales, Mr. Reuther's idea remains the oldest and most discredited in the book. It assumes that high wages in America cannot be justified by anything more substantial than the desire to have high wages and cannot be maintained except by political power.

The assumptions are demonstrably untrue. America has developed its high wage scales mostly in competition with low-paid foreign industry, by and large without effective tariff protection. High wages have resulted from high labor productivity which in turn has been the product of mechanization and high management skill. We could pay more, in short, because we got more for the wage dollar.

If that is no longer true, then there is the problem that demands solution. No ingenuity in ducking it will serve. In the long run none can profit from artifically maintained high wages and high prices in a closed market. Mr. Reuther knows that. It is sad to see him abandoning his principles in unseemly haste to find any old refuge from his current troubles.

A World Attack on Cancer

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written for United Press International by my friend and colleague in the Senate, Senator RICHARD NEUBERGER, which appeared in the February 12, 1959, edition of the Eugene (Oreg.) Register-Guard:

THANKFUL TO BE ALIVE—NEUBERGER ASKS WORLD ATTACK ON CANCER

(EDITOR'S NOTE.—Last fall, Senator RICHARD L. NEUBERGER, 46-year-old Democratic Senator from Oregon, underwent surgery for removal of a cancerous tumor. Wednesday, he was en route back to Washington, grateful for being alive. In this dispatch, Senator NEUBERGER speaks frankly of his experience and, as he prepares to "resume a normal schedule of activity"—his physician's words—offers a message of hope to other cancer sufferers. He also speaks, from the basis of his own trying experience, of what he feels this country must do to bring the possibility of cure to all cancer victims.)

(By Senator RICHARD NEUBERGER)

It has become almost axiomatic to protest about our modern age. Yet if I did not live in a modern age, I would probably be dead now. Three miracles of modern medical science have given me a prospect for recovery from cancer which my doctors regard as excellent.

These miracles are (1) early detection of the tumor; (2) skillful surgery; and (3) the twin agents of cobalt radiation and chemotherapy, with their destructive impact on any of the tumor which might have spread.

Even before cancer was diagnosed in me, I stood on the floor of the U.S. Senate and advocated vastly increased Federal support of medical research. Yet I used glibly the reference that 40 million Americans were destined to have cancer. I never thought I might be among the 40 million. I always felt that this would be somebody else. I suppose countless citizens feel this way—otherwise we would not tolerate spending more on chewing gum than on cancer research, and many times more on such things as permanent waves and cigarettes.

INTERNATIONAL MEDICAL YEAR

Along with my colleagues, Senator LISTER HILL, of Alabama, and Senator HUBERT

HUMPHREY, of Minnesota, I have been proposing an International Medical Year and a pooling of medical discoveries made by all nations. This has a particularly urgent meaning for me today. Cobalt radiation, a vital factor in the successful treatment I have undergone, was developed by such illustrous scientists of Canada as Dr. David A. Keyes and Dr. H. F. Batho. I am fortunate that no unwise import quota kept this marvel of their intellects from coming to the United States.

A brush with cancer tends to place many things in true perspective. First, one becomes profoundly grateful to all those who, through the long history of medical research, have contributed to the advances thus far made in treatment of this grim disease. Secondly, old antagonisms fade away. I no longer can transform political disagreements into any feelings of personal malice. When one is grateful to be alive, it is difficult to dislike a fellow human being.

I am keenly aware that some of the most eminent Members of the Senate have died of cancer during recent years—among them Charles L. McNary, of my own State of Oregon; Robert A. Taft, of Ohio; Arthur Vandenberg, of Michigan; Matthew Neely of West Virginia; and Brian McMahon, of Connecticut. That is why I regard it as so crucially important if I can stand in the Senate and stress to my colleagues that my own life has been spared, because I have had a type of cancer which has responded to a discovery thus far made in the realm of medical research.

Is it not vital that we devote every effort to extending these discoveries, if possible, into other areas of cancer where successful treatment has not yet been achieved? Does it make sense to invest in cancer research only about 1 percent of what we spend on research into armaments and weapons of war? Two out of every three American families are in peril of affliction from cancer.

From the very beginning, I told my doctors to include candidly in their medical bulletins the fact that my illness has been diagnosed as cancer. I realize that has not been done in the case of some public figures. Yet we need to have full understanding of this disease if it is to be conquered.

Medical scientists inform me that some people, knowing they may have cancer, still hesitate to seek treatment because they fear it is inevitably hopeless. Thus, if a person in public life does recover from cancer, it is an event which can give hope and courage for many millions of others.

The American Cancer Society reports that, already, about 30 or 35 percent of cancer victims are being saved. As new findings are attained in the field of chemotherapy, this percentage undoubtedly will be increased—especially if people seek immediate medical care.

MANY COMPETENT DOCTORS

While much remains to be known about cancer, I think it is essential that Americans have faith in the competence of their doctors. Some believe that capable care can be received only at a few nationally known medical centers. I chose to remain for treatment in my native city of Portland, Oreg., because I believe that knowledge and competence in this field are not confined to one or two famous places. I think I have been confirmed in this decision by the fact that, in my travels around our State this past fall and winter, I have met quite a few men and women who have recovered from cancer under the able auspices of their own local physicians.

The National Cancer Institute, which is part of our U.S. Public Health Service, makes grants throughout the Nation to all promising avenues in the area of cancer research. Your own life or that of a loved one might potentially be saved if you urge your Senator to vote full and adequate appropriations for this vital Government agency, which provides about 72 percent of the funds for research into the causes and possible cures of the series of diseases known as cancer.

An Effective Program

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I would like to insert an editorial which appeared in the Observer (N.J.), February 12, 1959, entitled "An Effective Program," which is noteworthy and significant in that it gives emphasis to the need for expanding our people-to-people program in an effort to build a bridge of friendship across the world.

I can think of nothing that has more impact, and nothing more constructive than such a device for bringing about greater understanding among the people of the earth. This is indeed a crossroads approach toward the way to peace and stability in the world.

The editorial reads as follows:

AN EFFECTIVE PROGRAM

In September 1956 President Eisenhower called a group of some 50 leaders in American life to the White House and presented a plan. First aim, he said, was to build a massive system of communications between Americans and the peoples of other countries. This marked the official launching of the people-to-people program.

The thought behind it was a compelling one. Governments operate on high levels of political, military, economic, and diplomatic affairs. But governments are remote and impersonal. So, the President emphasized, Americans outside of Government must work out thousands of methods by which people can gradually learn a little bit more of each other. People-to-people, in sum, involves a sort of grassroots approach to better knowledge and understanding.

People-to-people has come a long way since that original meeting. Some 40 committees were formed to reach into virtually every phase of American life and activity. These committees have more than 1,100 members, of which 700 represent organizations, associations, clubs, and other groups. Their geographical spread blankets the Nation, and practically all vocations and professions are represented.

Prior to this other groups—such as the Lions International, and the 4–H clubs—had been conducting comparable activities on a person-to-person or group-to-group basis. The formal people-to-people program, however, brought these groups into closer contact with each other, and sharpened the focus on the objective of greater international understanding through a multitude of contacts between Americans and other peoples.

The success of such a program, in which all Americans in every walk of life can participate, is largely measured by the multiplicity of the projects which are undertaken. Judged by such a yardstick, people-to-people has compiled an impressive record. To select a few examples, the public relations committee drafted a pamphlet entitled "Make a Friend This Trip" for Americans preparing to visit other countries, and a million copies were distributed. To meet a specific request from the Sudan, another committee collected 16,000 books and sent them overseas. More than 70 American communities in this country are now affiliated with communities of comparable size and kindred interests abroad, and a like number are in the planning stage. A sports committee sponsored the American tour of the Pakistan cricket team. A 50-member American rifle team was sent abroad to compete in Germany, Switzerland, Sweden, and the Soviet Union. There are committees of the handicapped, of cartoonists, of people concerned with hobbies and the arts, and so on and on.

In Senator HUMPHREY'S words: "People-to-people efforts at building friendship are not bound by the restrictions and handicaps which encumber official government-to-government dealings, and can often be more effective." And the program is and must be a two-way street.

Three Thousand Farm Folks Speak Out on REA Proposals

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, on February 6, 1959, the Chippewa Valley Electric Cooperative held its 22d annual membership meeting at Cornell, Wis. At tihs meeting, 4 resolutions were passed which express the wishes of the 3,000 members of that cooperative on current issues confronting the rural electrification program. Under leave to extend my remarks, I would like to include those resolutions in the RECORD:

REA REORGANIZATION

Whereas the original REA Act of 1936 provided for strictly nonpartisan administration of REA and provided for the appointment of an Administrator by the President, with confirmation by the Senate, for a 10-year term to insure nonpartisan, nonpolitical administration; and

Whereas Secretary Benson has supported a bill in Congress which would drastically increase interests rates and drive electric and telephone cooperative to Wall Street for their financing: Now, therefore, be it

Resolved, That we are vigorously opposed to any reorganization of REA; and be it further

Resolved, That as soon as the new Congress convenes in 1959 a bill which would restore to the REA Administrator all of the functions and authority vested in him by the original act of 1936, be introduced and passed.

INTEREST RATES

Whereas a member of bills and proposals were presented to the 85th Congress to increase REA interest rates; and

Whereas the Congress, by enacting the Pace Act of 1944, and fixing the interest rate of 2 percent, therein made a covenant with the rural electric cooperatives to proceed with area coverage at reasonable, retail rates; and

Whereas we believe the continuance of the 2-percent-interest rate is necessary to enable rural electric systems to compete the task

of providing full, efficient and reasonably priced electric service on an area coverage basis: Now, therefore, be it

Resolved, That we urge the Congress to vigorously oppose any change or proposed change in the law, the effects of which would increase REA interest rates.

REA LOAN SOURCE

Whereas the Secretary of Agriculture last February sent to the Congress a proposed bill which provided that the cooperatives secure their financing in Wall Street for which no legislator would act as sponsor; and

Whereas such bill would double or triple interest rates to the rural electric systems; and

Whereas such bill would virtually kill the program and bankrupt many distribution cooperatives; and

Whereas the Congress has always evidenced its wholehearted support of the REA program by consistently providing sufficient loan funds: Now, therefore, be it

Resolved, That we urge Congress to oppose any and all proposals which would send the rural electric systems into the private money market for their financing, and we urge Congress to continue its fine support of the rural electric program which means so much to the people of rural America and to the country as a whole.

SELLOUT PROTECTION

Whereas forces opposing the rural electrification program are moving in on cooperatives in various parts of the country, e.g., the New Jersey and Arizona cases, for the expressed purpose of buying them out; and

Whereas it is evident that the power companies instituting sellout are being directed by executives hired and maintained by their holding companies; and

Whereas electric consumers in and outside the program will pay more for electricity if these sellouts become more widespread: Now, therefore, be it

Resolved, That we urge REA to provide more aggressive assistance to cooperatives needing its help to continue their existence—such as was the case of cooperatives in New Jersey and Arizona; and be it further

Resolved, That we urge our State legislatures to provide us with the machinery to function as public agencies or utility districts where such a step is necessary to preserve consumer ownership; and be it further

Resolved, That we urge Congress to protect rural electrics and all electric consumers by abolishing the electric holding companies; and be it further

Resolved, That we urge Congress to investigate and expose the apparent master plan to cripple and destroy the rural electrification program, and be it further

Resolved, That we urge Congress to thoroughly investigate the sellout cases that have now occurred in order that the Rural Electrification Act may be strengthened as a means of protecting the interest of consumers and all Americans who are concerned about the contributions rural electrics are making.

Nixon Defines War on Reds

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. ARENDS. Mr. Speaker, under leave to revise and extend my remarks, I am inserting in the RECORD an editorial entitled "Nixon Defines War on Reds," which appeared in the Daily Pentagraph of Bloomington, Ill., on February 13.

It is a commentary on the speech delivered by Vice President NIXON at Fordham College with respect to how best to deal with communism.

As the editorial points out, there is no stronger foe to communism than Mr. NIXON and no one knows better than he how best to deal with this threat to our security and freedom:

NIXON DEFINES WAR ON REDS

When it comes to fighting the Communists inside or outside the United States Vice President NIXON has no peers. Mr. NIXON's views command attention. Among his most pertinent comments on the subject of communism in general and the visit of Deputy Premier Mikoyan to this country in particular are his observations in a Fordham College Alumni Association dinner January 27.

Mr. NIXON does not discount the ability of the Soviet leader. "In several respects," he said, "I would have to rate Mr. Mikoyan as the equal of any leader I have met." He said the Russian Deputy Premier "has a steel-like toughness of character and an almost arrogant faith that his cause was right and that it inevitably would prevail."

This led Mr. NIXON to observe that the United States is not going to "change Communist policy with a handshake. They are hardheaded realists motivated by their own self-interest. They will respect us only if we stand firmly by our principles and our ideals."

The Communists, said Mr. NIXON, have nothing but contempt for those who are dupes and who can be deceived by what the Reds know as obvious untruths; they respect those who oppose them on principle.

"I have been deeply concerned at the naive attitude and lack of understanding of communism displayed by some Americans, both in Government and out."

Among these he might have included the "whipping boys of Communist propaganda, the Wall Street bankers and businessmen," who received Mr. Mikoyan and his promises of greater trade with much less critical judgment than did the leaders of our free trade unions. Mr. Mikoyan admitted that he found these latter the strongest defenders of the American system and the most vigorous critics of communism.

Mr. NIXON urges a better job at the college and university level in teaching the fundamentals of Communist philosophy, strategy and tactics. "The only effective answer to combat a false idea is not ignorance," he said, "but the truth."

Mr. NIXON warned against an assault in the name of economy on our programs for technical assistance, developmental loans, exchange and information. "Anyone with even an elementary knowledge of tactics knows we could make no more disastrous mistake," he declared.

The Vice President said the United States can be the strongest military power in the world and still lose the struggle for the world without a missile being launched "if we don't have the vision to counter the massive Communist offensive in the economic, propaganda, and political areas."

But, said Mr. NIXON, competition on the material level, while essential, is not enough. He holds that material achievements do not meet the deeper needs of mankind.

"Man needs the higher freedoms, freedom to know, to debate freely, to write, and express his views. He needs the freedom that law and justice guarantee to every individual so that neither privilege nor power may make any man subservient before the law. He wants the freedom to travel and to learn from other peoples and cultures. He wants freedom for worship.

"To us, these are the most precious aspects of our civilization. We would be happy if others were to compete in this sphere and try to surpass our achievements."

Mr. NIXON urges that we speak less of the threat of communism and more of the promise of freedom. He would have us adopt the primary objective, not of the defeat of communism, but the victory of plenty over want, of health over disease, of freedom over tyranny.

The Vice President urged that this country present its programs to underdeveloped countries in terms of their aspirations and their aims rather than our own. This should be easy since the United States seeks no new land; it has no goal of dominating the world.

And in our struggle with the Communists, says Mr. NIXON, we must realize that we are confronting men with iron determination, fanatical dedication, and superb mental discipline.

"The soft, the flabby, the naive, the lazy will not win in a struggle with men like this," he warns. "We must have men who are worthy of those causes we profess."

This is a realistic approach to the challenge we face. We cannot wish the Communist threat away. We must face it with knowledge, courage, dedication, discipline, and with conviction in the ideals we espouse. Mr. NIXON is such a man himself.

Importance of the Boy Scout Movement

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mrs. BOLTON. Mr. Speaker, on February 13 last, it was my privilege to address a meeting of Scouters and their parents at the Windermere M.E. Church in East Cleveland on the "Importance of the Scout Movement." It was particularly significant that Boy Scout Week was being celebrated all over the Nation at the same time that Americans everywhere were commemorating the 150th anniversary of the birth of Abraham Lincoln.

Under unanimous consent to extend my remarks, I include the text of my speech herewith:

ADDRESS BY HON. FRANCES P. BOLTON, WESTERN RESERVE DISTRICT, BOY SCOUTS OF AMERICA, WINDERMERE METHODIST CHURCH, CLEVELAND, OHIO, FEBRUARY 13, 1959

Members of the board of the Western Reserve District (District No. 7) of the Greater Cleveland Council (No. 440) of the Boy Scouts of America, Den Mothers, Cubmasters, Scoutmasters, Explorer advisers, Scouters of every sort and kind, executive staffs and such Scouts as may be here, as well as your many guests: I greet you with a deep sense of the privilege it is to be amongst you here in this great Windermere Methodist Church on this fellowship night.

Yesterday in Washington a joint session of the Congress gathered to do honor to the humble, modest, magnificent Abraham Lincoln, of whom it was said that when he went to a town, a village, or just a gathering, "he brought light with him."

Gathered in the House Chamber at 11 a.m. on Thursday, February 12, were Members of the Senate and House, the Supreme Court, the Cabinet, and a very large representation

of the diplomatic corps. The Army orchestra played in the Speakers Lobby, the choir of the Coast Guard Academy sang in the Chamber, Frederick March recited the Gettysburg Address and Carl Sandburg, who of all others has studied every word Lincoln spoke and wrote, gave an address none present will forget. It was a deeply moving hour, I can assure you.

It seems to me peculiarly fitting that the week set aside as "Boy Scout Week" should contain the date of Lincoln's birth. And this year we celebrate the 150th anniversary. Could one find anywhere a more inspiring example for Scouts and Scout leaders than this great man?

Indeed, I would like to suggest that wherever and whenever Scouts from Cubs on up meet, they would ask that their hours of togetherness might be infiltrated by his simple ways, his deep understanding, and the challenge of his courage and his faith. I am very certain that his spirit rejoices that there are nearly 5 million Scouts and leaders currently in America; 26 million persons who have felt the impact of the Scout oath and are infinitely better for it.

Let us turn now to Scouting.

This is a wonderful organization to whom Congress granted a Federal charter on February 8, 1910. On this last evening of Boy Scout Week in the year of Our Lord 1959, let us glance over the long list of achievements, remembering that more than 4,780,000 active Cub Scouts, Boy Scouts, Explorers and their leaders have been meeting together in happy, earnest observance.

Since 1911, 331,719 Americans have qualified for Eagle Scout rank; 199 awards for heroism or meritorious service were made in 1957 by the Boy Scouts' National Court of Honor. The Safety merit badge has been earned by 869,756 Boy Scouts and Explorers. This is only part of a wonderful record. And let us rejoice that there are 7,589,183 Boy Scouts and leaders in 67 nations around the world.

A year or more ago I foregathered with many of you in a tent on the Chagrin Reservation. It had been raining heavily and the ground was soggy, the air water-charged. But there were no empty chairs and no one grumbled! It was my first direct contact with Scout leaders and it was a thrilling experience!

And here we are tonight under the delightfully friendly hospitable roof of this Windermere Methodist Church which gives such wonderful service to this community.

What a miraculous thing it is, this togetherness. Never in our history have we so needed strength of body, mind and soul, individually and collectively, as we do at this moment. We are pitted against an adversary who, in denying the very existence of God, signed his own ultimate death warrant, but who is terrible indeed in his present strength. We have found him to be ingenious, in some things brilliant, in others not. We know him to be cruel, ruthless, deceiving and deceitful. We have found him to be without morals and without honor. And we must have realized by now that we are in a long, dark, treacherous battle for the survival not only of the nation that Mr. Lincoln hoped would go "onward and upward," that "will not pass away," but of free men across the world.

And then it is as if someone lighted a little candle and set it upon a rock and darkness gathered her cloak about her and oh, so reluctantly, turned from us and began her long way through the gloom of hatred toward the pity and forgiveness of Him whom she had tried to destroy.

"On my honor I will do my best to do my duty to God and my country, and to obey the Scout law; to help other people at all times; to keep myself physically strong, mentally awake, and morally straight."

These lads and those who volunteer as leaders believe that "because God is, I am," their strength can be the support of free men and women everywhere. Their faith can uphold the weakest among us, and even as it was with Lincoln they can bring light with them.

An organization such as the Boy Scouts of America does not come forth suddenly from the heart and mind of one man. No, a dream precedes it, a vision brings into being a tiny infant, lusty, perhaps, but not full-grown or fully panoplied as Minerva when she sprang from the head of Zeus. Yet, from the moment of birth this infant has drawn to itself the ever-increasing many whose dreams have been but fleeting, whose vision takes time to clear—the infant has become a powerful force in the Nation, praise Heaven and makes itself felt across the world.

So has it been with this great Nation of ours which was indeed conceived in a dream and born because a few men with vision joined together to build a nation under God. But a nation is not built of bricks and mortar to fall in the first storm, but rather is it built and held together by the hopes and fears, the love and the labor of millions of men and women seeking a way to the infinite. So it is with Scouting. It rests upon the patient collaboration of literally millions of men and women determined that American boys no matter where they live shall have the opportunities that spell faith, hope and love, the greatest of the three.

I have said that the United States came into being because a few great souls saw a vision and determined that a nation dedicated to freedom, to the dignity of the individual and to the Eternal God should be born. It is not yet 200 years that we have lived—nor have we been too successful in giving true freedom of the spirit as well as freedom under law to every American. There is yet so much, so very much to do. And why not—for is not this great adventure we call living, as we come out of unconscious perfection and go toward perfected consciousness, given us that we may strive constantly to strengthen ourselves and those around us to the end that man everywhere may indeed be free?

What group is there better equipped than you of the Scouting world? What does Scouting stand for? Is it not training and discipline each of himself, each helping those with whom he comes in contact? Is it not very basic, very fundamental, not just for the Cub, the Scout, etc., but for the leaders as well, indeed, first of all? When you sit down with yourselves—alone—at the end of a Scout year and take stock, don't you find that you, as an individual, have grown in many directions? Do you not realize more and more each year the truth you came across long since and only half believed, that you cannot teach another (least of all an intuitive youngster) anything very vital about a character quality which you do not possess? Do you not find increasingly that as Walt Whitman so well said, "The gift is to the giver and comes back most to him"?

We need more Scouts, so we must have more trained and dedicated leaders. I have seen your plans toward this end and am glad indeed to add my earnest hope that the very fire of the need for men who will stand up individually and together to strengthen the great army of righteousness, will be a light which will inspire hundreds and thousands and millions to take up their part of the load.

Little by little in these years since Scouting was brought to these shores people are realizing that as President Coolidge said in 1926, Scouting is a movement that has a "unique power for fusing together in a common citizenhood in one generation, the different elements that make up the United States, which would otherwise take two or three generations of schooling and legislation."

Scouting makes visible the elements that have made us a Nation of free men, united in the certainty that in a land such as ours, "one Nation under God" there can be "liberty and justice for all."

Out of this community there can and must come a great tide of desire in the hearts of many to play a simple, quiet but very effective role in giving youngsters a clearer picture of what freedom means—of showing them that character is what makes a man and builds a nation—that honor and loyalty and courage and faith bound together intelligently with understanding will inevitably become a cleansing force not only here in these United States, but also throughout the world.

What must a boy do when he joins up? He must take the Scout oath solemnly, and as we say on Capitol Hill—"without reservations." Listen all over again as I read it to you:

"On my honor I will do my best to do my duty to God and my country, and to obey the Scout law; to help other people at all times; to keep myself physically strong, mentally awake, and morally straight."

Strong meat, friends, but potent, for the young respond to these things with every fiber of their threefold being. How much there is in those 40 words, friends. There is a promise in them so rich in possibility that one could sing for joy.

"To keep myself"—not anyone else for him—"physically strong." I watch the many Scout troops that flow in and out of Washington when winter is done with a real thrill. Oh, they often are hot and tired and their uniforms are mussed and tell the story of hikes in dust and rain. But Scouts do not slouch and shuffle along, as all too many school groups do, even at the end of a long, hard, and exciting day. Praise Allah, we have 4¾ million youngsters who can walk.

"To keep myself mentally awake." Just sit down with a group of them—they are like hungry vultures tearing at your brains.

Just the acknowledgment of their recognition of moral values puts the whole country outside the Iron Curtain and all it has grown to mean of atheistic materialism.

So it is not casually said that a Scout is trustworthy for when a Scout repeats the oath—the Scout law—he is really saying that he will be trustworthy, loyal, helpful, friendly, courteous, kind, obedient, cheerful, thrifty, brave, clean, and reverent. Rather wonderful, that—especially when one realizes that just the words have little value to the Scout unless they are backed by dedicated, constructive action.

Surely there are—just around the corner at least—the 600 who are needed right away, men and women like yourselves who have dreamed dreams of a strong, healthy, God-fearing land, and who will find such volunteer service more enriching than they would now believe.

I agree wholeheartedly with a statement contained in a recent Boy Scout annual report, which says:

"The development of our youth to be physically strong, mentally awake, and morally straight, to be citizens of character, with high spiritual ideals and motives, is not just a desirable thing, but it is essential if America is to fulfill its mission as the leader of the free world."

Let us remember that: "Scouting is a way of living. It values deeds above words. It builds character through habit and citizenship through service. It develops cooperation through cooperating. It learns through doing. Its outdoor craft enhealthens, deepens, and enriches boy life. Scouting is a process of making real men out of real boys, by a real program—an interest-gripping, growth-producing, character-building pro-

gram of activities. Scout activities are of great worth in themselves as well as in their byproducts of habits and attitudes."

Again my deep appreciation for this privilege of sharing this fellowship night with you. And may the Infinite bless this work, strengthen and keep you, and may His light shine before you on whatever road you travel.

Tony Moyer, Bellflower High School Boy in 23d Congressional District, Los Angeles County, Calif., Wins California Statewide Democracy Scriptwriting Contest Sponsored by National Association of Broadcasters

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased and very proud indeed to present the text of the California statewide winning script written by my young friend and congressional constituent, Tony Moyer, of the Bellflower High School, Bellflower, Los Angeles County, Calif., in the nationwide State-by-State contest which was sponsored by the National Association of Broadcasters.

As I say, Tony Moyer was the top winner throughout the State of California.

I am pleased to say that this distinguished high school lad from my native State of California, together with the top winners of the 48 other States of the United States, is to arrive in Washington, D.C., during the day of Sunday, February 22, and thereafter is to be entertained and looked out for by the National Association of Broadcasters, which association has arranged a thoroughgoing and splendid program of information and inspection for all these distinguished lads who will come from throughout our Nation. Their visitations to famous places and monuments, memorials, and programs and facilities in and about Washington includes a visit to historical Mount Vernon where there will be a special program for them.

On Monday next they will visit our Capitol and attend a session of the U.S. Senate and the House of Representatives. On Wednesday, February 25, at 12:30 p.m., in the Presidential Ballroom of the Statler-Hilton here at Washington will occur the Voice of Democracy National Awards luncheon and I will have the great pleasure of eating luncheon with that distinguished young guest from my great 23d Congressional District.

Mr. Speaker, I know that you and every other Member of this great legislative body will join with me in complimenting the National Association of Broadcasters upon initiating and carrying forward this Voice of Democracy scriptwriting contest. I know too that you will join with me in my sense of pride and pleasure in having one of the distinguished lads from my own congressional district be the statewide winner of this significant contest from all the schools of California.

Herewith follows the text of letter to me of January 19, 1959, from Mr. Harold E. Fellows, chairman, Voice of Democracy Policy Committee of the National Association of Broadcasters; and, the text of the winning script of Tony Moyer, the California statewide winner:

NATIONAL ASSOCIATION
OF BROADCASTERS,
Washington, D.C., January 19, 1959.

The Honorable CLYDE DOYLE,
House Office Building,
Washington, D.C.

MY DEAR MR. DOYLE: I thought you would like to know that the California State winner in the 1958–59 Voice of Democracy broadcast scriptwriting contest is Tony Moyer, of 10038 Rose Avenue, Bellflower, a student at Bellflower High School. He is the son of the Reverend Otis H. Moyer, a resident of your congressional district.

Tony competed among high school students throughout your State by writing and delivering orally a 5-minute script on the theme, "I Speak for Democracy." A panel of judges in California determined that this script was the best of all submitted in the statewide contest. It was selected as California's entry in the national contest finals.

Tony and the top winners from the other 48 States will each receive a 4-day, all-expenses-paid trip to Washington, D.C., next month to see their Government in action. Their activities in the Nation's Capital will begin on Sunday, February 22 (George Washington's Birthday), and will be climaxed by a national awards program at the Statler Hilton Hotel on Wednesday, February 25, to which you will shortly receive a formal invitation. The State winners' schedule will include a visit to Capitol Hill.

The Voice of Democracy Contest is designed to stimulate American youth to think about the meaning of our form of government in their own lives and to communicate their ideas to others.

The contest is sponsored by the National Association of Broadcasters and the Electronic Industries Association in cooperation with the Veterans of Foreign Wars. It has been endorsed by the U.S. Office of Education and approved by the National Association of Secondary School Principals (a department of the National Education Association).

If Tony is selected as the top national winner, he will receive a $1,500 scholarship to any college he chooses. If he is one of the four national finalists, he will be offered a $500 scholarship by the University of Missouri School of Journalism. The finalists and the top national winner will be announced at the awards program on February 25.

Sincerely yours,

HAROLD E. FELLOWS,
Chairman, Voice of Democracy Policy Committee.

ENTRY OF TONY MOYER, 10038 ROSE AVENUE, BELLFLOWER, CALIFORNIA, IN THE 1958–59 VOICE OF DEMOCRACY SCRIPTWRITING CONTEST

There are many voices to be heard in our lives, among them the voices of freedom, the voices of knowledge, the voices of religion and the voices of democracy.

I listen to all these voices, knowing that each has for me a message of great significance. I have been born in a democratic nation. I have listened with special attention to the voices of our democracy. Everywhere I look, I see democracy at work and hear its many voices. Yes, the voices of democracy ring out in clarion tones which echo from one end of our Nation to the other, trumpeting the blessings we Americans enjoy. The voices of democracy proclaim the message of freedom: freedom of speech, freedom of thught, freedom of religion, freedom to pursue happiness as I interpret happiness, freedom to choose for myself a life that will bring personal satisfaction and whatever measure of personal security I feel is necessary to my wellbeing, freedom to develop to the maximum of my potentialities.

Democracy makes it crystal clear that the individual is important. Each individual may walk along life's way with dignity, knowing that he or she will never be swallowed up by the oblivion of a collectivized society. Democracy guarantees me the right to live my own life; yet democracy warns me against infringing upon and abusing the rights of others. Democracy demands that I respect other men if I am to be respected by them.

Democracy also has something to say about duty as well as freedom. Democracy affords me the opportunity and imposes upon me the responsibility to vote. My right to vote gives me a say in who shall hold public office and make the laws by which we are to be governed. If people like myself make a mistake and elect the wrong man to public office, we do not need to resort to barbarous force to remove him. Democracy provides a civilized and sensible way—the ballot box. As long as we heed the voice of democracy and assume these duties and discharge our responsibilities, the voices of American freedom will continue to proclaim the blessings which dignify the lives of our people. To listen to only some of the voices of democracy or to disregard the duties that political and economic freedom imposes upon us will soon destroy freedom itself.

Remember, democracy is by and of the people. This means that we decide our way of life and that it is our duty to sustain it. God help us that we as a people never turn over to a few the responsibilities of governing this Nation. If we do, the few will appropriate to themselves these, our corresponding blessings. Therefore, the voice of democracy constantly reminds me that I cannot be selfish and demand the good things of life without doing my part to sustain the system that provides these good things. Too many who do not heed the voice of democracy think that life owes them a living and happiness. It is this very thing that produces dictators and totalitarian systems. Democracy can survive only in a nation where everyone is willing to bear their part of the burden as well as enjoy the rewards.

I wish I could make the voice of democracy heard by all the young people of all lands. If they could but learn of all that democracy offers, I believe that they would in a few years foster democracy in their own lands. We, the teen-agers of our day, could have a mighty impact upon world affairs if we could but reach those of our own ages in other lands. If every school in our land would produce five students each year who could speak fluently a foreign language and would study democracy with a view of speaking to the youth of other lands, I believe it would influence world affairs as much as any other one thing on earth.

We then add our own voice to the voices of freedom wherever they may exist in this world, lest the enemies of democracy crush us into eternal silence.

Surgeon for Statesmen: Leonard Dudley Heaton

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks I include an article from the New York Times, dated February 14, entitled "Surgeon for Statesmen: Leonard Dudley Heaton."

SURGEON FOR STATESMEN: LEONARD DUDLEY HEATON

WASHINGTON, February 13.—Even among surgeons, Maj. Gen. Leonard Dudley Heaton is known as a cool hand with a scalpel.

He performed an operation for ileitis on President Eisenhower in 1956, an associate remarked, with the same calm assurance that he showed when he tended the wounded in the first hours of the attack on Pearl Harbor. Today he operated on John Foster Dulles, Secretary of State, for a hernia. A little more than 2 years ago, in November 1956, he had successfully operated on the Secretary for a cancer.

General Heaton, now commandant of Walter Reed Hospital, was chief of surgical services at Schofield Barracks, T.H., when the Japanese attacked Pearl Harbor in 1941.

He was officially commended for the way in which he handled the wounded. He received a Legion of Merit for his work in the weeks that followed.

General Heaton was born in Parkersburg, W.Va., on Nov. 18, 1902. He received his degree of doctor of medicine from the University of Louisville, Ky., in 1926.

COMMISSIONED IN 1927

He was appointed a first lieutenant in the Medical Corps Reserve and assigned to active duty almost immediately upon graduation. He took his regular commission August 3, 1927.

After serving as an intern at Letterman General Hospital at San Francisco, he served at other hospitals. These included Walter Reed, where he attended Army Medical School in 1928.

After his service at Schofield Barracks, he was transferred in November 1942 to Woodrow Wilson General Hospital at Staunton, Va. He was then placed in command of the 160th General Hospital at Atlantic City, N.J., and took that unit to Europe in March 1944.

When hostilities in Europe ended in 1945, he was in command of the 802d Hospital Center at Blandford, England. He returned to Letterman and became chief of surgical service there.

And in June 1948 he assumed the additional duty of director of professional services at Letterman and became commanding general of the hospital in July 1950.

At Walter Reed, where he assumed command April 1, 1953, his associates speak almost reverently of General Heaton as a dedicated teacher as well as practicing surgeon.

He spends 3 days a week in the surgical rooms, occasionally performing operations, frequently assisting the resident surgeons and interns.

Not only the famous men, General Heaton's associates point out, but also private soldiers and others of little public note receive his personal attention.

He is a devout Baptist. His brother, a prominent Baptist minister in Charlotte, N.C., is a consultant with the Department of Labor.

General Heaton reads a great deal, not only almost every professional journal and book that comes out, but popular fiction and books on public affairs as well.

His second great diversion is golf. He has the reputation of being able to wield a club as well as he does his scalpel. He scores around 80, often breaking that figure.

His wife is the former Sara Hill Richardson, with whom he resides at the commandant's house at the Walter Reed Medical Center.

They have a daughter, Mrs. Sara Heaton Mason, whose husband, a West Point graduate, is studying medicine at Georgetown University in Washington.

Crime Prevention Week Observed

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. MINSHALL. Mr. Speaker, it is a sad fact that crime has become big business in the United States. Major crimes last year neared the 3 million mark, an appalling increase of 50 percent since 1952.

Recently, J. Edgar Hoover said:

One of the greatest obstacles which law enforcement faces today is the apathy and disinterest of a large segment of the population. Far too many of our citizens seem to look upon lawlessness as a matter of concern only to the courts, the police, and others in related professional fields.

Last week, the Exchange Club of Fairview Park, Ohio, which lies in the 23d District, took a giant step in dispelling their community's apathy and disinterest in crime prevention.

Mr. Arlin Weardahl was chairman of the Exchange Club's observance of Crime Prevention Week, February 8–14, in Fairview Park. Mr. Weardahl and his committee performed a yeoman service in rallying local churches, parent-teacher organizations, youth clubs, service groups, and law-enforcement agencies in an impressive, week-long series of crime prevention programs.

The Fairview Herald, published by Mr. Emil M. Uschelbec, gave strong support to the week's activities, featuring a four-page spread on crime prevention in its February 5 edition. Commenting in its editorial columns, the newspaper stressed:

Such a program also depends upon the interest of the average resident—your neighbor and mine—who helps the police, the schools and the churches to do the job. Crime is not absent from suburban communities such as ours—but we feel it is being effectively combated by such a program as this one.

Highlights of the week included special church services; talks by Juvenile Court Judge Albert A. Woldman, Detective Robert Lee and Patrolman Fred Standen, and Cuyahoga County Prosecutor John T. Corrigan; a special proclamation by Mayor James A. Dunson; open house at the Fairview Police Department under the charge of Chief Albert Burkhart.

Cooperating with the Exchange Club in sponsoring Crime Prevention Week in Fairview Park were the city administration, the police department, the Boosters Club, the recreation department, the amateur coaches association, the Fairview Athletic Club, and the board of education.

Mr. Weardahl's committee was composed of the Reverend Fred E. Blue, Jr., and Bill Gillam, of the Exchange Club, and Mayor Dunson, Chief Burkhart, Dr. Frank Barr, of the Fairview Park schools, and Recreation Director Nelson Russ.

Rural Electric Co-ops Have Remained Silent Too Long

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, for years the public has been bombarded with propaganda advertising directed against the rural electric cooperatives by the private utilities. Meanwhile, the co-ops have quietly gone about their business of electrifying the farms of America—a job that the utilities had refused to undertake. I feel that the rural electric systems should tell their story, and John Van Meter, editor of the New Richmond (Wis.) News, very ably expressed the same conviction in an editorial in the February 12, 1959, issue of his weekly newspaper. Under leave to extend my remarks, I would like to include a copy of that editorial in the RECORD:

The hundreds of rural electric cooperatives throughout the Nation are growing up, and waking up, too. They are bringing their message to the attention of the public through newspaper advertisements in the various communities served by each cooperative.

Rural electric co-ops have too long remained silent while the mighty electric power companies have hammered away at them, hindered their progress and generally been a pain in the neck. We believe there is a place for both services—we can't imagine private electric energy companies ever attempting to tap the sparse rural areas with its lines—them boys like to sell electric energy, but in populated areas where the demand is great—one or two customers to the mile is not their meat but they would have the public think they would eventually come to this market.

In the meantime, energetic farmers devised a way to get electric energy to any farmer and more power to them for their success. It appears to have been easier to get set up in business than to stay in—the electric cooperatives are under a bit of pressure from so-called private enterprise for their success. Private enterprise makes some wild claims against the eletcric co-ops but the main thing is that the co-ops are getting electric energy through to any farmer who wants it, and that's the important thing. Tt us it's quite a thrill to have to get up before daylight occasionally to start on a long drive and see the farms along the way safely lighted with electric energy instead of the old-fashioned way of a farmer having to carry a lantern which oftentimes burned down the barn it was supposed to light up.

You wonder what brought all this on at this time? It was the following letter from Manager David Rodli, manager of the St. Croix County Electric Cooperative at Baldwin who recently induced his board of directors to take the advertising columns of the newspapers in the co-op's area to state its side of the case, and they are doing a good job of it:

"During the week of February 9, your newspaper will carry another in the series of advertisements we have scheduled for your publication during the current year. 'Did someone say taxes?' is the question we ask. The point we try to make is that rural electric cooperatives do pay taxes, substantial taxes. This fact is known to all who seek and use facts as they concern the position of cooperatives in our business economy.

"A fact that is not too well known, or fully appreciated, is that rural electric cooperatives are new business, organized within the past 25 years. Consequent to this fact, the taxes we pay are new taxes, where none were paid before for the reason that the rural electric cooperatives were organized and operate in areas previously regarded as uneconomical for electric service.

"Rural power lines are costly to build and maintain, with few consumers per mile. It was difficult for any electric company to justify the expense of constructing rural lines when expected revenues would hardly cover this expense, much less return any profit. Thus, as late as 1935, only 1 out of 10 of the Nation's farms was electrified. This was justification enough for the U.S. Congress to establish the Rural Electrification Administration (REA) and make funds available for rural line building. Congress decided it was in the public interest, socially and economically, to encourage rural electricity. Private companies, municipal systems, and cooperative groups were invited to participate in the program.

"In our local area, as in a thousand other sections of the Nation, the farmers themselves organized a cooperative to accomplish a job that wasn't being done in any other way. They overcame many obstacles in establishing this new and strange business, and they have succeeded where others would not try. One essential to progress was that rates be kept low enough to encourage a maximum use of electricity. Cooperative service at cost was probably the only way in which this job could ever have been done.

"Members of the rural electric cooperatives are justifiably proud to be providing themselves with modern electric service, to be repaying their REA loans with interest, and to be paying a fair share of taxes, new taxes, where none were paid before."

So far as electric energy users are concerned in New Richmond, did you ever stop to realize we get our electric service somewhat along the lines of hideous co-op methods? We buy the electric energy wholesale, distribute it through a municipal commission, and don't charge ourselves with a full slate of taxes. We should be happy to cooperate with the co-ops—we practice what they preach.

Columbus Day Should Be a National Holiday

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. CRAMER. Mr. Speaker, on February 5 I introduced a bill, H.R. 4188, to make October 12, Columbus Day, a legal holiday.

Columbus Day is already a State holiday in 39 out of our 49 States.

In fact the only States which do not pay honor to the discovery of America are Alaska, the District of Columbia, Idaho, Maine, Massachusetts, North Carolina, South Carolina, South Dakota, Tennessee, Virginia, and Wyoming.

It is not always called Columbus Day. In Alabama October 12 is designated as Fraternal Day. In Indiana, North Dakota, and Ohio it is called Discovery Day, and in Wisconsin it is known as Landing Day.

Arkansas, Iowa, and Oregon call it Memorial Day.

It seems to me that with so many of the States celebrating October 12 each year as a legal or public holiday, the time has come to make it known as a national holiday for all Americans.

Certainly there is no event deserving more of nationwide acknowledgment and celebration than the discovery of America by Christopher Columbus.

There is no person in history, to whom the American citizenry is more indebted, than Christopher Columbus; no person of greater fortitude and determination; no person who better exemplifies the American impulse to discover new horizons, to press forward, to prove for ourselves the falseness of outmoded theories; and no person has made greater self-sacrifice or taken greater risks in order to serve the future of humanity.

It is only fitting that Columbus Day be declared by Congress as a legal national holiday.

Resolution to Commemorate the 41st Anniversary of the Declaration of Independence of Lithuania

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. RODINO. Mr. Speaker, I am pleased to include in the Appendix of the RECORD the following resolution which was adopted on the occasion of the 41st anniversary of the declaration of independence of Lithuania by the Lithuanian Council of New Jersey at St. Georges Hall, Newark, N.J., on February 15, 1959.

Resolution unanimously adopted at a mass meeting of Americans of Lithuanian descent of the city of Newark, State of New Jersey, sponsored by the Lithuanian Council of New Jersey and held on February 15, 1959, at St. Georges Hall, 180 New York Avenue, Newark, N.J., to commemorate the 41st anniversary of the declaration of independence of Lithuania:

"Whereas in 1940 the Soviet Union in conspiracy with the Hitlerite Germany and in brutal violation of all treaties and obligations, signed by her, invaded Lithuania with armed forces and against the will of the people, annexed her to the Communist empire; and

"Whereas since that time the freedom of Lithuanian people is suppressed by cruel means of the Communist dictatorship which strives to dominate all the world; and

"Whereas the fate of Lithuania, as well as of other subjugated eastern European nations, will depend on the success of the foreign policy of the United States: Therefore be it

"*Resolved*, That this gathering of loyal Americans of Lithuanian descent of the city of Newark calls upon the Government of the United States to stand firm against the expansion of Communist imperialism and do all in its power to liberate the enslaved nations behind the Iron Curtain; be it further

"*Resolved*, That this meeting urges the Government of United States to continue its opposition to the United Nation's Code of Offenses which prohibits lending assistance to, and liberation of, captive nations; and be it finally

"*Resolved*, That the Government of the United States refrain from signing any new treaties with the Soviet Union until the latter agrees to restore freedom and sovereign rights to Lithuania and the other enslaved European nations."

LITHUANIAN COUNCIL OF NEW JERSEY,
WALTER J. DILIS, *Chairman*.
ALBIN S. TRECIOKAS, *Secretary*.
NEWARK, N.J., *February 15, 1959*.

Thaddeus Kosciuszko

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks I should like to insert in the RECORD the following article on Thaddeus Kosciuszko which appeared in the February 14, 1959, issue of the Polish-American Journal, commemorating the birth of this great man:

THADDEUS KOSCIUSZKO

February 12 marked the anniversary of the birth of Thaddeus Kosciuszko, Poland's great patriot and national leader and America's Revolutionary War general and aid to George Washington.

Thaddeus Kosciuszko was born in 1746 at Siechnowicze, Poland. He was the brilliant son of a prominent but impoverished family. After briefly attending a Jesuit college, young Kosciuszko entered the Polish corps of cadets. He completed his military course with the rank of captain. The king of Poland, impressed with his natural ability for engineering, sent him to France to pursue further studies.

After 7 years of studies abroad, he returned to Poland in 1774. He found little employment for his talents because of conditions prevailing in Poland after the First Partition. He left Poland when he heard of the outbreak of hostilities in America. He was determined to go to the aid of America—a Polish knight in the cause of liberty.

In the summer of 1776, Kosciuszko arrived in America at his own initiative and at his own expense. He was compissioned by Act of Congress, October 18, 1776, as an engineer in the Continental service with pay of $60 a month and the rank of colonel.

In the spring of 1777, he joined the Northern Army, where his ability as an engineer was of valuable use in the campaign against Burgoyne. His fortification at Van Schaick and elsewhere, his able judgment in the

choice of battlegrounds, contributed much to the skillful retreats and the firm stands of the Continental Army before Burgoyne's rash advance. He was ordered by General Gates to erect the fortification in the defense of Saratoga, and his task was accomplished with great brilliancy and speed.

With justified pride Poles regard the role played by their national hero in the victory at Saratoga, a victory which won for America not only a campaign but France's recognition of her independence.

To secure the defense of the Hudson River Kosciuszko was chosen over the French engineer, Radiere, to build the fortifications at West Point. Little is now left of the fortification, but the monument erected to his memory at West Point by American youth will remain a grateful tribute forever. That America today can regard West Point with pride is, in large measure, due to Kosciuszko who first suggested for a national military school the spot where it now stands.

General Gates requested Washington to transfer Kosciuszko to the South. Gates, however, ruined himself at Camden before the Polish engineer could join him. While awaiting the arrival of Gen. Nathaniel Greene, who succeeded Gates, Kosciuszko spent some time in Virginia among the planters. There he saw the Negroes at close quarters and was brought face to face with the Negro slavery. It was then that, with his keen susceptibility to every form of human suffering, he acquired the profound sympathy for the American Negro which 17 years later was to dictate his parting testament to the New World.

Kosciuszko was present through the whole campaign of the Carolinas. When Charleston fell, he was among the first to enter the city. He fought for 6 years in the American Army. General Greene wrote "Colonel Kosciuszko belonged to the number of my most useful and dearest comrades in arms. I can liken to nothing his zeal in the public service, and in the solution of important problems, nothing could have been more helpful than his judgment, vigilance, and diligence. He was fearless of every danger. He never manifested desires or claims to himself, and never let opportunity pass of calling attention to and recommending the merits of others."

Congress, in 1783 belatedly conferred upon Thaddeus Kosciuszko the rank of Brigadier-General with an acknowlegement of its "high sense of his long, faithful, and meritorious service." He was given the privileges of American citizenship. He was granted lands and money.

In the fall of 1784, Kosciuszko returned to Poland. A further wave of patriotic ardour swept over Poland after the second partition in 1792. General Kosciuszko hastened to Krakow, summoned the people to arms, proclaiming new decrees in favor of the peasants. He attacked the Russians at Raclawice. Infuriated, Catherine of Russia sent a large army to fight Kosciusko and his poorly equipped army at Maciejowice in the south of Poland. The two forces met, three horses were killed under him, and bleeding from many wounds he was taken prisoner. With him fell the independence of Poland. He was cast into a dungeon in Petersburg, and only after Catherine's death her successor Paul I liberated the Polish hero.

In December, 1796, Kosciuszko sailed for Philadelphia, arriving on June 18, 1797. He was warmly received by Thomas Jefferson. He lived briefly in Philadelphia. His grants of American land and American money were very considerable for the time. He turned them over to Jefferson with the stipulation that the gifts be used to found a Negro school and to buy and free Negro slaves. In 1826 the legacy went to found the Colored School at Newark, the first educational institute for Negroes in the United States and which bore Kosciuszko's name.

By the end of June, 1798, Kosciuszko reached Paris. He began negotiating at length with the Government of France for her help in the restoration of Polish independence. Napoleon, in 1806, summoned Kosciuszko to assume leadership of the revolting Poles. But Kosciuszko had little faith in the fortune of the Emperor and none in his promises. He declined to obey the call, and remained in Paris.

Leaving France Kosciuszko settled in Switzerland. And here, on the sad autumn evening of October 15, 1817, far from his motherland, though close in spirit, among strangers, with not a Polish face nor a Polish word to gladden his heart, Kosciuszko died.

Kosciuszko's body now rests in the Wawel Cathedral in Krakow, where lie Poland's kings and her most honored dead. To this day the name of Thaddeus Kosciuszko lives in the hearts of the Polish people, not only as the object of their profound and passionate love, but as the symbol of their dearest national aspirations. His pictures, his relics, are venerated as with the devotion paid to a patron saint. Legend and music have gathered about his name.

The spirit of Kosciuszko, however, will never rest in peace until there is restored to her proper place at the council table of the nations of the world a free and independent and sovereign state—the Republic of Poland.

The spirit of the Polish people is the spirit of Kosciuszko. It is an unconquerable spirit that will never die.

KOSCIUSZKO'S WILL

"I, Thaddeus Kosciuszko, being just in my departure from America, do hereby declare and direct that should I make no other testamentary disposition of my property in the United States thereby authorize my friend, Thomas Jefferson, to employ the whole thereof in purchasing Negroes from among his own as any others and giving them liberty in my name in giving them an education in trades and otherwise, and in having them instructed for their new condition in the duties of morality which may make them good neighbors, good fathers or mothers, husbands or wives, and in their duties as citizens, teaching them to be defenders of their liberty and country and of the good order of society and in whatsoever may make them happy and useful, and I make the said Thomas Jefferson my executor of this.

"T. KOSCIUSZKO.

"5th day of May 1798."

National Historic Shrine Assured Near Astoria

EXTENSION OF REMARKS
OF

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 19, 1959

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an excellent article by Senator RICHARD L. NEUBERGER, of Oregon, regarding the Fort Clatsop National Memorial:

NATIONAL HISTORIC SHRINE ASSURED NEAR ASTORIA

(By RICHARD L. NEUBERGER, U.S. Senator for Oregon)

As Oregon commemorates 100 years of eventful history as a State, talented men and women of the U.S. National Park Service are bending over drawing boards at their regional offices in San Francisco, designing the visitors' center and museum building for the first national historical shrine ever to be located in Oregon.

This is the Fort Clatsop National Memorial, which Congress and the President have recently authorized for construction at a cost of approximately $350,000 near Astoria.

Fort Clatsop National Memorial will herald an epochal event which occurred more than half a century before statehood—the original crossing of the continent by Americans, when Meriwether Lewis and William Clark ended their overland pilgrimage at the mouth of the Columbia River. They spent the winter of 1804–05 in a primitive stockade of logs which they named "Fort Clatsop." It was the first such habitation by citizens of the United States along the Pacific seaboard.

The site of this occupancy, some 125 acres in expanded dimensions, will be the Fort Clatsop National Memorial.

In November I conferred at San Francisco with the National Park Service officials in charge of preparing plans for the great undertaking. They share my view that the buildings of the memorial should be in keeping with their Pacific Northwest locale, and that perhaps such native materials as field stone and Douglas-fir siding should characterize the edifices. These officials assured me of their enthusiasm for the project, because they believe our system of national historical shrines has too long neglected the Lewis and Clark expedition.

Representative WALTER NORBLAD of the First Oregon District and I jointly sponsored the legislation authorizing Fort Clatsop National Memorial, which passed both Chambers of Congress unanimously and was signed by President Eisenhower. Several months ago I presented to the Clatsop County Historical Society the pen which the President used for this purpose.

Both Representative NORBLAD and I consider it particularly appropriate that the first national historical shrine ever to be built in Oregon should be under way just as Oregon marks its first century of statehood.

In view of the existence of McLoughlin House at Oregon City, even many Oregon historians are perplexed by the claim that Fort Clatsop National Memorial will be our State's first historical shrine of national proportions.

McLoughlin House, which pays tribute to the career of the illustrious Dr. John McLoughlin of the Hudson's Bay Co., is a national historical site, but it is under non-Federal ownership. It is privately owned and privately administered. Federal funds do not contribute to its operation or maintenance.

Fort Clatsop National Memorial, by contrast, will be developed and administered entirely by the U.S. Government. Title to the land will be vested in the Federal Government. Federal funds and personnel will be used in its administration—and, incidentally, the budget for operation will be about $22,000 annually.

Other similar national memorials of great fame are the Lincoln and Jefferson Memorials in Washington, D.C., and the De Soto National Memorial of Florida. There also is the Wright Brothers National Memorial of Kitty Hawk, N.C., where two brothers named Orville and Wilbur Wright flew their handmade flying machine in 1903.

The Fort Clatsop National Memorial, which will be along U.S. 101, represents a longtime goal of the Oregon Historical Society. Through the years the society carefully marked the site of original Fort Clatsop, as the logs crumbled back into the earth from whence they had come. Without this diligence on the part of the historical society, there might have been so much doubt about the location of the winter headquarters of Lewis and Clark that the memorial never could have been authorized.

The Clatsop County Historical Society also has played a key role in the plans for Fort Clatsop. Two of its leaders, Otto Owen and Burnby M. Bell, have been particularly assiduous in marking out the location of the historic winter encampment of the Lewis and Clark party. These local people in Astoria will see the memorial actually under construction during the fiscal year which commences July 1, 1959, because the administration budget includes $157,250 for the start of work on the undertaking.

Such a sum will be sufficient to finance building of the houses to be occupied by the personnel of the memorial shrine. It also will provide for installation of sewage facilities, parking lots, access roads, wells for a domestic water supply and for rehabilitation and protection of the recreated log fort.

It is highly likely that Congress will go along with the administration's budget recommendations in this field, because the project is not controversial. Our Fort Clatsop legislation passed both the Senate and House unanimously.

The memorial will include the rebuilt log Fort Clatsop, which was a joint project of the Astoria Junior Chamber of Commerce and the Crown-Zellerbach Timber Co. at the time of the Lewis and Clark sesquicentennial in 1955. Buildings added by the National Park Service will be featured by the museum and visitors' center, and also by two staff residences for the superintendent and the historian of the project. Roads, trails and parking areas will complete the undertaking.

Lectures on the dramatic Lewis and Clark trek will take place daily at Fort Clatsop National Memorial for schoolchildren and other visitors. A booklet distributed by the Government will explain the historical significance of the site. Such men as Herbert E. Kahler, chief historian of the National Park Service, tell me that they expect Fort Clatsop National Memorial to become a mecca on the Pacific coast for families interested in American history.

I believe the entire project should be constructed and ready for formal dedication some time late in 1960 or early in 1961. It is hoped that the dedicatory address will be given by the President of the United States, whoever he may be, at that time. After all, Lewis and Clark, whom the memorial honors, were sent westward on their journey of high destiny by our country's eminent third President, Thomas Jefferson.

(Senator RICHARD L. NEUBERGER was the first Member of Congress to propose Fort Clatsop National Memorial. He and Representative WALTER NORBLAD were the successful sponsors of the legislation which President Eisenhower signed late last summer creating the historical shrine near Astoria.)

Textile Industry Is Alarmed Over Imports From Tokyo

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. DORN of South Carolina. Mr. Speaker, the great American textile industry is alarmed over imports from Tokyo. The textile industry was hoping that Assistant Secretary Henry Kearns on his present trip to Tokyo would stand up for the American industry and its employees. I was shocked a moment ago to receive the following telegram from Mr. Leon Lowenstein of New York. Mr. Lowenstein is a patriotic American who is desperately trying to furnish employment for Americans. Mr. Lowenstein is working night and day to keep his industry going:

Hon. WILLIAM JENNINGS BRYAN DORN,
House of Representatives,
Washington, D.C.:

Today's news record reports U.S. Assistant Secretary of Commerce Henry Kearns as saying in Tokyo, "U.S. Government is interested in helping to expand the market for Japanese textile industry and is interested in seeing the Japanese textile market expand in the United States as much as the Japanese are interested." If such quotation is correct I wonder whether Mr. Kearns reflects official U.S. policy. By virtue of what authority does any department of our Government seek to expand markets for Japanese industry in the United States?

LEON LOWENSTEIN.

Now, Mr. Speaker, in response to Mr. Lowenstein's telegram, I am sending the following wire to the Honorable Lewis L. Strauss, Acting Secretary of Commerce:

Hon. LEWIS L. STRAUSS,
Acting Secretary of Commerce,
Washington, D.C.:

Fairchild News Service, under date of February 18 from Tokyo, Japan, reported Assistant Secretary Kearns as having said, "the U.S. Government is interested in helping to expand the market for the Japanese textile industry and is interested in seeing the Japanese textile market expand in the United States as much as the Japanese are interested."

I would be interested in knowing the source of the policy on which the Kearns statement is based. The American industry is presently sharing its textile markets with the Japanese to such an extent that it is injurious to our industry and its employees. Please advise why, in view of the present ease of access to our markets, the Assistant Secretary deems it a matter of policy to encourage the Japanese to seek an even larger share. The U.S. economy cannot be expected to absorb the Japanese industrial capacity which has been largely rebuilt with American tax dollars.

WM. JENNINGS BRYAN DORN,
Member of Congress.

Mr. Speaker, it is high time for this Congress to know whether or not the State Department and the Department of Commerce are really interested in helping the industry and labor of America or whether or not their first allegiance is to industry and labor in foreign lands.

This Congress has a continuing responsibility to see that our trade laws and agreements are properly administered by executive agencies.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

The Role of the Supreme Court as the Interpreter of the Constitution

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, February 23, 1959

Mr. RUSSELL. Mr. President, I have served in the Senate with many able lawyers. However, I do not believe that I have ever served with or known a greater lawyer than the distinguished senior Senator from North Carolina [Mr. ERVIN]. He is a jurist of experience and a scholar of many years of labor. He delivered a very noteworthy speech before the trust division of the American Bankers' Association in New York City on February 11 entitled "The Role of the Supreme Court as the Interpreter of the Constitution."

I ask unanimous consent that it may be printed in the RECORD so that it will be available to all who are interested in the preservation of the Constitution of the United States.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE ROLE OF THE SUPREME COURT AS THE INTERPRETER OF THE CONSTITUTION

(Address by U.S. Senator SAM J. ERVIN, JR., Democrat of North Carolina, before a meeting of the trust division of the American Bankers Association, New York City)

The constitution of my native State of North Carolina has always contained a warning which all Americans would do well to heed. It is this: "A frequent recurrence to fundamental principles is absolutely necessary to preserve the blessings of liberty." Let us pause for a few moments, and recur to some fundamental principles.

The men who composed the Constitutional Convention of 1787 were wise men. They had read the history of the long and bitter struggle of man for freedom, and had found this shocking but everlasting truth inscribed upon each page of that history: No man or set of men can be safely trusted with governmental power of an unlimited nature. As a consequence, they were determined, above all things, to establish a government of laws and not of men.

To prevent the exercise of arbitrary power by the Federal Government, they embodied in the Constitution the doctrine of the separation of governmental powers. In so doing, they utilized this doctrine in a twofold way. They delegated to the Federal Government the powers necessary to enable it to discharge its functions as a central government, and they left to each State the power to regulate its own internal affairs. It was this use of the doctrine of the separation of powers which prompted Chief Justice Salmon P. Chase to make this trenchant observation in *Texas* v. *White:* "The Constitution, in all its provisions, looks to an indestructible union, composed of indestructible States."

In their other utilization of the doctrine of the separation of governmental powers, the members of the Convention of 1787 vested the power to make laws in the Congress, the power to execute laws in the President, and the power to interpret laws in the Supreme Court and such inferior courts as the Congress might establish. Moreover, they declared, in essence, that the legislative, the executive, and the judicial powers of the Federal Government should forever remain separate and distinct from each other.

This brings me to my subject: "The Role of the Supreme Court as the Interpreter of the Constitution."

In discussing this subject, I must tell you the truth about the Supreme Court.

I know it is not popular in some quarters to tell the truth about this tribunal. Admonitions of this character come to us daily from such quarters: When the Supreme Court speaks, its decisions must be accepted as sacrosanct by the bench, the bar, and the people of America, even though they constitute encroachments on the constitutional domain of the President or the Congress, or tend to reduce the States to meaningless zeros on the Nation's map. Indeed, the bench, the bar, and the people must do more than this. They must speak of the Supreme Court at all times with a reverence akin to that which inspired Job to speak thus of Jehovah: "Though He slay me, yet will I trust Him."

To be sure, all Americans should obey the decrees in cases to which they are parties, even though they may honestly and reasonably deem such degrees unwarranted. But it is sheer intellectual rubbish to contend that Americans are required to believe in the infallibility of judges, or to make mental obeisance to judicial aberrations. They have an inalienable right to think and speak their honest thoughts concerning all things under the sun, including the decisions of Supreme Court majorities. It is well this is so because the late Chief Justice Harlan F. Stone spoke an indisputable truth when he said: "Where the courts deal, as ours do, with great public questions, the only protection against unwise decisions, and even judicial usurpation, is careful scrutiny of their action, and fearless comment upon it."

As one whose major efforts have centered in the administration of justice, I have the abiding conviction that tyranny on the bench is as objectionable as tyranny on the throne and that my loyalty to constitutional government compels me to oppose it. In entertaining this conviction, I find myself in the company of such great Americans as Thomas Jefferson, Andrew Jackson, and Abraham Lincoln, who refused to accept in abject silence what they conceived to be judicial usurpations.

I do not find it easy to express my disapproval of the action of the Supreme Court. I was taught in my youth to repose an absolute confidence in that Tribunal by my father, an active practitioner of law in North Carolina for 65 years, who was accustomed to refer to it with almost reverential awe. He used to say that the Supreme Court would administer justice according to law even though the heavens fell.

I regret to say, however, that the course of the Supreme Court in recent years has been such as to cause me to ponder the question whether fidelity to fact ought not to induce its members to remove from the portal of the building which houses it the majestic words, "Equal Justice Under Law" and to substitute for them the superscription, "Not justice under law, but justice according to the personal notions of the temporary occupants of this building."

Let me confess that I live in the South. Let me also confess that I deem the school desegregation decisions constitutionally indefensible. Nevertheless I assure you that I would be compelled to hold the opinion I have just expressed even if the school desegregation decisions had never been made.

The truth is that on many occasions during recent years the Supreme Court has usurped and exercised the power of the Congress and the States to amend the Constitution while professing to interpret it.

In so doing, the Supreme Court has encroached upon the constitutional powers of Congress as the Nation's legislative body, and struck down State action and State legislation in areas clearly committed to the States by our system of constitutional government. This action has been accompanied by overruling, repudiating, or ignoring many contrary precedents of earlier years.

A study of the decisions invalidating State action and State legislation compels the conclusion that some Supreme Court Justices now deem themselves to be the final and infallible supervisors of the desirability or wisdom of all State action and all State legislation.

This is tragic indeed, because there is nothing truer than the belief attributed to the late Justice Louis D. Brandeis by Judge Learned Hand, that the States are the only breakwater against the ever-pounding surf which threatens to submerge the individual and destroy the only kind of society in which personality can survive.

Time does not permit me to analyze or even enumerate all of the decisions which sustain what I have said. I must content myself with stating in summary form the effect of only a few of them.

Congress is told by the Court that it really did not mean what it said in exceedingly plain English when it enacted statutes to regulate the naturalization of aliens and to punish criminal conspiracies to overthrow the Government by force. Congress is told by the Court that its committees must conduct their investigations according to rules imposed by the Court which make it virtually certain that no information will ever be obtained from an unwilling witness. Political parties are told by the Court that they must admit to their membership persons who oppose the things for which they stand. California is told by the Court that it cannot punish its residents for criminal offenses committed within its borders if such residents are ignorant of the statutes creating such criminal offenses. California and New Mexico are told by the Court that they cannot determine the fitness or qualifications of those who apply to them for licenses to practice law in their courts. New Hampshire and Pennsylvania are told by the Court that they cannot investigate or punish seditious activities within their borders. New York is told by the Court that it cannot prescribe standards of propriety and fitness for its teachers. North Carolina is told by the Court that it cannot determine the status of its own citizens within its own borders. Pennsylvania and the trustees of the will of Stephen Girard, who has slumbered "in the

tongueless silence of the dreamless dust" for 126 years, are told by the Courts that the 14th amendment empowers the Court to write a postmortem codicil to the will which Stephen Girard made while he walked earth's surface and entertained the belief that disposing of private property by will is a matter for its owner rather than judges.

In saying these things, I am not a lone voice crying in a legal wilderness. The concurring opinion of the late Justice Robert H. Jackson in *Brown* v. *Allen*, and the resolution adopted by 36 State chief justices in Pasadena, Calif., disclose that a substantial portion of the judges and lawyers of America believe the Supreme Court is not confining itself to its allotted constitutional sphere.

I quote these words from Justice Jackson's concurring opinion: "Rightly or wrongly, the belief is widely held by the practicing profession that this Court no longer respects impersonal rules of law but is guided in these matters by personal impressions which from time to time may be shared by a majority of the justices. Whatever has been intended, this Court also has generated an impression in much of the judiciary that regard for precedents and authorities is obsolete, that words no longer mean what they have always meant to the profession, that the law knows no fixed principles." Justice Jackson closed his observations on this score with this sage comment: "I know of no way we can have equal justice under law except we have some law."

Let us consider and weigh the reasoning of those who seek to justify the proposition that it is permissible for the Supreme Court to amend the Constitution under the guise of interpreting it.

They make these assertions: The Constitution must change to meet changing conditions. As its authorized interpreter, the Supreme Court has the rightful power at all times to make the Constitution conform to the views of the majority of its members. Since the doctrine of stare decisis, i.e., the rule that judges stand by and follow the decisions of their own court, might handicap the Supreme Court in making the Constitution conform to the views of a majority of its members on some occasions, the Supreme Court is not bound by its own decisions on constitutional questions.

These arguments rest upon a wholly fallacious premise, namely, that the power to interpret and the power to amend are identical. The distinction between these powers is as wide as the gulf which yawns between Lazarus in Abraham's bosom and Dives in hell. The power to interpret the Constitution is the power to ascertain its meaning, and the power to amend the Constitution is the power to change its meaning.

It seems at first blush that those who advance these arguments overlook the significant fact that article V of the Constitution vests the power to amend the Constitution in the Congress and the States, and not in the Chief Justice and Associate Justices of the Supreme Court. But not so. They simply nullify article V with these neat assertions:

The method of amendment authorized by article V is too cumbersome and slow. Consequently, the Supreme Court must do the amending. The alternative is to let the Constitution freeze in the pattern which one generation gave it.

To a country lawyer, this is merely a high falutin' way of saying that the oath of a Supreme Court Justice to support the Constitution does not obligate him to pay any attention to article V or any other provision displeasing to him.

When all is said, the thesis that the Supreme Court has the rightful power to amend the Constitution under the guise of interpreting it is repugnant to the end the Founding Fathers had in mind when they gave this country a written Constitution. Indeed, it is incompatible with the primary object of all law.

"The Federalist," Judge Thomas M. Cooley's monumental treatise on "Constitutional Limitation," and certain great decisions of the Supreme Court antedating the last quarter of a century, reveal with unmistakable clarity the end the Founding Fathers had in mind in giving our country a written Constitution.

The Founding Fathers "were not mere visionaries toying with speculations or theories, but practical men, dealing with the facts of political life as they understood them." (*South Carolina* v. *United States.*)

They understood the facts of political life exceedingly well. The history of the world had taught them that what was done in the past might be attempted in the future. In consequence, they foresaw that the fundamentals of the Government they desired to establish and the liberties of the citizen they wished to secure would be put in peril in troublous times by both the Government and the people unless they protected such fundaments of government and such liberties by irrepealable law binding equally upon the Government and the governed at all times and under all circumstances. (Ex parte Milligan.)

The Founding Fathers knew that the surest way to protect the fundamentals of the Government they desired to establish and the liberties of the citizen they wished to secure was to enshrine them in a written Constitution, and thus put them beyond the control of impatient public officials, temporary majorities, and the varying moods of public opinion. To this end, they framed and adopted a written Constitution, thereby putting into form the Government they were creating and prescribing the powers that Government was to take (*South Carolina* v. *United States;* "Constitutional Limitations.")

The Founding Fathers knew that useful alterations of some provisions of the Constitution would be suggested by experience. Consequently they made provision for amendment as set out in article V. James Madison, whom historians rightly call the father of the Constitution, informs us that the Constitutional Convention preferred this mode for amending the Constitution because "it guards equally against that extreme facility, which would render the Constitution too mutable, and that extreme difficulty, which might perpetuate its discovered faults." ("The Federalist.")

Since the Constitution is a written instrument, its meaning does not alter, unless its wording is changed by amendment in the manner prescribed by article V. "That which it means when adopted it means now. * * * Those things which are within its grants of power, as those grants were understood when made, are still within them, and those things not within them remain still excluded." (*South Carolina* v. *United States.*)

Chief Justice John Marshall declared in his great opinion in *Gibbons* v. *Ogden* that "the enlightened patriots who framed our Constitution and the people who adopted it must be understood * * * to have intended what they said."

This being true, it is as clear as the noonday sun that the role of the Supreme Court as the interpreter of the Constitution is simply to ascertain and give effect to the intent of its framers and the people who adopted it. (*Gibbons* v. *Ogden; Ogden* v. *Saunders; Lake County* v. *Rollins.*) As Justice Miller said in ex parte Bain: "It is never to be forgotten that in the construction of the language of the Constitution here relied on, as indeed in all other instances where construction becomes necessary, we are to place ourselves as nearly as possible in the condition of the men who framed that instrument."

Since the meaning of a written Constitution is fixed when it is adopted and is not different at any subsequent time when a court has occasion to pass upon it, Judge Cooley was justified in declaring in his "Constitutional Limitations" that "a court * * * which should allow a change in public sentiment to influence it in giving a written constitution a construction not warranted by the intention of its founders would be justly chargeable with reckless disregard of official oath and public duty."

I know that in recurring to fundamental principles I lay myself open to the charge that I am setting the clock back. As one who believes truth to be eternal, I am not troubled by this charge. Moreover, I have observed that the charge is usually made by those who labor under the delusion that there was little, if any, wisdom on earth before they arrived. It was a wise man and not a wag who suggested that these persons object to setting the clock back because it would require them to adjust their clocks and their minds forward.

Let us reflect at this point on the primary object of all law.

Laws are designed to furnish rules of conduct for government and people. As a consequence, a law is destitute of value unless it has sufficient stability to afford reliable rules to govern the conduct of government and people, and unless it can be found with reasonable certainty in established legal precedents. Justice Louis D. Brandeis had this truth in mind when he said: "It is usually more important that a rule of law be settled, than that it be settled right. Even where the error in declaring the rule is a matter of serious concern, it is ordinarily better to seek correction by legislation."

If the thesis that a majority of the members of the Supreme Court have the rightful power to change the meaning of the Constitution under the guise of interpreting it every time a sitting Justice wavers in mind or a newly appointed Justice ascends the Bench should find permanent acceptance, the Constitution would become to all practical intents and purposes an uncertain and unstable document of no beneficial value to the country. Yea, more than this, it would become a constant menace to sound government at all levels, and to the freedom of the millions of Americans who are not at liberty to join Supreme Court Justices in saying that Supreme Court decisions on constitutional questions are not binding on them.

I cannot forbear expressing my opinion that the notion that Supreme Court Justices are not bound by the decisions of the Court on constitutional questions exalts Supreme Court Justices above all other men, and is of the stuff of which judicial oligarchies are made. Be this as it may, what Justice Benjamin N. Cardozo said in "The Nature of the Judicial Process" concerning the contention that the judge is always privileged to substitute his individual sense of justice for rules of law applies with equal force to this notion. "That might result in a benevolent despotism if the judges were benevolent men. It would put an end to the reign of law."

What I have said on this point finds full support in the ringing words of Edward Douglas White, one of the ablest lawyers and wisest judges ever to grace the Supreme Court bench. He said: "In the discharge of its function of interpreting the Constitution, this Court exercises an august power. * * * It seems to me that the accomplishment of its lofty mission can only be secured by the stability of its teachings and the sanctity which surrounds them. * * * The fundamental conception of a judicial body is that of one hedged about by precedents which are binding on the Court without regard to the personality of its members. Break down this belief in judicial continuity, and let it be felt that on great constitutional questions

this Court is to depart from the settled conclusions of its predecessors, and to determine them all according to the mere opinion of those who temporarily fill its bench, and our Constitution will, in my judgment, be bereft of value and become a most dangerous instrument to the rights and liberties of the people."

What has been said does not deny to the Supreme Court the power to overrule a prior decision in any instance where proper judicial restraint justifies such action. A sound criterion for determining when proper judicial restraint justifies a judge in overruling a precedent is to be found in the standard which Judge Learned Hand says his friend and colleague, Judge Thomas Swan, set for his own guidance: "He will not overrule a precedent unless he can be satisfied beyond peradventure that it was untenable when made; and not even then, if it has gathered around it the support of a substantial body of decisions based on it."

In ending this phase of my remarks, I wish to emphasize the precedents set by the Supreme Court on constitutional questions were tenable when made if they conformed to the intention of those who framed and adopted the constitutional provisions involved, no matter how inconsistent they may be with the views of Justices subsequently ascending the bench.

This brings me to the argument that Supreme Court Justices must nullify article V and usurp the power to amend the Constitution while pretending to interpret it to keep the Constitution from freezing in the pattern which one generation gave it.

I assert with all the emphasis at my command that there is really no substantial vadidity in this argument. I take this position for three reasons:

First. Although the Constitution does not change its meaning in the absence of amendment under article V, the provisions of the Constitution are pliable in the sense that they reach into the future and embrace all new conditions falling within the scope of the powers which they in terms confer. (*Missouri P. R. Co.* v. *United States; South Carolina* v. *United States.*) Existing grants of constitutional powers will enable the Federal Government to take action in virtually all new fields in which action on its part will be appropriate.

Second. As the possessor of all the legislative power of the Federal Government, Congress has complete authority at all times to make, amend, or repeal laws relating to all matters committed by the Constitution to the Federal Government.

Third. For these reasons, occasions which really call for amendments to the Constitution are comparatively rare. While it is frequently asserted that the method for amending the Constitution prescribed by article V is too cumbersome and slow for practical purposes, those who make the assertion furnish no satisfactory proof of its truth. To be sure, they cite as evidence the failure of Congress and the States to make constitutional changes they deem desirable. They overlook the fact, however, that the evidence they cite has just as logical a tendency to prove that the wisdom of Congress and the States exceeds theirs. Thomas Riley Marshall said that "it is as easy to amend the Constitution of the United States as it used to be to draw a cork." While this statement is not literally true, it is substantially true in instances where Congress and the States believe a constitutional amendment to be advisable.

In the final analysis, those who contend that Supreme Court Justices are justified in changing the meaning of constiutional provisions while pretending to interpret them confuse right and power.

What Justice Cardozo said of the judge as a legislation, in "The Nature of the Judicial Process," is relevant here.

He said: "I think the difficulty has its origin in the failure to distinguish between right and power, between the command embodied in a judgment and the jural principle to which the obedience of the judge is due. Judges have, of course, the power though not the right to ignore the mandate of a statute, and render judgment in despite of it. They have the power, though not the right, to travel beyond the walls of the interstices, the bounds set to judicial innovation by precedent and custom. Nonetheless, by that abuse of power, they violate the law."

Twenty years ago a great American, William E. Borah, a Senator from Idaho, made this moving statement:

"We do not know what the future has in store for us as a nation, but do know that the system of government which was brought forth on this continent nearly 150 years ago, baptized with the blessings and crowned with the wisdom of great leaders, has brought greater contentment and prosperity and more freedom to the average man and women than any form of government yet devised. This fact alone should burn into our very souls the determination to preserve it in all its essential principles. It is one thing to adopt and adjust principles to new conditions; it is another thing to permit new conditions to disregard principles; the former is the highest achievement of the statesman and the lawgiver, the latter the work of the timeserver and the adventurer."

In closing, I add this observation to Senator Borah's stirring words: We shall not preserve any of the essential principles of the Government which brought these great blessings to America if we permit the Constitution to be destroyed by judicial usurpation.

Speech Delivered by Hon. Lister Hill, of Alabama, at the Dedication of the National Education Association Headquarters

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Monday, February 23, 1959

Mr. COOPER. Mr. President, the distinguished senior Senator from Alabama delivered a remarkable speech at the dedication of the National Education Association headquarters in Washington, D.C., on February 10, 1959. I ask unanimous consent that it may be printed the Appendix of the RECORD.

I was present at the dedication of the National Education Association headquarters and heard Senator HILL deliver his speech. The Senate has heard him speak many times on the floor of the Senate, and many of us have heard him in other forums. He always speaks eloquently and well. However, as I heard the distinguished Senator from Alabama speak before the delegates to the National Education Association on the educational problems of our country I thought that it was one of his finest speeches. The subject itself related to defense, the economic growth of the Nation, the necessity of our citizens being prepared to participate fully in democratic government, and to our basic concept of the full development of man.

The speech of the Senator from Alabama was philosophical, practical, and eloquent. It is a call for thought and action by our Government both at the local and Federal levels, and by the people of our Nation. It is a statement of permanent value for the people of our country.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

SPEECH BY HON. LISTER HILL, OF ALABAMA, AT THE DEDICATION OF NATIONAL EDUCATION ASSOCIATION HEADQUARTERS, WASHINGTON, D.C., FEBRUARY 10, 1959

Dr. Givens, Mr. Secretary, Commissioner Derthick, Dr. Carr, officers, and friends of the National Education Association and of American education, it is an honor to be with you today to take part in the dedication of this magnificent building, the new headquarters for the National Education Association.

Impressive as is this fine new building, is the record of splendid service that NEA has rendered during the past century to the teachers, to education, and to the people of America.

As NEA begins its second century of service, it is fitting that these handsome new quarters become the home of the efficient and busy nerve center of the largest professional organization in the world.

I know the many services to your 700,000 members, the information and guidance you give to the teachers of the Nation to help them advance their professional competence and improve their economic status. I know your efforts to improve American education.

As your organization has worked to advance the cause of education on all fronts, your greatest fight has been made for educational opportunity for every American child.

Today, as your executive secretary and my friend, Dr. William G. Carr, has so aptly put it: "We have been concerned that every child get into school. Now we must ask what every child gets out of school."

The responsibilities of education have never been better summed up than in the blunt phrase of Thomas Jefferson:

"If a nation expects to be ignorant and free in a state of civilization, it expects what never was and never will be."

America is challenged as never before by a ruthless, ambitious Communist Russia that has deliberately geared its education system to take advantage of the emerging new age of science, with massive and ever-increasing demands for more trained manpower and for new skills and techniques, with a premium upon intellectual excellence, and with its demand for devotion to the hard labor of rigorous thought.

America's traditional values of the dignity, the essential worth, and the inalienable rights of the individual are challenged by the Communist concept of the all-powerful state, where the individual is simply the tool of the state.

Our religious and cultural heritage is challenged by a society of dynamic, atheistic materialism.

Our system of economic opportunity through free enterprise and individual initiative faces driving competition from a regimented economy whose resources are used as political and diplomatic weapons.

Our science and technology are challenged and have been presently surpassed by sputnik, lunik, and other evidence of Russia's amazing scientific progress within a single generation.

And hanging darkly over all is the ominous possibility of nuclear war.

What are the resources of our people—resources of the mind and of the spirit—for

meeting the challenge of a dynamic and ruthless Communist Russia, and the challenge of a swiftly changing world?

At the very roots of our resources and our capabilities lies America's system of education. Education provides not only the knowledge and technical training, but the intellectual discipline and incentives for meeting the challenge. In our democracy, education has a vast responsibility for instilling the patriotism, the sense of duty, the moral commitment to make a choice, to work in the cause of justice and human liberty. For well we know the uncommitted mind leads to the cynicism and decadence of the uncommitted heart.

The successful launching of Russia's sputniks struck a severe blow at the self-confidence of the American people and at our prestige in the world. Rarely have Americans questioned one another so intensively about our military posture, our scientific stature, and our educational system. In the wave of reproach and criticism that has swept America a principal target has been our system of education.

American education, it is charged, is obsessed with the teaching of "social adjustment," with gearing education to the lowest common denominator, with pressing America's children into an educational lockstep that moves them from grade to grade without regard for individual talents and capacities.

Some of these charges are true. For some time, you and I have been concerned over the vastly increased number of nonacademic courses in the secondary schools. We have been concerned that English language and literature have been diluted; that physics and chemistry have become general science; that algebra has become general mathematics. We have been concerned that education does not demand the rigorous effort, the mental discipline, the creative thinking, and the respect for learning that American education must have.

But education in America is not determined by the educators and the teachers alone. Education in America reflects the attitudes of a whole people. Our educational programs are determined by:

The businessman, the labor leader, the banker, and the mother who sit on the local school board;

By the industrialist whose factories provide jobs in the community and thereby influence the kind of education provided to fill those jobs;

By parents whose indulgence or whose desire for material success, prestige, and good incomes for their children shape so deeply the child's sense of values and his selection of courses;

By Government—Federal, State, and local—through the administrative agencies and the legislatures, through the funds they provide and the limitations and requirements they impose;

By the foundations and the philanthropists, in the types of grants and endowments they give; and

By the newspapers, radio and television, and the Nation's other mass communications media, as they contribute to public opinion and public attitudes.

It is fitting and proper that all these segments of American democracy play their rightful part in determining the shape and emphasis and function of American education. But when we come to assess the needs and deficiencies of American education, they should stand up and be counted and accept their share of the responsibility. The burden must not be put solely on the educators and the teachers, many of whom are dedicated men and women who give their lives to teaching, who, in their devotion and self-sacrifice, spend and are spent in the cause of educating America's children.

It is important to remember that our aim is to attack the problem, not the schools. Criticism and difference of opinion help to clear the air, but they are only part of the process of decision. Criticism is a measure of our desire for excellence, but it does not alone achieve excellence.

In the words of John Milton, "Where there is much desire to learn, there of necessity will be much argument, much writing, many opinions; for opinion in good men is but knowledge in the making."

We must not permit criticism to destroy our faith in the essential value, the proven success, and the democratic validity of our American school system—the great training ground for democracy. Are we to be made self-doubters by our aspirations and ideals?

What, then, is the American, this new man, who has made the deserts bloom, who has taken the drudgery out of farming and removed the backbreaking toil from factory labor, whose productivity per worker is by far the highest there is, who is surrounded by the world's best systems of communication and transportation, and who enjoys the highest standard of living in the world?

Was this progress made by a people with an inferior educational system?

There are some who look with trepidation on the incoming flood of school and college students that will double the present school population by 1970. There are some who feel this greatly increasing school population endangers the quality of American education. We need not feel besieged by the rising tide of students. Their claims to education are a sign of national health and vitality. Their millions constitute a national asset—a vast reservoir of skills and ambition and intellect. From so broad a base we can discover and develop the most talented young intellects.

In the last session of Congress—with the enactment of the National Defense Education Act—we took a major step for discovering and encouraging the Nation's potential intellectual talent, for creating wider opportunities for advanced training of our gifted young people, for providing better training and equipment for our teachers.

The principal objective of the National Defense Education Act is to help correct the serious imbalance in our educational system that for some years has been unfavorable to the teaching of mathematics, the sciences and foreign languages. Student loans at low interest rates and fellowship grants for advanced study give the able and qualified student an opportunity to complete his education and give the Nation the benefit of his maximum capabilities. Teachers may attend special institutes where they can learn the newest developments in their fields of study. Aptitude tests will reveal talented pupils at an early age. Guidance and counseling services will help students select the paths of study best suited to their individual capacities.

The act provides for research and experimentation into new uses for radio, television, films, and other teaching aids. Language centers are provided to give instruction in the language and culture of foreign peoples.

Expansion of area vocational educational schools will help provide the technicians so vitally needed to support the Nation's scientists and engineers. The latest findings of scientific research throughout the world will be assembled and translated.

As the National Defense Education Act strengthens America's education in mathematics, the sciences and languages, we must move to strengthen our whole educational system. The need for mobilizing our intellectual resources has been dramatized chiefly by the shortage of scientists and engineers. But this deficiency is only part of a general shortage of specialized talent which affects virtually every aspect of our society and the strength of our America. We need more of every kind of talent, not morely more nuclear physicists and engineers, but more first rate biologists and doctors, teachers and politicians, economists and ministers, writers, poets, and philosophers—and leaders in all the varied activities that make up our national life. And this calls for total effort from the Nation.

In this effort, we recognize that the primary and basic responsibility for and the control and administration of our educational system, sensitive to the needs and desires of the people, rests with the States, the local communities and their college and universities. In enacting the National Defense Education Act, Congress reaffirmed this principle and the act declares:

"The Congress reaffirms the principle and declares that the States and local communities have and must retain control over and primary responsibility for public education."

In this effort, we recognize that education is a total responsibility of the Nation and that the Federal Government has primarily a twofold duty in American education: To strengthen the intellectual resources of our people to meet the needs of national security; to help relieve the disparities in the wealth of the individual States which impose an undue burden on the less wealthy States in their efforts to maintain adequate education programs. Assistance from the Federal Government should stimulate and encourage and challenge State and local action and never be a substitute for such action.

There are great disparities in the wealth of the States, and consequently in their ability to raise revenue and to support adequate educational programs.

It is axiomatic to say that taxes can be levied only where wealth exists. The disparity in taxable wealth between States is dramatically pointed out in a pamphlet prepared by Prof. R. L. Johns, of the University of Florida, and published last year by the NEA legisaltive commission. In this pamphlet, entitled "Ability and Effort of the States to Support the Public Schools," Dr. Johns showed that in 1955 the concentration of taxable wealth in five great industrial and commercial States—Illinois, Michigan, New York, Ohio, and Pennsylvania—was so great that over 60 percent of the total U.S. corporation income and profits taxes were raised in these States, although they have less than 30 percent of the school-age children of this country to educate. On the other hand, Dr. Johns points out that 21 nonindustrial and noncommercial States, having roughly the same number of children to educate, have taxable wealth which produced only slightly more than 8 percent of the corporation income and profits taxes of the United States. To put it another way, these five great industrial States have many times more the tax collecting possibilities than exist in the 21 nonindustrial and noncommercial States.

In our concern with sputniks, with rising enrollments, with the teaching potential of television and other mass communications media, we must not forget that the teacher is the central figure in the education process.

Inevitably the qualities and influence of the teacher are woven into the character of the Nation. We entrust the minds and characters of our most precious resource—our children—to the teacher for many hours of the day. We look to the teacher to help mold the child for the responsibilities of manhood and womanhood.

Teaching has for a long time been called a profession. It is time to make it a profession in fact.

The hour demands a bill of rights for the teacher, a bill of rights guaranteeing a salary that will enable the teacher to enjoy a good standard of living, permit recreation and travel, continued study and educational growth, and insure security in old age.

The bill of rights must go further. It must recognize the essential worth and dignity of the teacher and assure him of full opportunity to take part in the life of the community, outside the classroom.

But a bill of rights for the teacher is not self-enforcing. To become reality, such a bill of rights requires public understanding and public support. There must be a new consciousness by the public and by State and local officials of their obligations. You, the teachers, must inform the public of your needs and the needs of the schools.

I know that you have organized the citizenship committee of the National Education Association, and it has been an active, agressive organization. Yet a recent survey by NEA revealed that two-thirds of the teachers in the United States felt a kind of pride in being aloof from politics and public affairs.

You cannot fulfill your obligations as teachers and as citizens by standing apart. Perhaps more than others, you have an opportunity—through your teaching and through your active example—to serve as a constructive and influential force in public affairs.

We stand today at one of the great watersheds of history. It is a commonplace that they are seldom noted until, looking back, we see them rising out of what Tennyson called "the eternal landscape of the past." Our generation can realize, in awe and humility, that we have been permitted the rare experience of crossing an epochal divide into a new valley of civilization.

To meet the challenge of this new epoch, to reap the rich harvest of its promises, we shall need unwavering determination and a burning resolve to reach the new heights demanded of us.

More than any other kind of society, democracy requires talent and leadership, widespread among all the people. The goal of our educational system must be the opportunity and the incentive for the fullest exercise of each individual's ability. America's strength requires that we have a people who hold a deep respect for education and intellectual attainment, who recognize that intellectual discipline is essential to our national purpose, who know the hard labor of intensive study and devoted, rigorous thought.

But for our people to meet the challenge of the Communist world, for them to measure up to the demands of the hour, the answer lies not alone in learning, and in such wisdom as they may acquire.

The foundation of the whole matter lies in the character of our people.

The great task of American education is to build this character, to instill the ideals and the faith to know what is right, and to instill the courage and resolution to choose to work and to fight for it.

Let us build upon the rock of the commandment of Joshua to his troops: "Choose you this day whom ye will serve; as for me and my house, we will serve the Lord."

The Late Honorable Herman P. Eberharter

SPEECH
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. ROONEY. Mr. Speaker, it is with a feeling of great sadness that I join here in the House in paying a well-deserved tribute to our departed colleague and friend, the Honorable HERMAN P. EBERHARTER, who at the time of his passing on September 9, 1958, represented the 28th District of Pennsylvania.

When I came to Congress in June 1944 HERMAN EBERHARTER was most kind and helpful to me. During the years we served together we found that we had much in common and worked together in seeking solutions to many legislative problems in which we shared an interest.

HERMAN was an outstanding Member of the House and of the Ways and Means Committee. He made substantial contributions to and sponsored much important legislation beneficial to the welfare of the people he represented in his district, his State, and our country. He was a man possessed of great political wisdom and personal courage. I considered him one of my close friends in this body and one in whom I had great faith and trust. I miss him greatly and I am sure that his colleagues on both sides of the aisle share these sentiments.

His sons, Herman P., Jr., and James Jacob Eberharter, have every reason to be proud of their father's illustrious career and his humanitarian principles. They have my deepest sympathy in their great loss.

His memory is as dear today
As in the hour he passed away.

Foreign Relations, 1796–1959

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, February 23, 1959

Mr. WILEY. Mr. President, on Saturday night it was my privilege to deliver an address before the Sons of the Revolution, at Troy, N.Y. The meeting was a very interesting one. I ask unanimous consent that excerpts from my remarks on that occasion be printed in the Appendix of the RECORD.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

FOREIGN RELATIONS, 1796–1959

(Excerpts of text prepared for delivery by Senator WILEY before Sons of the Revolution, at Troy, N.Y., Feb. 21, 1959, at 7 p.m.)

If Washington could revisit the United States today, about the only thing he would recognize would be the institutions of the Government which he helped to found and of which he was the first Chief Executive. In every physical respect, the country has changed and so has its place in the world, since 1796. Indeed, the change which has occurred in these 163 years is greater than the change which had occurred in all the time from 1796 back to Adam's bite out of the apple in the Garden of Eden. This change is continuing, and at an accelerating pace.

The challenge of 1796 was whether a new and relatively weak country, with a government founded on new and revolutionary principles, could survive in a skeptical and largely hostile world. The challenge of 1959 is whether this same country, now grown to be the richest and strongest on earth, can adapt itself with sufficient speed and flexibility to the rapidly changing world environment in which it finds itself.

The fact that Washington would still recognize the institutions of his Government is a tribute to the skill and wisdom with which he and his contemporaries laid the foundations for those institutions. The triangular structure of the Federal Government has proved itself both durable and flexible. It has, of course, grown to meet the new demands with which it has been confronted in each succeeding generation of its existence; but at the same time, it has retained in basic form the beautiful simplicity with which the Founding Fathers endowed it.

Washington became President at a time when Britain and France, the two titans of Europe, were engaged in bitter struggle. They were entering the last quarter of the Second Hundred Years War, and neither was overly respectful of the rights of the insignificant neutral on the western side of the Atlantic. From the long history of European wars and from the circumstances of the time, Washington correctly sensed that a policy of neutrality—or more accurately a policy of noninvolvement—was most likely to promote the national interests of the United States.

It was by no means certain, as Washington assumed the Presidency, that the United States was strong enough to resist involvement in the European war. This question was still in doubt at the end of Washington's second term, and he recognized this fact in his farewell address when he said:

"If we remain one people, under an efficient government, the period is not far off • • • when we may take such an attitude as will cause the neutrality we may at any time resolve upon, to be scrupulously respected."

Washington hoped that the period was not far off; he knew it had not yet arrived. And in fact, within less than two decades of the farewell address, the United States was drawn into the final convulsion of the Anglo-French war.

In the same sentence which I have just quoted from his Farewell Address, Washington also predicted the period to be not far off "when we may defy material injury from external annoyance."

"Why," he asked, "forego the advantages of so peculiar a situation? Why quit our own to stand upon foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice?"

It was, and is, a good question. The only trouble is that the period which Washington foresaw to be not far off—the period "when we may defy material injury from external annoyance"—has come and gone. Thanks in part to the benign presence on the high seas of the British Navy, we enjoyed such a period for the century which intervened between the end of the Napoleonic Wars and the beginning of World War I.

But increasingly since 1914, the onrush of technology has ended our physical isolation in the world. And it has correspondingly made impossible a policy of political isolation.

Some, who were not convinced of this by World War I, were convinced by Pearl Harbor.

Others, who were not convinced by Pearl Harbor, were convinced by Hiroshima.

Others, who still remained skeptical, were convinced by the ICBM.

And finally, any who even then were not convinced, must certainly have been persuaded by sputnik.

This snowballing technology, on which no Nation has a monopoly, is at the bottom of the biggest political problem we face today; indeed, it is the heart and core of that problem.

It has given both to us and to the Soviet Union the means literally of destroying the human race.

It has awakened the aspirations of those two-thirds of the human race who for centuries have been somnolent under the pall of a deadening and all-pervading poverty.

It has made a better life possible for the hundreds of millions of Asia and Africa; and, through its improvements in communications, it has made it possible for these millions to glimpse the better life.

It has likewise made possible a better life for us, the American people, and we have been enjoying this better life. Never have so many lived so well.

This greater material well-being may have within it the seeds of its own destruction unless we come to grips with the implications of technological growth. I am frank to say I do not think we have even begun to glimpse those implications.

We are confronted, literally, with a choice between life and death, in a form in which it has never been presented before. If it is death, it will be, as I said, total death. If it is life, it can be—perhaps we can even say it will have to be—a more abundant life than has ever been known.

This has all come about so rapidly that we have not yet adjusted our thinking and our habits of living to it. What complicates the matter is that this change is not a single incident in history; it can not be neatly bounded in time. It is a continuing process, and it is continuing at a rapidly growing rate. Great as has been its progress up till now, I think we are still only on the threshold of this technological revolution. And make no mistake about it: It is by far the greatest, the most portentious revolution of all time.

The possibilities, and the problems, which are opened up to us by this revolution are as boundless as the revolution itself. We can content ourselves with using the instruments it gives us for our own comfort and luxury and can for a period—I fear it will be a brief one—wallow in our private swimming pools, with the color television sets, the station wagons, and the hi-fi apparatus which are spewed out by our technology and our industry.

Or, we can use the new tools which we have acquired to secure our own place in the world and thereby put our rising standard of living on a firmer base. For example, we can—and we must use our new sources of energy to provide ourselves with better missiles and other means of defense. But we should also use these new sources to power the kind of irrigation projects which will make the deserts of the world bloom.

We can use our new found knowledge of electronics to bring Steve Allen into half the living rooms of America. But we should also use this same knoweldge to communicate the truth about ourselves to the hundreds of millions of people who are living in intellectual darkness.

What I am trying to say is that technology has now put into the hands of man instruments of the most awful potential for good or for evil. I emphasize that these instruments are in the hands of man; they are not in our hands alone. They can be used, I think—if we are wise enough—not only for strictly technical purposes, but also for broader sociological purposes. Science and technology, in other words, offer one means of building at least some kind of a bridge—fragile though it may be—between us and the Russians. One advantage of this approach is that it is nonpolitical and emphasizes the things that are common to all men. Most people would rather be well-fed than hungry, warm rather than cold, healthy rather than sick. There is no ideology in a slide rule, or hybrid corn, or a vial of penicillin. We should seize every opportunity, however, slight, to work together for constructive purposes rather than to work separately for mutual destruction.

On the foreign scene, the technological revolution has complicated our problems, as I have described, primarily because it has transformed communications, transportation, and weapons.

On the domestic scene, it has created what may well be an even bigger problem. At the same time that it has made the physical side of life easier, it has made the intellectual side of life enormously more difficult. The educational effort which must now go into producing a scientist or an engineer is vastly greater than what was required even a generation ago. But even so, it is a great deal easier for an individual to become a qualified atomic scientist than it is for him to become a qualified atomic statesman, and I hope those in charge of our schools will keep this fact in mind.

It has not been very long since leisure was the exclusive property of the upper class. The technological revolution could quite conceivably reverse that. We already have a situation where the factory laborer works 40 hours a week and spends his weekends on the golf course or at the movies or just puttering about the house; while, on the other hand, the factory manager works 6 days a week and spends most of Sunday worrying about next week. The Government clerk works a 40-hour week; his boss is likely to work 60 or 70 hours. What we are seeing, I think, is a reverse twist on the old Marxist doctrine—life is getting easier and easier for more and more people while it is getting harder and harder for fewer and fewer. This has within it political and social implications of the most profound and incalculable nature.

I shall certainly not attempt to deal with all of these implications, but let me comment in passing on only one of them, and this is a rather superficial one. It is frequently said these days, especially since sputnik went up, that children don't have to work hard enough in school. That may or may not be true, but it is difficult for me to understand how a father can logically expect his child to work harder than the father himself does. If a father sets an example of spending Saturday afternoon in front of a television set, does he really expect his son to spend Saturday afternoon with an algebra book?

I don't know what to do about this, or about the other problems I have mentioned. I do know that the first step in solving a problem is to define it, and I think that we haven't yet even begun to define some of our problems very precisely.

Now let me mention just one more change which has occurred since Washington's time—this on a somewhat different level from those I have been talking about. In 1790 the budget request for the domestic expenses of the Department of State was a little less than $8,000. This included the salary of the Secretary, which was $3,500, and eight employees—five clerks, a French interpreter, and two messengers. In addition, it included $691 to pay for rent, firewood, stationery, and newspapers.

Congress reduced the total from a little less than $8,000 to a little more than $6,000.

In 1792 the estimated cost of the Foreign Service—as distinguished from the domestic expenses of the State Department—was $40,000. This included the cost of 5 Ministers and 16 consular officers abroad.

By way of contrast, in the President's budget currently before Congress for the fiscal year 1960 the requests for the State Department, including both its foreign and domestic expenses, total $243 million. To this should be added requests of $107 million for the U.S. Information Agency and $3,498 million for the mutual security program.

Despite these and other changes, however, there has been an enduring quality, not only in our institutions, as I mentioned at the outset, but also in our basic approach to policy. This can be very clearly traced in the policy pronouncements of our first and our present Secretary of State. Ten days after assuming the Office of Secretary of 1790, Jefferson wrote to his friend, the Marquis de Lafayette:

"I think, with others, that nations are to be governed with regard to their own interests, but I am convinced that it is to their interest, in the long run, to be grateful, faithful to their engagements, even in the worst of circumstances, and honorable and generous always. If I had not known that the head of our Government was in these sentiments, and that his national and private ethics were the same, I would never have been where I am."

The same ideas, of course, recur in the writings of the then head of the Government, that is, General Washington. And I am sure that our Secretary of State would also say that he would not be Secretary unless these ideas were shared likewise by the present head of the Government, General Eisenhower. And compare Jefferson's letter with a speech which Dulles made less than a month before he assumed the office of Secretary:

"I believe that we can still follow the good American tradition of openness, simplicity, and morality in foreign policy. The need today is to rekindle faith in freedom, and make it contagious, by a fresh demonstration of what to do with freedom."

That was good doctrine in 1796; it was good doctrine in 1952; and it remains good doctrine in 1959. It is, as Lincoln said of the Declaration of Independence, a sentiment "which gave liberty, not alone to the people of this country, but, I hope, to the world for all future time."

May I summarize foreign relations, 1796–1959:

In the earlier date there were two great nations, France and England. Now there are two—Russia and the United States.

Then we stood alone against the world—now England and France and the West stand with us against the Kremlin.

Then the world was large, taking months to cross the Atlantic—now we fly around the world in 40 hours.

Then there was no radio, or telegraph, or television, or telephone; no steam, or electric engines; no aircraft; no electronics. Now, as indicated, we are in the heart of a new great revolutionary age.

Then we were the laughing stock of the kingdoms of the world—now we are the envy.

Then we were experimenting with the rights of man while the kings were experimenting with curtailing those rights.

Then we stood alone, apart as the new experiment in government, independent and flexing our muscles. Now we stand, not alone, but interdependent and providing the bedrock for the free nations to rest on.

Then we had but a pittance of a national income and a national market—now we have one-half of the market of the world, and one-half of the income.

Then we talked of noninvolvement in the affairs of Europe—now, because every nation is neighbor to every other nation, we are involved not only in the affairs of Europe, but in the affairs of the whole earth.

Then we were about 15 percent urban and 85 percent agricultural. Now, the reverse is the truth.

Then we stretched along the Atlantic coast, now we encompass the whole distance between the oceans and the gulf.

Then a people of 4 million, now a people of 175 million.

I conclude in the words of Washington: "Let us raise a standard to which the wise and honest can repair."

Making Fresh Water From Salt Water

EXTENSION OF REMARKS
OF
HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, February 23, 1959

Mr. YARBOROUGH. Mr. President, the 85th Congress began consideration of a pressing problem for the United States and particularly for the Southwest—the problem of abundant water.

One of the avenues of research in this long-range program to find a solution for the problem was the establishment of experimental demonstration plants designed to convert sea water to fresh water.

One of the finest locales available for the construction of such a plant would be the Texas gulf coast. This area is just beginning to realize its industrial potential, but one of the factors which is hampering its growth at an even more rapid rate is the lack of fresh water for industrial and other uses.

In addition, the Texas gulf coast is near the lands of the southwestern and midwestern United States, which need more fresh water.

Construction of a conversion plant on the Texas gulf coast would greatly bolster the economy and would benefit the country as a whole. It could provide fresh water for industry, irrigation of farmlands, residential consumption, and many other uses.

We have seen the blossoming of the agricultural and industrial potential of previously arid areas where plentiful water is made available. Such a supply of water could do the same thing for the Southwest.

Building a conversion plant on the Texas gulf coast would be an investment in the future prosperity of our Nation. I strongly urge that Secretary of the Interior Fred A. Seaton and the Members of Congress seriously consider the many brilliant qualifications of the Texas gulf coast as the site for such a plant.

Mr. President, the Honorable J. Charles Whitfield, Jr. of the Texas House of Representatives, has sent to me a resolution introduced by himself and Representatives Miller, Daily, and Bridges and passed by that body recently. I ask unanimous consent to have it printed in the Appendix to the RECORD, and earnestly commend its content.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

HOUSE RESOLUTION 87

"Whereas the great Texas coast is in the center of the fertile crescent of America; and

"Whereas to that area there is a growing migration of heavy industry; and

"Whereas heavy industry cannot survive save with an abundance of fresh water; and

"Whereas the 85th Congress of the United States, by Joint Resolution 135 of September 2, 1958, has addressed itself to the long-range solution of the water problem; and

"Whereas that Congress has appropriated $10 million for the construction of demonstration plants designed to convert sea water to fresh water; and

"Whereas, one of those plants is to be on the gulf coast; and

"Whereas the Texas gulf coast is the most logical location, considering its industry growth potential, together with its nearness to arid lands of the interior of our great Midwest and Southwest; and

"Whereas the Secretary of the Interior, Fred A. Seaton, will on or before March 3, 1959, begin this program: Now, therefore, be it

"*Resolved*, That we, the members of the house of representatives, do petition the Honorable Fred A. Seaton, Secretary of the Interior, to consider the Texas coast as the first site for this monumental undertaking, and express to him and to our scientists our confidence in their ability ultimately to solve the various problems of cheap and abundant sea water conversion; and, be it further

"*Resolved*, That copies of this resolution be forwarded to the Members of Congress from Texas.

"WAGGONER CARR,
"*Speaker of the House.*"

I hereby certify that House Resolution 87 was adopted by the house on February 12, 1959.

DOROTHY HALLMON,
Chief Clerk of the House.

George Washington and Brooklyn

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. MULTER. Mr. Speaker, we in Brooklyn are not only celebrating the 227th anniversary of the birth of the Father of our Country, but also the 335th anniversary of the formal settlement of Brooklyn.

The first actual purchase of land on the present site of Brooklyn was made in 1636 at about what is now Gowanus Bay. Between the following year and 1654 a colony of Walloons built their dwellings on Waal-boght, which we now know as Wallabout Bay.

As early as 1642—only 6 years after the first land purchase—a ferry had been establishede by one Cornelis Dircksen, operating from Peck Slip, over in Manhattan, to what is now Fulton Street.

Nearby, at the intersection of Fulton and South Streets, the settlement of Breukelen—Broken Land—was established. It was named for a village in Old Holland.

In 1643 Lady Deborah Moody, having been excommunicated by the Puritan Church in Massachusetts because of her disbelief in infant baptism, settled with some English followers at Gravesend.

By 1660—the year of the Restoration in England—New Utrecht, Midwout—Midwood—and Bushwick had been established.

These Dutch-Walloon settlers brought to Manhattan and Long Island a type of culture and community life entirely their own, of which the Dutch Reformed Church was the focal point. Around it all else revolved. Even after the American Revolution, the pattern was still strong enough to impress itself upon the village and, later, the city. That pattern was, as one writer has described it, one of "order, sobriety, piety."

Oddly enough, the Dutch and Walloons cared nothing, in these early days, for waterfront rights: they were interested in farming the hinterland; it was the enterprising Yankee across the river who established warehouses, slaughterhouses, and tanneries to which the Long Island burghers brought their cattle bred on the salt meadows sloping down to Wallabout and Gowanus.

With the coming of American independence and the consolidation into a closely knit union, Brooklyn, like her neighbor on Manhattan, thrived and prospered. When it was proposed in 1883, that the Long Island town be incorporated into the city of New York as a sensible and practical step, mutually advantageous to both communities, a roar of protest went up from the old-timers. Stout old Gen. Jeremiah Johnson, of Wallabout, speaking for the majority, roundly declared:

Between New York and Brooklyn there is nothing in common, either in object, interest, or feeling—nothing that even apparently tends to their connection, unless it be the waters that flow between them. And even those waters, instead of, in fact, uniting them, form a barrier between them which, however frequently passed, still form and must forever continue to form an unsurmountable obstacle to their union.

The forerunner of the argument that Hawaii is too far from the mainland to be a State.

The following year the intrepid general and his triumphant followers secured from the legislature a city charter for the village. But, as one historian observes:

The general's defiance was fateful. Geographically and hence commercially, Brooklyn was bound to the island of Manhattan; yet it became a city and remained one for 64 years. When incorporation finally took place, in 1898, the insurmountable obstacle to the union had already been spanned by the mighty Brooklyn Bridge. The Williamsburg and the Manhattan bridges followed and the high-sounding words of General Johnson have long since been lost in the roar of three subways under the river.

By daybreak of August 27, 1776, the powerful British Army, landing under the guns of the fleet, threatened the encirclement and complete annihilation of the scanty and divided American forces. Perceiving the peril of the situation—the fate of the American cause hung indeed in the balance during these 2 days—Washington, in a masterly decision, evacuated his entire army from Brooklyn Heights during the night of the 29th in a counterstroke, unsurpassed for swiftness and efficiency in military annals. What is more, he had managed to bring back intact all the cannons, small arms, ammunition, tools, horns, and foodstuffs, so that when the bewildered British, puzzled by the strange silence, finally climbed into the empty works, they found, in the words of a contemporary historian, not "so much as a biscuit or a glass of rum wherewith to console themselves." Though men did not then perceive it, the independence of America was secured.

It is well that we inhabitants of old Breukelen think of those great days as we celebrate the birthday of the Father of our Country and our own civic anniversary.

Who's Who and What Is Going on in Space—A Space Lesson

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. FULTON. Mr. Speaker, Abe Silverstein is Director of Space Flight Development at the National Aeronautics and Space Administration headquarters in Washington, D.C. Before the NASA was established, on October 1, 1958, he was associate director of the Lewis Flight Propulsion Laboratory, Cleveland, Ohio, a research center of the National Advisory Committee for Aeronautics, which formed the nucleus of the NASA.

Silverstein directs those NASA programs aimed at the development of space flight. Development programs under his direction includes space probes and manned and unmanned satellite systems. He is also responsible for the development of propulsion systems capable of powering these space vehicles.

Silverstein is a native of Terre Haute, Ind., where he attended local grammar and high schools. He earned a bachelor of science in mechanical engineering degree in 1929, and a mechanical engineering degree in 1929, and a mechanical engineer professional degree in 1934, from Rose Polytechnic Institute. He was awarded an honoary Ph. D. degree by Case Institute of Technology in 1958.

Silverstein joined the National Advisory Committee for Aeronautics in 1929 and soon after helped design the full-scale wind tunnel at the Langley Aeronautical Laboratory. He later was placed in charge of this facility and directed research which increased the high-speed performance of most of the combat aircraft of World War II. This work was recognized as a major factor in gaining U.S. air superiority during the war.

In 1943 he was transferred to the Lewis Laboratory at Cleveland to select and train a staff which he directed in research at the altitude wind tunnel. These investigations led to significant improvements in both reciprocating and early turbojet aircraft engines. He also pioneered with large-scale ramjet engines, now used on certain missiles.

At the end of World War II, Silverstein was directing the work at several major research facilities at Lewis. He directed the erection of the $9 million NACA 8- by 6-foot supersonic wind tunnel, first operated in 1949, and the $33 million NACA 10- by 10-foot supersonic wind tunnel, completed in 1956. These facilities, the largest wind tunnels of their kind in the world, have greatly accelerated the development of supersonic aircraft. In 1952 he was appointed associate director of the Lewis Laboratory, a post he held until he was named to the headquarters staff of the NASA.

Silverstein was a member of several NACA committees and subcommittees, including: Committee on Aerodynamics, 1946 to 1947; Subcommittee on Self-Propelled Guided Missiles, 1945 to 1947; Subcommittee on Internal Flow, 1947; Subcommittee on High-Speed Aerodynamics, 1945 to 1957; Committee on Powerplants for Aircraft, 1951 to 1957; and the Special Committee on Space Technology, 1958.

He served as chairman of the Cleveland section of the Institute of Aeronautical Sciences, 1946 to 1947. He was a member of the committee on arrangements for the joint meeting of the Institute of the Aeronautical Sciences and the Royal Aeronautical Society, held in New York City, in 1949. The Assistant Secretary of Defense for Research and Development appointed him a member of the Technical Advisory Panel on Aeronautics for the year 1955, and as chairman of the ad hoc working group on rockets for 1956. He was a member of the scientific advisory board of the Chief of Staff, U.S. Air Force, for 1956 and 1957, and chairman of the OASD technical advisory panel on aeronautics, ad hoc group on propulsion for aircraft and missiles. He was a member of the Assistant Secretary of Defense's steering group of the Advisory Panel on Aeronautics for 1958.

Silverstein was American representative to the joint meeting of the Institute of the Aeronautical Sciences and the Royal Aeronautical Society, in London, in 1947. He delivered the annual Wright Brothers Lecture before the IAS in 1949.

He is a member of Tau Beta Pi, and a fellow of the Institute of the Aeronautical Sciences.

Silverstein, his wife Marion, and their three children, Joseph, Judith, and David, live at 7205 Rollingwood Drive, Chevy Chase, Md.

Glen Canyon Bridge

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. DIXON. Mr. Speaker, today, at Glen Canyon Dam, currently the largest construction job in the United States, a major accomplishment is being celebrated.

The States of Utah and Arizona are now connected by a new bridge over the Colorado River at the damsite, making it possible for a traveling America to visit and explore some of the most colorful and hitherto most inaccessible area of the old West.

Following is a brief statement of facts on this important construction achievement:

The spectacular Glen Canyon Bridge is the final link forged in a new highway joining the States of Arizona and Utah in a colorful corner of the Nation. Spanning the 1,200-foot-wide, 700-foot-deep gorge of the Colorado River at Glen Canyon damsite, the bridge eliminates the major obstacle in the building of Glen Cayon Dam.

Glen Canyon Bridge was designed by the Bureau of Reclamation; financed jointly by the State of Arizona, U.S. Bureau of Public Roads, and U.S. Bureau of Reclamation; and built by Kiewit-Judson Pacific Murphy under a competitively bid contract of $4,139,277.

Work started at the bridge site in May 1957 with excavation for skewbacks and building the abutments. As work proceeded at the damsite, the steel was fabricated in California. On May 7, 1958, the first steel beam was placed. Erection proceeded rapidly from both sides, and on August 6, 1958, the arch was closed as the last piece was pinned into place.

Now, the Glen Canyon Bridge is completed—the highest of its type in the world. For years to come it will stretch gracefully across the Glen Canyon of the Colorado—an engineering wonder—and a servant to the people of the Nation.

Administered Price Inflation

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, February 23, 1959

Mr. KEFAUVER. Mr. President, in the course of the Antitrust and Monopoly Subcommittee hearings there has been considerable testimony to the effect that a primary cause of the high prices and inflation plaguing the consumer today has been the upward manipulation of prices in the concentrated administered price industries.

I want to place in the RECORD a letter which appeared in the Washington Post and Times Herald. It is written by Eugene Havas, a prominent financier and economist. It is a vivid statement of how prices are raised in administered price industries, especially in steel, in the face of remarkably high profits. The effect on the cost of living is obvious. It hits every consumer in this country, directly or indirectly, right in his pocketbook.

I ask unanimous consent that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THOSE ADMINISTERED PRICES

Congratulations on your forceful editorial of February 8 on "Those Administered Prices," and Bernard D. Nossiter's lucid presentation of this new type of inflation.

You have performed a great public service by printing Dr. Gardiner Means' charts comparing the administrative type inflation of 1953–58 with the wartime inflation of 1942–47, so that the average man can understand what is plaguing us and could urge Congress to do something about it.

It is clear from Dr. Means' conclusions that the steel industry passed on to the con-

sumer not only the wage increases granted to its employees, but much more. Indeed in the last 10 years, the leader of the steel industry, the United States Steel Corp., increased its dividend fourfold from 4 or 5 percent to 18 percent on their investment, reinvested more than $1,250 million from undistributed profits, set up a pension fund of $1 billion, and wrote off about $2 billion in normal and accelerated depreciation.

No wonder that the equity of the United States Steel, which was valued about $550 million by the stock market in 1948 increased to about $5 billion at current stock exchange prices. Somewhat similar is the story of the Bethlehem Steel Corp., which increased its dividend in the period of 1947 to 1957 from 6 percent to 28 percent.

These two corporations are producing about half of the total of the steel output and dictate the price policy of the industry. Had they refused to increase their prices in August 1958, following the announcement of a $4.50 per ton increase of the other companies such as Armco Steel, Jones-Laughlin, Republic Steel, there is no doubt that the price increases would have been rescinded by these lesser producers.

Whether some of the less efficient marginal steel companies needed the increase to maintain profitable operation is debatable; what is certain is that some of the big companies such as United States Steel, Bethlehem, Republic, etc., did not need it. Unless, of course, we are willing to acquiesce that United States Steel and Bethlehem Steel needed to earn close to 100 percent on their equity capital (before taxes) or that they needed to continue to pay a dividend of 18 percent or 28 percent, inaugurated in the prosperous years of 1956–57.

The average man does not realize that the so-called regular quarterly dividend of 75 cents for United States Steel, or 60 cents for Bethlehem Steel corresponds to 18 percent or 28 percent because the $100 par value stock was split in 1949 and in 1955 to the ratio of 1 to 6 in the case of United States Steel and 1 to 12 in the case of Bethlehem Steel. In the first half of 1957, when the steel industry operated at about 90 percent capacity, these two companies earned more than 100 percent on their equities before taxes, and at the present more than 80 percent operating capacity they are approximating that high profit ratio again.

Is it surprising that in face of such high profits steelworkers are restless and want another wage increase in the coming negotiations this spring. They can point to the huge benefits the managers are obtaining from their stock options. The annual report of United States Steel states that options were granted at $18.50 per share in 1953. These shares are now quoted around $90, so that in 5 years there is a capital gain of 500 percent, a free ride on the waves of administered price inflation.

This clearly demonstrates that the managers of the big corporations have a vested interest to make good on their stock option and that their pricing practices are not unrelated to their own interest, which is not identical with the public interest.

That such a situation calls for action by Congress is obvious. It is useless to hope that either the policy of the Federal Reserve System or budgetary measures, however sound and necessary they are by themselves, can stop inflation spurred by administrative price increases. The executive officers of the giant corporations cannot be unbiased judges of what is good for the country, when their actions of raising prices could so enhance their private fortunes.

Secretary Anderson, testifying before the joint congressional committee, said that when speculation is safe and saving is a gamble, the country is in a bad way. Nothing can be more true. Let us hope that Secretary Anderson will act in accord with his wise statement and present Congress with effective measures to stop the free ride on inflation.

He can do that by taxing profits realized on stock options at regular income tax rates, instead of the 25 percent capital gain rates. He can propose taxes for stock splits which are characteristic of an inflationary psychology: that it is safe to speculate and foolish to save or invest in Government bonds.

All the efforts of the administration to achieve price stability, balanced budget and last but not least the easier and less expensive refinancing of the $80 billion Government debt due in a year, will be in vain if no appropriate measures are taken to end the now prevailing administrative pricing practices in the steel industry. Another steel price increase in July 1959, would further impair the present disequilibrium of our economy and the soundness of the dollar.

EUGENE HAVAS.

WASHINGTON.

Billion Dollar Bundle

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, February 23, 1959

Mr. DIRKSEN. Mr. President, one of the most engaging and provocative speeches I have encountered in a long time is that made by Mr. Roger M. Blough, chairman of the board of directors of the United States Steel Corp., when he addressed the annual meeting of the Minnesota Editorial Association at Minneapolis. Mr. Blough's speech deals with inflation and the current challenges. I recommend his speech as essential reading for every Member of the Senate. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

BILLION DOLLAR BUNDLE

(An address by Roger M. Blough, chairman of the board of directors, United States Steel Corp., at the annual meeting of the Minnesota Editorial Association, Minneapolis, Minn., February 20, 1959)

If anyone could be happier these days than a hypochondriac at a medical convention, it is, I suppose, a businessman at a meeting of the press. The reason in both cases is the same. Each feels that at last he can tell his troubles to a group which can really do something about them.

So when you honored me with your welcome invitation to come out here and talk with you today, I accepted it with even more alacrity than usual.

This may have been a mistake. Since receiving your invitation, I have run across a recently published book entitled the Sugar Pill, whose author sets out to prove that you really aren't much interested in news anyhow; and that the vaunted power of the press is a mere delusion. In fact, I believe that claptrap was the word he used in describing it.

Now needless to say, it was quite a shock to me to learn from this, shall I say, authoritative source, that the influence of you members of the biggest and, I think, the most powerful, press in the world is merely a figment, so to speak, of your own imaginative egos. But if it is any consolation to you, let me offer you the sympathy of one who fully shares your partnership in pain; for over the years, we of United States Steel have suffered a veritable hailstorm of sugar pills that have been aimed in our direction by a number of self-appointed critics who were doubtless equally well meaning.

It is true, of course, that none of these critics, so far as I can recall, ever accused us of being powerless. Conversely, they have sought with great unanimity, to prove that we possessed some vast, mysterious and unhappy power to crush our competitors and thus to work great evil upon society. So I have had frequent occasion to ponder, at length, this question of power, or the lack of it; and it has always puzzled me.

It just happens, you see, that in 1901—the first year of its existence—United States Steel produced about two-thirds of all the steel that was made in America—in other words, twice as much as all of its competitors put together. But last year, our company produced only 28 percent of America's steel; and our competitors turned out more than 2½ times as much as we did.

So you will understand my natural desire to get my hands on this enormous power that we are supposed to have; because if I ever find it, I know exactly what I want to do with it. I want to give it, with my blessing, to Bethlehem, Republic, National, Armco, Jones & Laughlin, and one or two hundred other competitors of ours who have been crushed to such heights of success since United States Steel was born.

Meanwhile I shall continue to take my sugar pills with a grain of salt; and my confidence in the power of the press will remain undiminished. In fact if there is any understandable complaint that can be lodged against the American press today by a tired and harassed reader, it is that you are doing your job so thoroughly.

You recall that onetime colleague of yours, the late, lamented humorist, Will Rogers, once said that if his audience ever walked out on his act, he would bundle up his family and head for the tall grass of Oklahoma. There he planned to get a high-powered rifle, point it down the road, and cut loose at the first man who approached with a newspaper. That way, he said, he could just keep on living in ignorance.

Now living in ignorance, as a solution to all of the problems that confront us daily in the headlines, sometimes sounds mighty appealing; and despite the rising circulation of your newspapers, I suppose that a great many of us would welcome escape from the tidings they so often bring. With pressures and tensions building up on every side of us, we wish perhaps that we might forget the news and seek some quiet wilderness where we could commune, in peace, with nature. But even that word "commune" has lost its restful magic. Today it is usually used as a noun that depicts only terror, oppression, and the degradation of human life—as millions of people in China can attest.

No; today there is no escape—no beckoning Walden.

The news is too demanding. It is filled with questions pressing for answers. And only an informed people can hope to come up with the right answers in a republic such as ours.

So I, for one, am devoutly thankful for the power and the freedom of the press in America—a press which has the energy, initiative, enterprise, and integrity to search every corner of the world for meaningful news, whether it be good or bad, to report that news honestly and fully, to comment upon it intelligently, and thus to maintain in this country of ours an informed and enlightened citizenry.

That, as I see it, is the great, unchallenged power of the free American press. And since

the power to provoke thought is vastly more important than the power to control thought, it stands today, I think, as our first, best hope of survival.

So in talking here with you members of the Minnesota Editorial Association, I first want to say that all of us at United States Steel recognize and commend the well-informed reporting and editorial comment that has generally characterized the Minnesota press in dealing with our mutual problems on the iron range. In company with your distinguished guests, you have discussed the local aspects of these problems at length with many of my colleagues; and you have shown a deep understanding of the difficulties we encounter in our joint search for a solution.

But you also recognize, I know, that the production problems which beset us here are not merely local. They are not unique to Minnesota, nor to the mining industry. Actually, they resolve themselves into one, basic economic problem that confronts every industry in every State of the Nation, and in nations across the world.

And that problem is to keep our production costs competitive with those of other producers both here and abroad.

You know this era that we live in has been called the atomic age, the space age, and by many similarly imaginative titles; but economic historians of the future may call it—more correctly, perhaps—the age of competition; for never before in history, probably, has the ability of man to survive depended so directly upon his ability to compete on a national and international scale.

Today the industrial leadership which America has enjoyed throughout the present century is being challenged by nations all over the world and on both sides of the Iron Curtain. The so-called cold war is centering more and more upon the battlefield of industrial production. But to call it merely a war of production is to miss the point. It is primarily a war of productivity—a struggle on the part of every company, every industry, and every nation to become the low-cost producer of the things which it offers for sale in world markets.

There is no doubt, for example, that if Minnesota's iron mines were the most economical source of supply for all of the steel mills in America, employment on the iron range would increase substantially. And if Minnesota ores could undersell their competitors in foreign markets generally, the iron range would be booming. The same thing is true of steel and almost any other product you can name.

So over the years, American industrial management has striven in every conceivable way to increase its productive efficiency and cut down its operating costs. In its laboratories and its factories, it has devised and developed machines which have multiplied the output of its workers enormously. It has discovered and installed the techniques of mass production. It has streamlined its organization and has hammered away at methods improvement and cost reduction programs until it would seem that there is almost nothing left in this field to hammer—although there is still a plenty.

Yes, it has done everything in the book, and has even rewritten the book. Yet all the economies that it has effected so steadily in the costs that it could control have not balanced out the rising costs that lie beyond its control. And so today we see our production costs mounting on every side; we see prices rising as a result; and we see many of the products of our foreign competitors underselling ours—not only in markets abroad, but often here at home.

In short we see the inevitable harvest of inflation.

Now there is a school of thought, of course, which holds that inflation is a kind of heaven-sent answer to our problems. The adherents of this school believe—sincerely, I am sure—that if Government will just quit worrying about the deficits which are one of the major sources of inflation, and will spend its borrowed money liberally enough, it will touch off such a spree of industrial production and employment that the resulting increase in the tax yield will balance the national budget and bury the specter of inflation forever in its grave.

But if there were any validity in that convenient argument, inflation should have been a dead duck many years ago; for—including World War II and Korea—our Federal Government has operated in the red for 23 out of the last 28 years. Our national debt is at an alltime high, and we are about to raise the debt limit again for the fourth time in 13 years. And our interest payments alone, on that debt, now about to $7½ billion a year. That is more than the total Federal budget was in 1938; and it amounts to—$43 apiece for every man, woman, and child in our land.

Nor have our States been backward in the testing of this theory. Seven years ago, 19 of them were spending more than their general revenues could cover. In 1957, that number had increased to 29. So going into the red has become more popular each year; and the net result of this inflationary cure for inflation has been to reduce the value of the American dollar to less than 50 cents in the course of the past 20 years.

Still the quaint belief persists that the way to treat this form of economic intoxication is to administer ever-increasing quantities of the intoxicant to the hapless victim; and while this may make everything look rosy, temporarily, the result is inevitably fatal. From the ancient days of Greece and Rome, inflation has brought collapse not only to nation after nation, but to whole civilizations.

We saw what it did in Germany, Poland, Russia, Hungary, and Austria after World War I; and now, in France—where the cost of living is 37 times greater than it was just 32 years ago—Antoine Pinay, the former Premier who has been put in charge of the treasury by President De Gaulle, has this interesting and expert comment to offer:

"Inflation," says M. Pinay, "corrupts everything, a balanced budget, investments, job security, social legislation, the moral health of all classes, even national prestige abroad."

All our wishful thinking to the contrary, therefore, we know that we cannot spend ourselves into prosperity or inflate ourselves into a position of international security and leadership. We cannot go on forever getting more and more for producing less and less. And we merely delude ourselves when we seek to increase consumer purchasing power by adding more dollars to our pay envelopes, on the one hand, and by ignoring the shrinking value of those dollars on the other. Ultimately, the inflated dollar becomes worthless, and whether we double, triple, or quadruple nothing, the result is still nothing.

Yet this year, unless we can prevent it, the probability is that we shall go orbiting off on another great round of inflation, as unions in a dozen major industries make wage demands that exceed any conceivably possible increase in national productive efficiency. And since one of these industries is steelmaking, I should like to discuss this aspect of inflation with you briefly.

In recent years, our Nation has witnessed a new phenomenon which is known among economists as cost-push inflation and which made its appearance simultaneously with the growth of the powerful industrywide unions that we have today.

Cost-push inflation occurs when wages, and other production costs, are pushed up more rapidly than national productive efficiency increases. This, in turn, forces prices to rise where competition permits, and diminishes the purchasing power of the dollar accordingly. Where competition prevents the recovery of increased costs through higher prices, the producer ultimately goes out of business. There is no other alternative.

But I do not need to tell you ladies and gentlemen of the press about the dangers of this spiral of wages, costs and prices. People in your industry tell me that rising costs have been largely responsible for the disappearance of some 217 daily newspapers in the United States in the past 10 years.

Now there are many costs, of course, which enter into the production process, but by far the most important of these is the cost of employment. If we take the entire production process from the raw materials right through to the finished product, unemployment costs—direct and indirect—account for 75 to 80 percent of all costs. That means that an unearned rise in employment costs has from three to four times as much inflationary effect as a corresponding rise in all the remaining costs of production put together.

So bearing this all-important fact in mind, let us look for a moment at the wage picture that confronts us. Of the major wage contracts on file with the Department of Labor, 154 will come up for negotiation this year. These contracts cover about 4½ million workers, and among the many unions involved, one of the largest and most powerful is the steelworkers union with about 1¼ million workers. Its present 3-year agreement with the steel-producing companies expires on June 30.

Now presumably most of these unions will come up with demands for a "package" embracing higher wages and benefits; but the steel union union isn't talking in terms of a mere package— it's talking about a billion-dollar bundle.

In the advertisements which it has been running in your newspapers, this union has been telling us how an extra billion dollars, in the pockets of the steelworkers, will increase the sales and the profits of the automobile industry, the moving-picture houses, and the homebuilders of America, and so on, ad infinitum. So it is going to do the whole Nation a great favor by getting that billion-dollar bundle for its members.

And that sounds just dandy; but why be so selfish about it? Why limit it to 1¼ million steelworkers? Why not do the same for all of the 65 million gainfully employed people in America, and thus raise the ante of $52 billion? In short, why not go on a real inflationary bender while we're at it? It should be lots of fun, while it lasts.

Unhappily for all of us, however, you don't find a billion-dollar bundle in a 5-and-10-cent store—not even in these days of inflation. And when the union, in its advertisements, speaks as it has about a billion dollars in new money, it is describing the sutuation more accurately and more prophetically, perhaps, than it had really intended. For that is precisely what it would be in the end—new money, fresh off the printing press and worth exactly that.

Now it is not my purpose to argue the steel wage case here today. That would take a great deal more time than any of us can spare on this occasion. But I do want to discuss two points that will be hotly debated in the press, no doubt, as the negotiations in steel and all these other industries develop during the year:

First we will be told that these new wage demands can be met out of increased productivity, and thus will not be inflationary. And second we will be told that the real cause of this cost-push inflation is to be found—not in rising wages—but in exorbitant industrial profits. Let's look at these statements a little.

In the case of productivity, we must remember that it is not, by any means, the

same thing as output per man hour. In any one company or industry, for example, an increase in output per man hour may be completely offset by the increased cost of machines or materials that made the higher output possible. So when we talk in terms of output per man hour we are usually exaggerating greatly any increase in real productivity that may have occurred.

We must also remember that productivity—as an offsetting factor to inflationary wage increases—cannot be measured on a short term basis covering a month, a few months, or even a few years.

For example, if we take the records of the American Iron and Steel Institute, and do a little arithmetic, we find that in 1956—the year in which our present steel wage agreement was signed—the industry turned out considerably more steel per thousand man hours than it did last year. Over that period, in fact, output per man hour declined by more than 7 percent.

That, of course, was due primarily to the sharp drop in steel production during a period of recession; and now that the demand for steel is rising rapidly, it may be expected that output per man hour will do likewise. So if the steel union seeks to justify its wage demands by claiming some spectacular rise in output per man hour during the coming months, it may fool a number of people; but that will not make its demands one whit less inflationary.

The truth is, of course, that from 1940 through 1957, hourly employment costs in the steel industry have gone up an average of 7.6 percent for 17 solid years. And in contrast, the reports of the Department of Labor show that output per man-hour has risen by only 2.6 percent per year. And, as I pointed out before, using "output per man-hour" overstates the real produotivity gains.

So there you have it: 7.6 percent against 2.6 percent, each year for 17 years. The difference spelled wage inflation.

Now, let's take a look at those profits.

The argument here is that rising corporate profits, rather than wages, are responsible for the ever-mounting cost of living. And the trouble with this argument is that corporate profits haven't been rising for years. In fact, only twice during the present decade have the after-tax profits of corporations as a whole been as high as they were in 1950. In all other years they were lower. And Government reports show that last year they were $5 billion less than they were in 1950.

The same Government reports also show, however, that compensation of employees, throughout the Nation, has risen by $100 billion during these same 9 years. So I leave it to you; whence cometh this cost-push inflation?

I should add, however, that this decline in corporate profits may have contributed, in one respect, to the inflationary effect of the wage increases; because, you see, there is only one way in which these corporate profits can be spent. They all go to pay for the use and improvement of the tools and other capital facilities necessary to production * * * and had the profits of all corporations risen as they should have, during this period, there is no doubt that many of the cost-reducing improvements that American industry is still waiting to make in its facilities would have already been installed and would now be yielding the fruits of increased efficiency.

So when we hear union leaders say that higher wage costs can, and should, come out of profits, let us remember one little economic maxim: that less profit means fewer tools—or poorer tools—of production; and that this, in turn, means less efficiency, higher production costs, higher prices, shrinking purchasing power, diminishing markets, and fewer jobs. It is just as simple as that.

Ladies and gentlemen, at the outset of this little talk I said I wanted to discuss my problems with you because you could really do something about them. As you see, however, they are not my problems alone. They are the problems of all of us, of you, of the men in the mines and the mills, and of union members and leaders alike; for no matter what economic group we may belong to, and no matter what the conflicting interests of these groups may seem to be, we are a Nation of 175 million consumers and each one of us has a vital stake in the task of protecting the consumer purchasing power of all of us.

If there is one banner under which we should all unite, I suppose it would read something like this: "Hold that line in 1959."

No single group of us can do it alone. We who represent the steel companies are going to do our full part, but in saying that, let me remind you that at the American bargaining table, in these days of industrywide unions, the power that is concentrated on the labor side normally outweighs by a considerable margin that on the management side. This is especially true when any single company is negotiating with the union and is still likely to be true even when a group of companies have joined together for bargaining purposes.

Unless the representatives of the union are fully satisfied when our present steel contracts expire, they can strike the plants and close down about 90 percent of the steel industry. And they have done so five times in the last 13 years.

The steel companies have taken these costly strikes in an effort to help check the rising tide of wage-cost inflation; but they have never succeeded in doing so; for a strike in steel is not a weapon that is aimed at the companies alone. After it has gone on for a few weeks, many of our customers begin to run out of steel. Thus they face a shutdown of their plants and a layoff of their employees. The flow of steel needed for defense is shut off too; and so the pressure upon the companies to settle finally reaches a point where it is difficult to withstand any longer. It comes from our customers, from the public, and—frequently—from the Government itself.

Settle, they tell us; and settle we must. So the companies alone cannot stop wage inflation. Neither can the Government, I think, under present circumstances. Conceivably it might legislate a more equal distribution of power at the bargaining table, but I cherish little hope that it will do so. Failing that, it could resort to the peacetime imposition of wage and price controls; but those have been tried in nation after nation for more than 2,000 years, and never yet have they stopped inflation. They have only stopped production and progress.

Yet there is, I believe, one great, irresistible force in this country that can stop wage inflation at its source. That is the force of informed public opinion. And the power to create an informed public opinion is the power of the press.

Now I know that the issues in any wage negotiation are many and complex; and that working as you do under the inexorable pressure of the clock, you have little time to delve into them fully. I also know that a wage negotiation, even in a nationwide industry, is pretty small potatoes as news goes, these days, and that there is very little space that you can give it.

It is true, moreover, that you have fully and fairly discharged your reportorial duties when you give both sides of the story. You tell your readers that the union says its wage demands will cost X cents per hour; but the companies claim that it will cost a good many cents more per hour. So the reader, who is often a pretty busy fellow himself, is likely to conclude that both sides are protesting too much, and that it really doesn't matter much because they're only haggling over a few pennies anyway.

But which side is protesting too much? And just how much does it matter?

Well it matters a great deal, because, you see, an increase of 1 little cent per hour in the cost of employment will add some $15 million a year to the industry's cost of making steel. And in saying that, I am referring only to the direct employment cost. As similar wage boosts occur in other industries and are reflected in our purchased goods, services, taxes, and so on, the increase in our indirect employment costs soon mounts up to an equal sum. So as a kind of rough rule of thumb, we may say that each 1 cent increase in steel wages and benefits means some $30 million of increased costs to add to the inflation spiral.

But it lies within the power of the press to determine what the exact facts are. You men and women have the opportunity to go to the source of these conflicting statements on both sides, to check the figures for yourselves, and to tell your readers of your findings.

My purpose here today is to invite you most cordially to do so; because unless the public can be fully and truthfully informed, it looks as if we may have another billion-dollar bundle of unwanted inflation on our national doorstep for keeps.

Industrialization of the States

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, February 23, 1959

Mr. PROXMIRE. Mr. President, the Milwaukee Sentinel recently printed a table showing the degree of industrialization of each of the 48 States excluding Alaska, as measured by percentages of personal income derived from manufacturing wages and salaries.

It will surprise many Members of Congress to discover that the State of Wisconsin is now seventh in the country in industrialization by this measure and ranks ahead of such States as Massachusetts, Rhode Island, Illinois, New York, California, and Texas.

Mr. President, I ask unanimous consent that the table and the interesting article accompanying it, written by William A. Norris of the Sentinel be printed in the Appendix of the RECORD.

There being no objection, the table and article were ordered to be printed in the RECORD, as follows:

STATE RESIDENTS' INCOME HEAVILY DEPENDENT UPON MANUFACTURING

(By William A. Norris)

Here's a good method of measuring the degree of Wisconsin's industrialization, its dependence on manufacturing for its economic life:

Out of every dollar of personal income received by Wisconsin people, 30 cents comes from manufacturers in the form of wages and salaries.

The remaining 70 cents of the State's total personal income are derived from wages and salaries in all nonmanufacturing occupations, and from the professions, interest and dividends, profits on farms and businesses, pensions, annuities and other nonwage sources.

The figures used in this column are based on reports of the Department of Commerce

for 1957 (percentages by courtesy of my slide-rule).

Only six States get a higher percentage of personal income from manufacturing wages and salaries than does Wisconsin.

At the top of the list is Michigan, with 36.8 percent; at the bottom is North Dakota, with only 2.6 percent. The national average is 23.4 percent.

The following table does not show which States have the most manufacturing, but it does show which States have the most manufacturing in relation to all their other sources of personal income.

As a result, some rather surprising things appear. New York, which leads all States in total value of manufacturing, is No. 19 on the list, slightly below the national average. That's because New York has tremendous sources of personal income other than manufacturing—financial institutions, shipping, vast wholesale and retail structures, service industries, utilities, transportation of all sorts. Manufacturing is relatively less important to New York than it is to Wisconsin.

On the other hand, little Delaware, with manufacturing output only about one-sixth of Wisconsin's, is tied with us in the list because its total personal income is only about one-sixth of ours. Relatively, Delaware is as highly industrialized as we are. Some other small States, such as New Hampshire, Rhode Island, and Vermont, are higher on the list than you might expect.

Some industrial giants, like California and Texas, whose manufacturing volume exceeds Wisconsin's, are far down on the list because their economies include big nonmanufacturing resources. Here's the list:

Percentage of personal income derived from manufacturing wages and salaries

1. Michigan	36.8
2. Indiana	35.2
3. Connecticut	34.5
4. Ohio	34.2
5. New Jersey	31.4
6. Pennsylvania	31.0
7. Wisconsin	30.4
8. Delaware	30.4
9. New Hampshire	28.7
10. Rhode Island	27.6
11. Massachusetts	26.8
12. South Carolina	26.1
13. Illinois	25.7
14. North Carolina	25.0
15. Maine	24.6
16. Tennessee	23.4
U.S. average	23.4
17. Alabama	22.5
18. Vermont	22.4
19. New York	22.0
20. Missouri	21.4
21. Maryland	20.8
22. Georgia	20.4
23. West Virginia	20.2
24. California	19.5
25. Washington	19.5
26. Kentucky	19.2
27. Oregon	19.0
28. Minnesota	17.5
29. Kansas	16.3
30. Texas	16.0
31. Iowa	15.6
32. Mississippi	15.5
33. Virginia	15.5
34. Arkansas	13.8
35. Louisiana	13.5
36. Utah	12.4
37. Idaho	11.5
38. Oklahoma	10.9
39. Colorado	10.7
40. Arizona	9.9
41. Nebraska	9.5
42. Florida	8.1
43. Montana	7.6
44. Wyoming	5.3
45. New Mexico	4.9
46. Nevada	4.5
47. South Dakota	4.5
48. North Dakota	2.6

(Apologies to Alaska, for which we have no figures.)

This list, perhaps, will help to impress public officials and private citizens alike with the vital necessity of preserving and expanding our State's manufacturing industries.

The Vanguard Weather Satellite

EXTENSION OF REMARKS
OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

STATEMENT OF DR. ABE SILVERSTEIN, DIRECTOR OF SPACE FLIGHT DEVELOPMENT, NATIONAL AERONAUTICS AND SPACE ADMINISTRATION, BEFORE THE HOUSE COMMITTEE ON SCIENCE AND ASTRONAUTICS, FEBRUARY 18, 1959

As you know, we launched a 21½-pound Vanguard weather satellite yesterday morning. From all indications, it is transmitting valuable cloud cover data which can be related to the overall meteorology of the earth.

This is a very exciting, historic, experiment. It represents a first step toward obtaining continuous, 24-hour-a-day weather mapping of global scope. At the present time, by means of weather ships, balloons, etc., we are able to map only 10 percent of the world's weather, so it's not hard to see why we are excited about this experiment.

I'd like to review, briefly, the history of Project Vanguard because I feel there has been considerable misunderstanding about this project from the very beginning. And at the outset, I'd like to pay tribute to Dr. John Peter Hagen, chief of NASA's Vanguard division, whose faith in the Vanguard rocket, and the project in general, has never wavered.

On July 29, 1955, the White House announced that the United States planned to launch earth satellites as part of this country's contribution to the International Geophysical Year which ended formally on December 31, 1958. Project Vanguard was the name assigned to that part of the satellite program which was under management of the Chief of Naval Research, Adm. Rawson Bennett. The Naval Research Laboratory (NRL) in Washington, D.C., under the leadership of Capt. P. H. Horn, had responsibility for technical aspects of the program.

Here, I would like to emphasize a fact that is too often forgotten: the Navy set out to produce, essentially from scratch, a satellite launching vehicle in a remarkably short time. The very production of this vehicle was to be, in a sense, one of the most significant contributions of the IGY. The Vanguard vehicle is an advanced rocket, parts of which are in use in other U.S. rockets and missiles.

On October 1, 1958, the President by Executive Order 10783 transferred "all functions (including powers, duties, activities, and parts of functions) of the Department of Defense, or of any officer or organizational entity of the Department of Defense with respect to * * * the U.S. scientific satellite project (Project Vanguard)" to the National Aeronautics and Space Administration.

Under authority of this Executive order, 133 members of the Vanguard group at the Naval Research Laboratory and 25 persons in other divisions of the Naval Research Laboratory devoting substantially full time to the Vanguard project, a total of 158 persons, were transferred to NASA on November 30. Of these, 86 are scientists, 42 technicians, and 30 administrative and support personnel. Project Vanguard developed not only the Vanguard vehicle but also the IGY radio tracking net (Minitrack) which has been used not only for Vanguard but for observations of every active satellite so far launched, United States and Russian. With the transfer, responsibility for this network passed to NASA.

At the time of transfer to NASA the engineering and manufacture of the vehicles was essentially completed. Seven three-stage vehicles, i.e., test vehicles TV-3, TV-3BU, TV-4, TV-5, and satellite launch vehicles SLV-1, SLV-2, SLV-3, had been launched. Modifications which resulted from study of records from each launching attempt were being incorporated in the remaining vehicles. Additional preflight operations, intended to eliminate the causes of low performance of the second stage in previous flights, had been adopted and were being applied to SLV-4. Four satellite launching vehicles remained to be fired.

When responsibility for the Vanguard program was given to NASA, we reviewed the complete history of the project. The Vanguard vehicle is comparable in complexity and application of advanced techniques to military ballistic missiles. Its early flight experience is substantially the same as that of the other missiles, whose failures and successes were not made a matter of public record. The personnel of the Vanguard group are highly competent, and we are pleased that their services have been made available. They have joined in the overall activity of NASA with highly cooperative spirit and are active in the formulation of the national space program.

As a result of administrative review of Vanguard history, NASA decided to postpone the Vanguard firing scheduled for December 1958 to February 1959 to provide time for an objective technical review of the vehicle to determine whether any additional steps might be taken to increase the probability of success. A working committee composed of experts having no previous connection with Vanguard studied in detail the systems involved in the vehicle and vehicle launching. The committee examined all pertinent data from the Vanguard launchings and from the use of Vanguard components in other vehicles such the Thor-Able reentry and moon-probe vehicles. Numerous modifications in the system and operational practices were made as a result of the work of the review teams and the Vanguard and industrial teams working together.

Whether any of these modifications definitively helped in achieving success of Vanguard II is difficult to say. Definitely the conservative engineering approach that led to a deliberate look by all the participants at their equipment and operating practices was correct in principle.

Prior to yesterday's successful experiment, one Vanguard satellite had achieved orbit—a three-and-one-quarter-pound test sphere which was launched on March 17, 1958. (Its 50-pound third stage rocket casing also went into orbit.) Vanguard I, as it was christened, is still aloft, with an expected lifetime of hundreds of years. Its solar batteries are still doing their job and the Army Map Service has been making electronic observations of the satellite from Pacific islands to pinpoint their location more exactly. The satellite is also being used for more exact determination of the earth's shape.

The Vanguard II cloud cover satellite is the first in a series of meteorological satellites to be launched by NASA during the next few years. These satellites should gain information about the weather and how it develops. Substantial economic returns—to say nothing of returns in the form of lives saved by accurate forcasting of hurricanes, typhoons, etc.—can be expected as the technology is developed.

Before closing, I would like to note the contributions of the U.S. Army Signal Research and Development Laboratory, Fort Monmouth, N.J., which developed the instrumentation in the cloud cover satellite; also, the contributions of the industrial firms which have been associated with Project Vanguard under the Martin Co. as prime contractor. The General Electric Co. provided the first-stage rocket. The Aerojet General Corp. provided the rocket for the second-stage booster, and the Grand Central Rocket Co. made the third-stage rocket. The guidance and control equipment was developed from contributions by the Minneapolis-Honeywell Regulator Co., Designers for Industry, Air Associates, and the Martin Co. The fine contributions of these industrial teams are representative of the high level of the Nation's industrial technology and lead us to a feeling of confidence in the future of our programs.

New Challenges to Education

EXTENSION OF REMARKS
OF
HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, February 23, 1959

Mr. YARBOROUGH. Mr. President, it was recently my pleasure and privilege to address the Texas breakfast at the National School Administrators convention held in Atlantic City, N.J.

The school administrators of this Nation are a most important group. To them and the teachers under their supervision falls the vital task of training the youth of the United States. The excellent record they have already established stands as a living monument to their skill and dedication to duty, particularly when we consider they have been forced to work with inadequate facilities and are generally underpaid. To remain at their posts and continue to work for the betterment of young people requires a missionary zeal. These people are to be heartily commended.

At the request of friends, I am asking unanimous consent to have my address, given February 17, 1959, printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NEW CHALLENGES TO EDUCATION

(Address by U.S. Senator RALPH YARBOROUGH at the annual Texas breakfast at the National Association of School Administrators convention, Atlantic City, N.J., February 17, 1959)

Mr. Chairman, fellow Texans, fellow Americans, I am very grateful for the privilege of participating in your annual meeting. This is a doubly pleasurable meeting to me, because some of the happiest days of my life have been spent in school—most of them as a student under inspiring teachers.

Although some of my former students in the Piney Woods country of the Neches River Valley may feel differently about those times, my 3 years as a country schoolteacher in Henderson County were to me some of the happiest days of all.

Now, as a member of the Senate Education Subcommittee, I am having an exceptional opportunity to learn something of the many complex problems facing our schools today.

In common with most informed Americans, I am deeply concerned about the lagging progress of public education and I am particularly concerned about it in Texas. This does not mean that I am critical of you and of our teachers. On the contrary, I commend you for doing an excellent job despite limited tools, inadequate pay, and lukewarm public support. It is my job, and the responsibility of every thinking citizen, to do everything possible to see that you have the funds to pay adequate teachers' salaries and to build adequate classrooms.

I firmly believe that teachers' pay in Texas should be raised from 50 percent to 100 percent, but not because I feel that every teacher is worth twice as much as he or she is now receiving. I am convinced that doubling teacher pay would not only solve the teacher shortage, it would create competition for the jobs. Then you as administrators would be in position to demand a high degree of excellence in this vital profession.

To those who say we "can't afford it," my answer is—we cannot afford to do otherwise. Like it or not, we cannot afford either having only half of our Texans educated, or having all Texans half educated. Yet, we are dangerously near that point.

Only one Texan in three over the age of 25 years has completed 4 years of high school. Texans rank 38th among people from all the States in the percentage qualified through the selective service mental test. Likewise, our students rank 38th among the students of other States in the per capita average number of days they attend school each year, under Texas' generally unenforceable compulsory school attendance law.

It is a shocking disgrace for big, rich Texas to rank 32d among the States in public school expenditures for each pupil in average daily attendance. But one must confess that is what might be expected in a State where an inept Government is blind to the needs of education. It taxed students by raising university tuition fees, and refused to tax the interests that are exploiting Texas, her people, and her resources.

A century and a quarter ago, our Texas forefathers revolted because of the failure of the general government to establish a public system of education in Texas.

Texas was ravaged by fire and by sword, her cities besieged, her towns burned, her heroes killed. But her right to a system of public education was won. Are we, the inheritors of those rights, to fail this, and the next generation? Are we too weak, too conformist, too servile and supine, to fight for what we know is right? Is big money to connote big ignorance? I call on every Texan to rally now, and help us build the best system of public education in the United States.

Proud, wealthy Texas is paying its elementary teachers an average of only $4,296 yearly, considerably below the national average. This is criminal neglect because the student is the casualty in the long run. As your representative in the Senate, I am working for the solution of this problem.

As a member of the Senate Education Subcommittee, I have been present at hearings on Senate bill No. 2, the so-called School Support Act of 1959 introduced by Senator MURRAY, of Montana. Under this provision, Texas would be eligible to receive an allotment of $25 per school age child in fiscal 1959–60, $50 the next year, $75 the next year, and $100 per student in 1962–63. The estimated allotments for Texas by respective year would total $63.8 million; $132.9 million, $206.4 million, and $285.3 million.

This money, and I want to emphasize this—without any Federal controls or intervention—would be available to local school districts to use as local boards see fit, either for teacher pay increases or construction of new school rooms, or both.

Regardless of whether this bill passes, you can count on me to fight to see that we do not lose any of the good programs already underway. I will continue to strenuously oppose moves to abolish or to limit the school-lunch program, and the school-milk program, vocational education programs, and Federal assistance to federally impacted areas. I am working to expand all of these programs. You know, some of these people who are against spending money on public education, no matter why or where the money is needed, have been running around the State saying, "Why you've got to watch out for old RALPH YARBOROUGH. He's for Federal aid to education."

I'd like to clear that point up once and for all. I'm not just for Federal aid to education. I'm for all aid to education. The soundest investment we can make in America is in developing the minds of our young people. The need for more funds in the field of public education is so critical that revenues from local districts, cities, States, and the Federal Government all are required.

With this in mind, I have been shocked and saddened to learn that the board of regents of our Texas State teachers colleges have declined by an official resolution to participate in the student loan provisions of the National Defense Education Act of 1958. As you know, this is the act which primarily is designed to start us on the road to higher educational achievement, particularly in the field of science.

One provision of the National Defense Education Act of 1958, which, incidentally, I had the honor of coauthoring, provides funds for loans to college students. Most colleges in Texas and throughout the Nation have responded enthusiastically to this loan program as a very worthwhile means of assisting worthy students in securing a college education. But I was astonished to learn that the board of regents of Texas State teachers colleges have denied participation in these loans to students in five colleges.

Despite the fact that college officials had estimated a student loan need totaling $195,333, the board saw fit to deny this loan program to students at Sam Houston Teachers College, Southwest Texas State Teachers College, Stephen F. Austin, East Texas State, and Sul Ross College.

The board of regents of these colleges has made a decision which I would not want on my conscience. If a single student drops out of a single one of these schools for lack of funds, the regents should be held accountable. Ironically, one of the colleges which the regents prohibited from participating in the loan program has this statement of purpose printed on its letterhead: "Founded to promote the advancement of the profession of teaching. Dedicated to the cause of better schools. Devoted to the welfare of children and youth."

It is my sincere hope that the board of regents of Texas State teachers colleges, for the good of the students, will reconsider its position on this matter: A total of $21,758 has been reserved for the five colleges involved. If the regents finally deny this aid to their students, I shall make every effort to see that these funds are apportioned to other Texas students in other schools so that they will not be diverted to other States.

In my opinion, the people who make the mistake of opposing the granting of sufficient funds for the Nation's educational program are doing this country, themselves, and particularly our children, one of the greatest injustices of which they are capable.

Basically, the cold war now raging between democracy and communism around the world is a struggle for the minds of men. Enlightenment has always been free men's bulwark against tyranny. Education is the foundation stone of democracy, and it is an ever-increasing factor in the standard of living each man and his family can enjoy. We cannot, we must not, and we will not continue to deny all our students an education of the first class.

It would be simpler if I could say at this point, "Well, we are going to help you get some money, and that will solve the educational problems in America in general, and in Texas in particular."

But it isn't that simple. The educational problem facing us all goes much deeper than money. The thing we need most in education cannot be bought with money; it must grow again in the hearts and minds of the American people. I refer to the once proud dream that this land would be the world's model of universal educational attainment and cultural development. I refer to the spirit which made a backwoods boy named Abraham Lincoln study by firelight because he and other young people of his time recognized that knowledge is an invaluable stepping stone to happiness and to greatness.

What has become of the insatiable and inexorable quest for knowledge which played such a dominant role in pioneering of our Nation? Does it exist no more? Is a penchant for a be-bop ducktail culture a passing fad, or evidence of the long decline?

As a people we have more time free from work and drudgery than any other people in the history of mankind. But are we Americans using this time, even a small portion of this free time, to improve our minds through new educational attainment or even serious thought?

The answer is all too obvious. We have become a Nation with its head stuck in a television set; a people establishing new records annually in the consumption of alcohol and happy pills. We spend our lives vainly searching for happiness from a bottle. We are more concerned with the tearful soap opera TV heroine than with Communist terror in Hungary.

This is a deadly trend. As Adlai Stevenson has said: "We have confused the free with the free and easy." We threaten to become a people whose principal purpose is piling up profits and partaking of fleeting pleasures.

In the words of Abraham Lincoln, "We cannot escape history. * * * We will be remembered in spite of ourselves. No personal significance or insignificance can spare one or the other of us. The fiery trial through which we pass will light us down, in honor or dishonor, to the latest generation."

There must be an awakening. As a people and a Nation we cannot afford to retire in the prime of our lives. We have reached what might be considered a breathing point in American history. But our indolence and vacuity and indifference cannot continue. This breathing point must not become a permanent campsite. Let us adopt as a national educational aim the motto of an American State "Ad astra per aspera," "To the stars through difficulties."

We must recapture our desire for high educational excellence, and unflinchingly meet the mental disciplines and hard work basic to superior knowledge.

Mass education of all the people, once an American monopoly, is fast coming to the whole world. We can maintain our leadership only by moving faster and working harder for educational progress than other countries now turning their efforts to mass education.

The parent, the teacher, and the politician must all make up their minds that easy courses, little discipline, and stinted funds for education will never add up to high educational standards. Major emphasis on athletic spectacles and academic trivia cannot produce a high percentage of well-educated citizens. It is more likely to produce mediocrity.

We must turn from mediocrity to educational excellence, not only in pursuit of happiness for more Americans, but to achieve educational superiority.

Never before in the history of man have the talents and the specially developed abilities of educated men been in more urgent demand. Never have the opportunities for educated, thinking, freemen been so great. The next 10, 20, or 30 years will tell whether this Nation produces the large numbers of high caliber citizens it so needs.

The brunt of the burden is on your shoulders. Those of us in public service can assist in the work of making known the need, and by helping to make funds available. But the real job of turning out young men and women who are intellectually prepared to be responsible Americans is up to you.

Upon the success or failure of your mission may well rest the eventual fate of freemen everywhere.

I wish you Godspeed.

REA Co-ops Deserve Protection and Encouragement

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, February 23, 1959

Mr. PROXMIRE. Mr. President, the rural electric cooperatives of Wisconsin and of America have been the agencies through which the greatest benefit to farmers has been accomplished in all the history of public action in agricultural policy. Now, unfortunately, these REA co-ops are under attack.

From one of Wisconsin's finest REA co-ops, which held its annual members' meeting early this month, I have received a number of resolutions. The policies advocated by these resolutions are sound and, in my opinion, fully merited. I agree with these co-op members that REA should be taken out of politics; in fact I am a cosponsor of the Senate bill to accomplish this. I agree also that REA should not now withdraw from its traditional role as the banker to the rural electrification program, and that its rate of interest should not be raised above the present 2 percent. This rate of interest has been sufficient to cover the cost of money to the Treasury most of the time since REA was established 23 years ago, and there is no reason why it should not do so at present, if our Government would abandon its high interest policy of forcing interest charges to go up. In any event, these co-ops are undertaking considerable expenses and obligations on behalf of the public, particularly in their complete area coverage policy, which entitle them to an interest charge of no more than 2 percent.

Mr. President, because these matters are of such great and direct concern to all of our rural citizens, I ask unanimous consent to have them printed in the Appendix.

There being no objection, the resolutions were ordered to be printed in the Appendix, as follows:

RESOLUTIONS ADOPTED BY MEMBERS OF THE CHIPPEWA VALLEY ELECTRIC COOPERATIVE, CORNELL, WIS., AT ANNUAL MEETING OF FEBRUARY 6, 1959

REA REORGANIZATION

Whereas the original REA act of 1936 provided for strictly nonpartisan administration of REA and provided for the appointment of an Administrator by the President, with confirmation by the Senate for a 10-year term to insure nonpartisan, nonpolitical administration; and

Whereas Secretary Benson has supported a bill in Congress which would drastically increase interest rates and drive electric and telephone cooperatives to Wall Street for their financing: Now, therefore, be it

Resolved, That we are vigorously opposed to any reorganization of REA; and be it further

Resolved, That as soon as the new Congress convenes in 1959 a bill which would restore to the REA Administrator all of the functions and authority vested in him by the original act of 1936, be introduced and passed.

INTEREST RATES

Whereas a number of bills and proposals were presented to the 85th Congress to increase REA interest rates; and

Whereas the Congress, by enacting the Pace Act in 1944, and fixing the interest rate of 2 percent, therein made a covenant with the rural electric cooperatives to proceed with area coverage at reasonable, retail rates; and

Whereas we believe the continuance of the 2 percent interest rate is necessary to enable the rural electric systems to complete the task of providing full, efficient, and reasonably priced electric service on an area coverage basis: Now, therefore, be it

Resolved, That we urge the Congress to vigorously oppose any change or proposed change in the law, the effects of which would increase REA interest rates.

REA LOAN SOURCE

Whereas the Secretary of Agriculture last February sent to the Congress a proposed bill which provided that the cooperatives secure their financing in Wall Street—for which no legislator would act as sponsor; and

Whereas such bill would double or triple interest rates to the rural electric systems; and

Whereas such bill would virtually kill the program and bankrupt many distribution cooperatives; and

Whereas the Congress has always evidenced its wholehearted support of the REA program by consistently providing sufficient loan funds: Now, therefore, be it

Resolved, That we urge Congress to oppose any and all proposals which would send the rural electric systems into the private money market for their financing, and we urge Congress to continue its fine support of the rural electric program which means so much to the people of rural America and to the country as a whole.

SELLOUT PROTECTION

Whereas forces opposing the rural electrification program are moving in on cooperatives in various parts of the country, e.g., the New Jersey and Arizona cases, for the expressed purpose of buying them out; and

Whereas it is evident that the power companies instituting sellouts are being directed by executives hired and maintained by their holding companies; and

Whereas electric consumers in and outside the program will pay more for electricity if these sellouts become more widespread: Now, therefore, be it

Resolved, That we urge REA to provide more aggressive assistance to cooperatives needing its help to continue their existence—such as was the case of cooperatives in New Jersey and Arizona; and be it further

Resolved, That we urge our State legislatures to provide use with the machinery to function as public agenices or utility districts where such a step is necessary to preserve consumer ownership; and be it further

Resolved, That we urge Congress to protect rural electrics and all electric consumers by

abolishing the electric holding companies; and be it further

Resolved, That we urge Congress to investigate and expose the apparent master plan to cripple and destroy the rural electrification program; and be it further

Resolved, That we urge Congress to thoroughly investigate the sellout cases that have now occurred in order that the Rural Electrification Act may be strengthened as a means of protecting the interest of consumers and all Americans who are concerned about the contributions rural electrics are making.

Peach Pioneer of the Piedmont: Ben Gramling

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, February 23, 1959

Mr. THURMOND. Mr. President, one of the great farm leaders of South Carolina, Mr. Ben Gramling, of Gramling, Spartanburg County, died on Friday, February 20. Known as the "Peach Pioneer of the Piedmont," Mr. Gramling not only pioneered and engineered Spartanburg County in front of the entire State of Georgia in peach production but also led an inspiring life.

I ask unanimous consent to have printed in the Appendix of the RECORD a recent biographical sketch of Mr. Gramling entitled "Peach Pioneer Ben Gramling," which was published in the April 16, 1958, edition of the South Carolinian, edited and published by Brent Breedin.

There being no objection, the article was ordered to be printed ni the RECORD, as follows:

PEACH PIONEER BEN GRAMLING

Ben M. Gramling, who will observe both his 83d birthday and his 60th year of blissful marriage this November, is a villain in Georgia, sometimes referred to as "The Peach State."

His crime—pioneering and successfully engineering his county of Spartanburg in front of the entire State of Georgia in peach production.

His defense—there was no premeditation in his "crime" against his Georgia neighbors. When he and three Spartanburg County friends, Andy Harris, P. J. Woodfin, and M. F. Johnson, each planted 5 acres of peach trees in 1921, the intention was simply to go along with one of the new cash-crop schemes of County Agent Ernest Carnes, who had become alarmed by the presence of the boll weevil in cotton-producing Spartanburg acreage. In fact, there was no actual objection from Georgians until 25 years after the first peach trees were put down in Spartanburg soil by Gramling and his associates. It was at this stage that the U.S. Agriculture Department statisticians revealed that Spartanburg County was producing more peaches than all the orchards combined in Georgia and that "The Peach State" tag was no longer appropriate for Georgia.

Georgian Joe Nunn, who worked for inexperienced peach-grower Gramling in the early years, might have returned to his home State to warn friends there about his South Carolina employer and associates, but he didn't. Instead he fell under the magic of the Gremling personality to such an extent that on one occasion he offered Ben the loan of $4,000 he had saved in a Georgia bank if it would tide him over following a disastrous peach crop year.

"I really appreciated Joe's sentiments," the reflective Gramling says today, "but I told him that I had been fortunate enough to put up a little money of my own for such an emergency and didn't need any financial help."

Ben has never needed help for lack of foresight. Planning and industry have been the keys to his success in fulfilling the adage, "If you can build a better mousetrap, the world will beat a path to your door." He lived all his life within a mile of his birthplace; yet, Gramling's "Sweet n' Juicy" peaches are in demand throughout the country. In staying home, he has added probably the most colorful and useful chapter to date in the Gramling book of South Carolina history.

His great-great-grandfather Adam Gramling migrated to South Carolina from Germany in 1750 and was given land in the Orangeburg area by the English rulers. It was a practice in pre-Revolutionary War days to welcome non-English settlers to South Carolina, the British using these settlers as a buffer between Charleston and the Indians in the upcountry.

Great-grandfather Martin Luther Gramling (born in 1765) served his neighbors in the Orangeburg sector as a Methodist preacher.

Grandfather Reuben Gramling (born in 1791) started the 19th century by moving into the Spartanburg County area.

And father Henry H. Gramling (born in 1823) amassed one of Spartanburg County's largest estates following the War Between the States, first as a worker on the railroad between Spartanburg and Asheville and later as the biggest producer of ties for the railroad following his purchase of 1,800 acres of virgin timber about 15 miles north of Spartanburg (site of Gramling today) and the setting up of a sawmill. Ben, born on November 1, 1875, can still recall the oxen teams hauling fallen trees from the forest to the mill. It was during this period that the community of Gramling came into existence, getting the name from railroad officials who referred to "Gramling Siding" as the spot at which they could pick up the lumber for their construction.

Ben, literally a chip off the old block, was slated for a full college education after attending a country school at Gramling for 5 years and following graduation from high school in Spartanburg (where he lived with his sister). One year at Wofford, however, and the 18-year-old Gramling was ready to begin work, which he did for merchant W. R. Ballard at a salary of $10 monthly. A year later he attended business college in Nashville, Tenn., returning home in 1895 following the completion of a bookkeeping course in order to be near a sick father. When Henry Gramling died in July of that year, Ben returned to work for Ballard at $15 a month. One year later the young businessman borrowed $200 and went into business for himself at Gramling. And 2 years after that, on November 17, 1898, he married Cora Turpin of nearby Landrum.

Inheriting 150 acres of land from his father, Ben was quick to put his legacy to work in becoming an independent businessman-farmer. Ultimately he purchased the inherited estates to his two brothers and four sisters as well as other lands, putting them all to such excellent usage through the years that he was named one of South Carolina's first "Master Farmers" in 1939. Cotton, wheat, oats, corn, peas, sorghum, alfalfa, and grazing crops for his dairy and beef cattle have all been planted successfully along with his peaches.

Businessman that he always has been, farmer Gramling stepped naturally into matters allied to agriculture—public ginnery, community fertilizer plant, country store, and country bank. When the bank closed in the depression, all obligations were met. The other enterprises are still operating successfully to the advantage of the entire community.

Ben's leadership has not been limited to the fields of business and agriculture but also touches public service and religion. His happy marriage, which he obviously enjoys as much today as he did at the beginning—seven children, seven grandchildren, and five great-grandchildren ago—has been an inspiration to friends and associates. He was a trustee of the Gramling School at age 21 and has served as Spartanburg County's Democratic Party committeeman. At Gramling Methodist Church he has been a steward for years and was Sunday school superintendent for a quarter of a century, "missing attendance only when my children were born at home," he points out.

The management of Gramling Marketing Co., Inc., and the peach orchards have been turned over to the fifth generation of South Carolina Gramlings, while the fourth generation leads an inactive (physically) but nimble (mentally) life in and around his handsome, while unpretentious house. He prefers to discuss current events but can be prodded into reminiscing about his own experiences.

Peaches have been good to the Gramlings and their Spartanburg neighbors. They've meant a new way of life and a higher standard of living, but the success found here has never blinded Ben, or his family, to civic, professional, and religious responsibilities. Three plaques hang on the wall in the Gramlings' front room which testify to this.

"Master farmer award, 1939: 'For notable accomplishments in farming, homemaking, and citizenship' (presented by Progressive Farmer and Extension Service).

"Spartanburg County's No. 1 citizen, 1945: (Presented by Spartanburg Kiwanis Club).

"Chairman of building committee, 1952: 'As an expression of our grateful acknowledgment for his untiring and faithful service to our church' (presented by Gramling Methodist congregation)."

Rewriting of Stephen Foster Songs

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, February 23, 1959

Mr. THURMOND. Mr. President, the able editor of the Johnston (S.C.) Ridge Citizen, J. Luther Aull, expresses concern with the tampering of song lyrics by NAACP-subdued publishers and TV program directors in a February 19 editorial entitled "Foster Rewritten."

I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOSTER REWRITTEN

We just paused to look up at the teevee, having heard the announcement that a program of Stephen Foster songs was about to be presented. The program was the Eddie Fisher program. We were interested to see if they would sing it as Foster wrote it, but they didn't.

"Swanee River" was never taught to us as having any such line in it as "Oh, how my

heart is growing weary," but that was the awkward way the line was rendered by the "teevee-ers." Foster wrote it, "Oh Darkies, how my heart grows weary," but that is not pleasing now to the NAACP which has succeeded in having all such references banned on the networks.

That incident serves to point up one of the troubles with the country—too many pressure groups, all too sensitive. Nobody can laugh at anybody any more. All kinds of dialect jokes are taboo, except of course what passes for southern dialect. We even understand that the Plasterers Union is protesting the use of the term "plastered" as a synonym for intoxicated.

Slow Pace of Watershed Protection Program Is Severe Disappointment to Wisconsin's Coulee Country

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, February 23, 1959

Mr. PROXMIRE. Mr. President, one of the world's most beautiful regions is located in southwestern Wisconsin. This area is absolutely unique; nowhere else on earth is there a region which has been completely surrounded by glacial ice but never covered. In fact, the Wisconsin coulee country has been surrounded by glaciers several times. Because of this unique geologic history, this region has a distinctive pattern of steep, deep valleys or coulees, separated by high ridges.

Beautiful as it is, and productive also, the distinctive topography of the coulee country makes it unusually vulnerable to the ravages of flood and soil erosion. After the forests were cut off the steep hillsides, erosion has been taking a grimly costly toll of rich topsoil. Frequent flash floods ravage the valley bottoms, ruining farm crops, farm buildings, and property in the small villages and cities located there. Tremendous strides have been made by farmers and their local soil conservation districts, in cooperation with the Federal Soil Conservation Service and other agricultural agencies, to apply contour cropping, terracing, and other practices to help hold the soil and water in place. But these efforts are not adequate. A broader conception is needed. This need gave rise to the watershed protection program established several years ago—which, if applied with energy and determination, could finally do the job.

Many of us are disturbed by the extremely slow progress which is being made under the watershed program. No one is more disturbed, and no one has a better appreciation of the dangers and costs of delay and procrastination in applying this fine program to the Wisconsin coulee country, than Mr. Lewis C. French of the Milwaukee Journal staff.

Mr. French has written a splendid report on this problem for American Forests magazine. It was published in the October 1958, issue. I ask unanimous consent that Mr. French's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WATERSHED FORESTER
(By Lewis C. French)

Richard Sartz, age 39, a watershed forester, goes to work in a new research station on critical land problems in the upper Mississippi River Valley with headquarters in La Crosse, Wis.

In a three-way cooperative agreement between the Federal Government, the Wisconsin Conservation Department, and the Lake States Forest Experiment Station, this new research agency will seek the answers for a more effective means of curbing erosion and curbing upstream floods on some 7,800,000 acres in the fertile Mississippi River Valley.

The plain facts are that conservationists must do something with this whole area—rather than patchwork watershed programs here and there—or more and more land will be gutted by floods and ruined beyond repair.

If this upper Mississippi Valley is worth saving—and it is—then action must soon be taken on a wholesale scale rather than a slowpoke piecemeal basis. Time is running out in the land of the coulees. Under the aforesaid arrangement, Congress authorized $30,000 a year for the station. The Wisconsin Conservation Department will lease or buy the problem land where the research tests will be run. Under consideration by the State commission is the Russian Coulee not far from La Crosse in the famed Coon Valley watershed, the birthplace of modern soil conservation. It is neglected land, farmed with scant success; a valley wedged in between high ridges with steep slopes, just now a bramble.

As the third partner in the research station, the Lake States Experiment Station will direct the technical program. Currently a memorandum as to definite obligations between the three partners is being prepared. What's the problem?

Starting in northeastern Illinois around Galena and running straight north on the fringe of "Old Man River" past La Crosse and into St. Croix County, of Wisconsin, is land the glaciers missed, the driftless area. There are 100,000 acres in Illinois and 5 million acres in the coulee country of Wisconsin which are flooded periodically, spilling millions of tons of the thin skin of top soil into the Mississippi and on down to the delta.

On the western side of the Mississippi there are about 700,000 acres in the northeastern corner of Iowa and 2 million acres of Minnesota having the same problem.

True, the slopes on the Minnesota side are not as sharp, nor the ridges as high, nor the problem as great as in Wisconsin, but every section of this whole area has erosion and flood problems.

Even in areas given a fairly good treatment of strip cropping, terracing and contour farming, and waterways, periodically the meandering, deep-banked creeks and tributary streams threading through these valleys flood. The dry run creeks, fed by a hundred or a thousand drain pipes, run down those slopes, rolling up a tidal volume of water that, with increased velocity, picks up the top soil, carries off the fences, sweeps the lowland corn out of the field, or silts the alfalfa land, washes out bridges and roads to wreck buildings and hopes in its path.

This happens during the spring thaws and through the summer and fall, right until the area is locked in winter ice. It can be in March, when the snows melt, or in August, when the crops are ready. Let there be a steady downpour and all too often these floods will occur.

Even an untrained newspaper reporter can understand that when the steep, tin-roof slopes are still frozen with the snow when the rain comes, the water cannot seep into the soil very much and rushes to the bottom land creeks.

But what about those summertime floods when there are grass and crops?

First is the sad mistake of cutting the original timber off those ridges, and especially down those slopes—exposed land.

Then, too, farmers try to stretch their forage supplies by pasturing this land or putting it into crops.

The technicians are now finding out that during the summer those southern slopes, exposed to the sun, denuded of grass and cover, are baked to a hard, tight crust.

Now let a storm hit and the water rushes down these crusted slopes, generally following those blasted cow trails that become gullies, pouring a sheet of water into what was a harmless dry run the day before. And watch out downstream. Run for the hills.

There was an enthusiastic dedication of the 24,000-acre East Willow Creek watershed on the Minnesota side. Twelve solid earthen dams were built, often utilizing a highway grade as the barrier to stop the destruction of 155 farms.

Lovely country, this Minnesota valleyland; the slopes are more gentle and the valleys much wider than in much of the Wisconsin coulee country across the big river.

There had been considerable soil conservation work in this area, here and there—strip corn farms with terraces and contours—but never one solid program for the whole watershed.

Eight years ago, in a spring flood, there were 4 inches of rain within 6 hours. Down poured that flood of water from the slopes, concentrating into the East Willow Creek.

Even in Preston, Editor Ludwig Gartner of the Preston Republican, two blocks from the creek, points to the type cases in his plant and says, "Water clear up to the top."

In a few hours that rip-roaring flood cascading downstream ripped out a gully 15 feet deep and 150 feet wide. The engineers and fieldmen going to work to repair the damage had to climb in and out of that gully with ladders.

There was 100-bushel-an-acre corn on farms where this gully had been. Bulldozers scraped dirt into the gulch. The rills in the farmlands that became deep gullies had been healed. The upstream dams so far stopped a flood threat with the series of reservoirs and ponds. Still, look close and you see slope timberland slashed with gullies.

This Minnesota watershed, like all the rest in the whole upper Mississippi River Valley, needs and deserves a better answer to the cancerlike erosion.

And every place even a novice looks, there is the crying need for trees.

The mass of paper and blueprints for the famed Coon Valley watershed of 93,000 acres on the Wisconsin side finally wallowed through Washington, D.C., redtape to get approval. Normally this Coon Creek is a harmless stream meandering on its way through Coon Valley and Chaseburg and Stoddard to unload in the Mississippi. However, there have been two severe floods in recent years, with every landowner nervous over the dangers.

Having their own blueprint system, and not being tied to a desk, wild beaver moved into Coon Creek to build their own dams * * * but in the wrong places.

The application for a full watershed treatment is now for the Bad Axe section adjoining Coon Valley, around 122,000 acres. Dams are scheduled to be built on a small watershed near the Mississippi. The pilot watershed built by the Government on the Kickapoo River is working.

The East Willow Creek project in Minnesota and the Wisconsin programs, such as historic Coon Valley, are fine. But they are only comparative patches of the 7.8 million

acres of land needing better erosion control. Go down almost any side road in this vast area and you can see land that needs attention now.

"There is alarming need for one overall program for the whole upper Mississippi River Valley," says David Mackie, Madison executive secretary of the Wisconsin Conservation Department during the first conference at La Crosse for this new research station.

"The job ahead is to find what cover does the best job protecting those slopes and valley land," said Sidney Weitzman, St. Paul, watershed supervisor of the Lake States Experiment Station.

The stern fact of the matter is that some of these slopes exposed toward the south have been washed so thin and robbed of fertility so much that many trees will not thrive. The survival rate is too low to be practical.

Red cedar has been used. But there is the problem of this tough tree being the host to a variety of apple rust. Now the genetics divisions of the Lake States station seeks a resistant red cedar strain.

For the start, this new research station is quartered in the La Crosse fish hatchery of the U.S. Fish and Wildlife Service.

"It may take time, but we want the right answers," says the committee setting up the program.

It will be Forester Sartz' job to make an analysis of the area problems, then carefully measure the successes and failures of past practices, including cover crops and trees. He will try out practices recommended by the Lake States Experiment Station and others, and in time put the result to work.

Is this upper Mississippi Valley worth saving?

Some early August day when you want a scenic feast, travel to the coulee country, via Coon Valley or the Alma (Wis.) drive back to this quiet haven. Get up on a high ridge.

As far as you can see is a masterpiece of color: the green of the trees and corn and lush alfalfa, then curving bands of gold, the ripe oats and wheat, some as bright as new gold and some burnished bronze of old antiques. Set back is a white church with a tall steeple inviting a prayer of thanks for such beauty and abundance. And farms are nestled into the nooks and valley land; the so-called two story farming, the lowland and the highland.

Here is beauty, the green and gold with bright-colored combines and forage choppers in the distance looking for all the world like huge crawling bugs gobbling up the grain.

Only a statistical dolt with a sliderule brain submerged by administrative redtape could see this scene of preharvest glory and still say the costs are too great for the benefits.

Just go to the Mississippi with its series of big dams—26 of them, each costing $5 million or more to harness the floods of the river and protect the channel—and watch. Look at the finest topsoil of the area. How much better to keep that soil and that extra water upstream on the farms and have fewer dredging costs down the big stem.

We should either do something about repairing this upper Wisconsin valley area or junk much of the soil conservation program. For right in these valleys was intended the basic proof that modern soil conservation would work to preserve the land and abundance.

Either make it work, or in eons of time this area will be the grand canyon of the upper Mississippi.

Graduated from the University of Pennsylvania forestry school, Sartz first went to work for the Forestry Service in the Quaker State. Then he specialized in watershed controls and restoration work near Philadelphia and outside Portland, Oreg., on the Columbia River. More recently he was in the White Mountain forests and watershed of the East, being stationed at Laconia, N.H.

Now he will try for the answers to heal the scars of the upper Mississippi Valley, once so rich with pine and hardwoods.

Representative Charles O. Porter Heralded as Friend of Democracy in Latin America

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, February 23, 1959

Mr. NEUBERGER. Mr. President, recognition has again been accorded to my good friend, Representative CHARLES O. PORTER, of Oregon, for his outspoken declarations against Latin American dictatorships. Throughout Central and South America, CHARLIE PORTER is heralded as the champion of freedom and democracy and as a crusader against dictatorial tyranny.

Last week the Washington correspondent for the Oregonian, Mr. A. Robert Smith, journeyed to Venezuela to assess the effect of CHARLIE PORTER'S efforts on relations between the United States and Latin American countries. It is not surprising to learn that Mr. Smith heard widespread acclaim for what Mr. PORTER has accomplished in fighting despotism and Communist influence. So that the facts can be known of the effectiveness and vigor of Mr. PORTER'S activities for the improvement of our relations with Venezuela and other Latin American countries, I ask consent to have printed in the Appendix of the RECORD the article, entitled "CHARLES PORTER, Foe of Dictators, Hero to Venezuelan Populace," written by A. Robert Smith, and published in the Oregonian of February 19, 1959.

I wish to emphasize that Mr. Smith is an able, accurate, and responsible journalist. I feel certain that he has reported only the facts in describing the widespread favorable impact which Representative PORTER has had on the populace of Venezuela. For example, Mr. Smith has contrasted Mr. PORTER'S forthright defense of democracy with the equivocal and straddling attitude taken by ex-Governor Thomas E. Dewey when he toured Venezuela recently, as the head of the official American delegation to the inauguration of Venezuelan President Romulo Betancourt. This comparison is definitely to the advantage and benefit of CHARLIE PORTER.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHARLES PORTER, FOE OF DICTATORS, HERO TO VENEZUELAN POPULACE

(By A. Robert Smith)

CARACAS, VENEZUELA.—As this leading South American country struggles back upon the road to democractic self-government, often blocked in the past by military coups, many of its political leaders are looking for moral support from friends throughout the hemisphere.

One of their valued friends, one quickly finds, is Representative CHARLES O. PORTER, who has for 2 years been conducted almost a one-man campaign in Congress against the sort of Latin dictator Venezuela has only so recently been rid of. Gen. Perez Jimenez was ousted a year ago, and last week Venezuela inaugurated its newly elected President, Romulo Betancourt.

Congressman PORTER came down here last week to wish the new government well. Venezuela invited Congress to send the customary delegation to the inauguration. PORTER was the only Congressman who went. To conclude, after many interviews, that PORTER has had a beneficial effect on the attitude of Venezuelans toward the United States since Vice President RICHARD NIXON was stoned here last summer seems undisputed.

SHARP LINE DRAWN

An American newspaperman who has been here 25 years told me that Venezuelans tend to regard U.S. public figures as either good or bad Americans. He said about the only good Americans in their minds today are Porter, Gov. Nelson Rockefeller, of New York, and Herbert Matthews, veteran New York Times writer to whom a "Good Neighbor" trophy was given here last weekend by President Betancourt.

"That's an improvement," the newsman said, "because not long ago they thought all Americans were bad."

A Venezuelan born here, educated at Columbia University and a long-time resident of New York before returning here, said substantially the same thing.

"There is a great man," he said of PORTER.

PORTER became such a figure in the minds of Venezuelans starting with his crusade against Dominican Republic Gen. Raphael Trujillo, who is despised here; his criticism of the United States giving military aid to Latin dictators, including Perez Jimenez; his coming here after the NIXON incident last summer and again last week to bolster democratic elements and assure Venezuelans that Americans are friendly toward them and are prodemocracy and antidictatorship, whatever State Department policy might indicate to the contrary.

PORTER STANDS ALONE

PORTER, in a word, is the only American official, among numerous other leaders in this hemisphere (such as Jose Figueras of Costa Rica and Gov. Munoz Marin of Puerto Rico) who has lent open support to democratic forces in this rich oil-producing country where military dictatorships have been the rule and not the exception. Betancourt is only the second freely elected president of Venezuela.

Venezuelans have been sore at the United States because of a medal awarded their dictator by President Eisenhower in 1955, along with a laudatory citation. They suspect the State Department of playing footsie with Perez Jimenez, buttering him up with this prestige-making award, in behalf of large U.S. corporations seeking new oil and iron ore concessions from him. Whether there was any connection or not, Venezuelans believe there was. Anti-American feeling ran high, even months after Perez Jimenez fled, one official said. This was exploited by Communists and other agitators in the demonstrations against NIXON.

BUSINESS LIKES DICTATORS

America's image in this country of sharp contrasts between luxurious oil wealth and stark poverty is not improved by the fact that most of the intrenched U.S. business interests here would prefer a dictatorship to a democracy, the American newsman said.

"When PORTER'S name is mentioned, they shudder," he observed, recalling his many contacts with the business community here.

U.S. businessmen found Perez Jimenez not difficult to do business with. He abolished a decree of the previous president against granting further concessions to U.S. firms for resource exploitation. Businessmen feel uneasy about a democracy, which may be less profitable to deal with. The new government has already raised income taxes to tap more oil revenue for public improvements such as schools, thus permitting less oil money to flow into hands of foreign investors.

REDS DISLIKE PORTER

PORTER has opposition from still another group, the Communist Party, which now numbers about 50,000 persons in this country of 6 million population. In the December election, the Communist Party elected nine men to Congress, one of whom is Gustavo Machado, their leader.

"PORTER is interfering in the internal affairs of Venezuela," Machado told me resentfully when asked what he thought of PORTER's remarks here a few days before.

The Oregon Congressman criticized local Communists for trying to represent their party as just a nationalistic movement without ties with Russia. The Caracas Daily Journal reported PORTER told a press conference:

"If a man is a Communist, unless he doesn't know better, he must put the Soviet Union first. I don't see how anyone who believes in liberty can believe in communism when he sees how the satellites such as Hungary are treated."

In his inaugural address, President Betancourt, who himself was a Communist briefly as a youth some 30 years ago, said much the same thing as PORTER and reiterated that his new coalition government had no room for Communists. He was roundly applauded by the new Congress, whose members jammed into the senate chamber with other dignitaries to hear him.

This offered a strong rebuttal to those U.S. Congressmen who in recent years have said the United States should back Latin dictators, such as Trujillo and Perez Jimenez, on grounds they were needed as bastions of anticommunism.

PORTER also suggested in public statements here that he thinks the tide is running against dictatorship throughout the hemisphere. He predicted Trujillo will fall before the year is out. He said Dominican rebels are obtaining arms and are organizing within and outside Santo Domingo.

In contrast to PORTER's statements here, Thomas E. Dewey, head of the delegation sent to the inauguration by President Eisenhower, ducked all political questions. In a real way, Dewey personified the administration's oft-expressed Latin American policy of showing no partiality for either democracies or dictatorships.

The latest administration expression of Latin American policy, by Milton Eisenhower after a trip through Central America, reiterated what PORTER, first, and NIXON, second, had said—that we ought to give Latin democracies an embrace and give dictators only a cold, formal handshake, thus leaving no doubt in this hemisphere which form of government our sympathies lie with.

HERO STATUS EXPLAINED

A Venezuelan said his people can see little sign that this new policy is being implemented. He said they think only a change of administration in Washington will do it.

This helps to explain PORTER's hero status in Latin America. He stands almost alone among Washington officials in embracing popular Latin democratic leaders, offering them verbal and moral support, shunning the dictators and consulting with exiled foes of the dictators about ways and means of undermining the despots' political strength.

There are several skilled diplomats on the U.S. Embassy staff here who are well received by Venezuelans and display their preference for democratic processes. But one stumbles easily across an example of harmful, bumbling staffing, as depicted in the best-seller, "The Ugly American." At a reception at Ambassador Edward Sparks' home on inauguration night, one U.S. military attaché was sounding off loudly that Venezuela would be better off under a dictatorship. Some guests were shocked to find this sort of "military mind" assigned to any diplomatic post, much less in a country where military officers have often needed little encouragement to grab the reins of power.

As long as the State Department doesn't implement Milton Eisenhower's policy proposals more vividly, Congressman PORTER will undoubtedly continue to be regarded as a big man and much-needed friend in this part of the hemisphere where Latins are sensitive to the impression that most North Americans haven't much cared whether their struggle for liberty succeeded or not.

Congress Should "Thumbs Down" Any Increase for Civil Defense

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE SENATE OF THE UNITED STATES
Monday, February 23, 1959

Mr. YOUNG of Ohio. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which was published in the Columbus Citizen of February 18, 1959, entitled "Thumbs Down."

The Columbus Citizen is one of Ohio's great newspapers, a member of the Scripps-Howard league of newspapers. The editorial indicates that Congress should "thumbs down" any increase for civil defense.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THUMBS DOWN

The Democratic majority in Congress, irked by charges of free spending, promises to cut into the administration's economy budget.

This is a commendable objective, and a good place to start is on civil defense, which has escaped the economy ax and is down for $87 million next year—actually double what it gets this year.

Civil defense is a handy example of the tendency of Government to expand steadily, regardless of the useful services they perform, if any. As recently as 1955 this office had 787 salaried employees. Now it has 1,634 and wants 1,750.

Leading off the Democratic attack, Senator STEPHEN M. YOUNG, of Ohio, said that half a billion dollars has been appropriated for this purpose in the last 9 years and "most of this money has been wasted."

The money has gone mainly for fanciful and conflicting plans, facilities, and advice pamphlets on what to do in a bomb raid—run for the hills one month and sit tight the next.

In the new budget is more money for sample fallout shelters and matching funds to States to expand their own salaried civil defense personnel, all tending to build up an officious bureaucracy, complete with uniforms and armbands, which would drain defense resources and, more than likely, would just be in the way in event of a real disaster.

No one knows the defense against H-bombs, if there is any. The only reliable protection is retaliatory force so strong it will discourage the firing of bombs, and that's where the money should go.

Congress should thumbs down this increase, and, while at it, should inquire what portions of present expenditures are buying anything worth the money.

Why Are We So Smug About the Dangers of Berlin?

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, February 23, 1959

Mr. ENGLE. Mr. President, in his column in yesterday's Washington Post, Joseph Alsop pointed up a matter which has mystified and troubled me for some weeks—and that is the smug air here in Washington regarding the situation in Berlin.

In the light of the statements made by Mr. Khrushchev, both last fall and recently, Berlin appears to me to be a very dangerous area. The Senator from Minnesota, [Mr. HUMPHREY], after a long interview with Mr. Khrushchev, stated that he was convinced that the Russians intend to be tough about Berlin. Notwithstanding these indications of real trouble, word keeps getting around Washington that everything is going to work out all right.

The danger with this frame of mind is, first, that it may be based upon entirely erroneous assumptions; and, second, if this is so, we may end up in a shooting war—small or large—with the American people wholly unprepared for it either psychologically, militarily, or any other way. Mr. Alsop says the present complacency stems from two words—"Quemoy" and "Bison." I call his explanation on these two words to the particular attention of my colleagues, and ask unanimous consent to have the article printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BACK OF THE BERLIN COMPLACENCY

(By Joseph Alsop)

A question of great importance is underlined by Nikita Khrushchev's angry, warlike answer to the Western allies' note on Berlin. The question is why the American Government is so remarkably complacent about the Berlin crisis.

On the face of the facts, complacency is utterly unjustified. At the very outset, Khrushchev committed himself to use force, if need be, to get his way at Berlin. He has now renewed that commitment in unvarnished terms. For just these reasons, partial military mobilization is actually advocated by many old hands at dealing with the Soviets. These men are Dean G. Acheson, who strongly supports the firm policy of John Foster Dulles, and George F. Kennan, who bitterly criticizes the Dulles policy.

But instead of mobilization, we have continued disarmament. And instead of the earnest concern that is being voiced by men like Acheson, the most intelligent officials

of the State Department went on parroting the story that the Kremlin has got itself into a box on Berlin and wants out. At least, they did this until Khrushchev's last speech.

The American Government has been complacent, in short, because the American Government has been cheerfully convinced that Nikita Khrushchev did not mean a word that he said about fighting to get his way at Berlin. The reason for this conviction can be given, in turn, in four short words: "Quemoy and the Bison."

To begin with the first part of this seemingly magical formula, Quemoy's profound effect on the State Department is really impossible to exaggerate. The decision was taken—by Secretary of State Dulles almost singlehanded—to risk war rather than permit the Communists to seize the offshore islands by naked force. The gamble paid off, too.

Furthermore, there can be very little doubt (and Secretary Dulles feels no doubt at all) that the gamble paid off because of the American deterrent, which lay in wait far from the battlefront. The test of nerves on the islands, with what may not be called false weapons, convinced the Communist high command that there was real danger of the eventual use of real weapons. To avoid this danger, the attack on Quemoy was called off.

From this experience, Secretary Dulles reasoned by analogy that the threat to Berlin will also be withdrawn if the Communist high command is again convinced that there is real danger of the eventual use of real weapons. This was the most constantly repeated Dulles argument, both before Christmas and again on his last courageous trip abroad.

As for the other part of the seemingly magical formula, an overestimate of Soviet production of the Bison bomber has also affected the Defense Department in a way that cannot possibly be exaggerated. In response to this Bison overestimate, former Secretary of Defense Charles E. Wilson was driven to increase output of our own B–52 bomber. This was just as well, since the B–52's are about the only effective force-in-being we now have. Yet the Defense Department has never recovered from the apparently shattering experience of being driven to increase its own efforts by an overestimate of the Soviet's effort.

"We gave them too much credit in the Bison case," the defense leaders are always in effect saying, "and by God, we're not going to make the same mistake again." Because of the Bison story, in other words, the Defense leaders think that they can safely ignore Khrushchev's claims to great power with long- and medium-range missiles, just as the State Department makes light of Khrushchev's highly specific threats to Berlin, because of the Quemoy story.

The two arguments, from the Bison experience and the Quemoy experience, may both be right. God knows, every American and every other friend of freedom everywhere must pray that these arguments are indeed right, in every minute detail.

But one cannot forget that the Bison overestimate is the only one on record in a long trail of American national estimates which have been much too smugly optimistic about Soviet military capabilities. One cannot forget either that there is no room at Berlin for the kind of safe test of nerves that took place at Quemoy.

Above all, one cannot forget the tone taken by Nikita Khrushchev. For all these reasons, the further question arises: whether Dean Acheson's judgment of the risks is not better than the prevailing official judgment.

Mrs. J. Q. Anderson Sets a High Standard for Us To Meet

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 23, 1959

Mr. MUNDT. Mr. President, in the current issue of the Health-O-Gram, the publication issued by the South Dakota Tuberculosis and Health Association, there is an excellent article paying tribute to Mrs. J. Q. Anderson, of Chamberlain, S. Dak., who recently passed away.

In reading this tribute, we can readily agree that Mrs. Anderson is one of the Nation's unsung heroines. Despite physical handicaps and other adversity, this noble woman found time to work in behalf of unfortunate people, especially those afflicted with tuberculosis.

We may often wonder, Mr. President, why community projects or national projects are carried out so effectively. It is almost wholly due to the personal effort and sacrifice of such people as Mrs. Anderson, who serve unselfishly in behalf of worthy causes.

I ask unanimous consent to have printed in the Appendix of the RECORD the article concerning Mrs. Anderson so that her example in life may serve as inspiration to all of us, and that her work may set a high standard for Americans to meet.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEATH CALLS PIONEER SEAL SALE CHAIRMAN

Word has reached the South Dakota Tuberculosis Health Association office of the death of Mrs. J. Q. Anderson, 84, at the Community Bailey Hospital in Chamberlain on February 6.

Mrs. Anderson had been Brule County Christmas seal chairman since 1917. Her long service in the tuberculosis control movement has set a record in South Dakota and her 41 year term as Christmas seal chairman may very well be the longest of anyone in the United States.

Mrs. Anderson became interested in preventing tuberculosis after she had observed the heavy toll the disease was taking in the Fort Thompson community after several employees at the ranch and trading post which she and her husband operated, many of them Indians, had succumbed to the disease.

She helped organize her county for the fight against tuberculosis shortly after the State association was formed in 1913. In 1917, she became Brule County chairman and has served continuously since then, having conducted her 41st seal sale last fall.

Since 1950, when Mrs. Anderson had both limbs amputated because of diabetic ulcers, she has managed the annual seal sale from her wheel chair. Earlier she had both breasts removed because of cancer. For the last 2 or 3 years she has been a resident of the Community Bailey Nursing Home in Chamberlain. At the June 1957 South Dakota Tuberculosis Health Association annual meeting, Mrs. Anderson was recipient of the Agnes M. Holdridge award conferred by the South Dakota Tuberculosis and Health Association in recognition of her outstanding services and contributions to the work for which the State association was founded.

Mrs. Anderson's husband, J. Q. Anderson who died in 1937, was a pioneer rancher and trader in the Fort Thompson area and well known as a successful rancher, banker, and State legislator. He was influential in promoting the construction of the early pontoon Missouri River crossing at Chamberlain.

In the first quarter of the century the Andersons built up a ranch of some 30,000 acres and operated a successful trading post at Fort Thompson. During the crash of the thirties Mr. Anderson, who was then vice president of the Brule County National Bank, mortgaged their holdings and sold cattle at $25 a head to pay off $135,000 of indebtedness and save the bank. After her husband's death, Mrs. Anderson was able to salvage about 1,000 acres from the shambles as she called it, and most of the rest became part of the Geppert ranch.

The Andersons had no children of their own but raised the family of a brother who died in 1930 of pneumonia. One of the children, Myron, the oldest, was blinded in an ammunition explosion in France during World War II. Another nephew, Robert W. Beckwith, has been administrator of the Community Bailey Hospital at Chamberlain for several years and has taken an important part in various State organizations interested in promoting better health.

In an interview for an article written by Ida B. Alseth 2 or 3 years ago, Mrs. Anderson said, "I have had my ups and downs but truly life has been very good to me." In her articles Mrs. Alseth paid tribute to Mrs. Anderson by saying "When one notes her accomplishments, her work in outside activities, her ability to do many things for herself, despite her disabilities that would put many persons so afflicted on the total disability list, one must admit that she is truly a pioneer, with that inbred pioneer spirit that would see her through just such tragedies as she has experienced. Yet, you see her rise above them all with a smile to live a full life dedicated to self-reliance and the service of others. Such is one's reaction to Mrs. Anderson who tops the list of Christmas seal workers in years of service to the cause."

Harry S. Truman Selects Six Great Turning Points of American History

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mr. BOLLING. Mr. Speaker, the interesting article which follows appeared in the February 22, 1959, issue of This Week. I am confident that the historians of the future will recognize Harry S. Truman as one of our country's great Presidents:

HARRY S. TRUMAN SELECTS SIX GREAT TURNING POINTS OF AMERICAN HISTORY

(By Jhan and June Robbins)

INDEPENDENCE, MO.—More than half a century ago Miss Maggie Phelps, a vigorous country schoolmarm, taught American history to a serious, spectacled youngster named Harry Truman.

"I think Miss Maggie made a special effort to interest me," Mr. Truman recalls, "because she knew I was too shortsighted to play baseball. She sensed that I needed a substitute. She taught me that the events that altered the course of our country's history are some of the most exciting moments the world has ever seen. Right then and there I decided to try to become a history scholar."

Professional historians acknowledge that Mr. Truman has done a pretty good job. He is the only President in recent years who has displayed no interest in whodunits or other escape literature. He rested from his spirited bouts with Congress by reading a relaxing chapter about Yorktown or Chancellorsville.

"Men make history and not the other way 'round," Mr. Truman decided. "In periods where there is no leadership, society stands still. Progress occurs when courageous, skillful leaders seize the opportunity to change things for the better."

TO LOOK FORWARD, HE LOOKS BACK

Today, at 74, Mr. Truman watches with keen interest while modern history unwinds at its dizzy rate. In an exclusive interview granted to This Week at the Truman Memorial Library here, he declared, "When I want to understand what is happening today or try to decide what will happen tomorrow I look back. 'A page of history is worth a volume of logic.' Justice Holmes said that."

The former President added feelingly, "I know something about American history. We have had many glorious moments. Many of those which have been of important, lasting benefit to the American people have occurred during the administrations of strong Presidents. This can be no coincidence. We need our system of checks and balances but we must have leaders who can see what needs to be done and who do it. We've been lucky enough to elect a number of such men to the presidency. It is because of their efforts that we have the best government that has ever been organized in the history of the world."

Mr. Truman, who has had quite a bit to do with history himself, believes there are certain key moments in our past which have brought the United States to its present position. Studied together, he believes, they may reveal a predictable pattern for the future. Here, in his own words, he describes six of these key events in American history—and their significance for This Week readers.

1. WASHINGTON STOPS THE WHISKY REBELLION

When Congress in 1791 passed an excise-tax law, levying 4 pence per gallon on all distilled spirits, the counties west of the Alleghenies rose in violent protest.

"A government may be organized under the highest ethical ideals. On paper, it may sound efficient. Yet the real test of any government is: How authoritatively can it govern?

"George Washington, today, is a name that evokes no controversy. From earliest school years our children are taught to love his memory and admire his works. Yet in his own time he was opposed politically, reviled by the press, mocked by professional critics. He was the first leader of a federated nation—a new experiment in modern government. Could the laws that Congress passed be enforced in the 14 member States, even when they were unpopular?

"Washington met his greatest test as President in 1791 when Congress, with his endorsement, passed a law that levied a tax on liquor. The Monongahela Valley in western Pennsylvania was a good place to grow corn.

"The Allegheny Mountains separated the area from its markets. The cheapest and easiest way to ship its major products over the hills to market was in the form of distilled liquor. The new whisky excise tax hit hard. In 1794, open rebellion broke out in Pennsylvania. Organized squads of armed infantry began drilling. They declared: 'The whisky tax will never be collected.'

"It must have been a sore dilemma for Washington. Many of those antagonistic mountaineers had been his best soldiers in the Revolution. Yet he did not hesitate. He was President of the United States, sworn to uphold and execute its laws. He called on the Governors of 4 States and ordered 15,000 troops to occupy the area, restore order, and enforce the law. The rebels quickly put down their arms. Only a handful of them were taken into custody. Only two were tried, convicted, and imprisoned and Washington quickly pardoned them. He could afford to be generous. He had proved what all the world of his time wanted to know.

"The new Federal Government could collect the taxes it levied. It could enforce the laws it passed."

2. JEFFERSON PUSHES US ACROSS THE CONTINENT

In 1803 the United States purchased from France for $15 million over 800,000 square miles of territory, nearly doubling the size of the Republic.

"One of the tests of a great leader is the ability to recognize and seize unexpected opportunity. When President Jefferson sent James Monroe on his historic mission to Napoleon, he was merely concerned with securing freedom for American exporters to ship their goods through the port of New Orleans, then a French possession. Jefferson expected Napoleon to refuse and gave Monroe an 'ace in the hole'—a threat that the United States would make a defensive alliance with Britain, then France's enemy.

"To Monroe's surprise Napoleon was anxious to sell the entire French possession of Louisiana. He felt that Britain would probably capture the area anyway. To push the deal, he threw in what we now know as the Louisiana Territory—the entire west side of the Missouri-Mississippi valley, some 800,000 square miles stretching nearly all the way to the Pacific Ocean. At roughly 3 cents per acre, it was probably history's greatest real estate bargain.

"Imagine President Jefferson's excitement when he heard the news. Here was a chance for his struggling little Atlantic seaboard country to become a mighty continental power. But there was a big 'if.' Jefferson was a strict constitutionalist. He believed that the survival of the new Federal Union and the continued freedom of its citizens depended on hewing to the laws of the Constitution down to the last letter. And nowhere in the Constitution was there any mention of the right to acquire any new territory. What should he do?

"Jefferson decided to take a broad general view of his constitutional powers and go ahead with the purchase. He argued that the power to govern territory obviously implies the prior right to acquire it. He relied on our system of checks and balances to stop him if he were wrong. But the Supreme Court upheld his move. Because of Thomas Jefferson's farsighted courage—which included even the courage to modify his own public position—the United States of America was on its way to our historic destiny as a rich, major power."

3. JACKSON UPHOLDS THE POWER OF CONGRESS

In 1832 the State of South Carolina, under the leadership of U.S. Vice President John C. Calhoun, called a legislative convention and declared that the Federal excise tax law of 1828 was null and void and was therefore no longer enforceable in South Carolina.

"In 1828 Congress had passed a tariff law imposing high import duties on textiles, glass, earthenware and paper. The law pleased the industrial North, infuriated the agricultural South. It brought to a head a question that had been debated for many years. Can a State legally nullify the force of an act of Congress within its own borders?

"South Carolina, under the leadership of John Calhoun, called a special convention in 1832 and declared that the Federal tariff law was nullified in that State. Citizens of South Carolina were ordered to stop paying or collecting it. The State militia was ordered to back them up in their intransigent stand.

"Andrew Jackson was President. He was himself a southerner. These were his people, of his own faith, his own kind. What's more, Jackson frankly stated his conviction that the tariff worked injustice to the people of the South. He agreed that it was abominable.

"But he denied that nullification was legal. He said it was not even peaceable—that it was an act of open rebellion, directly inciting to treason and war.

"In a moving speech, he begged the people of South Carolina to honor the Union first and to put States rights second.

Then, to show that he meant business, he ordered Gen. Wilfield Scott to command Federal troops in South Carolina, sent two warships to anchor in Charleston harbor. The tax, President Jackson warned, would be collected by force if necessary. The best way to settle disputes over States rights, he firmly believed, was by means of debate and compromise—not by threats of rebellion.

4. LINCOLN HOLDS THE UNION TOGETHER

When Lincoln took the oath of office as President of the United States, on March 4, 1861, the Nation was facing one of its darkest hours; seven States had renounced the Union. Four more would soon join them. Six weeks later our country's bloodiest conflict started. At a cost of 359,528 northern lives and 133,785 southern lives, peace was finally restored and the Union preserved.

"Very few members of my family have shared my admiration for Abraham Lincoln. They were southern in their sympathies. But to me Lincoln is one our most important Presidents because he closed the door for all time on the right of a State to leave the Union. Ironically, the single act for which he is best remembered—the emancipation proclamation—is not clearly understood even by those who revere him most.

"Lincoln was not an abolitionist. He believed that slavery was morally wrong. He often expressed his personal wish that all men everywhere could be free. But he believed that under the Constitution it was a matter that each State had the right to decide for itself. He knew very well that the men of the North did not answer his call to arms in order to free the slaves. The objective was to preserve the Union. Everything else was secondary to that goal.

"In a letter to Horace Greely, editor of the New York Tribune, Lincoln stated his point of view. It's astonishing that so few people today are familiar with it. He wrote, 'If I could save the Union without freeing any slave, I would do it. If I could save it by freeing all the slaves, I would do it. If I could save it by freeing some and leaving others alone, I would also do that.'

"The emancipation was conceived as an act of military necessity. Lincoln acted under his emergency wartime powers. Legally speaking, what he did was to seize and dispose of a large amount of private property—something he could never have got away with in peacetime, no matter how much he longed to do it.

"The proclamation was a master stroke of psychological warfare. It was intended to underscore the withdrawal of Lee's troops after the battle of Antietam, an indecisive contest in which the North claimed victory. Lincoln also hoped that it would draw off some of the slave labor forces that were supporting the armies in the South and help swing opinion in Europe, particularly in England, in favor of the North.

"Today we have still to solve the problems which the emancipation has bequeathed us. If we had had strong, able men in the White House between 1850 and 1860, the issues concerned in the secession could probably have been settled and the slaves freed peacefully and justly. The Civil War would never have occurred and we would not now be living with its bitter racial aftermath that distorts the harmonious democracy we so wish to show the world."

5. CLEVELAND RESTORES THE TWO-PARTY SYSTEM

An aftermath of the Civil War was the almost complete domination of the national political scene by the Republican Party, the party of Lincoln and of the victorious North. From 1861 to 1885 the administration was in Republican hands for six successive terms.

"Grover Cleveland, a Democrat, was elected to office in 1884, ending 24 years of Republican rule in the White House. It marked the recovery of our healthy two-party system. It also marked the end of a period in which Congress had pushed Chief Executives this way and that and usurped many Presidential powers. Cleveland was not the man to stand for that. During his first term, the Presidential vetoes came down like hailstones.

"When a President doesn't have a fight or two with Congress, you know there is something wrong. A man with thin skin has no busines being President. These scraps are not personal. It's part of our scheme of government that the executive and legislative branches jealously guard their rights against infringements. But in 1885, Congress had had things pretty much its own way for a long time.

"Cleveland vetoed 414 bills during his first administration. Many of them were private pension bills—thinly disguised graft. He braved the wrath of the Grand Army of the Republic, the politically powerful veterans' organization, when he knocked out the dependent pension bill which would eventually have put nearly every veteran in the United States on the public payroll. He forced through the repeal of the Tenure of Office Act and regained Presidential control over appointment to and removal from executive office.

"Under Cleveland, our democracy once again began to function as our founders had intended that it should. Our Government was ready to face the massive problems of the 20th century, prompted by a newly alert public and powered by a Chief Executive who had recovered his independence."

6. THE UNITED STATES JOINS THE WORLD COMMUNITY

Under the administration of Franklin D. Roosevelt and later by Harry S. Truman, the United States for the first time committed itself to membership in a world organization of nations. Woodrow Wilson, a generation earlier, was unable to persuade this country to join the League of Nations, but his efforts paved the way for the change in public opinion that eventually resulted in our present leadership in the United Nations. Wilson was right—the irreconcilables were wrong.

"Credit for the sixth, and perhaps the greatest, event in our country's history must be shared by two men—Woodrow Wilson and Franklin Roosevelt.

"We followed an isolationist policy for the first 150 years of our existence. It took 30 years, 2 dreadful wars, and 2 great leaders who literally struggled to their deaths to lead us to our rightful place in the world.

"Many people think that Woodrow Wilson's second term was a failure because he could not persuade the U.S. Senate to let us join the League of Nations. Yet it's quite possible that if Wilson hadn't tried, Roosevelt couldn't have succeeded. Both of these men understood what we are dangerously close to forgetting today—that it is the President's duty to lead the Nation in the conduct of its foreign affairs. This is a responsibility that cannot be delegated and must not be avoided.

"Wilson was a great historian and a great leader. Under him, we became international minded. He failed only as a politician. He was unable to enlist the support of the irreconcilables. These Senators abused their power to approve treaties, kept us out of the League of Nations and, in my opinion, played a large role in causing World War II.

"Roosevelt early recognized the need to keep the United Nations project above and beyond politicis. When the U.N. opened for business, Arthur Vandenberg, a Republican and former isolationist, was a leading member of our delegation. In this way, we showed the world that our isolationist period had come conclusively to an end.

"When I became President, my first act was to reaffirm the U.S. desire to see a world organization that would preserve peace. Within a few minutes of my taking the oath of office, I announced that we would carry on with the historic assembly that is now known as the San Francisco Conference. In this way, at last a mature Nation, we joined the world community."

We asked the former President what he considered the most important event of his administration. He answered unhesitatingly, "Containment of communism." He ticked off these four major moves:

Preservation of the freedom of Greece and Turkey.

Marshall plan aid that balked Communist political campaigns in Western Europe.

The Berlin airlift that prevented an East German putsch.

Our stand in Korea that met aggression with force and restored the legal status quo.

"It's been proved beyond doubt that the President has the power to meet emergencies when they arise," said Mr. Truman. "Sometimes he has to take the bull by the horns. And he must be strong enough to hold on when he does."

What will history say about Harry Truman?

"A man who has to try to answer that," said the former President, "is in a terrible fix because there is no way anyone can tell today or for the next half century. I do know one thing. People seldom honor the names of men who try to obstruct something that needs to be done. Who can recall the identity of the men who attacked Washington because of the Jay Treaty and vilified Jefferson at time of the Louisiana Purchase?

"I tried to do the right thing and I suppose eventually the facts will come out. I'll probably be holding a conference with St. Peter when that happens. However when I'm finally carried out feet first I hope it will be said of me, 'He did his damnedest.'"

Ex-Gov. Charles A. Sprague, of Oregon, Analyzes State Administration of Gov. Robert D. Holmes

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, February 23, 1959

Mr. NEUBERGER. Mr. President, many Members of the Senate became familiar with Robert D. Holmes during his service as Governor of Oregon.

Last November, Mr. Holmes, a Democrat, was defeated for reelection by Mark O. Hatfield, a Republican.

On January 12, 1959, a former Republican Governor of Oregon, Charles A. Sprague, published an estimate of the Holmes administration in his daily paper, the Oregon Statesman, of Salem. Mr. Sprague is one of the distinguished editors of the Pacific Northwest, a man of integrity and fairness. He has declared editorially:

And (Robert D.) Holmes is entitled to the respect of all the people for the high character of his administration.

Mr. Sprague also speaks highly of the capable services performed by John Richardson, State director of finance, and Howard Morgan, State commissioner of public utilities under Governor Holmes.

I ask unanimous consent, Mr. President, that the thoughtful editorial entitled "Changing of the Guard," written by ex-Gov. Charles A. Sprague, of Oregon, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CHANGING OF THE GUARD

As he retires today from 2 years' service as Governor of Oregon, Robert D. Holmes can take much satisfaction in the accomplishments of his administration. Standards of administrative services have been well maintained. Notable improvements have been made at the many institutions of the State, both educational, charitable, and penal or correctional. His administration has been remarkably free of scandal. He has sought to spur business expansion.

Holmes has upheld the dignity of the office, without show of conceit. He has held firm to convictions even when, as with certain commutations, he has provoked much protest. And Mrs. Holmes has been a most gracious first lady.

Almost any Governor on retiring from office is aware of errors he has made and of tasks left unperformed. Presumably Holmes is normal in this respect and has the added disappointment of failing to win reelection. These regrets, however, should not becloud the pride he is entitled to feel for what has been achieved during his short term. And Holmes is entitled to the respect of all the people for the high character of his administration.

Among the Holmes appointees who leave office today we would like to mention particularly John Richardson, director of finance and business administration, and Howard Morgan, public utility commissioner. Richardson quickly showed his competence in management of the State's fiscal affairs. He was objective, free of partisan bias in administering his responsibilities, and eminently fair in his relations with State officials and the public.

The hostilities which Howard Morgan had incurred in his political battles pursued him in the office of public utilities commissioner. But his administration of this sensitive office appeared to be in strict conformity with the law and with the function of the office, to safeguard the public interest in the regulation of public utilities. His grip was firm, and in this office it must be kept firm, especially in time like the present when inflation is in the air. Morgan has been blamed for extra curricular activity as adviser to Holmes. Of that we have no knowledge and little interest. On the particular job given him, he has done his duty, efficiently and conscientiously.

Survival of Minor League Baseball

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, February 23, 1959

Mr. KEFAUVER. Mr. President, Wirt Gammon is the very able sports editor of the Chattanooga Times. In an article appearing in the Times February 16 he analyzes the bill, S. 886, which I have introduced in connection with the application of the antitrust laws to team sports. Mr. Gammon concludes that this bill would be the salvation of minor leagues, and would thereby help the major leagues also. This was certainly my intention.

I invite the attention of my fellow Members of Congress to this article, and I hope it will be read by all those who are interested in the survival and success of team sports. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JUST BETWEEN US FANS

(By Wirt Gammon)

LIFESAVER FOR THE MINORS

The Kefauver bill would be good for minor league baseball.

We think it would be good for the majors, too, but there is difference of opinion on that. Yet it looks like a gift from heaven for the minors, at a time when there is danger of the smaller leagues going broke.

"I'd say most of the baseball provisions of the bill," Senator KEFAUVER says, "are the result of things the minor league people have told us would help them. I am satisfied that unless a bill similar to this one is enacted into law, very little hope will remain for the continuation of minor league baseball."

KEFAUVER has gained a lot of baseball knowledge since asking Casey Stengel in Senate testimony last summer how many major league teams there are.

Ford Frick, baseball commissioner, testified in the suit for $250,000 against baseball by a Portsmouth former owner—a case dismissed because no contract was broken—that "the only way I can see that radio and TV can be forbidden in the minor league cities is by legislation. I would like to see such legislation."

Well, it is in the Kefauver bill. Frick has been told by the Justice Department that baseball itself can't make such a law; it would be collusion (against the television-radio businesses).

The minors are hurting, and need the legislation fast.

"We are hurting most because games are televised into our cities on the days we have games," one minor league club official told us by telephone the other day. "The Kefauver bill would help. Anything would be better than the way it is now." We will quote again later from this unnamed official.

KEFAUVER'S bill opens the road for agreements among teams to keep TV games out, but leaves it up to the FCC to make them show that such agreements are necessary to survival. The FCC thus is cast in a role of striking a balance, as KEFAUVER puts it, between the two public interests of the minor league ball club's rights and the rights of the television viewer and station owner.

Unless an agreement among the top baseball officials had the sanction of the FCC as being in the public interest, it would be almost impossible to avoid prosecution under the antitrust laws. But if the FCC has approved the agreement after hearings and a vote by the Commission's seven members, the owners could not be prosecuted for obeying a Federal regulation.

The major leagues and the television business have been running the show and doing very well for themselves. For this no one blames them, for they have broken no rules. But the feeling that the minor league stake in the matter rightfully makes it a three-way proposition has resulted in this bill.

KEFAUVER is the first to make a proposal from the minor league point of view. It recognizes a basic weakness in the baseball structure, pointed out here some months ago, that the minors have no voice in baseball's own law. They are made by the major moguls. KEFAUVER'S bill would save the minors by enforcing their rights on the majors and on television.

It's either that or let the minors die, as we see it. Some may not care whether the minors live. They should be against this bill.

MAJORS WOULD BENEFIT, TOO

In another way, the bill also would save the majors from themselves, we believe. That is on giving large bonuses.

Some claim the Kefauver bill would kill the minors because it limits each major club to a total of 80 players, and so the majors would cut down the subsidies to minor league clubs.

On the contrary, the 80 limit would, first of all, cause major clubs to cut down very much on the size of scouting staffs, and on giving out large bonuses to a large number of players.

That would turn the field over to the minor league clubs after each major club gets its 80. The rest of the players could be signed by the minor clubs. They'd be back in business for themselves, instead of being subsidized.

Here's a case in point, as told by the unnamed club official mentioned above: "There was a top prospect near our city last spring. A friend of ours there was watching him and was going to bring him to us after he finished high school ball. But he told us later that he didn't have a chance. The thousands of major league scouts looking behind every bush in the land to line up a lot of players, they found him. The boy just sat still and let them bid. The bidding went up and up, over $100,000. Way out of reason.

"Now if this bill goes into effect, there won't be these major league scouts everywhere. A kid like that, being near us, will be brought in to us, we'll pay him what we can to sign and we minor league clubs will be able to field our own teams and eventually sell our players to the majors."

Thus, the bill could help the independent club owner to come back.

It could help the major league club with a small farm system, like Washington, too. Washington could still send player help to its main farms, Chattanooga and Charlotte. But the Yankees and Braves would have to cut down on their 250 or so players.

Yet, to say the bill tries to bring the Yankees and Braves down to the level of the rest of the majors is erroneous. The bill tries to keep the minors from disappearing.

WHEN 500 G'S IS PEANUTS

There was a story the other day that the Washington farm system lost $502,000 in 1958.

This is an imposing figure. But the Senator officials didn't jump on their men in Chattanooga and Charlotte about it. Why? First, farm losses of some of the other major league clubs run over $1 million. Second, such figures include all phases of the procurement of ball players—the money paid bonus players, salaries of the many scouts, the cost of spring training, salaries of the head men in the farm system.

In the rat race that major league clubs find themselves now, $502,000 is not much. Why, Baltimore paid $125,000 for one player, Dave Nicholson, last year. Incidentally, he was no star at Knoxville.

Surely the Kefauver bill would cut down on this rat race.

The way we see it, the bill would help both the minors and majors.

Education of Youth

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Monday, February 23, 1959

Mr. CHURCH. Mr. President, the literate and incisive Eric Sevareid, in his broadcast on February 13, spoke of a problem of concern to all of us—educating our youth in spite of the discord of TV, movies, and automobiles. The fact that he made a reference to my State gives me the opportunity to insert his comment in the CONGRESSIONAL RECORD, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

Good evening. Here it is, Friday sermon time and we find ourself in the predicament of the old time Negro preacher who said, "I ain't had time to prepare no reglar, theologic sermon, so I'm just gwine let the Bible drap open and wheresoever my eyes rest."

Well, we just let the newspapers drap open, and our eyes rested immediately on two stories dealing with the same subject—kids, cars, and high school courses. In one story the subject had been approached by the methods of social science; in the other by the humanistic approach. The humanities, at a rough definition, concern people as persons, as individuals, in their intimate minds, hearts, and spirits, often as reflected in music, literature, and the arts. The social sciences are concerned with persons as people—in the group, where methodistic measurement is used. And it's surprising how often the humanist's pure instinct and intuition lead him to the same conclusions as the social scientist's charts and graphs.

Sam Levenson, the former teacher, is a humanist; he goes by instinct and experience; and what Sam has been saying on TV this week about kids and cars, as retailed for us by critic John Crosby, is just what a group of social scientists have been discovering in their charts and graphs. To wit: Giving a car to a teen-ager is doing him positive, provable injury. The glory of having his own car not only goes to his head but drives out whatever else was in his head.

As a high school official in Los Angeles puts it: the boys are joyriding themselves right out of an education. He cites a study made in Idaho as typical of the country at large. Not one of the straight-A students observed owned a car; only 15 percent of the B students had a car; 41 percent of the C students had one, 71 percent of the D students and nearly all—83 percent—of the flunkers drove cars.

Why parents allow it, says the Los Angeles educator, is almost beyond comprehension.

Sam Levenson, humanist, is concerned not only about what the car does to a kid's education; but what it does to the kid, period.

Kid ownership of cars, he maintains, is just one illustration of the fact that the teenagers are the ruling class in the country. They've overthrown the Government, says Sam. Certainly, they have overthrown their parents; or the parents have abdicated; they haven't the guts to be parents, says Samuel.

"You do a kid no good by giving him everything in life," he goes on. "The only thing he gets out of it is the habit of receiving. You've denied him the joy of achieving * * * the car is only a symbol of the unearned increment that a kid should not be given unless it's absolutely necessary."

Even in simple, practical terms, matching a teenager to a car makes no sense, according to the Los Angeles gentleman; what happens, time after time, is that the boy quits school or quits athletics at least, in order to get a job to keep his buggy rolling; almost invariably, he finds that keeping a car costs much more than he had expected.

Levenson is convinced that the motor car is mixed up in the whole problem of truancy and corruption and sex. He's found, he says, that the truant invariably ended up in a car somewhere; the car has become the American boudoir; it's led to sex experience at an early age; the antidote, he thinks, is simply in teaching kids the wonder, the miracle, the reverence for the creation of life itself.

As for rock and roll; it's something, says Sam the humanist and teacher, approaching musical alcoholism.

Thus ended the sermon for today.

This is Eric Sevareid in Washington.

Way To Tackle Farm Problem

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Peoria Journal Star regarding a recent trip to Peoria by our Agriculture Subcommittee of the Appropriations Committee, which on this occasion was chairmanned by my good friend, the very able and likable gentleman from Minnesota, Mr. FRED MARSHALL. FRED certainly knows the hog business and handled the subcommittee on this factfinding tour in such a manner as to provoke praise from many quarters not the least of which comes from my own hometown newspaper:

[From the Peoria Journal Star, Feb. 18, 1959]

WAY TO TACKLE FARM PROBLEM

Peoria and central Illinois this week observed a demonstration of the proper way in which to seek a solution to the farm problem.

A subcommittee of the House of Representatives Appropriations Committee, visiting here, expressed more interest in efforts to develop a leaner type of hog, which will improve marketing conditions, than in anything else.

Representative FRED MARSHALL, Democrat of Minnesota, speaking for the committee, stressed the fact that development of a leaner type of hog is essential to retention of the national market for pork. This also has an effect on corn and grain products because if the demand for pork falls off and fewer hogs are raised on American farms, the demand for corn and grain also will be affected adversely.

Best solution to the farm surplus problem, of course, is development of additional markets. Development of a leaner hog, with more appeal for the meat purchaser, would go a long way toward cutting down the surpluses not only of pork but of corn and grain.

Artificial support of prices never will provide a lasting solution to the farm problem. Development of additional markets and increases in consumption are the only sound approach. By indicating its interest in the development of a more attractive type of pork the committee has indicated its interest in a sound and lasting solution, rather than a temporary lessening of the surplus problem.

Washington Gave All for His Country

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Monday, February 23, 1959

Mr. RANDOLPH. Mr. President, there will be many meaningful tributes to George Washington on the anniversary of the birth of the first President of the United States.

Few, if any, will be more inspiring than the column by Walter Winchell. His words of strength about the Father of Our Country are couched in classic prose.

I felt a lift of the spirit as I read Winchell's merited praise of this matchless patriot. He wrote:

During the Nation's darkest hour, he carried the brightest torch. At Valley Forge a winter of suffering made possible the springtime of democracy. Although weapons become obsolete and maps change, the principles of George Washington remain constant.

This complete newspaper column, published nationwide on February 22, 1959, is as follows:

WASHINGTON GAVE ALL FOR HIS COUNTRY

(By Walter Winchell)

He was a light in the darkness. The immensity of George Washington's contributions are exceeded only by the knowledge of what he relinquished to make them possible. He was a wealthy man who surrendered material abundance for the burdens of arduous duties. He exchanged personal security for bitter peril. He traded the security of his farm for the torture of battlefields. He sacrificed almost everything for a hope. But he never surrendered his conscience.

His birthday is a time for profound inspiration. It arouses renewed dedication to the Nation's mightiest force: Devotion to liberty. The homage tendered the Founding Father is more than respect for valor. It exceeds the shimmer of personal glory. For it represents a testament of national faith in the concepts his sacrifices gained. The vibrancy of his spirit has always been evoked by the Nation in time of crisis.

For internal obstacles he endured and eventually surmounted offer a finer tribute to his generalship than his final success on the battlefield. The Continental Congress was plagued by corruption. The Nation's credit almost crumbled. There were times when Washington could not send ordinary military dispatches because he was unable to pay the riders. During the second winter at Morristown the Nation was almost numbed by despair. There were wild demands for General Washington's dismissal. When the future seemed dismal, a friend wrote to Washington—urging him to surrender. The general replied: "Death will provide peace."

The shaping of farmer-patriots in the form of an army was one of Washington's more formidable tasks. He was appalled by the lack of essential discipline. Nevertheless, his fixity of purpose, personal dignity and profound faith in the Nation's objectives won the loyalty of his soldiers. He once began an address to his unpaid and discontented troops with the words: "Gentlemen, you will have to permit me to put on my spectacles for I have not only grown gray, but almost blind in the service of my country." Many hardened warriors who heard those words openly wept.

He became Chief Executive amid the earnest acclaim of his countrymen. The singing quality of the high honor (as Washington's successors learned) marks the overture for the solemn beat of harsh realities. The Presidency is a national institution—the President is a man. His problems are not only political, economic, and military. They are also extremely personal. He must be equipped with moral endurance plus philosophic conviction. His physical stamina will be constantly challenged and his spiritual strength severely tested. Glory is transient, the duties are arduous and history is a stern judge.

It is difficult to imagine that the man who achieved an exalted position in history was the target of venomous opposition during his lifetime. The fierce disputes over the Constitution's ratification left burning scars. The controversy incited by the French Revolution and the Jay Treaty rocked the Nation. And there was violent opposition to the whisky tax. Washington was vilified in dailies and denounced at mass meetings. There was an assassination attempt. One paper forged letters in an effort to embarrass him.

The scurrilous press campaigns inspired Washington to write to a friend: "But in what will this abuse terminate? For the result, as it respects itself, I care not; for I have a consolation within that no earthly effort can deprive me of, and that is that neither ambition nor interested motives have influenced my conduct. The arrows of malevolence, therefore, however barbed and well-pointed, never can reach the most vulnerable part of me; though, whilst I am up as a mark, they will continually be aimed."

He urged Congress to repeal the transportation tax on newspapers by reminding the legislators: "No resource is so firm for the Government of the United States as the affection of the people, guided by an enlightened policy; and to this primary good nothing can conduce more than a faithful representation of public proceedings diffused without restraint throughout the United States."

When he embraced the serenity of Mount Vernon, Washington began his historic journey to the viewless heights. During the Nation's darkest hour he carried the brightest torch. At Valley Forge, a winter of suffering made possible the springtime of democracy. Although weapons become obsolete and maps change, the principles of George Washington remain constant. Undoubtedly, he was a man of immense proportions. You can measure the Nation's basic ideals by his character. He was the incomparable magician who transformed sprawling Colonies into a vigorous Nation. He was the Father of our Country.

Even more—he was a brother to every American.

All citizens of the United States would do well to recall the admonition of Washington when he said:

Citizens by birth or choice, of a common country, that country has a right to concentrate your affections.

This challenge, as necessary today as when Washington gave it on September 19, 1796, was embraced in his Farewell Address on that memorable occasion. He continued by declaring:

The name of American, which belongs to you, in your national capacity, must always exalt the just pride of patriotism, more than any appellation derived from local discrimination. With slight shades of differences, you have the same religion, matters, habits and political principles. You have in common cause fought and triumphed together. The independence and liberty you possess are the work of joint counsels and joint efforts; of common dangers, sufferings and successes.

Washington, as a young surveyor, climbed the hills in what is now West Virginia. He often visited sections which are known as Jefferson and Morgan Counties as well as many other areas of the State.

Diversion of Water of Lake Michigan

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, February 23, 1959

Mr. PROXMIRE. Mr. President, Tuesday I appeared before the House Public Works Committee in opposition to the Chicago water bill. I ask unanimous consent that my statement before that committee be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILLIAM PROXMIRE, TUESDAY, FEBRUARY 17, 1959, BEFORE THE HOUSE COMMITTEE ON PUBLIC WORKS

H.R. 1 should be rejected because in the 6 years this kind of measure has been before the Congress there has never been a showing that the study which is the only authorized purpose of this bill is necessary.

The study is unnecessary for these reasons:

1. The Corps of Engineers has already testified (pp. 193, 194, in hearings before Senate Public Works Committee, July 19, 28, 29, and August 7, 1958) that they are fully satisfied that additional diversion will not improve navigation on the Illinois waterway, and will have an adverse effect on navigation on the Great Lakes (p. 18057 in 1958 CONGRESSIONAL RECORD). In 6 years of consideration there has never been a showing that a study would contribute any useful information to a better understanding of navigation consequences. I challenge the author to show that this bill would provide any useful information on navigation although the effect on navigation is the only stated purpose of the bill.

2. The Corps of Engineers has also testified to certain knowledge of the effect of additional diversion on power generation—that it would be favorable at Lockport but far more unfavorable on the St. Lawrence—with a total net loss of power. There is no indication in 6 years of consideration that the study authorized in this bill would contribute even one fact necessary to a better understanding of the consequences of diversion on power. Again I challenge the author to show that this bill would provide such information.

3. The only remaining purpose the study authorized in this bill could serve is the effect of additional diversion on sanitation. Although similar study bills have been introduced in three successive Congresses, there has never been a finding by the Public Health Service, the Illinois Board of Health, the Chicago Board of Health, any public health group of any kind, or even of a single competent or for that matter incompetent public health authority that increased diversion would be necessary for improved sanitation or public health or even desirable.

On the other hand the most competent public health survey ever made of Chicago (the Chicago and Cook County health survey by the U.S. Public Health Service) called for a series of other recommendations to improve sanitation in Chicago. It specifically considered additional diversion and failed to recommend it.

It is true that this previous study was made nearly 12 years ago. Nevertheless there have been no contrary findings by the Public Health Service since the publication of this book. It would seem to me that since improved sanitation is the only possible beneficial consequence of this bill—that the Public Health Service should be requested to furnish the Congress with a report on the public health justification, if any, for this study.

4. This bill is unnecessary because the Supreme Court has established jurisdiction over diversion by Chicago for some 50 years. Everything provided in this bill could be granted by the Supreme Court. The Court has been willing to grant Chicago temporary increases in diversion in the past. It did so as recently as 1956. It would do so again if the Court deemed such increase merited. Through the appointment of special masters the Court has built up a record of great competence in this matter. Obviously only lack of merit keeps Chicago from going to the Court for the diversion authorized in this bill.

Before the committee votes on this bill I respectfully suggest that it request the Public Health Service to indicate whether a 3-year study is necessary to provide conclusions on the consequences of additional diversion on the sanitary quality of water in the Illinois Waterway.

In the event the committee favorably considers the bill I respectfully suggest the following changes:

1. The bill calls for a recommendation from the Army only. Yet the study authorized by the bill will be entirely concerned with the sanitary quality of water on the Illinois Waterway. This is within the competence of the Public Health Service. Therefore the Public Health Service should be called on to provide its own recommendations.

2. The bill calls for a recommendation but provides no standards for judgment on which such a recommendation should be based. The Public Health Service should be asked to specify the standards that it would be necessary for additional diversion to achieve in order to warrant a favorable recommendation. In the absence of such prestated standards for favorable recommendation—the Congress is guaranteeing Chicago a favorable recommendation. The deck is being stacked in advance: The favorable-to-Chicago recommendation is inevitable. What Chicago wants is a stacked deck, a study that will provide a preconceived conclusion—a guarantee of a permanent additional diversion of 1,000 cubic feet of water per second.

3. The Public Health Service should be asked to indicate whether or not a study of alternative sanitation methods to achieve comparable purification without additional diversion would be necessary to permit reasonable recommendations. A Public Health Service staff report, dated April 8, 1957, and entitled "Estimated Costs of Treatment Measures Equivalent to Increased Diversion of Lake Michigan Water for Sanitation Purposes at Chicago" was submitted at the request of the Bureau of the Budget on April 29, 1957. The report was submitted to Roger W. Jones, Assistant Director for Legislative Reference, Bureau of the Budget, by Marion B. Folsom, then Secretary of Health, Education, and Welfare.

This staff report indicated that its information was based on limited data. On two of the four alternatives the Public Health Service declared that they were not in a position to estimate the effectiveness. The cost estimates are at variance with firm estimates made by the president of the Metropolitan Sanitary District of Chicago. The Chicago estimates are substantially lower. The head of the sanitation district himself states that the cost of one of the alternatives to diversion "would not be beyond the ability of the sanitary district." The Public Health Service concludes its staff study by declaring of another alternative, "Its use for reducing oxygen demand may be economically justified and found effective in meeting the unusual conditions at Chicago either alone or in combination with other approaches." If either of these conclusions should prove to be the case, they would in my judgment demolish any reason for consideration of diversion by Chicago.

Mr. PROXMIRE. Mr. President, the Milwaukee, Wis., Common Council has recently adopted a resolution declaring the opposition of our largest city to this water diversion proposal. I ask unanimous consent that the resolution of the Common Council of the City of Milwaukee be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION DECLARING CITY OF MILWAUKEE OPPOSITION TO WATER DIVERSION PROPOSALS

Whereas by prior resolutions, this common council has recorded the position of the city of Milwaukee in opposition to proposals for diversion of water from Lake Michigan for the purposes of the Chicago Sanitary District; and

Whereas there is pending before the Congress of the United States bills to authorize additional diversion of water from Lake Michigan at Chicago; and

Whereas one of these bills is H.R. 1, introduced in the House of Representatives January 7, 1959: Now, therefore, be it

Resolved by the Common Council of the City of Milwaukee, as follows:

1. That the city of Milwaukee reiterates its position in opposition to increased or unreasonable diversion of water from Lake Michigan for the purposes of the Chicago Sanitary District, or comparable diversions of water elsewhere in the Great Lakes Basin; and

2. That the mayor, the deputy city attorney, and the municipal port director be and they are hereby authorized and directed to appear before congressional committees either in the House of Representatives or in the U.S. Senate holding hearings in Washington or elsewhere, and to express the opposition of the city of Milwaukee to legislation which would in any manner authorize the diversion of additional volumes of water from the Great Lakes Basin; and

3. That the city of Milwaukee hereby specifically declares its opposition to H.R. 1 pending before the Congress of the United States, or bills similar in intent; and

4. That the aforesaid persons enumerated

in paragraph 2 are hereby authorized to confer with representatives of Great Lakes cities of Canada for the purpose of discussing matters pertaining to water diversion, and they are also authorized to meet with other representatives of the principal cities of the Great Lakes area in the United States for the purpose of discussing opposition to water diversion legislation; and be it further

Resolved, That copies of this resolution be transmitted by the city clerk to the President of the United States, to the Committee on Public Works, U.S. Senate, and to the appropriate committee of the House of Representatives; to Senators and Representatives from the State of Wisconsin; to the attorneys general of the Great Lakes States opposing water diversion; to the Great Lakes Harbors Association; to the Great Lakes Compact Commission; and to the Lake Carriers Association; and that the city representatives herein enumerated be authorized to collaborate with the legislators and regional groups designated with a view to achieving collaboration and effective opposition to any and all proposals for extraction of water from the Great Lakes Basin; to the injury of the port cities and the maritime interests of the Great Lakes.

Charles A. Plumley, Statesman

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mr. CANNON. Mr. Speaker, under leave to extend remarks in the RECORD I include a notable address by a former Member of the House, the Honorable Charles A. Plumley, of Vermont, delivered on the 150th anniversary of the birth of Abraham Lincoln.

Dr. Plumley is the distinguished son of a worthy sire, his father having served as a Member of this body through the 61st, 62d, and 63d Congresses.

Representing his father's district, which included the entire State of Vermont, Dr. Plumley served here from the 73d to the 81st Congresses, inclusive. He came to the House as a nationally known educator and university president, and his scholarly address reflects his long and ardent admiration for the great war President.

The address follows:

ABRAHAM LINCOLN: THE UNCOMMON COMMONER

We honor ourselves today as we appropriately observe the 150th anniversary of the birth of Abraham Lincoln, uncommon commoner, great American emancipator, and savior of the Nation; a type that nature wills to plan but once in all a people's years; he was one who owned no common soul:

"Some opulent force of genius, soul, and race,
Some deep life current from far centuries
Flowed to his mind and lighted his sad eyes,
And gave his name, among great names, high place.

"Unschooled scholar! How did you learn
The wisdom a lifetime may not earn?
Unsainted martyr! Higher than a saint!
You were a man, with a man's constraint,
In the world, of the world was your lot;
With it and for it the fight you fought
And never till time is itself forgot
And the heart of man is a pulseless clot
Shall the blood flow slow, when we think the thought
Of Lincoln."

It is universally conceded that by his courage, his justice, his even temper, his fertile counsels, his humanity, he stood a heroic figure in the center of an heroic epoch. He is the true history of the American people in his time. Step by step he walked before them; slow with their slowness, guidening his march by theirs, the true representation of this continent; an entirely public man; father of his country; the pulse of 20 millions throbbing in his heart. The thought of their minds articulated by his tongue.

His cautious, but steady advances, militarily, during the war were like those of a Roman Army. He left behind him a firm road on which public confidence followed, as he took America with him wherever he went. What he gained, he occupied. His advanced posts became his colonies.

It is not generally recognized, but it is a fact, that Lincoln stands out as a great war President, probably the greatest in our history, and as a great natural strategist, a better one than any of his generals. He was in actuality, as well as in title, the Commander in Chief, who, by his larger strategy, did more, in the opinion of those qualified and competent to express one, than Grant or any general to win the war for the Union.

As Commander in Chief, he visited General Grant and his army at City Point in the spring of 1865. He wanted to see Grant defeat Lee and end the war. He wanted to witness a victory.

On the 7th of April 1865, Sheridan, smashing victoriously at the Confederates, telegraphed General Grant: "If the thing be pressed, I think Lee will surrender." General Grant sent Sheridan's telegram to President Lincoln, who wired General Grant: "Let the thing be pressed."

That was his last important order as Commander in Chief.

The era in which he lived and moved was but the beginning of things for the United States of America, whose destiny he prophetically saw was foreordained as the savior of the world.

In the grandeur of his soul, he visioned a world unshackled, willed to us the duty and the obligation to carry high the torch of liberty he threw into our hands; to the end that all men everywhere eventually shall be truly free.

"It is for us the living," said he, "to see to it that this Nation, under God, shall have a new birth of freedom and that government of the people, by the people, and for the people shall not perish from the earth."

This is the burden and the challenge of our undertaking, today.

His wisdom, they agree, was made up of a knowledge of things as well as of men; his sagacity resulted from a clear perception and honest acknowledgment of difficulties, which enabled him to see that the only durable triumph of political opinion is based not on abstract right, but upon so much of justice, the highest attainable at any given moment in human affairs, as may be had in the balance of mutual concession. Of course, he had an ideal, but it was the ideal of a practical statesman, namely to aim at the best, and to take the next best, if lucky enough to get even that.

His rugged, honest, steadfast perseverance and stanch Americanism still stand as examples, as objectives which the Nation and all of us as individuals may well try to emulate. Unwavering in his loyalty to the fundamentals of American Government, his genuine respect for the Constitution, and his great concern for the destiny of the Republic ended only with his death.

It was Abraham Lincoln who first said: "You cannot bring about prosperity by discouraging thrift. You cannot strengthen the weak by weakening the strong. You cannot help the wage earner by pulling down the wage payer. You cannot further the brotherhood of man by encouraging class hatred. You cannot establish sound security on borrowed money. You cannot keep out of trouble by spending more than you own. You cannot build character and courage by taking away man's initiative and independence. You cannot help men permanently by doing for them what they could do for themselves."

Interesting, also, just now, is his letter with respect to the draft, which letter of date August 15 (?), 1863, he concludes as follows:

"The principle of the draft, which is involuntary or enforced service, is not new. It has been practiced in all ages of the world. It was well known to the framers of our Constitution as one of the modes of raising armies. At the time they placed in that instrument the provision that 'the Congress shall have the power to raise and support armies.' It had been used just before in establishing our independence. It was also used under the Constitution in 1812. Wherein is the peculiar hardship now? Shall we shrink from the necessary means to maintain our free Government, which our grandfathers employed to establish it and our own fathers have already employed (once) to maintain it? Are we degenerate? Has the manhood of our race run out?"

It appears today that without the draft the armed services would fall 700,000 short of the 2.3 million men needed.

Some form of compulsion is necessary to build up the Nation's defense.

"A sad commentary on the willingness of Americans to guard their own country," says the Free Press.

However, we can find comfort in the fact, and it is to our credit, that the fanatical religous zealots—the Jehovah Witness type of citizens—the dedicated conscientious objectors, and the common run of the mill slackers and draft dodgers, Communists, parlor pinks, fellow travelers, and the rest of the lunatic fringe, who by weakening rather than strengthening our defense would give aid and comfort to our enemies, constitute but a very small minority of citizens who do not believe that their country, worth living in, is worth defending, bearing arms if necessary and fighting for.

It is as true today as when Capt. Alden Partridge said 140 years ago that, "In every republic the due cultivation of a proper military spirit among the great mass of the people and a general diffusion of military information are indispensably necessary for the preservation of liberty. The liberties of Rome were safe, while military information was generally diffused and every Roman citizen considered and felt himself a soldier."

History surely repeats itself. "We cannot escape it," says Fitzgerald:

"The moving finger writes; and having writ,
Moves on: Nor all your piety nor wit
Shall lure it back to cancel half a line
Nor all your tears wash out a word of it."

We will be remembered "in spite of ourselves," and lighted down "in honor or dishonor, to the latest generations," as Lincoln said.

Abraham Lincoln's standing before posterity will not be exalted by mere praise of his virtues and abilities, nor by any concealment of his limitations and faults. The stature of this great man, one of whose peculiar charms consisted in his being so unlike all other great men, will rather lose than gain by the idealization which so easily runs into the commonplace.

It was distinctly the weird mixture of qualities and forces in him, of the lofty with the common, the ideal with the uncouth, of that which he had not ceased to be, that made him so fascinating a character among his fellow men, gave him his singular power over their minds and hearts, and fitted him to be the greatest leader in the greatest crisis of our national life, the uncommon commoner.

We seldom think of Lincoln as an orator, though the speech at Gettysburg has no parallel in the English language. It was his

happy lot to rise in the realm of oratory by the power of his poetic spirit higher than any American, save probably Emerson, has done in other fields of literature. On the theme of slavery, where his unerring moral sense had free sway, he became our supreme orator, transcending even Webster in grandeur of thought and beauty of its expression. His periods are not as sonorous as our Olympian New England orator's but their accents will reach as far and resound even longer by the carrying and sustaining power of the ideas which they express.

He takes the wind out of Seward's sails by his "Divided House" speech, wins the nomination over Chase, Cameron, Bates, and Seward, and when elected takes up the desperate task of government with his old political enemies for his Cabinet advisers, quietly confident that he is more than a match for them all. Stanton sneers at him as "the imbecile in the White House"; and what is Lincoln's revenge? Only this, that Stanton stood beside his corpse and said: "Here lies the greatest ruler of men the world has ever seen." Born in abject poverty, spending most of his life in squalid or commonplace surroundings, he takes his seat for the ages in a marble temple that Phidias might have fashioned, whose walls on either hand are inscribed with his own words, that will outlast the temple. Could contradiction any further go?

The American people will long remember two of his so-called perorations. Said he: "I am loath to close. We are not enemies, but friends; we must not be enemies. Though passion may have strained, it must not break our bonds of affection. The mystic chords of memory stretching from every battlefield and patriot grave to every living heart and hearthstone all over this broad land, will yet swell the chorus of the Union when again touched, as surely they will be, by the better angels of our nature."

And that closing paragraph of his second inaugural:

"With malice toward none; with charity for all; with firmness in the right as God gives us to see the right, let us strive on to finish the work we are in; to bind up the Nation's wounds; to care for him who shall have borne the battle, and for his widow and his orphan—to do all which may achieve and cherish a just and lasting peace among ourselves, and with all nations."

Neither oration has any parallel or equal in the English language.

There was a dream that men could one day speak the thoughts of their own choosing. There was a hope that men could one day stroll through streets at evening unafraid. There was a prayer that each could speak to his own God, in his own church. That dream, that hope, that prayer became America. Great strength, youthful heart, vast enterprise, and hard work made it so. Now, that same America is the dream, the hope, the prayer of the world. Our freedom its dream. Our strength its hope. Our swift race against time its prayer.

Let us undertake to emulate his sturdy virtues, accepting and appreciating the great responsibility of the white man's burden he laid upon our shoulders, welcoming the opportunity to show the world the stuff of which we are made.

"The fiber will hold.
The colors have not faded nor has rot
Weakened the fabric of our ancient might.
Through centuries our forefathers have guarded
Freedom and justice with a jealous pride.
We are the heirs of those whose deeds were lauded."
Do we disgrace them? Let the world decide.

"And so he came.
From prairie cabin up to Capitol,
One fair ideal led our chieftain on.
Forevermore he burned to do his deed
With the fine stroke and gesture of a king.
He built the rail pile as he built the State,
Pouring his splendid strength through every blow,
The conscience of him testing every stroke,
To make his deed the measure of a man.
So came the Captain with the mighty heart;
And when the step of earthquake shook the house,
Wresting the rafters from their ancient hold,
He held the ridge-pole up and spiked again
The rafters of the Home. He held his place!
Held the long purpose like a growing tree—
Held on through blame, and faltered not at praise!
And when he fell, in whirlwind, he went down
As when a kingly cedar, green with boughs,
Goes down with a great shout upon the hills,
And leaves a lonesome place against the sky."

"Now he belongs to the ages."

The Death of John Quincy Adams

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mr. BOW. Mr. Speaker, today we commemorate the birth of George Washington. Much has been said about the accomplishments and life of this great American. As his Farewell Address is read to us we are all aware of the fact that had we followed his admonitions, the world and this Nation would not be facing the perilous days we see ahead. Nor would there have been the great concern for the economy of this Nation, for had we followed the dictates of that farewell address, our fiscal house would be in order and we could be looking to the horizons of tomorrow with confidence rather than the fear that our irresponsibility may be placing a yoke upon our children and our children's children which they may not be able to throw off.

Mr. Speaker, as one reads the history of our Nation, and particularly of its legislative branch, we find that we are privileged to stand here in the shadow of giants. We should walk with humility as we look back upon those who gave so much which we now take so lightly.

I am reminded on this 23rd day of February that it too is an anniversary, the anniversary of the passing in 1848 of a truly great American, one who served in this House after having served in the Presidency of the United States, in the Senate, in the President's Cabinet, and as a minister abroad, a man truly dedicated to those things in which he believed, who made no compromise with principle and wielded with distinction a trowl which helped to build the foundation and the framework of this great Republic.

I think it is well to look to the past so that we may better appreciate the future. In "Benton's 30 Years View" there is a chapter on the death of John Quincy Adams. I ask unanimous consent to include with these remarks that chapter, which follows:

DEATH OF MR. ADAMS

"Just after the yeas and nays were taken on a question, and the Speaker had risen to put another question to the House, a sudden cry was heard on the left of the chair, 'Mr. Adams is dying!' Turning our eyes to the spot, we beheld the venerable man in the act of falling over the left arm of his chair, while his right arm was extended, grasping his desk for support. He would have dropped upon the floor had he not been caught in the arms of the Members sitting next him. A great sensation was created in the House: Members from all quarters rushing from their seats, and gathering round the fallen statesman, who was immediately lifted into the area in front of the Clerk's table. The Speaker instantly suggested that some gentleman move an adjournment, which being promptly done, the House adjourned."

So wrote the editors of the National Intelligencer, friends and associates of Mr. Adams for 40 years, and now witnesses of the last scene—the sudden sinking in his chair, which was to end in his death. The news flew to the Senate Chamber, the Senate then in session, and engaged in business, which Mr. Benton interrupted, standing up, and saying to the President of the body and the Senators:

"I am called on to make a painful announcement to the Senate. I have just been informed that the House of Representatives has this instant adjourned under the most afflictive circumstances. A calamitous visitation has fallen on one of its oldest and most valuable Members—one who has been President of the United States, and whose character has inspired the highest respect and esteem. Mr. Adams has just sunk down in his chair, and has been carried into an adjoining room, and may be at this moment passing from the earth, under the roof that covers us, and almost in our presence. In these circumstances the whole Senate will feel alike, and feel wholly unable to attend to any business. I, therefore, move the immediate adjournment of the Senate."

The Senate immediately adjourned, and all inquiries were directed to the condition of the stricken statesman. He had been removed to the Speaker's room, where he slightly recovered the use of his speech, and uttered in faltering accents, the intelligible words, "This is the last of earth;" and soon after, "I am composed." These were the last words he ever spoke. He lingered 2 days, and died on the evening of the 23d—struck the day before, and dying the day after the anniversary of Washington's birth—and attended by every circumstance which he could have chosen to give felicity in death. It was on the field of his labors—in the presence of the national representation, presided by a son of Massachusets (Robert C. Winthrop, Esq.) in the full possession of his faculties, and of their faithful use—at octogenarian age—without a pang—hung over in his last unconscious moments by her who had been for more than 50 years the worthy partner of his bosom. Such a death was the "crowning mercy" of a long life of eminent and patriotic service, filled with every incident that gives dignity and luster to human existence.

I was sitting in my library room in the twilight of a raw and blustering day, the lamp not yet lit, when a note was delivered to me from Mr. Webster—I had saved it 7 years, just 7—when it was destroyed in that conflagration of my house which consumed, in a moment, so much which I had long cherished. The note was to inform me that Mr. Adams had breathed his last; and to say that the Massachusetts delegation had fixed upon me to second the motion, which would be made in the Senate the next day, for the customary funeral honors to his

memory. Seconding the motion on such an occasion always requires a brief discourse on the life and character of the deceased. I was taken by surprise, for I had not expected such an honor: I was oppressed; for a feeling of inability and unworthiness fell upon me. I went immediately to Mr. Winthrop, who was nearest, to inquire if some other Senator had been named to take my place if I should find it impossible to comply with the request. He said there was none—that Mr. Davis, of Massachusetts, would make the motion, and that I was the only one named to second him. My part was then fixed. I went to the other end of the city to see Mr. Davis, and so to arrange with him as to avoid repetitions—which was done, that he should speak of events, and I of characteristics. It was late in the night when I got back to my house, and took pen and paper to note the heads of what I should say. Never did I feel so much the weight of Cicero's admonition—"Choose with discretion out of the plenty that lies before you." The plenty was too much. It was a field crowded with fruits and flowers, of which you could only cull a few—a mine filled with gems, of which you could only snatch a handfull. By midnight I had finished the task, and was ready for the ceremony.

Mr. Adams died a Member of the House, and the honors to his memory commenced there, to be finished in the Senate. Mr. Webster was suffering from domestic affliction—the death of a son and a daughter—and could not appear among the speakers. Several Members of the House spoke justly and beautifully; and of these, the preeminent beauty and justic of the discourse delivered by Mr. James McDowell, of Virginia (even if he had not bèen a near connection, the brother of Mrs. Benton), would lead me to give it the preference in selecting some passages from the tributes of the House. With a feeling and melodious delivery, he said:

"It is not for Massachusetts to mourn alone over a solitary and exclusive bereavement. It is not for her to feel alone a solitary and exclusive sorrow. No, sir; No. Her sister Commonwealths gather to her side in this hour of her affliction, and, intertwining their arms with hers, they bend together over the bier of her illustrious son—feeling as she feels, and weeping as she weeps, over a sage, a patriot, and a statesman gone. It was in these great characteristics of individual and of public man that his country reverenced tht son when living, and such, with a painful sense of her common loss, will she deplore him now that he is dead.

"Born in our revolutionary day, and brought up in early and cherished intimacy with the fathers and founders of the republic, he was a living bond of connection between the present and the past—the venerable representative of the memories of another age, and the zealous, watchful, and powerful one of the expectations, interests, and progressive knowledge of his own.

"There he sat, with his intense eye upon everything that passed, a picturesque and rare one man, unapproachable by all others in the unity of his character and in the thousandfold anxieties which centered upon him. No human being ever entered this hall without turning habitually and with heartfelt deference first to him, and few ever left it without pausing, as they went, to pour out their blessings upon that spirit of consecration to the country which brought and which kept him here.

"Standing upon the extreme boundary of human life, and disdaining all the relaxations and exemptions of age, his outer framework only was crumbling away. The glorious engine within still worked on unhurt, uninjured, amid all the dilapidations around it, and worked on with its wonted and its iron power, until the blow was sent from above which crushed it into fragments before us. And, however, appalling that blow, and however profoundly it smote upon our own feelings as we beheld its extinguishing effect upon his, where else could it have fallen so fitly upon him? Where else could he have been relieved from the yoke of his labors so well as in the field where he bore them? Where else would he himself have been so willing to have yielded up his life, as upon the post of duty, and by the side of that very altar to which he had devoted it? Where but in the Capitol of his country, to which all the throbbings and hopes of his heart had been given, would the dying patriot be so willing that those hopes and throbbings should cease? And where but from this mansion-house of liberty on earth, could this dying Christian more fitly go to his mansion-house of eternal liberty on high?"

Mr. Benton concluded in the Senate the ceremonies which had commenced in the House, pronouncing the brief discourse which was intended to group into one cluster the varied characteristics of the public and private life of this most remarkable man:

"The voice of his native State has been heard, through one of the Senators of Massachusetts, announcing the death of her aged and most distinguished son. The voice of the other Senator from Massachusetts is not heard, nor is his presence seen. A domestic calamity, known to us all and felt by us all, confines him to the chamber of grief while the Senate is occupied with the public manifestations of a respect and sorrow which a national loss inspires. In the absence of that Senator, and as the Member of this body longest here, it is not unfitting or unbecoming in me to second the motion which has been made for extending the last honors of the Senate to him who, 45 years ago, was a Member of this body, who, at the time of his death, was among the oldest Members of the House of Representatives, and who, putting the years of his service together, was the oldest of all the Members of the American Government.

"The eulogium of Mr. Adams is made in the facts of his life, which the Senator from Massachusetts [Mr. DAVIS] has so strikingly stated, that from early manhood to octogenarian age, he has been constantly and most honorably employed in the public service. For a period of more than 50 years, from the time of his first appointment as Minister abroad under Washington, to his last election to the House of Representatives by the people of his native district, he has been constantly retained in the public service, and that, not by the favor of a sovereign, or by hereditary title, but by the elections and appointments of republican government. This fact makes the eulogy of the illustrious deceased. For what, except a union of all the qualities which command the esteem and confidence of man, could have insured a public service so long, by appointments free and popular, and from sources so various and exalted? Minister many times abroad, Member of this body, Member of the House of Representatives, Cabinet minister, President of the United States—such has been the galaxy of his splendid appointments. And what but moral excellence the most perfect; intellectual ability the most eminent; fidelity the most unwavering; service the most useful; would have commanded such a succession of appointments so exalted, and from sources so various and so eminent? Nothing less could have commanded such a series of appointments; and accordingly we see the union of all these great qualities in him who has received them.

"In this long career of public service, Mr. Adams was distinguished not only by faithful attention to all the great duties of his stations, but to all their less and minor duties. He was not the Salaminian galley, to be launched only on extraordinary occasions; but he was the ready vessel, always under sail when the duties of his station required it, be the occasion great or small. As President, as Cabinet minister, as Minister abroad, he examined all questions that came before him, and examined all, in all their parts—in all the minutiae of their detail, as well as in all the vastness of their comprehension. As Senator, and as a Member of the House of Representatives, the obscure committeeroom was as much the witness of his laborious application to the drudgery of legislation, as the Halls of the two Houses were to the ever-ready speech, replete with knowledge, which instructed all hearers, enlightened all subjects, and gave dignity and ornament to all debate.

"In the observance of all the proprieties of life, Mr. Adams was a most noble and impressive example. He cultivated the minor as well as the greater virtues. Wherever his presence could give aid and countenance to what the useful and honorable to man, there he was. In the exercises of the school and of the college—in the meritorious meetings of the agricultural, mechanical, and commercial societies—in attendance upon divine worship—he gave the punctual attendance rarely seen but in those who are free from the weight of public cares.

"Punctual to every duty, death found him at the post of duty; and where else could it have found him, at any stage of his career, for the 50 years of his illustrious public life? From the time of his first appointment by Washington to his last election by the people of his native town, where could death have found him but at the post of duty? At that post, in the fullness of age, in the ripeness of renown, crowned with honors, surrounded by his family, his friends, and admirers, and in the very presence of the national representation, he has been gathered to his fathers, leaving behind him the memory of public services which are the history of his country for half a century, and the example of a life, public and private, which should be the study and the model of the generations of his countrymen."

The whole ceremony was inconceivably impressive. The two Houses of Congress were filled to their utmost capacity, and of all that Washington contained, and neighboring cities could send—the President, his Cabinet, foreign ministers, judges of the Supreme Court, Senators and Representatives, citizens and visitors.

Isthmian Canal Policies

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mr. WALTER. Mr. Speaker, under a previous order of the House, our distinguished colleague the gentleman from Pennsylvania [Mr. FLOOD] will address this body tomorrow on the most timely and gravely serious subject of the Panama Canal—its control and jurisdiction.

As Members of this body know, he has made extensive studies of Isthmian problems, especially the diplomatic and juridical, and starting on March 26, 1958, made one of the most comprehensive series of addresses on this subject in Isthmian history.

Ever since the 1956 Suez Canal crisis, world attention has become increasingly focused on the Panama Canal. Thus, it is of the highest importance that the

Congress, which is the ultimate authority in the determination of Panama Canal policies, should be fully informed.

I am sure that his address will be highly informative, definitely constructive, and delivered in his usual brilliant form.

Adequate Meat Inspection Appropriation a Necessity

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mr. McGOVERN. Mr. Speaker, the American people deserve the protection of adequate meat inspection. Toward that end, those groups that are responsible for providing adequate meat supplies for the American table have joined together in calling upon the Congress to approve the budget request for the Meat Inspection Division of the Department of Agriculture.

Mr. John A. Killick, executive secretary of the National Independent Meat Packers Association, wrote me on February 19, 1959, and included a joint statement supporting meat inspection appropriations. Believing this statement should receive the serious consideration of the Congress, I include it at this point in the RECORD, together with the names of the signatory organizations.

The statement follows:

JOINT STATEMENT SUPPORTING MEAT INSPECTION APPROPRIATIONS

Mrs. Homemaker demands assurance that the meat she buys for her family's dinner table is clean and wholesome. Congress, more than a half century ago, decided that she has the right to this guarantee. It, therefore, established a meat inspection agency.

We, the officers of consumer, public health, farm, livestock, producer, labor and management organizations, agree that Mrs. Homemaker and her family must be fully and effectively protected. We are, therefore, anxious that the Meat Inspection Division of the Department of Agriculture obtain sufficient funds to employ an adequate staff of inspectors.

For a period, which fortunately ended last year, the Meat Inspection Division was inadequately supported. It could not increase its staff of inspectors to meet the steadily rising demands, which resulted from the meat industry's decentralization and growth. The increase in funds in the appropriation and supplemental appropriation for fiscal year 1959 have, we are glad to say, again put the Division on the road to full effectiveness.

The $21,475,000 budget request for the Meat Inspection Division for fiscal year 1960, although hardly generous, does promise to continue to permit the hiring of new and needed inspectors. We, frankly, would have liked to have seen a somewhat higher request, but we hope this amount will prove adequate.

We, therefore, urge Congress to approve the budget request of $21,475,000 for the Meat Inspection Division of the Department of Agriculture. We believe it is the minimum amount necessary to permit the Division to keep an adequate staff of inspectors, who must provide the consumer protection so necessary to our Nation's health.

Thomas J. Lloyd and Patrick E. Gorman, president and secretary-treasurer, Amalgamated Meat Cutters and Butcher Workmen (AFL–CIO); Radford Hall, executive secretary, American National Cattlemen's Association; Homer R. Davison, president, American Meat Institute; A. Z. Baker, president, American Stock Yards Association; James G. Patton, president, The National Farmers Union; Herschel D. Newsom, master, The National Grange; John A. Killick, executive secretary, National Independent Meat Packers Association; Dr. R. A. Hendershott, secretary, U.S. Livestock Sanitary Association; E. F. Forbes, president and general manager, Western States Meat Packers Association.

Lake Michigan Water Diversion

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, February 23, 1959

Mr. PROXMIRE. Mr. President, the attorney general of Wisconsin, Mr. John Reynolds, appeared before the House Committee on Public Works last Tuesday. His persuasive and thoughtful presentation deserves the consideration of the entire Congress. Therefore, I ask unanimous consent that his statement before the committee be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the Appendix of the RECORD, as follows:

STATEMENT OF JOHN W. REYNOLDS, ATTORNEY GENERAL OF WISCONSIN, BEFORE THE SUBCOMMITTEE ON RIVERS AND HARBORS COMMITTEE ON PUBLIC WORKS, HOUSE OF REPRESENTATIVES, FEBRUARY 17, 1959

Gentlemen, my name is John W. Reynolds and I am the attorney general of the State of Wisconsin. I would like to thank you for the opportunity you have given me to appear before you.

Speaking on behalf of the State of Wisconsin, the city of Milwaukee, and the Milwaukee Port Authority, I urge this committee to take no action on H.R. 1 at this time for the following reasons:

1. The matter of the diversion of Lake Michigan water is presently the subject of litigation. In December 1958, Wisconsin, joining with the other Great Lakes States, which were parties to the original action in the case of *Wisconsin et al. v. Illinois and the Chicago Sanitary District*, filed its application with the Supreme Court of the United States to reopen the decree of April 21, 1930. By that decree the U.S. Supreme Court retained jurisdiction over the subject matter of H.R. 1. Wisconsin's present application to the U.S. Supreme Court is for the purpose of requesting the Court to appoint a special master to take evidence to determine whether Chicago should be compelled to follow the practice of all other Great Lakes cities and return its unused domestic pumpage, after it had passed through its waterworks and purification system, to the Great Lakes Basin.

The State of Illinois and the sanitary district filed their brief in opposition to our application in January of this year.

In connection with this litigation, I would like to point out that the Solicitor General of the United States, Mr. J. Lee Rankin, is taking an active interest in this case. He has notified the U.S. Supreme Court that in order to protect the sovereign interests of the United States he will file a brief in March of this year.

In addition, the Solicitor General has called a conference on March 2, 1959, of all the Great Lakes States concerned, including Illinois. I cannot predict what results may be reached at that conference, but I respectfully and specifically request that the records of this committee be kept open to receive a report of that conference.

2. The second reason that we request this committee to take no action on H.R. 1 at this time is that on February 25 and 26 of this year there is going to be held in Detroit a meeting of Senators, Governors, attorneys general, and mayors of Wisconsin, Ohio, New York, Michigan, Pennsylvania, and Minnesota, and mayors of several Canadian cities, to plan unified opposition to bills and suits on the diversion of water from the Great Lakes. I also request that the records of this committee be kept open to receive a report of that conference.

On behalf of the State of Wisconsin I am here to reiterate our strenuous objection to the never-ending effort of the Chicago Sanitary District to take the waters of Lake Michigan. No other city on the Great Lakes in the United States or Canada has ever sought or asserted the right to deplete the waters of the Great Lakes Basin.

Wisconsin has been fighting for 30 years to preserve and protect the water of Lake Michigan. As a matter of fact, it was my father as attorney general of Wisconsin who get the original decree from the Supreme Court of the United States in 1930, which established the present limit on the amount of water that Chicago may take from Lake Michigan.

Since our time as well as the subject matter at this hearing is strictly limited, I would like permission to incorporate in the record at this point two statements of the attorney general of Wisconsin. The first was made to this subcommittee in March 1956 and recorded in the report of this committee on the hearings of H.R. 2, March 26 and 27, 1956, pages 66–68. The second is reported in the hearings before a Subcommitte of the Committee on Public Works of the U.S. Senate on H.R. 2 and S. 1123, held July 28–29 and August 7, 1958, pages 273–275.

These two statements outline the position of Wisconsin. First, that it is a scientific fact that the diversion of an additional 1,000 cubic feet per second of Lake Michigan water will have no effect upon pollution in the Chicago drainage canal or the Illinois River Waterway; and second, that an attempt by the U.S. Congress unilaterally to divert this water from an international system of lakes and rivers is violative of international law and would create a dangerous precedent in our dealings and negotiations with Canada over the mutually beneficial use of international waters.

The present bill proposed on behalf of the Chicago Sanitary District, H.R. 1, is considerably watered down from previous bills which have been before the House of Representatives and before your committee. It makes the comparatively modest proposals to increase the diversion of water by the city of Chicago by 1,000 cubic feet per second for 1 year. The alleged purpose of the bill is to permit the U.S. Public Health Service to determine the effect of such increased diversion upon Chicago's woefully mismanaged sewage disposal problem and the problem of pollution in the Chicago drainage canal and the Illinois River Waterway.

Our primary objection to this bill is twofold. First, such a bill would establish a

highly undesirable precedent. Our second objection is that according to the best scientific and professional advice that we can obtain, we know in advance it is not going to do the city of Chicago or the Chicago Sanitary District one iota of good. The available evidence which we have already accumulated indicates that the mismanagement by the city of Chicago of its sewage disposal facilities has now resulted in a pollution problem so great that nothing less than the diversion of 10,000 cubic feet of water per second would do any good.

Surely, gentlemen, if you propose to recommend this bill for passage you should insist that the proponents of this bill present the testimony of at least one competent and qualified sanitary engineer that there is at least a possibility that the proposed diversion will have a beneficial effect upon the pollution caused by the city of Chicago in its drainage canal and the Illinois River Waterway. According to the best advice I can obtain, the proponents cannot obtain such testimony.

This bill would interfere with a difficult and perilous international question. To increase Chicago's take of Lake Michigan water could seriously jeopardize the negotiations which I understand our State Department is now conducting with Canada concerning our mutual rights and obligations in the use of all international waters including, particularly, the Columbia River.

In this connection I would respectfully call your attention to two publications. The first is entitled, "Document on the Use and Control of Waters of Interstate and International Streams," which is a compilation of compacts, treaties, and adjudications affecting the use of interstate and international waters, published by the U.S. Department of the Interior in 1956. The second is the proceedings of the 10th conference of the Inter-American Bar Association held in 1957 at Buenos Aires, Argentina, entitled, "Principles of Law Governing the Uses of International Rivers and Lakes," published in Washington, D.C., in April 1958.

It is my considered opinion that these two publications establish beyond all reasonable doubt the principle that no state or nation can act unilaterally on a matter affecting an international water in a manner which will adversely affect some other state or some other nation.

The distinguished authority on international law, Lauterpacht, who is now a judge of the International Court of Justice, has stated that "the duty of the state not to interfere with the flow of a river to the detriment of other riparian states" is "one of those general principles of law recognized by civilized states which the Permanent Court is bound to apply to virtue of article 38 of its statute." (1 Oppenheim, "International Law," pp. 346–347, 8th ed. Lauterpacht, 1955.)

The so-called Harmon doctrine, under which former U.S. Attorney General Harmon asserted in 1895 that the United States could deal with the waters of the Rio Grande without regard to the rights of the united Mexican States, has never been followed. In fact, by the Rio Grande Convention negotiated in 1906 by the President of the United States of America and the President of the United States of Mexico, the United States agreed to insure delivery to Mexico of 60,000 acre-feet of water annually. And in our relations with Canada we have entered into four separate treaties: the Boundary Waters Treaty of 1909; the Lake of the Woods Convention of 1925; the Rainy Lake Convention of 1938; and the Niagara River Water Diversion Treaty of 1950.

If we are to protect and preserve our amicable relations with Canada, I most respectfully suggest to you that no diversions of water whatsoever from the Great Lakes Basin should be authorized or permitted in the absence of a specific convention or agreement ratified by our own U.S. Government and the Government of Canada.

In conclusion, it is Wisconsin's position that to permit an additional diversion of 1,000 cubic feet per second so that the U.S. Public Health Service can make a so-called study of the effect of a diversion is totally unjustified for the following reasons:

1. Such a study would be fruitless and a wast of the time of an important Federal agency as well as the taxpayers' money.

2. Such unilateral additional diversion would violate international law and seriously affect our relations with Canada.

3. Such additional diversion would create a disastrous precedent, and if followed by other Great Lakes cities would have the effect of seriously diminishing the value of the St. Lawrence Seaway project.

4. Such additional diversion would interfere with the jurisdiction of the U.S. Supreme Court.

I would like to remind the committee of our sincere belief that the riparian rights of the Great Lakes States of the United States are subject to the jurisdiction only of the U.S. Supreme Court under the decree of April 21, 1930, and of any modification that the Court may make thereof upon proper application. As I have stated, there is litigation presently pending affecting those rights, and I most respectfully urge upon the Congress that it should do nothing which would prejudice the outcome of that litigation.

Gentlemen, I would like to again thank you for your consideration.

Mr. PROXMIRE. Mr. President, the Milwaukee Journal discussed the telling points made by Attorney General Reynolds in a recent lead editorial. I ask unanimous consent that this editorial summarizing and emphasizing the case made by the attorney general be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the Appendix of the RECORD, as follows:

ATTORNEY GENERAL ABLY PUTS THE DIVERSION BILL IN FOCUS

Wisconsin's Attorney General Reynolds has ably restated, to the House Subcommittee on Rivers and Harbors in Washington, the considerations of national public policy that argue against any act of legislation letting Chicago drain off Great Lakes water and not return it.

The amount of Chicago's diversion is not without pertinence in the discussion—some is now sanctioned by rule of the U.S. Supreme Court, and two-thirds more is sought from Congress—but the mere question of how much is not at all the central one that Members ought to weigh in voting on the current bill or any others.

Reynolds instead emphasized three other issues. One is the dangerous precedent. Once Congress started granting water diversion privileges, other sections than Chicago would have the same entitlement and quite likely the same temptation. Cumulative diversions could indeed imperil other users of the same water sources, and be seriously crippling to navigation and water power.

Another point of national import is the indiscretion and even, says Reynolds, illegality of one nation's acting to divert international waters without consulting and agreeing with others affected. Senator DOUGLAS, of Illinois, cannot make stick his claim, heard in Milwaukee the other night, that Lake Michigan is not Canada's concern. For all water purposes it is one body with Lake Huron, and any effect on its levels is felt all the way to tidewater below Montreal.

Canada, though now again going on record against the Chicago diversion, has been blowing hot and cold on it. Passage of the bill might give her just the needed excuse to do some diverting of her own without our consent, where the great Columbia and Yukon Rivers rise in Canada and flow into the States, for instance. Thus the Chicago bill, far from having only local import, may prove an international trap.

Thirdly, Reynolds reminded that the subject matter is within the purview of the Supreme Court. When it placed the present limit on Chicago diversion 29 years ago, it retained jurisdiction, and is even now being asked by Wisconsin and other aggrieved States to consider whether the diversion should be halted altogether. Thus the bill shifts a judicial question into the political arena.

And that arena is an especially poor place to make this sort of decision because most Members of Congress, from their own regional viewpoints, don't much care. It's the kind of bill they tend to vote for if they don't happen to feel strongly opposed, or by way of scratching the back of some friend who does care. And the Illinoisans are in key position to line up that kind of support, which is not on the merits.

If Reynolds can direct more congressional attention to the national concern for precedent, propriety and foreign relations, he will well serve the antidiversion cause.

The Farm Folly of a $9 Billion Surplus

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, February 23, 1959

Mr. KUCHEL. Mr. President, by July of 1959 the U.S. Government will have over $9 billion of surplus farm commodities in Government inventories and under loan. It will cost the Treasury of the Government of the United States $1 billion a year—that is $1,000 million a year, Mr. President—merely to provide storage for the accumulated farm surpluses.

On January 30, 1959, in San Francisco, the distinguished Secretary of Agriculture, Mr. Benson, made a speech on farm problems generally and on the problems of the sugar beet industry in particular. I ask unanimous consent that the text of the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE FARM FOLLY OF A $9 BILLION SURPLUS

I am pleased to participate in this meeting sponsored by the California Beet Growers Association. I count it an added privilege to find here also so many representatives from other sugar beet areas throughout the country. It is always a joy to visit this historic and beautiful city in the Nation's leading agricultural State.

The development of the beet sugar industry is one of the most fascinating chapters in the history of American agriculture. It is a story of vision, initiative, struggle, of repeated failures and final success. It is a story of the triumph of perseverance by free men in a free economy in a free land. Perhaps it will not be amiss for us to refresh our minds on a point or two of that story.

Early in the history of this Nation, men of vision watched with keen interest the

development of the beet sugar industry in Europe. The United States was then almost completely dependent on foreign countries for sugar. These men saw that if we could produce beet sugar here in the United States, great advantages would result. A new industry would bring new life to the economy. A new and profitable crop would be added to our agriculture.

Back in the 1830's the first recorded attempts were made to establish a beet sugar industry in this country. The Beet Sugar Society of Philadelphia in 1836 obtained 600 pounds of beet seed from Europe. But the seed was planted too late and no sugar resulted. Then about 1839 a factory at Northampton, Mass., succeeded in producing some 1,300 pounds of beet sugar. After operating for about 2 years, this factory closed its doors.

In the next few decades no less than 13 beet sugar factories were established in widely separated localities from Maine to California. One after the other, they all failed.

One of these attempts that is most interesting to me concerns the efforts of the Mormon pioneers to establish a beet sugar industry in Utah. In these early days, more than a century ago, the people of Utah, including some of my progenitors, were buying sugar for $1 a pound—at a time when a dollar went a great deal further than it does today.

After a study of beet sugar operations in France, Mormon Church officials organized the Deseret Manufacturing Co., intending to establish the industry in Utah. The company bought a complete sugar manufacturing outfit and shipped it from France to New Orleans. It arrived in April 1852. They brought the plant up the Mississippi and Missouri Rivers to Fort Leavenworth. There they loaded it into covered wagons. In November 1852, after many difficulties and hardships, the equipment reached its destination.

I wish I could say that this tremendous effort immediately resulted in the birth of a new industry in Utah and in the Nation. Unfortunately, history records that the promoters lacked sufficient technical knowledge and the factory produced only inedible syrup. Not until over a quarter of a century later was the first beet sugar industry in the United States established on a truly successful basis.

That was in 1879 at Alvarado, Calif.

Without taking anything away from California, however, I am happy to say that the people in Utah also persisted and eventually developed a flourishing sugar-beet industry.

In the past 80 years, the sugar-beet industry has had a steady growth. Some 64 factories now produce over 2 million tons of refined sugar annually.

California, the home of the first successful sugar-beet factory, is now also the Nation's largest producer of sugar beets.

Last year, despite a poor planting season and sharply reduced yields, California produced about one-fourth of all the sugar beets grown in the United States.

The sugar-beet industry is in a solid position. Production last year was about 15.3 million tons. This was about 30 percent above the 10-year average and only slightly below the all-time high of 1957. Yields per acre in the past 2 years have been higher than ever before. But you are not burdened with surpluses as producers of some other crops are. The industry has been doing a good job of expanding production and markets simultaneously.

Your operations have been realistic—geared to market conditions.

The Sugar Act is realistic legislation. It has brought benefits to sugar-beet and sugarcane farmers, to consumers of sugar, to the sugar industry as a whole, and to our foreign suppliers.

But the sugar program cannot be used as a model for farm crops in general, particularly those produced in quantities beyond our domestic needs. We import much of the sugar we consume. Therefore surpluses of sugar, when they develop, tend to occur abroad rather than in this country. We have helped alleviate the problem of surplus abroad. The U.S. Government and the domestic sugar industry have participated in the development of an international sugar agreement designed to stabilize the world market. I know it is due in no small part to the cooperation of many of you that no major difficulties have been encountered in adjusting our domestic production so as to prevent the piling up of surpluses here at home.

By keeping prices at reasonable levels the danger of pricing sugar out of the market has been avoided.

The program has permitted and encouraged more efficient production. Here in California from 1924 to 157 yields per acre rose 127 percent. In our country's beet area the acreage per farm has doubled since the prewar period. This has permitted the use of labor-saving machines which have simplified production and harvesting problems and have reduced costs. During the past decade the man-hours required to produce a ton of beets have declined by at least one-third.

But, I repeat, the sugar program cannot be used as a model for wheat, cotton, corn, rice, peanuts, and tobacco programs, except in this respect, the sugar program has been realistic.

The programs for the six legislatively designated basic crops have not been realistic. The sugar program has been adapted to the particular circumstances surrounding U.S. production of sugar. The same cannot be said of the past programs for the basic crops.

Unrealistic programs have priced the basics out of some of their oldtime markets. Competitors at home and abroad used the artificial price umbrella to expand their production and move in. Surpluses piled up at home, followed by more and more cutbacks in acreage.

Last year we harvested 16 percent more acres of sugar beets than the 10-year average from 1947 to 1956. But last year, compared with the average for the same 10 years, we harvested 10 percent fewer acres of corn, 16 percent fewer acres of wheat, 25 percent fewer acres of peanuts, 26 percent fewer acres of rice, 34 percent fewer acres of tobacco, and 46 percent fewer acres of cotton.

Now I know there will be some who will quickly point out that comparing an import crop with export crops is not very meaningful. I don't want to read too much into this comparison. All I want to do is to show that where we have realistic programs—programs adapted to market conditions—programs that make sense—we can have an expanding agriculture. Where we have programs that are outmoded, unrealistic, not adapted to market conditions, we have a contracting agriculture.

As you know, the Administration has recommended that the Sugar Act be extended. Senator ELLENDER has introduced a bill to make the Sugar Act permanent. This measure is cosponsored by many Senators from Western States, including Senators KUCHEL and ENGLE of this State. These proposals illustrate the importance of this legislation, not only to farmers but to all our people.

It seems paradoxical, but the sugar program's popularity may constitute its greatest weakness. When the pressures to increase production are as great as they are in the case of domestic sugar beets and mainland cane, they demand attention.

The Department of Agriculture is charged with administering the act in a manner that will protect the welfare of consumers as well as the welfare of those engaged in the domestic sugar-producing industry—and that includes the growers.

I trust that all branches of our domestic sugar industry will collaborate with the Department in dealing with the problems that appear to face us in administering the sugar program. The success of the past has been due in large part to the fact that the sugar industry has borne an major share of responsibility for the administration of this program. Let us continue to face facts honestly and courageously. I feel confident that if we join in support of fearless and essential administrative actions, the sugar program will continue to be an effective force, bringing benefits to producers, the domestic sugar industry, and consumers.

Your future progress, like that of all agriculture, depends on how successfully you lower costs, improve quality, and expand markets.

As one who grew up in sugar-beet country, who was thinning beets with a short-handled hoe at the age of 7, I'm delighted to see the advances that are being made.

With your great record of achievement, you can look ahead to still further progress—to improved varieties, better control of disease, and such developments as the monogerm seed to bring greater efficiency and more profits in the future. The productive new varieties you are now growing have done well in holding down our old enemy, curly top. You've learned a lot about using fertilizer to increase yields. The sugar beet has been tailored to fit the machine, and machines have been built to take over most of the tasks in the fields.

But new problems are always arising. The new varieties don't stand up to virus yellows. And we have not yet achieved a quality in machine harvest that is as good as the best when beets are harvested by hand.

The search for the right answers is being carried forward on many fronts. Some of the solutions will come out of production research; others will grow out of research on processing problems. Still other advances will come from the basic research of our new pioneering laboratories.

With all these efforts we are building for the future—for greater efficiency in production and marketing, which means lower costs, for higher quality, and for new markets at home and abroad.

This is the road to a truly prosperous, expanding, and free agriculture.

Immediately before us, however, is the task of completing a long overdue revision of the farm price support programs as applied to the basic crops.

The President yesterday sent a special agricultural message to Congress. This was his fourth agricultural message. Again he called for changes in a farm program that has become outmoded, costly, discriminatory, and harmful.

We still have only a small part of the program the Administration asked for and that farmers need. We have had to fight every inch of the way to get more flexibility into the pricing mechanism. On some commodities—tobacco for example—nothing has been done. On others we got a little flexibility but not enough. That is why it has been necessary to devise and maintain such emergency programs as the soil bank and Public Law 480.

Our program really has never been put into operation. It has never been given a real try.

That is why the surpluses have built up. That is why a few farm commodities still have serious problems.

Yet our technicians estimate that, even with the little legislation we have been able to get on price supports, we have expanded markets and cut costs to taxpayers by a billion dollars in 1958. And farmers are taxpayers, too.

My fellow citizens, the situation is critical.

The present price support, acreage control program as it applies to wheat is bankrupt. Tobacco and peanuts are also in trouble.

Wheat is our No. 1 problem. Harvested wheat acreage has been cut by over 20 million acres since 1949—yet, under artificial pricing, combined with good weather, we now have by far the greatest wheat surplus in all history.

By July 1960 the carryover of wheat will be about 1½ billion bushels—enough to supply our normal domestic requirements for 2½ years. We will have $3½ billion tied up in wheat alone. We cannot continue to produce wheat for government by government-provided incentives.

We have spread the Wheat Belt all over America. Wheat acreage has increased in areas of high cost, while acres have been cut back in areas where production is most efficient. This doesn't make sense.

The cost of farm price and income stabilization programs have risen dangerously high.

By next July we will have over $9 billion of surplus farm commodities in Government inventory and under loan. The cost of storage and interest on these Government stocks will be $1 billion a year. This is fantastic and indefensible.

The program is unfair and discriminatory.

Farmers produce commercially about 250 farm crops. Only a very few are price supported. And 85 percent of our Federal inventory of farm commodities consists of just three crops—wheat, cotton, and corn.

Less than one-third of our farms account for by far the greater part of our price support outlays.

About one-fourth of the cotton farms have three-fourths of the cotton acreage allotments.

Two-fifths of the farms with wheat allotments have 90 percent of the allotted acres.

Thus, relatively small numbers of farms—usually those with the highest income—account for practically all of the Government price support outlays.

Finally, the old program is harmful not only to producers of wheat, tobacco, and peanuts—but harmful to agriculture as a whole.

It has caused distortions throughout our agricultural economy.

It has caused many people to regard farm programs with suspicion and resentment.

It has depressed farm income.

It has wasted farm resources.

It has placed a ceiling on farm opportunity.

It has enmeshed farmers in a maze of Government controls.

The President again recommended to the Congress further forthright changes in our farm price supports. He urged that price supports no longer be related to a standard 45 years old, but to a percentage of the average market price during the previous 3 years.

If the Congress still prefers to relate price supports to outmoded standards, the President urged that discretion be provided for establishing the level in accordance with guidelines fixed by law. This is now the case for all commodities except the few for which supports are mandatory.

The alternatives before us are clear. Take wheat. Either we must clamp down with more rigorous controls on wheat producers than we have ever had before—more controls that Congress has ever been willing to impose—or we must move toward market expansion and greater freedom to produce and compete.

The controls we have don't control. Wheat allotments have been cut. But wheat yields have nearly doubled in about 20 years. And last year's crop was the biggest ever.

Moreover, the controls provided by earlier Congresses have been watered down by later Congresses. The allotments used to be based on planted acres—now they are based on harvested acres. The minimum national allotment for wheat is 55 million acres, required by law. But if we applied the formula in the old 1938 law, still in effect, to wheat in 1959—please note this—the national allotment would be zero acres—no what production at all.

A far better approach, I believe, would be to provide wheatgrowers with a program that moves toward freedom to produce and compete for markets.

When such a program became fully effective, it would eliminate all acreage allotment and marketing quotas for wheat.

It would relate price supports for wheat to realistic market conditions.

Preferred quality wheat would then sell in the markets at premiums above support.

With such a program, wheat could really compete on its own merits. Better land use would result. High-hazard land would go into pasture and hay.

Other conservation measures would be adopted by farmers.

Farmers could more effectively manage their farms and their crop rotations.

There would be an adjustment of acreage between such competing crops as corn, grain sorghums, and soybeans.

Changes are needed for tobacco and peanuts also. The present laws require price supports at continually rising levels. As prices of U.S. tobacco increase, foreign buyers change their blends and turn to other sources of supply. Legislation is needed to permit adjustments in support levels.

For peanuts, too, the law should be changed so that growers can expand their markets.

The Agricultural Act of 1958 was a step toward more realistic programs for producers of corn, cotton, and rice. Now we need prompt and effective action in behalf of producers of wheat, tobacco, and peanuts.

This is not only the wheat, tobacco, and peanut producers' battle for realistic farm programs. This is your battle—the battle of everyone in every phase of agriculture.

Our present costly farm programs contribute to unbalancing the budget. That is of utmost concern to every citizen. No nation can go on indefinitely living beyond its income.

The President last week submitted a balanced budget for the coming fiscal year—a budget that "will help prevent further increases in the cost of living and the hidden and unfair tax that inflation imposes on personal savings and incomes."

As the President said in his Economic Report: "Our objective must be to establish a firm foundation for extending economic growth with stable prices into the months and years ahead. This will not come about automatically * * *. An indispensable condition for achieving vigorous and continuing economic growth is firm confidence that the value of the dollar will be reasonably stable in the years ahead."

This is of vital importance to all of us. During periods of economic expansion, the demand for sugar increases. Your prosperity, like that of our agriculture in general, depends on the soundness of the American economy.

We must keep our economy strong. Yes; we must keep America strong—strong economically, strong socially, but, above all, spiritually strong—so that our way of life may endure. This is your challenge and mine—a challenge to every American, no matter who or what he may be. "God grants liberty only to those who love it and are ready to guard and defend it." (Daniel Webster.)

Feeding the World's Hungry

EXTENSION OF REMARKS
OF

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1959

Mr. McGOVERN. Mr. Speaker, one of the most inspiring efforts in the world today is the work of religious institutions that are ministering to the needs of starving people in all parts of the globe. Churches and other voluntary groups have been responsible for the distribution of vast quantities of food made available to them for overseas use under title III of the Public Law 480 program. Under this program $1 given through the church world relief organizations provides approximately $28 worth of surplus Government-held farm commodities for distribution to hungry men, women, and children in foreign countries. What better method could be devised to convert our farm surplus into foreign policy assets and more important to apply the ancient spiritual injunctions of our faith?

This is the thought behind an article authored by the Reverend Richard Ginder which appeared in the March 1, 1959, issue of Our Sunday Visitor, which follows:

HARDEST FACT OF LIFE

(By Rev. Richard Ginder)

In talking with our missionaries at work in the field, one learns that perhaps the hardest fact in their life is having people of all ages starve to death before their very eyes. They want to help, they spread their resources as thin as they can, and still they can reach only a pitifully small minority of the hungry.

When we read these things at home in the snug security of our armchair, they are only vague abstractions. But to the missionary they are tragically vivid. He is haunted, for instance, by the great sunken eyes of that big-bellied child, to listless now even to extend an open palm. He noticed the child this morning on the way to the post office.

"Should I help that particular boy?" he thought. "But why him, when I passed at least 17 like him in the same short walk?"

Reported in the United States, the situation can only be summarized in statistics, and statistics are impersonal. But, like the missionary doing His work, God has no use for statistics. He sees only individuals. He does not think to Himself: "There are five hungry children in that Chinese family." His thought is, rather—"John and Charles and Peter, Helen and Mary Wu are hungry, and little Mary is likely to die if she doesn't soon get some milk."

To paraphrase Bishop Sheen in one of his recent newspaper columns, "The feeding of one hungry mortal in the name of Jesus Christ is a greater thing than the launching of the sputnik."

The bishops' relief collection will be taken up in your parish next Sunday. Every dollar you give will buy $28 worth of milk, rice, and other food for the hungry. This is possible through our U.S. surplus-food program. Your dollar just about pays the freight on $27 worth of supplies given to us by the Government. If you donate $5, you will be

shipping $140 worth of food and supplies to Hong Kong, Formosa, Macao, to Korea, Vietnam, India, Africa—wherever God's children are hungry.

Think of how many children you could have to dinner for $28. Think of yourself walking along a crowded street, let us say, in Hong Kong and inviting the children to follow you. Soon you are like the Pied Piper. You have 35 or 40 children romping around your knees. By now you are at St. Joseph's Mission.

"Sister," you say, "here is some money. Get us some food and we'll eat"—and you hand her the $28. In a few minutes you are watching your little guests drinking their milk and enjoying what may well be the first square meal of their lives.

Those children will always be grateful to you—and so will the good God. And on judgment day, maybe things will be going badly for you, when suddenly a chorus of treble voices will ring out in your defense: "We were thirsty and he gave us to drink. We were hungry and he gave us to eat."

Then God will say: "Come, blessed of my Father, and enjoy the kingdom prepared for you. Inasmuch as you have done it to one of these, my least brethren, you have done it unto me."

Want to make that dream come true? Give a dollar, just one dollar—but why stop there? Give as much as you can possibly afford next Sunday to the bishops' relief collection. Remember: whatever you give will be multiplied by 28 here on earth, and by 10,000 up above.

Unbalanced Budgets and Inflation

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, February 23, 1959

Mr. THURMOND. Mr. President, the people of the Nation will not continue to tolerate an unbalanced budget and the ensuing inflation indefinitely. Able editors like Howard Cooper, of the fast-growing Beaufort (S.C.) Gazette are busy informing their readers in simple terms what inflation is doing.

I ask unanimous consent to have printed in the Appendix of the RECORD one of the Gazette's February 19 editorials, entitled "Enough Is Enough."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ENOUGH IS ENOUGH

Have you had enough?

Have you had enough of the high taxes, deficit spending, and galloping inflation that are incinerating your money and threatening your Nation with disaster in a worldwide cold war?

T. Coleman Andrews, former U.S. Commissioner of Internal Revenue who once had the job of trying to collect your taxes as fast as the Government could spend them, apparently has had enough.

He declared recently in a publication for the Economic Research Associates as follows:

"Inflation must and can be stopped. It cannot be stopped by more inflation. It can be stopped only by removing the causes. There are several causes, but the primary one is wasteful spending. Reprehensible on moral grounds, it is equally bad because it gives the Government too much choice, and leaves the people too little choice, as to how their own income will be spent.

"Tax reduction is urgently needed. But tax reduction without equivalent expenditure reduction would invite resumption of deficit spending and intensify the forces that are driving prices up and thus make the already bad situation worse.

"Any individual who gets into the habit of overspending his income has no choice but to balance his budget or suffer the shame of bankruptcy. It is the same with nations because a nation is but organized people. Its finances come only from its people. It cannot afford anything its people can't, and it cannot violate the rules of thrift and provident living without suffering the consequences that people do for the same offense."

Of course, those are opinions, but here are some of the facts on which those opinions are based:

In 1939, the unmarried recipient of an income of $2,000 had left after taxes $1,975. A person with that same income in 1957 had income after taxes worth only $863, because taxes had increased by $215 and inflation had taken $897—the price of a new car in 1939.

In 1957 a single person would have had to have an income of $4,806 to match a 1939 income of $2,000. And here's why: The increase would have entailed additional taxes of $755 and inflation had already taken away $2,051—the price of a small bungalow in 1939.

The way things are going now (and who's trying to stop it?), in 1975 a single man will have to have an income of $10,538 to match in buying power a 1939 income of $2,000.

Are you sure you have had enough?

Eyes on the ABA

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1959

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York News of February 18:

EYES ON THE ABA

The House Committee on Un-American Activities this week released a report entitled "Communist Legal Subversion," detailing activities of a small knot of Red lawyers who act as an "elite corps" to push their cause in U.S. courts.

Eight of these characters operate in New York, including John J. Abt, Nathan Witt, and Harry Sacher.

All Commy lawyers, remarked the committee, should be disbarred. It is foolish and dangerous to let persons dedicated to our Government's violent overthrow act as officers of this country's courts.

HOW ABOUT THAT 1958 DOCUMENT?

Ross L. Malone, new American Bar Association president, welcomed the committee's report with loud cheers. Mr. Malone added that he was sending copies to all State bar associations for appropriate action.

We hope he gets it—though we wouldn't bet on it in the case of New York City, where local bar associations have long been extremely tender about traitors in their ranks.

We also hope Mr. Malone will stand fast against what looks like a conspiracy to force the ABA to disavow the smashing, slashing 1958 report of its special committee on Communist tactics, strategy, and objectives.

This document, drawn up under the direction of Peter Campbell Brown, astutely analyzed Red methods in the United States, and summed up the worst 204 of the Earl Warren Supreme Court's pro-Communist decisions. Through some finagling not yet cleared up, it was partially sidetracked at the ABA's Los Angeles convention last year.

Nevertheless, it got into the CONGRESSIONAL RECORD via Senator STYLES BRIDGES, Republican of New Hampshire; is now circulated at 10 cents a copy by America's Future, Inc., 542 Main Street, New Rochelle, N.Y.; and continues invaluable to anybody who wants to know how U.S. Reds operate.

The question now is: Will the ABA board of governors and house of delegates, at their Chicago meetings February 20–21 and 23–24, respectively, adopt as an official ABA paper some watered-down version of the 1958 report, making little if any reference to the Warren court, and throw out the 1958 document?

Keep an eye on these ABA metings, folks. They'll give you an idea as to the courage or otherwise of the ABA's top brass.

Coal Files New Protest With United States

EXTENSION OF REMARKS

OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1959

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD I include herewith an editorial entitled "Coal Files New Protest With United States," which appeared in the February 18, 1959, issue of the Messenger of Madisonville, Ky.

The editorial is as follows:

COAL FILES NEW PROTEST WITH UNITED STATES

The National Coal Association called on the Washington Government last week to impose mandatory restrictions on the import of cheap foreign residual oil being dumped on our shores. The NCA formal protest called such imports a threat to the national security.

The coal association, speaking for producers of two-thirds of the Nation's commercially mined soft coal, filed the statement with the Office of Civilian and Defense Mobilization, which is conducting an investigation of the oil import situation—a situation which is costing the jobs of several thousand American miners.

The Office is expected to recommend a new program late this month to the Cabinet Committee on Oil Imports, which in turn will make recommendations to President Eisenhower.

The coal industry says President Eisenhower has both the power and the responsibility to clamp import controls on residual oil if they are imposed on crude petroleum. NCA points out that Congress has provided that when imports of any product are limited in the interest of national security, imports of its derivatives must also be limited.

Where is the logic in controlling importation of crude oil to prevent the impairment of national security, and, at the same time, allowing the unrestricted flow into the country of residual fuel oil? It is a fair question, this one which was posed to the mobilization office.

As NCA puts it:

"Uncontrolled imports of residual fuel oil contribute substantially to cutting coal production capacity and distribution below the level required for national defense.

"The future threats of unlimited residual imports inhibit the growth of the coal industry to meet projected defense requirements.

"The concentrated use of imported residual oil by eastern seaboard industry makes this industry unusually vulnerable to interruption by enemy action."

It should be plain to everybody that electric utilities and industrial plants along our east coast have, through dependency upon cheap foreign oil, mostly from Venezuela, developed a "built-in vulnerability" which could be serious in wartime.

NCA points out that tankers carrying this oil to our east coast could be sunk or blockaded in wartime, depriving the heavily industrialized Atlantic seaboard of much of its energy supply.

This would create a demand for more than 150 million additional tons of soft coal, though foreign oil imports are so weakening the coal industry that there is great doubt that it could expand production to meet sudden new demands.

The number of operating coal mines has declined from 9,429 to 7,855 since 1950. Closed mines cannot be easily reopened—in fact, it would be as easy to open new mines in emergency, which takes 2 to 4 years.

Anybody but bureaucrats, it would seem, could see the folly of tearing down our country's coal mines and building up Poland, Venezuela, and West Germany and other fuel-producing areas which for some years past have been smiled upon by Washington.

It will be interesting to see if the new protests succeed where former protests have produced nothing but vague expressions of interest.

Forty-six Thousand Scholarships by United States Is Ridiculous

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Bureau County Republican which emphasizes that private funds are, and will continue to do a good job of providing scholarships for qualified college students without the intervention and encroachment of the Federal Government:

[From the Bureau County Republican, Princeton, Ill., Feb. 19, 1959]

OUR OPINION—FORTY-SIX THOUSAND SCHOLARSHIPS BY THE UNITED STATES IS RIDICULOUS

National total of 10,000 high school students, including Lorinne Lane of Princeton High School, have reached the finals of the 1958–59 national merit scholarship program, and 700 of this number will be named merit scholars.

Names of the 10,000 certificate of merit winners will be sent to colleges for consideration for thousands of other privately financed scholarships.

Interest by the National Merit Scholarship Corp. and numerous other private agencies in helping worthy students obtain recognition toward scholarships points up the silliness of the proposal this week by Senator HUBERT HUMPHREY, of Minnesota, that the Federal Government finance 46,000 scholarships.

Over 478,000 students were tested in the national merit scholarship program. Those most worthy of help in obtaining higher education have been located by this testing program. Private funds are doing a good job without intervention of the Federal Government.

For ordinary citizens to warn Congress against extravagant intrusion into the fields in which people are meeting their needs seems futile with the present composition of Congress, but it nevertheless is the responsibility of every citizen to hammer home at every opportunity the necessity for this Government to restrict its activities to those fields where Government funds are needed.

A Letter to Nikita Khrushchev

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, February 23, 1959

Mr. KUCHEL. Mr. President, the Freedoms Foundation at Valley Forge has been a unique and effective force in inculcating in Americans of all walks of life a real appreciation of the form of government under which our Nation has achieved its enviable position of world leadership, internal strength, record of spiritual and material growth, and solid foundation for the future.

The annual awards to individuals who speak up for freedom are an inspiration to a wide variety of citizens to inspire in their fellow countrymen greater devotion to our concepts of liberty.

Among this year's award winners is a man who wears the uniform of the Armed Forces of the United States, a citizen of California, Lt. Col. T. N. Greene, now on active duty with the Marine Corps at Quantico, Va. For his essay, entitled "A Letter to Nikita Khrushchev," he was cited as author of the most penetrating article on the subject, "My Part in Winning Friends for Freedom." He is winner of the top award of an encased George Washington Honor Medal and the principal prize for members of our Armed Forces.

Because of the inspirational character of Colonel Greene's entry, I ask unanimous consent that the text be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NIKITA S. KHRUSHCHEV,
The Kremlin,
Moscow, U.S.S.R.

DEAR MR. KHRUSHCHEV: Don't look now. There's someone behind you.

You say you will bury us. You say the peoples of the world yearn for change. You claim change will pull the rug out from under the world we know. And so, Mr. Khrushchev, your agents swarm like termites gnawing and boring in a thousand dark and rotting beams. You count too much on tearing down, on destruction, despair, and decay.

Revolution truly is loose in the world today. Change does come. Rotten beams are tumbling. But Mr. Khrushchev, this is a revolution begun in 1776 and clearly stamped "Made in U.S.A."

Do you think Americans fear a changing world? Listen, Mr. Khrushchev:

There was taxation without representation. We changed that.

Soldiers quartered in private homes. We changed that.

The cold hand of tyranny choked life, liberty, and the pursuit of happiness. We changed that, too.

And we changed slavery, and child labor, and the 80-hour workweek, and poverty, and ignorance, and sickness.

We changed them by building up, by building a better world. That job's just begun.

Today our money and our skills work around the world, building economies with more jobs, more goods, more prosperity for all to share.

Our technicians share their secrets—how to grow more food on this plot of ground, how to stamp out that plague, how to teach, to learn, to progress.

And our arms, our might, and our sons help our friends patrol the beat, guarding the new world we build from wreckers, vandals, and firebugs.

More than 160 million apostles of freedom are agents of revolution on your terms. We stand for those inalienable rights with which each man is endowed by his Creator. Each American abroad—the serviceman, the technician, the tourist—carries subversion toward the tools of tyranny: the sudden knock on the door, the rifle butt, the concentration camp, the knout, and the enforced work quota. We'll change them. And we'll change the invitations to tyranny on which you count: Lunger, poverty, disease, and ignorance.

Tremble, Mr. Khrushchev, but you can't turn back the clock. We bring change—light and free air to the dark places on which you and your kind feed. Let your dupes froth and scream, "Yankee, go home." We won't go home.

Not until the world is on the march toward a better life for all.

You shall not herd the peoples of the world, dragging their chains, behind your bloody, red banners.

Even now, nation to nation and man to man we join hands in our living revolution to change the world and build a better tomorrow. We march proudly, heads high as befits freemen. Hear the fife and drum, as they have since 1776, pipe the music that strikes fear to tyrants—the march of freedom.

Yes, Mr. Khrushchev, there's someone behind you, and he's coming closer.

A YANKEE WHO WON'T GO HOME.
Lt. Col. T. N. GREENE,
U.S. Marine Corps.

QUANTICO, VA.

Fifty Chambers of Commerce Protest Misrepresentations of U.S. Chamber of Commerce on TVA and Causes Change in Position

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mr. EVINS. Mr. Speaker, the United States Chamber of Commerce during the past several months has published many misleading statements regarding the operations and programs of the Tennessee Valley Authority. Many of these were so remarkable in the misrepresentation of facts about the TVA that in view of many it has reflected on the integrity

of the U.S. chamber. More than 50 chambers of commerce in the Tennessee Valley area have protested these misrepresentations, and several southern chambers of commerce have resigned from the U.S. chamber. More recently, the U.S. chamber has modified its position as a result of these protests. This week the policy committee of the U.S. Chamber of Commerce held hearings on this subject. In this connection, Mr. George R. Dempster, former mayor of Knoxville, and Mr. Will C. Mickle, editor of the Huntsville Times of Huntsville, Ala., appeared before the above-mentioned policy committee on behalf of the more than 50 chambers of commerce in the Tennessee Valley. Following these hearings, the U.S. Chamber of Commerce has announced that it has modified its position on the TVA.

In this connection, Mr. Speaker, I have asked unanimous consent to have reproduced in the Appendix of the RECORD the statement made by Mr. Dempster and Mr. Mickle, and the Associated Press report on the hearings and the chamber's decision to change its policy.

The statement and the AP report follow:

STATEMENT BEFORE THE U.S. CHAMBER OF COMMERCE POLICY COMMITTEE IN WASHINGTON, D.C., FEBRUARY 17, 1959

(By George R. Dempster and Will C. Mickle for the Associated Tennessee Valley Chambers of Commerce)

We come before you today as members of the chamber of commerce. Specifically, we represent more than 50 chambers of the Tennessee Valley—members of the U.S. Chamber of Commerce which you represent—which have banded together as the Associated Tennessee Valley Chambers of Commerce to promote the valley region and to protect its interests wherever possible.

Today we ask you, as policymakers for the organization to which we all belong, to reconsider a statement of chamber policy which we believe detrimental to the valley and to the Nation.

We refer to the statement of policy contained in the U.S. Chamber publication, "TVA: What's Next?"

In its place we urge a new policy based on unbiased fact—not on misrepresentations and incomplete facts—a policy aimed at improving the welfare of all the Nation—not on improving the welfare of a select group of citizens or corporations.

It is not our purpose here to argue point by point the many misrepresentations that run through the publication, "TVA: What's Next?" To a sufficient extent that has already been done by TVA itself.

We presume you are familiar with the TVA's comments on the publication. However, in the event you are not, a copy of those comments is submitted with this statement.

We do want to protest the obvious bias, unfairness, and lack of objectivity of the publication. We regard it as an imposition on the public, to which it is presented as representing the well thought out, well grounded conclusions of a responsible business organization.

More specifically, we protest it as a disservice to the members of the Chamber of Commerce of the United States. And we mean all members of the chamber, not simply those members located in the Tennessee Valley region which have had experience with TVA and have watched its work for a quarter of a century.

We submit that the publication is even more unfair to those members scattered throughout the rest of the country who, having no direct experience or observation, have no way of judging its validity and must accept it at face value.

In fact, the character of the report, to our mind, is such that if the research staff of a private corporation were to submit such a report to its officials as a basis for reaching a sound decision, they would be promptly sent back to do the job over again. They would be asked to bring in all the pertinent facts, and not a selected variety; they would be asked to place the report in the proper context of public policy and practice; they would be asked to recommend progressive steps to achieve greater effectiveness, not a policy of retrogression which would sacrifice the gains that have been made in technology and administrative efficiency.

On all these scores, the publication is deficient. It treats TVA as an isolated phenomenon in the field of Federal resource development activities, falsely assuming that it is a special favor to a particular region. The fact is that this project is well within the traditional framework of national policy with respect to the development of natural resources and within the policies on the character of utilities as a public service. Counterparts of TVA's activities are carried on in other regions and river valleys across the Nation.

If there is one aspect which should be carefully weighed by a business association such as the chamber, it should be the effect of TVA activities on business and industry. Yet this publication ignores, if it does not positively exclude, virtually all the evidence that TVA has been a boon and a stimulus to private enterprise, not only in the Tennessee Valley but in other important areas as well.

The efficiency and economy of large, integrated power areas served by central stations with high capacity, economical, and efficient generating units and interconnecting transmission lines has been well established by experience. Such systems take advantage of improved technology. Yet this publication, in effect, proposes breaking up a large and efficient operating system, modern in every respect, into smaller, less economic and less efficient units. This is a proposal which no business man, in his own affairs, would countenance for an instant.

The objective inherent in the publication is the destruction of TVA. Indeed, "TVA: What's Next?" quotes approvingly from the earlier publication of the chamber's natural resources department, "The Continuing Cost of TVA," to this effect:

"The job is not to patch up TVA to make it acceptable, or even less objectionable. No corporate creation of Congress should be continued unless there is a clear, definable public interest to be served that cannot be served in any other way."

What is meant by "any other way"? By ignoring some of the other factors of public interest, electric service could of course be provided in the Tennessee Valley by other means than at present. However, today that power is provided by a system that is an integral part of a broader project producing multiple benefits. After a fashion, power could still be provided if, as apparently advocated by the natural resources department, this integrated system were broken down and the power system itself fragmented into smaller units.

It is difficult to see what public interest would be served by thus returning the Tennessee Valley region to outmoded, uneconomic practices that have been left behind, wherever possible, by the electric utility industry itself.

That this would endanger the national defense in a time of extreme tension—that it would put in question power supplies to the Atomic Energy Commission, Air Force research facilities, and missile and space research installations, not to speak of basic electrochemical and electrometallurgical industries—is apparently of no concern to the authors of "TVA: What's Next?"

One of the most carefully ignored, or carefully suppressed, facts about TVA in this publication is that for the past 4 years more than half of all the TVA power output has been devoted to atomic energy, air research, and space and missile research of vital importance to the whole Nation.

This omission by no means is the end of the effort. The intent to destroy is revealed in the facility with which your natural resources department switches—indeed reverses itself—to suit its purposes.

To wit: For the past several years the Administration has recommended and the people of the Tennessee Valley have urged that the Congress pass enabling legislation to permit the TVA to issue bonds in order to finance generating and transmitting facilities which are desperately needed to assure ample and continuing power supplies for the region now served by TVA power.

This the chamber opposes. It has provided witnesses from the utility industry to testify against the proposals in congressional committees and has opposed it in public statements. "TVA: What's Next?" complains that through this proposal TVA "would be practicaly assured that it will always be the sole supplier of electricity in an 80,000-square-mile area." This proposition is advanced as unique, although public utilities generally—whether publicly or privately owned—are by customer, law, and regulation the sole suppliers of their service areas.

In 1954, however, the situation was different. No bond proposal was before the Congress. No organizations or people in the valley region were urging it. What was the position of the chamber, or of its Natural Resources Department, then? The view was expressed in the publication "The Continuing Cost of TVA," as follows:

"Most all municipally owned and operated electric plants are now financed in whole or part through the sale of revenue bonds—i.e., bonds backed only by the anticipated revenue of the municipal utility. Surely the TVA, which as far back as 1945 produced more kilowatt hours than any other power system in the United States and which in 1952 alone had a gross power revenue of $95 million, could market its revenue bonds as easily as municipal plants can. And more positively: TVA power should be financed through the sale of revenue bonds."

We believe the conclusion to be drawn from these contradictory statements is inescapable. In 1954, the Natural Resources Department advocated financing TVA power through revenue bonds because it appeared that this would seriously embarrass, if it did not destroy, the TVA system. Today the TVA and the people of the Tennessee Valley are supporting revenue bonds as a sound and workable proposition which will enable the power system to go on meeting the electricity demands of the region efficiently and at reasonable rates.

Yet today, fearful that the valley region is right and that the proposition the national chamber itself advanced in 1954 is sound and workable, the chamber reverses itself and opposes it.

We believe it is time the chamber, as a responsible organization, put an end to this kind of patent chicanery.

The chamber puts itself in the position of advocating unbusinesslike procedures for TVA by elimination of the sole supplier clause from its contracts. What private utility would build generating capacity, transmission lines, and substations to serve a large wholesale customer and then fail to protect its investment by assuring that the facilities would be used to supply the cus-

tomer over a reasonable period of time? Common business sense dictates the answer. Aside from this, it must be remembered that the contracts are equitable and advantageous to both parties. What municipality, cooperative, or industry would sign a contract with a wholesale supplier of electricity, publicly or privately owned, without concrete assurance that its power supply would be continuously available over a reasonable term of years?

As similarly destructive measure, the natural resources department would turn over operation of the TVA dams to the Army engineers and split up other resource development functions among other Government departments. If this splintering and devisiveness could be shown to contribute to the efficiency and effectiveness of the resource development activities carried on in the Tennessee Valley as part of the national policy, then by all means it should be done.

But no case can be made for it; certainly the natural resources department has made no such case. On the contrary, the Tennessee is generally conceded to be the best-managed river in the country, yielding a balanced measure of benefits of all kinds—flood control, navigation, generation of power, municipal and industrial water supplies, malaria control, recreation, fish and wildlife development. One of the major reasons for this high degree of achievement is the fact that all these related operations and activities are under a unified administrative control. The proposal to emasculate an efficiently working system can only be regarded as destructive in purpose.

These are only a few of the ways in which the chamber, through the publications of its natural resources department, has placed itself on record with respect to TVA as advocating unsound and unbusinesslike policies and procedures.

We believe that it is time that the national chamber reassess its position on the TVA and, in the interest not only of an important region but of the Nation itself, assert itself on the side of progress.

[From the Huntsville (Ala.) Times]

CHAMBER GROUP BOWS ON TVA—COMMITTEE BACKS DOWN ON POLICY—VOTES TO DROP STAND AGAINST AGENCY IN NATIONAL CHAMBER OF COMMERCE STATEMENT—FULL MEMBERSHIP APPROVAL NEEDED

WASHINGTON.—The U.S. Chamber of Commerce's policy committee yesterday acceded to a request from local chambers in the Tennessee Valley area and backtracked on its stand against the Tennessee Valley Authority.

The U.S. Chamber has long demanded that the Federal Government get rid of TVA's power facilities.

But the policy committee voted to eliminate any reference to the future of TVA power from the organization's policy statement.

The proposed change will go before the chamber's annual membership meeting in April for acceptance or rejection.

SPOKESMEN APPEAR

The action came one day after spokesmen for 50 valley chamber units appeared before the policy committee and voiced strong disapproval of the U.S. Chamber's stand on TVA.

The group called for a new policy "based on unbiased facts * * * not on misrepresentation and incomplete facts." It was particularly critical of a U.S. chamber publication called "TVA: What's Next?" referring to what it said was the "obvious bias, unfairness and lack of objectivity" of the booklet.

The chamber has been urging since the start of the TVA that the authority's power facilities be turned over to local or State organizations, either public or private, for operation. This would have been done under a plan agreed upon by Congress and the valley States.

Under the proposed change, the chamber's policy statement no longer would say what it wants done with the TVA power facilities.

STILL OPPOSES CONTRACTS

But the policy committee reaffirmed its long-standing opposition to sole supplier TVA contracts, and issuance of revenue bonds by the authority.

Smith explained that under present contracts, purchasers of power from the TVA now must buy all their electricity from the authority. By eliminating this requirement, he said, power buyers could build their own plants for part of their power needs, or buy some of their requirements from other sources, such as private utilities.

A STEP IN RIGHT DIRECTION, MOST VALLEY OFFICIALS SAY

The national chamber of commerce policy committee's change brought a generally favorable reaction in the valley last night.

Most officials interviewed agreed with former Memphis Chamber of Commerce president J. T. Roach and a leader in the fight there that the decision was "a step in the right direction."

Some, however, felt that the U.S. chamber did not go far enough.

Here are some of the comments:

Brig. Gen. Herbert D. Vogel, chairman of the TVA board:

"I am delighted at the policy committee's action.

"The people who went up there to Washington did a fine job and are to be congratulated. I hope this means that from now on the chamber of commerce will take a broader view of the problem of developing an adequate power supply for the Nation."

George Dempster, former mayor of Knoxville and one of two spokesmen for the protesting Associated Tennessee Valley Chambers of Commerce, who appeared before the policy committee:

"It's better than we thought. We had about 45 minutes with them (the committee) and we roughed 'em up to the best of our ability. I asked them how many had ever been in the valley and only about half of them raised their hands.

"I told them: 'Gentlemen, you're not in any position to tell us what to do.'"

Public Policy, Rural Electrification, and the Farm Telephone

EXTENSION OF REMARKS

OF

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1959

Mr. McGOVERN. Mr. Speaker, one of the most remarkable achievements of the past quarter of a century is the extension of electricity and telephone service to the farms of America. No one can fully measure the benefits that have come to rural families in the form of electric lights, washing machines, refrigeration, telephones, and power equipment, all of which have lightened the labors and enriched the lives of farm families.

Both rural electrification and rural telephone service have been made possible largely through low-cost Federal loans to farmers' cooperatives. It is gratifying to know that this grassroots experiment in rural democracy has actually returned a profit to the Government as cooperatives have honored their loans and paid them back ahead of schedule. Furthermore, the program has brought countless millions of dollars to the mainstreets of America, as farmers have purchased electrical equipment and appliance of all kinds.

Recently, I have been alarmed by Federal practices and proposals that jeopardize the continued growth and reasonable operation of the REA program. The proposal in the President's current budget message that REA interest rates be increased would, if actually applied, stifle rural electrification and telephone service.

The REA's for more than two decades have paid back their loans at the present 2-percent rate to the mutual benefit of both themselves and the American public.

Even if one recognizes that the administration has deliberately raised its own costs of borrowing money above the 2-percent level, it would be a wise public investment for the REA program to be conducted as in the past. Vast Federal outlays were made to build the Nation's railway system and other needed services. Why not a small investment in the blessings of rural electricity? Or better still, why not a rollback of interest rates so that the Government can once again borrow its needed funds at a reasonable level?

In a recent column, Sylvia Porter, the financial analyst, points out that during World War II, military spending sent our national debt to $280 billion. The interest charge on that debt was $4.7 billion. "Today, the debt is about the same, $283 billion," writes Miss Porter. "Yet, the interest payment is much higher, up to $8 billion. This has been no accidental swelling in interest payments," she writes. "Instead, it has been the result of deliberate policies adopted at the higher policymaking levels in Washington."

I feel sure that many of my colleagues believe as I do that we must fight any disruption of the REA program that would certainly be caused by jumping interest rates on the rural electric association loans.

Recently, I received from Mr. Lawrence Stoley, Highmore, S. Dak., the secretary of the South Dakota Rural Telephone Association, a copy of the resolutions passed by that distinguished association at its annual meeting. I have also been honored recently with an invitation to address the annual meeting of the National Telephone Cooperative Association in Washington.

Believing that they will be of interest to my colleagues, I include a copy of the South Dakota resolutions, together with the text of my remarks to the national association:

ADDRESS OF CONGRESSMAN GEORGE S. McGOVERN TO THE ANNUAL MEETING OF THE NATIONAL TELEPHONE COOPERATIVE ASSOCIATION, STATLER HOTEL, WASHINGTON, D.C., FEBRUARY 7, 1959

I feel honored to appear before the National Telephone Cooperative Association. Since I have lived most of my life in the agricultural heartland of America, your work has long been of keen interest to me.

I have enjoyed my associations with your colleauges in South Dakota and the able staff representing your interests here in Washington. You have made progress in spite of heavy odds. I admire your spirit and determination. You have my support and that of many of my colleagues as you continue your efforts to build a healthy and prosperous rural America.

Never before has American agriculture been faced with so clear a worldwide challenge. We are the possessors of a mighty weapon—agricultural abundance in a hungry world. I use the word "weapon" in referring to the only kind of war the American people want to fight, the war against poverty and hunger and disease. That is why I have sponsored in the Congress a "Food for Peace Resolution," which calls upon our Government to use our farm surplus as a tool for freedom and peace.

More than ever before, our Nation needs men of vision and courage of the type exemplified by the people comprising your organization. As we meet here today, our Nation is caught up in a titanic struggle for military and scientific supremacy. All the world and the space beyond has suddenly been turned into an enormous laboratory, with the launching of globe-circling satellites a commonplace occurrence.

As we concentrate more and more on scientific achievement, I believe a word of caution is in order. Just as we have learned that man cannot live by bread alone, so we should not forget that a nation cannot live by science alone. Our concentration on the secrets of outer space must not replace our concern over the welfare of our fellow human beings. Our world needs more than ever the timeless message of the Good Samaritan.

Given that premise, I see no reason why a nation which has the brainpower to put a half dozen man-made satellites into orbit in outer space, send an atomic-powered submarine beneath the polar icecap, and break the speed of sound, cannot find a way to achieve for its rural people a standard of living equal to that of its city dwellers. Is it too much to ask that farmers receive an income comparable to urbanites and enjoy such blessings as the telephone?

Basically, I believe our farm problem is one of attitude—a misplacement of values. If, for instance, the present administration had as much concern for farmers as it does for the investment bankers, most of your problems would vanish. You would have two telephones in every farm home and an extra one in the barn.

Of course, farmers do not enjoy such favor. I do not want to be partisan today but it is a fact that when this administration took over the reigns of government, it set out to flex farm prices downward and interest rates upward. Since 1952 farmers have lost about $18 billion in income. On the other hand, the money lenders have increased their incomes many billions of dollars.

Last week the President's budget message denounced the farm price support program and called for virtual abandonment of the parity concept for farm prices. He gave as his reason the excessive cost of the farm program—not taking note of the fact that much of this cost stems from Secretary Benson's mismanagement and mistaken views.

Significantly enough, the interest on the national debt in this fiscal year will cost us $8 billion—highest in history and the second largest item on the President's budget. Only the defense outlay costs more. Yet the President said nothing about reducing the exorbitant interest rates we are paying the investment bankers holding Government notes. As a matter of fact he implied that higher interest rates were forthcoming. And you and I get socked more and more on all of the money we borrow. The budget message clearly calls for an increase in interest rates on REA loans—an increase which would throttle rural electrification and rural telephone expansion.

I do want to discuss the rural telephone program now and offer some suggestions. But I felt it important to quickly sketch in a few broad background strokes.

The drive to bring modern communications to rural America began a half century ago. It progressed nicely through the years just following World War I when 38 percent of all farm homes were equipped with telephones.

Then came the 1920's, a steadily deteriorating farm economy, followed by the depression years. The rural telephone program languished for more than 2 decades. In 1945, there were actually fewer telephones on farms than there were in 1920. It was then that farmers, having climbed out the economic basement, began a concerted drive once again for an effective rural telephone program.

With the support of farmers the Nation over, and the help of friends in Congress, you and others like you pushed through a new Telephone Act in 1949. On October 28 of that year President Truman signed it into law.

It was a program of great promise and farmers' hopes were high. But, if I interpret correctly letters I have received from my constituents and official Government reports, the vast potentiality of the act has not been realized.

The information that has come to me leads me to conclude that the rural telephone program is in need of a booster charge.

A decade has gone by since the program was passed. Yet the percentage of farm homes with telephones has only increased from 38 percent to 56 percent.

Henry Ward Beecher once said: "Laws and institutions are constantly tending to gravitate. Like clocks, they must be occasionally cleaned and wound up, and set to true time."

Clearly, the rural telephone program has gravitated away from its original purpose. And just as clearly, it needs to be brought up to date in light of mid-20th century living conditions.

Actually, there doesn't seem to be any singel roadblock holding the program back, but a combination of many.

For one thing, telephone co-ops have been plagued by restrictive rulings. Take, for instance, the equity fund requirement for cooperatives. This has been a tremendous hurdle. I know it has been modified somewhat because I was working with your representatives including Dick Dell at the time it was changed. We had been putting pressure on the people administering the program for a long time. But we all know the problem has not been eliminated. Further special considerations for cooperatives are necessary.

The fact that you must borrow your money from the Federal Government complicates matters, when you have an unfriendly administration in power. It is no secret that this administration is cool, if not hostile, toward your program.

Look at the President's budgetary recommendations for next year. Like those of the other years, his request for the rural telephone programs is too small to do the job. Fortunately, Congress has refused to go along with the President's telephone budget in the past and I feel confident that we will increase it this year.

It is bad enough to struggle with insufficient funds, but now the White House wants to increase interest rates on the money you borrow. I promise you that I, for one, will fight this move with all my strength. You need higher interest rates on your loans like a drowning man needs a millstone around his neck. You know it, and I know it.

Furthermore, the administration knows it. Just last year REA Administrator Hamil said in a statement before a Senate committee:

"I have loan applications that have come to me in REA, particularly in the telephone program where an increased interest rate would be difficult to handle. As a matter of fact, Senator, I have had applications in the telephone program that we have been unable to grant with a 2 percent interest rate."

It seems obvious that the administration is deliberately trying to freeze both the rural telephone and the rural electric programs.

Certainly it has given no indication that it intends to tailor its policies in accordance with the intentions of Congress, reiterated last spring by the Senate Committee on Appropriations. In its report, the committee said:

"The committee feels that the Rural Electrification Administration has a responsibility for assisting and promoting rural telephone cooperatives where necessary to secure telephone service to farmers."

The progress report on REA's telephone loans reveals, however, that this admonition has not been carried out. It shows that as of December 1957, REA had approved loans to 205 cooperative-type borrowers and 371 commercial company borrowers. As of December 1958, aggregate loans approved to cooperatives totaled 209, with loans approved to 429 commercial borrowers. Last year, REA approved loans to 62 new borrowers. Of these, 58 were commercial companies and only 4 were cooperatives. That's a 14 to 1 ratio. Furthermore, the official report shows that 75 percent of the total money loaned went to commercial borrowers. It is quite evident again that the administration has little stomach for promoting telephone cooperatives.

No one would quarrel with this record, if it represented the most effective means of getting service into the remote rural areas. But the truth is that it does not.

As of December 1958, telephone cooperatives were serving approximately 2.5 subscribers per mile of line. In contrast, the commercial companies were serving nearly twice as many—4.6 subscribers per mile of line. It is obvious which type borrowers is serving the sparsely populated areas. It is also clear which type borrowers has the greatest expenditure to make in getting started. When a cooperative gets a loan from REA, it can retain on the average of 32 miles of line in its old system. The commercial companies on the average retain about 77 miles of line.

Thus two points become clear: Cooperatives are the most effective instrument for getting service into the thinly populated areas, and they have greater handicaps to overcome than do their commercial counterparts.

On the face of the record, it is evident that we have a program suffering from malnutrition. To write a proper recovery prescription, we should do what all good doctors do with an ailing patient. Diagnose the trouble and take steps to correct the ailment.

Knowing that the commercial telephone companies do not like the RTA program, you can expect no help from that quarter. The Rural Electrification Administration itself seems preoccupied with the maintenance of an alleged neutrality policy, which says: "Don't do anything to offend anyone." All this seems to place the responsibility for improvement squarely on your shoulders.

For my part, I offer to you whatever assistance that is within the power of my office. I want to discuss legislation with you which you feel necessary to your program, and I would be happy and willing to meet with your representatives anytime to work out feasible proposals. May I suggest some steps we ought to consider immediately.

As a starting point, I would like to suggest the possibility of doing something about getting town and country to join forces in the extension of rural lines. Perhaps the time has come when we should raise or

eliminate altogether the 1,500-population limitation that is now in the act.

We need also to fully explore the problem of cooperatives that are prevented from adding rural subscribers to their membership roles because they are barred from making the central town or small city a part of the same system.

Experience in the rural electric program has taught us that there would have been no program if REA personnel had not gone out into the rural areas and actually organized many cooperatives themselves. Perhaps the same type of assistance and promotion is needed here.

It may be that we should provide legislation transferring the funds and responsibility for co-op promotion from REA to the Farmer Cooperative Service, a branch of the Department of Agriculture exclusively devoted to cooperative problems and their solution. The best co-op talent in the Department could be brought into full play in this way. Since all agencies are now fully assimilated into the Department as a result of the Secretary's reorganization, I do not believe this transfer of assignment would cause any administrative problem. On the contrary, I believe the change would expedite the program.

Finally, Congress should move now to end the 10 percent wartime imposed excise tax on telephone service both for rural and city users. This is a discriminatory tax that was added as a war emergency measure which should be repealed.

I have touched upon a few of the more important points demanding attention in the rural telephone program. Before this fine convention concludes, I am sure you will have discussed many more.

Sometime prior to the time you leave this convention city for your homes, I would suggest that you pay a visit to your Congressmen and Senators up on the Hill. Sit down with them. Inform them of your problems. I can assure you, you will find willing listeners. Many of them look to you for guidance and leadership in this technical field.

When you get back to your homes, talk up the rural telephone cause among your neighbors at every opportunity. Marshall your strength. It is imperative that you revitalize your program. If you chart your course of action properly, and stick to it, I have no doubt that the promise of the Rural Telephone Act of 1949 will be fulfilled, as your part in the building of a more abundant rural America.

ANNUAL MEETING, SOUTH DAKOTA RURAL TELEPHONE COOPERATIVE ASSOCIATION, MARVIN HUGHITT HOTEL, HURON, S. DAK., DECEMBER 12, 1958

PROPOSED RESOLUTIONS

1. Increased interest rates

Whereas the President and the Administration appear determined to increase REA interest rates by two or three fold; and

Whereas it is also proposed to increase the cost of financing still further by adding administrative costs on to and in addition to the regular interest; and

Whereas the rural electrification and rural telephone programs have successfully operated over the past years at the normal 2 percent interest rate and have shown a profit to the United States Treasury; and

Whereas the present loans made to rural telephone cooperatives are made to serve rural areas with low density and low operating revenue; and

Whereas approximately 50 percent of the rural population does not have adequate telephone service; and

Whereas good telephone service to all areas of the United States is vital to the defense of our Nation: Now, therefore, be it

Resolved, That the Congress of the United States vigorously oppose any increase in REA interest rates and that the present interest rate of 2 percent be maintained and preserved.

2. Federal telephone excise tax

Whereas the Federal telephone excise tax was initiated as a wartime measure, and justified in the name of the national defense; and

Whereas the Federal telephone excise tax is still in effect, and continues to work an undue hardship on the rural telephone cooperative program; and

Whereas an excise tax is not in keeping with the concept which prevails under our Federal tax laws in that it is a form of regressive taxation, not in keeping with the concept of ability to pay and burdens those least able to pay: Now, therefore, be it

Resolved, That we here at the annual South Dakota Rural Telephone Cooperative Association meeting condemn this discriminatory tax and petition the Congress this session for its immediate repeal.

3. Encourage development of telephone cooperatives

Whereas the major portion of REA telephone loans are now being made to commercial companies, and

Whereas many areas now needing telephone service are undesirable to commercial companies, and

Whereas formation of cooperatives seems to be the only way in which such service may be made available to such areas: Now, therefore, be it

Resolved, That REA be requested to encourage organization of cooperatives to provide such service.

4. Participation in NRECA insurance program

Whereas the NRECA has made available its retirement and security program to telephone cooperatives, and

Whereas this provides a plan tailored to the needs of telephone cooperatives: Now, therefore, be it

Resolved, That all telephone cooperatives in the State be encouraged to participate in this group insurance plan.

5. REA service to telephone cooperatives

Whereas a number of telephone cooperatives find it difficult to set up an accounting system acceptable to REA: Now, therefore, be it

Resolved, That REA increase the number of field auditors to meet this need.

6. REA Administrator

Whereas the REA Act of 1935 provided for the strict nonpartisan administration of REA, by stipulating the appointment of an Administrator by the President of the United States, with confirmation by the Senate, for a 10-year term, to insure the nonpartisan, nonpolitical administration of REA; and

Whereas the Secretary of Agriculture, did in 1957, require that all loans to REA borrowers of $500,000 or more, and that all loans of any amount requested by new borrowers, be reviewed by the Secretary's office: Now, therefore, be it

Resolved, That the South Dakota Rural Telephone Cooperative Association, in annual meeting assembled, apprise the Congress of the United States of its vigorous opposition to any and all impairment of the authority of the Administrator as granted by the REA Act of 1935; and be it further

Resolved, That this association urge the Congress of the United States, as soon as it convenes in 1959 to pass a bill which would clearly and completely restore to the Administrator of REA all authority and functions vested in him by the REA Act of 1935.

John N. Robertson, Director of Highways for the District of Columbia Since 1948, Retires

---

EXTENSION OF REMARKS

OF

HON. GEORGE H. FALLON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1959

Mr. FALLON. Mr. Speaker, one of the most respected and best liked of the public officials of the District of Columbia is John N. Robertson, who has served as Director of Highways for the District since September 1948. Mr. Robertson began work with the District of Columbia Department of Highways in April 1917. He has been concerned with the streets and highways of the District of Columbia in various capacities for almost 42 years.

The Nation's Capital will lose one of its most valuable public servants at the end of this month, when Mr. Robertson retires. He has been a progressive and forward looking leader, a forthright advocate of a highway program for the District that would handle the requirements of modern traffic loads while preserving the traditional and historic values of District streets and avenues. A large part of his effectiveness has been due to his natural friendliness of manner and his willingness to talk frankly and honestly with the proponents of all points of view. He has played a great role in the planning and execution of projects for Washington freeways.

His abilities are nationally recognized. He is a vice president of the American Association of State Highway Officials and a member of the executive committee of that organization. He is a past president of the American Road Builders' Association, and the present treasurer of that organization. I know of no highway official who is held in greater esteem and affection throughout the country.

In my work as chairman of the Subcommittee on Roads, I have come to place a high value on his expert advice, and on his friendship.

The esteem with which John N. Robertson is regarded is well expressed in the following editorial, which appeared in the Washington Evening Star on the occasion of the announcement of his retirement:

ROBERTSON'S RETIREMENT

The Commissioners are facing a tremendously tough job in finding a successor for Jack Robertson as city highway director. "J. N." has been synonymous with Washington highways for so long that he seems to most of us to symbolize them.

The reason, of course, is that that's exactly the way Mr. Robertson feels himself. As he recalls, he never has wanted to do anything but build roads here from the time he was "big enough to talk." A third-generation Washingtonian, he knows the city like the back of his hand and loves every bit of it. The District has reason to be proud of Mr. Robertson's accomplishments in the national field of highway legislation and administration. Locally, his contributions during 42 years in the department are too

numerous to single out. Just look out the window of your car the next time you drive; the chances are that Jack Robertson built or rebuilt the road you're on.

More than an exceptional public official, however, Mr. Robertson is a gentleman and a friend to thousands of Washingtonians who treasure the relationship. His mild temperament seldom gave way except in battles with planning and park officials over highway locations. When there were two sides to a question and one of them involved highways, however, Jack never faked any sympathy for the other side. His job was to build highways—and that's what he did.

It's no surprise that "J. N." and Mrs. Robertson intend to remain in Washington. Anything else would be unthinkable. Furthermore, our guess is that retirement isn't going to take him out of the picture. We'll look forward to hearing from him on the state of our highways for some time to come.

Senator Mundt Address at Joint Celebration of Four Patriotic Organizations

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mr. BERRY. Mr. Speaker, I have asked unanimous consent to insert in the Appendix of the CONGRESSIONAL RECORD a report of the George Washington Memorial Services held in the U.S. Department of the Interior auditorium, February 22, sponsored by four of our patriotic organizations:

SENATOR MUNDT ADDRESS AT JOINT CELEBRATION OF FOUR PATRIOTIC ORGANIZATIONS

WASHINGTON, D.C., February 22, 1959.—This afternoon before a large and responsive audience gathered in the U.S. Department of the Interior auditorium, for the purpose of commemorating the 227th anniversary of the birth of George Washington, the Honorable KARL E. MUNDT, U.S. Senator from South Dakota, chose as the subject for his address: "Washington—Then and Now."

Today's observance was the 45th joint celebration of the birth of George Washington that has been sponsored by the District of Columbia Societies of the Children of the American Revolution, Sons of the American Revolution, Sons of the Revolution, and Daughters of the Revolution.

Conducting of this annual program rotates among the societies. This year the Children of the American Revolution, Mrs. Joseph P. Hall, senior State president, general chairman, and Miss Patience C. Veitch, State president, presiding, conducted the program.

Senator MUNDT briefly reviewed outstanding highlights in the life of George Washington and then stated that the governmental principles upheld by him are still applicable today. As evidence that Washington and others who aided him had great foresight, Senator MUNDT pointed out that the United States is now the only large nation that has continued to operate to date from its founding under the same basic principles. He called attention to the fact that in Washington's time certain people thought that he should be a king, and then others wished that he would accept nomination for a third term as President, but Washington declined and in doing so emphatically warned the Nation against the danger of one person having too much power, or continuing in office as President over too long a period.

Senator MUNDT tried to think of some of the things that Washington might have said had he addressed a patriotic meeting today. He felt that he would have again warned of too great power in too few hands, with particular reference toward today's tendency of centralized government.

As examples of the evils of overcentralized government, Italy and its downfall through fascism; Germany and nazism; and Russia and communism, were cited by Senator MUNDT.

In conclusion, Senator MUNDT stated that he was greatly pleased to find that organizations such as those sponsoring this observance were able to bring out a large audience, and he felt sure that with their patriotic zeal much had been done and would continue to be done to prevent disruption of the governmental principles of this country that have proved so trustworthy over the generations from George Washington's days to the present time.

Musical selections were presented by the orchestra of the U.S. Marine Band, M. Sgt. Ralph Bucca, conducting, before and during the program, also for the advancing and retiring of the colors.

Hoosier Guardsmen Defend Lives and Homes

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mr. BRAY. Mr. Speaker, a few months ago, the National Guard of the United States introduced a slogan which reads: "Sleep well tonight, your National Guard is awake." This slogan seemed most appropriate to those of us who appreciate the important role the guard plays in our Nation's defense picture, for we realize that without these thousands of citizen soldiers our manpower problem would indeed be critical.

Though this slogan was undoubtedly conceived to dramatize the guard's important position in defending our country, it carries an implication in Indiana that brings it much closer to Hoosier hearts and homes.

For it was National Guardsmen who, day and night, worked and fought to help control the rampaging ice and water of the flooding Wabash River. Called from their own homes and families, from their civilian occupations, these Hoosier Guardsmen built dikes of sandbags, they evacuated stranded families, they literally moved small communities to safety.

When they were called, they moved quickly and without confusion. There was no question about rations, about transportation, about equipment, or anything else. They were ready and they were trained.

Every one of us—and every freedom loving citizen of this country—should thank God for the National Guard. We can sleep well because the National Guard is awake. Just ask the families along the Wabash River Valley.

Friendly Relations Between Sewart Air Force Base and the People of Murfreesboro, Tenn., Point the Pattern for Civilian and Military Cooperation

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mr. EVINS. Mr. Speaker, I desire to call to the attention of my colleagues the remarkable spirit of cooperation existing between the personnel of Sewart Air Force Base, Smyrna, Tenn., and the people of the adjoining city of Murfreesboro, both of which are located in the district which I have the honor to represent in the House.

This most commendable relationship is the subject of a letter from the Murfreesboro and Rutherford County Chamber of Commerce, to Col. Edwin R. Bane, base commander, and another letter from Colonel Bane addressed to me. It is also described in a brief article in the Air Force Times for January 7, 1959.

Under unanimous consent, I am inserting these letters and article in the Appendix of the RECORD.

The letters and article follow:

HEADQUARTERS,
839TH AIR BASE GROUP,
SEWART AIR FORCE BASE, TENN.,
February 9, 1959.

Hon. JOE L. EVINS,
House of Representatives,
Washington, D.C.

DEAR MR. EVINS: You will recall that during your holiday season visit to Sewart Air Force Base, we discussed at length the friendly relationship and remarkable spirit of cooperation existing between Sewart personnel and the townspeople of Murfreesboro. During our conversation I displayed to you a letter from the Murfreesboro-Rutherford County Chamber of Commerce, endorsing our Base Exchange and commissary sales facility, which you felt to constitute such important evidence of our amicable community relationship that it might appropriately be read into the CONGRESSIONAL RECORD. Since the writing of this letter, the directors of the chamber of commerce have further honored Sewart by electing its commander to permanent ex-officio membership on the board. I am enclosing, along with a copy of this letter, a clipping from the Air Force Times of January 7, 1959, which mentions this and several of the many other instances demonstrative of the natural friendliness of middle Tennesseans.

The feeling of belonging to a fine and progressive community, which the citizens of Murfreesboro have instilled in our personnel, has contributed in great measure to our unusually high reenlistment rate of 100 percent for December and 73.3 percent for the first 7 months of the current fiscal year. The hospitality of our civilian neighbors may thus be credited in part with the saving of many thousands of tax dollars which would otherwise have been expended for recruitment, training, and personnel movement.

For this tangible and the countless other less apparent results of their graciousness toward us, we at Sewart feel that the people of middle Tennessee cannot be praised too greatly nor thanked too much. We shall be as proud and grateful as they for any con-

gressional recognition of their contribution toward the defense effort.

Sincerely yours,

EDWIN R. BANE,
Colonel, USAF, Base Commander.

MURFREESBORO AND RUTHERFORD COUNTY CHAMBER OF COMMERCE,
November 25, 1958.

Col. EDWIN R. BANE,
Commander, Sewart Air Force Base, Tenn.

DEAR COLONEL BANE: In the past the relationship of personnel at Sewart Air Force Base and the townspeople of Murfreesboro has been a credit to both communities. This amiable association is not limited to social contacts between individuals of our two communities but extends as well to business relations.

We feel that this friendly relationship in no way has been affected by the operation of the post exchange and commissary on your installation. We wish to commend the command at Sewart for the excellent manner in which these two facilities are operated. We feel that every effort has been made to carry on these activities in strict accord with the spirit in which they were established, that is, to promote the morale and general welfare of the personnel of our uniformed services without permitting undue competition with local civilian enterprise.

While it is a normal ambition of the civilian merchants to gain the largest possible portion of any available market, we feel that the contributions of base exchanges and commissaries outweigh any loss of trade these facilities might cause to them in civilian counterparts. We recognize, furthermore, that any savings gained by your personnel in trade with these two establishments are not lost to our local businessmen but instead are channeled into our economy through increased purchases of goods not available at these two facilities.

Therefore, we wish you to know that we look with favor upon these facilities at Sewart, maintained within their present limit, as to the type of items sold.

At the James K. Polk Hotel, a meeting of the members of the chamber of commerce unanimously voted to publicly endorse the operation of these facilities at your installation as permanent necessities of our Armed Forces personnel and we, the directors of the Murfreesboro and Rutherford County Chamber of Commerce, concur in their resolution.

Sincerely yours,

W. D. ADKERSON,
President, Chamber of Commerce.

[From the Air Force Times, Jan. 7, 1959]

COMMUNITY RELATIONS FIRST RATE AT SEWART

SEWART AIR FORCE BASE, TENN.—The personnel at this middle Tennessee base claim friendly relations with nearby Murfreesboro have reached the highest possible level.

Backing up this claim is the recent campaign by the city that netted $4,500 for a base beautification program. The money was raised by selling "Murfreesboro likes Stewart" posters to the city merchants.

The city has gone all out to give Sewart personnel a feeling of friendship. The beautification was just one of the things the city has started.

In an unprecedented move, the base exchange and commissary at Sewart were recently indorsed by a letter from the Murfreesboro-Rutherford County, Tenn., Chamber of Commerce. Drafted by the chamber's board of directors, the letter was received by Base Commander Col. Edwin R. Bane.

The letter said: "* * * the chamber of commerce unanimously voted to publicly endorse the operation of these facilities at your installation as permanent necessities of our Armed Forces personnel, and we, the directors of the Murfreesboro and Rutherford County Chamber of Commerce, concur in their resolution."

In another portion, the letter cited the state of mutual good relations existing here. "The relationship of personnel at the base is nicer than at any place I have ever been," is a common expression among newcomers.

An atmosphere of this type pays off in better morale among Air Force personnel. In turn, better morale increases efficiency, enabling the base to provide more defense per dollar.

A town of some 26,000 population, Murfreesboro is situated 17 miles south of Sewart. Although in an area which is primarily agricultural, Murfreesboro is a progressive city which is growing rapidly through the attraction of industry.

Many factors make the area attractive to industry, not the least of which is the quality and quantity of labor available. Marvin Beck, manager of a General Electric plant recently established here, has been impressed by the people he has employed.

"Our plant," he says, "reached its expected level of production well ahead of company requirements, and has continued to produce more than its quota. I attribute this to the industry and efficiency of our employees."

Crop Control Failure

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial from the Peoria Journal Star of February 20, 1959:

CROP CONTROL FAILURE

The 17 million bushels of corn stored in bins owned by the Commodity Credit Corporation in the Peoria area are a monument to the failure of Government crop controls. Other millions of bushels are stored by the Government in private warehouses.

But this corn surplus is only part of the problem. The Government has more than doubled its facilities for storing grain in the last 8 years. It can now store more than 7½ billion bushels. But warehouses are full and the surplus continues to grow. If 1959 is a good crop year, more storage capacity will be needed.

The Government now owns about 1.3 billion bushels of wheat, enough to make all the bread the people of the United States will eat in 3 years.

These growing surpluses worry farmers, for obvious reasons. They worry others, too. The money which subsidized the production of so much grain that cannot be used came from the pockets of all taxpayers. Not only that, but the cost of storing the grain is a continued and growing expense to taxpayers. It is estimated that storage and interest charges on the funds tied up in surpluses will reach a rate of $1 billion a year this year. Peoria County taxpayers will pay about $1⅔ million of this. The average cost to every person in the United States is about $5.70 a year.

President Eisenhower, in his recent farm message to Congress, said that incentives for excess production should be cut. "The control program doesn't control," he declared, and he has plenty of evidence to prove it.

The President also pointed out that most of the Federal money spent to support farm prices and encourage overproduction has gone to a relatively few larger producers and has done little to help the farmers in the greatest difficulty.

President Eisenhower's appeal for abandoning mandatory high price supports makes good economic sense, but whether it makes good enough political sense remains to be seen.

Duel Over Labor Law

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I am placing in the RECORD a thoughtful editorial appearing in the Saturday, February 7, 1959, St. Louis Post-Dispatch. I am particularly anxious for my colleagues in the Congress who style themselves as liberals to read this editorial. Naturally, I am pleased with it because it says kind words about the administration's labor bill:

DUEL OVER LABOR LAW

The labor reform issue has produced a face-to-face duel between Secretary of Labor Mitchell and Senator KENNEDY, of Massachusetts, two men avowedly interested in the 1960 political race. Senator KENNEDY is said by one reporter to have "moved in with the intensity of one who felt that his political future depended on this encounter."

Because of the Senator's overeagerness, we think, Secretary Mitchell made the better appearance. The Labor Secretary avoided attacking the Kennedy bill, and confined himself to defending his administration bill.

In general, the Kennedy and administration bills could be amalgamated with reference to union democracy and financial reports, if some spirit of compromise existed.

The Senator's principal targets, however, are the blackmail picketing and secondary boycott provisions of the administration bill. Neither one supports his charge that the bill is "an open invitation to collusion between corrupt employers and labor racketeers."

The bill would prohibit a union from picketing an employer if his employes showed no interest in joining the union. It would prohibit boycotts of an employer who is not a party to a labor dispute. Both proposals are fair. Neither invites collusion.

When he offered his limited bill, Senator KENNEDY argued that major amendments to the Taft-Hartley Act such as the administration's proposed restraints on boycotts and picketing be left for a separate measure because they were too controversial. Now he no longer disguises the fact he left them out of his bill because he is against them.

That is worth clearing up. It is also worth noting that his attack on the administration bill was mimeographed and given to reporters before Secretary Mitchell had even completed his testimony. Such hasty acts of partisanship can only muddle the labor issue and will not, we imagine, help anybody's presidential ambitions. Senator KENNEDY is a little too obviously trying to appear antilabor to some people and prolabor to others. That Secretary Mitchell may be doing the same thing does not justify Senator KENNEDY.

The public interest in this affair is an effective but moderate and nonpunitive labor law which includes reasonable restraints on picketing and secondary boycotts as well as rules for funds reporting and union democracy. The administration bill meets that requirement; the Kennedy bill does not.

Making the Employment Act of 1946 More Effective

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. REUSS. Mr. Speaker, on January 15 and 17, 1959, there were introduced in the House and Senate bills—H.R. 2561 and S. 497—to amend the Employment Act of 1946 to do two things:

First. Request the President to include in his Economic Report and annual economic program and recommendations a discussion of monetary and credit policies "to the same extent as all other policies affecting employment, production, and purchasing power."

Second. Assign to the Council of Economic Advisers in the Executive Office of the President the responsibility for holding public hearings on price or wage increases which appear to threaten economic stability and to issue advisory statements, where advisable, as to whether the proposed increases are justified.

Explanatory statements by the bills' authors, Senator CLARK, of Pennsylvania, and myself, are contained in the CONGRESSIONAL RECORD, January 15, 1959, pages 665 to 666, and the CONGRESSIONAL RECORD, January 17, 1959, pages 724 to 725.

The filing by the President of his Economic Report on January 20, 1959, and the weeks of hearings on this report which have been held by the Joint Economic Committee, have reinforced the need for the two amendments included in H.R. 2561 and S. 497. In addition, they have disclosed the need for three additional amendments to the Employment Act of 1946 in order to provide for its more effective administration. Comprehensive new bills, which include the two earlier amendments and the three additional ones, are accordingly being introduced by the same sponsors.

The text of H.R. 4870, introduced by me, follows:

H.R. 4870

A bill to amend the Employment Act of 1946 to provide for its more effective administration and to bring to bear an informed public opinion upon price and wage increases which threaten economic stability

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Employment Act of 1946 (15 U.S.C. 1023) is amended by adding at the end thereof the following new section:

"SEC. 6. It is the sense of Congress that the President, and the Federal Government, in executing this Act, shall give due effect to the following provisions of the Act:

"(a) The provision of section 2 setting forth the goals of maximum employment, production (including the concept of sustained growth), and purchasing power (including the concept of reasonable price stability).

"(b) The provisions of section 3(a) requiring the President to include in each year's economic report, in quantitative terms, the levels of employment, production, and purchasing power which he deems maximum, and current and foreseeable trends.

"(c) The provision of section 3(b) for the discretionary periodic transmittal of supplementary or revised recommendations.

"(d) The provisions of section 3(a)(3) for a review, and of sections 3(a)(4) and 3(b) for program and recommendations, including therein monetary and credit policies to the same extent as all other policies affecting employment, production, and purchasing power: *Provided*, That if the Federal agency directly responsible for the execution of such monetary and credit policies disagrees with such program and recommendations, the President shall report such disagreement to the Congress, together with a statement from the disagreeing agency of its reasons."

SEC. 2. Section 4(c) of the Employment Act of 1946 (15 U.S.C. 1021 and the following) is amended by adding an additional subsection (c)(6) as follows:

"(6) to hold public hearings concerning (a) price increases, proposed in industries where most of the output is produced by relatively few firms, which increases appear to threaten economic stability, and (b) wage increases where the firm proposing such price increases declares such wage increases to be a cause of the price increases; to issue factual summaries of such hearings; and, where the Council deems it advisable, to issue advisory statements."

The first of the three new amendments explicitly declares that the statutory goal of the Employment Act of "maximum purchasing power"—which is a coordinate goal with maximum employment and maximum production—includes the concept of reasonable price stability. The ordinary meaning of "maximum purchasing power" would certainly seem to include "reasonable price stability." Maximum purchasing power can never be attained without reasonable price stability, since in an inflation, as we all know, incomes and hence purchasing power rise with great inequality. Moreover, the first two chairmen of the Council of Economic Advisers—1947–52—Dr. Edwin G. Nourse and Leon H. Keyserling, have both recently testified that the words "maximum purchasing power" of the act constitute an anti-inflationary mandate to bring about reasonable price stability.

The President, however, has cast doubt upon whether the Employment Act, as it is, really does contain the mandate of reasonable price stability. On January 20 the President asked the Congress "to amend the Employment Act of 1946 to make reasonable price stability an explicit goal of Federal economic policy, coordinate with the goals of maximum production, employment, and purchasing power now specified in that act." The first amendment, accordingly, explicitly adds the President's words "reasonable price stability" to the definition of the act's goals, without at the same time stigmatizing Dr. Nourse, Mr. Keyserling, and several thousand other reputable economists and public officials as wrong in thinking that reasonable price stability has been a goal of the act ever since 1946.

This amendment also explicitly states that the goal of the Employment Act of "maximum production" includes the concept of sustained growth. Economic growth is plainly comprehended by the term "maximum production," just as reasonable price stability is implied by "maximum purchasing power." However, the clarification of "maximum purchasing power" requires an equal clarification of what was intended by "maximum production."

The second of the three new amendments requires the President to include in his Economic Report the actual quantitative levels of employment, production, and purchasing power which he thinks are needed to carry out the act's goals—namely, maximum employment, production, and purchasing power. It would also require him to set forth current and foreseeable trends in the levels of employment, production, and purchasing power. Actually, the setting forth of these levels is required by the plain language of the 1946 act. The congressional mandate was faithfully adhered to by the executive branch from the first report in 1947 through 1952. In each case, a serious effort was made to project quantitative levels for employment, production, and purchasing power as they were likely to be in the upcoming year, and as they ought to be. But, since 1952, this vital portion of the Economic Report has been omitted. In the January 1959 report, for example, there is no mention whatever of quantitative levels. Obviously, unless the President is willing to project what is likely to be, and then declare what ought to be, his program for altering events so that what actually is becomes as near as possible to what ought to be, will prove inadequate.

The third of the three new amendments has to do with the requirement of section 3(b) of the 1946 act permitting the President to add to his January 20 annual report, where conditions warrant it, by making supplementary or revised recommendations. Again, the custodians in the executive branch of the Employment Act of 1946 during the period 1947–52, found it desirable each year to issue a supplementary report, usually around July. Since then, the Council of Economic Advisers is heard from on January 20, but is then heard from no more. Certainly, if there are major changes in the economic situation at any time during the year, Congress wants to be informed of them. Accordingly, the existence of the power to make supplementary recommendations needs to be made clear.

Hon. Daniel A. Reed

SPEECH
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I express my sympathy to the family of my close colleague, DANIEL A. REED. A chapter is finished and those of us who had a chance to read from this chapter have been enriched. It is a long chapter, a meaningful chapter, and a unique chapter. The sorrow is not for our

friend who wrote it, but for those remaining who now must interpret it. The library of life is composed of many books and we are privileged to read from only one chapter in any book. The chapter preceding and following remain a holy mystery, but I believe we can get glimpses of the past and future through some of the more noble chapters available to us. The chapter written by DANIEL A. REED was among the noblest.

Resistance—Dignified, Determined, Effective

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mr. HARRISON. Mr. Speaker, to the dismay of the Federal judiciary which had ordered it, and to the chagrin of the ill-informed among the editorialists and news commentators who had chortled that Virginia's will to resist had evaporated in the experiences of Arlington and Norfolk, the Warren County High School at Front Royal, Va., did not integrate its classes on February 18, 1959.

The citizens of Warren County demonstrated again the determination which had impelled them, against heartbreaking odds, to create a new school in which their children might continue their education in accordance with the sincere and firm beliefs of the community, rather than in forced conformity to the arrogant fiats of philosophizing Federal judges.

Under court order, Warren County High School did reopen on February 19. The entire student body in this 30-room building which can accommodate 1,000, consisted of 22 Negroes.

Some who claim qualifications to appraise public affairs in Virginia have suggested that the white students, who have been attending the private high school in Front Royal, did not return merely because their parents did not want them to switch classes again during this term, and not because there were any compunctions about racial integration. These observers, I believe, grossly underestimate the will of the citizens of Warren County to defend their right to control public education as guaranteed them by the Constitution.

Under leave to extend my remarks in the Appendix, I include editorial comment which appeared in Virginia newspapers:

[From the Northern Virginia Daily, Strasburg, Va., Feb. 19, 1959]

TURNING POINT IN SCHOOL STRUGGLE

Warren County citizens helped to write a new chapter in history yesterday, when their million dollar high-school building was occupied by 22 Negro students and not one single white student showed up to integrate the school. The 100-odd newsmen, photographers and TV cameramen who milled around trying to get a story may have missed the real significance of the occasion.

It was the first small county in the South which has successfully defended its rights against the overwhelming powers of the Constitution-flaunting Supreme Court. If Front Royal citizens can win their struggle against forced school integration, so can the other smaller communities and counties in the South.

Front Royal was truly valiantly fighting in the front lines of the cold war on race mixing yesterday and certainly Warren County people deserve the highest commendation for their exemplary deportment under heavy fire.

It was a heart warming exhibition of genteel Virginia and Southern conduct, and did not give the horde of alert integrationist critics the slightest legitimate opportunity to defame the good name of Warren County

There were less than 50 citizens who gathered to view the proceedings, and they were orderly. Despite the klieg-light atmosphere and the realization that the lenses of the world were focused upon them, the vast majority of Front Royal people went about their daily lives in routine fashion.

The officials of the school administration, the county, and the city had laid their plans well. They had anticipated every move in advance. There were no uncertain or awkward moments, and the only chagrined people we saw were the Northern newsmen scurrying in search of a story which did not occur.

The law enforcement officers had the situation under control at all times. Once or twice they found it necessary to declare certain areas off limits, but this was done in a firm, yet friendly manner which commanded respect and obedience.

We could sum up the situation with the comment that Warren County met the supreme test with flying colors. They obeyed the unfair and unconstitutional order of the Federal courts and yet won their point of not mixing the races in their high school. The slurs of the integrationist press and the insults of two Federal judges were shrugged off without attempt at retaliation.

We cannot emphasize the fact too strongly that the fight is not yet over. There will no doubt be immediate effort on the part of the NAACP and their race-mixing friends to induce some white students to enroll in the school. While the odds are against their success in this effort, it could happen. Such a turn of events would certainly nullify the victory won yesterday and mar its brilliant luster.

The issue is not yet finally resolved. That there will be other action within the immediate future is a certainty we must all anticipate. Warren County people have successfully passed the vital tests thus far, and we have confidence they will resolutely face and solve those which are to come.

Freedom-loving people of the South and the Nation should certainly be proud of the citizens of Warren County today. We have already received telegrams and phone calls expressing this spirit. This encouragement should help freedom fighters in their resolve to press on to complete victory.

[From the Daily News-Record, Harrisonburg, Va., Feb. 20, 1959]

WARREN COUNTY'S ANSWER

In court hearings involving the reopening of the Warren County High School at Front Royal, not only segregationists but those who would accept integration to maintain the public schools appealed for moderation and common sense from the Federal bench. In a body, responsible white citizens on both sides of the question of public schools told the district court in Harrisonburg that to transfer to the school now would mean untold confusion to the white students attending private schools and public schools in other counties.

The same plea was voiced before Chief Judge Simon E. Sobeloff of the U.S. 4th Circuit Court of Appeals. He was told, in effect, that few, if any, white students would transfer to the high school upon its reopening for the admission of 22 Negro students. To this plea, Judge Sobeloff is quoted as replying:

"One way to find out is to open the school and register them."

Instead of judicial moderation or understanding of their difficult situation, Warren County white residents received only stern, legalistic answers directed at complying with the Supreme Court's infamous 1954 decision. The desires of 22 Negroes, who already had won from courts sympathetic to the National Association for the Advancement of Colored People, their fight to attend the school, was placed above 1,000 white students whose parents made it manifest that the schooling of their children shouldn't be interrupted now.

The parents' pleas through their spokesmen went unheeded. At Harrisonburg and at Baltimore, their motives were impugned. Said Judge John Paul in an astounding statement:

"The legislature may devise some futile laws as they did in 1956. My feeling is that you want to wait until next fall in the hopes some way to avoid integration will be found."

That, as it already has been pointed out by other Virginia newspapers, is deciding a case on the basis of speculation about what the legislature may or may not do in the future.

Said Judge Sobeloff:

"I think by any standard that what Warren County has been doing is indefensible."

Yet what Warren County was asking was no more than what Judge Sobeloff already had granted Charlottesville in allowing that school board to delay integration until next September.

Wednesday and again yesterday, it was Warren County's turn to take the stand in the oldest forum known to man—before the people themselves. Its white children stayed away from the school. There are indications that not a single one of them will register for the questionable school term.

Harassed at every turn by the NAACP through courts that prefer to give ear to the theory of Federal domination of community schools, Warren County citizens have elected the honorable way of standing on their rights. They are telling the world that they—and they alone—know what is best for their own children.

[From the Richmond (Va.) Times-Dispatch, Feb. 19, 1959]

WARREN'S STONEWALL RESISTANCE

The Warren County High School at Front Royal reopened yesterday on a federally prescribed, integrated basis.

Twenty-two well-dressed Negro girls and boys entered the architecturally beautiful, 30-room building, with a capacity of 1,000.

They found themselves alone, with 15 white teachers still under contract to the public school system.

Five blocks away, in makeshift, privately financed schools, nearly 900 white children continued their self-segregated education.

Not a single one had enrolled at the erstwhile alma mater.

Their parents had preferred to accept whatever inconvenience or sacrifices might eventuate, rather than submit to compulsory, nominal integration.

In the gloomy annals of the 5-year constitutional crisis, Warren's stonewall refusal to surrender, will remain a bright spot remembered.

The people of Warren peacefully reopened their high school to the children of colored fellow citizens—as ordered by the court.

But they refused, as Virginians, to send their children to a federally dominated school.

The unanimity of the Warren Court was thus matched, by the unanimity of Warren County.

The county thereby set an example of adherence to a dual code of balanced loyalty inherent in the Constitution of the United States—to the Nation, and to the State.

In doing so the citizens of that county have, despite provocative attrition, maintained an imperturable dignity of citizenship which, we like to believe, will always be part of the Virginia tradition.

[From the Roanoke (Va.) Times, Feb. 19, 1959]

INTEGRATION DAY IN FRONT ROYAL

The white-columned school was still there, looking just as it did on the day months ago when its 1,000 pupils departed. People went about their business as if scarcely aware that something unusual was happening in their community.

It was integration day in Front Royal. Twenty-two Negro children presented themselves, as the Federal courts said was their right, to be enrolled in the school where—until it closed on that fateful day last year—only white children were eligible for instruction.

The Negroes had won a great victory, or so it must have seemed to them, in gaining the right to attend the white people's school. Only the victory now appeared to be a hollow one, for not a single white former student showed up at the school. Most of the white children were attending private schools. Some were in public schools outside the community. A few who had little liking for education in the first place were not going to school at all because under the new law they are not compelled to do so.

So the 22 Negro students had the big high school all to themselves except for six white teachers who reported for duty. Tension was there, to be sure, but nothing happened to mar the peace of the town. Police were on hand just in case but they had little to do beyond routine chores. The sensible people of Front Royal showed they want nothing to do with threats and violence, for which they deserve the utmost praise.

Well, nobody knows how things are going to turn out. Will the white children—or at least some of them whose parents do not object to mixed schools—come back? Or will the Negro children be the only students? What kind of integration is it where there is none of the other race to be "integrated"?

One thing can be said, however. It is that Front Royal has given the Nation the most dramatic demonstration of passive resistance it has seen since the drive for compulsory school integration began. Nothing else the community could have done by way of expressing its protest could have approached this in eloquence.

Analysis of H.R. 3000 and H.R. 3001

EXTENSION OF REMARKS

OF

HON. HOWARD H. BAKER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1959

Mr. BAKER. Mr. Speaker, on January 21, 1959, my distinguished friend and fellow member of the Committee on Ways and Means, A. S. HERLONG, Jr., and I introduced H.R. 3000 and H.R. 3001 which provide for a basic reform of Federal tax rates and methods in five major tax areas. At the time these bills were offered to the Congress for consideration we stated:

The present Federal tax structure stunts economic growth since it both prohibits adequate capital accumulation and destroys capital once accumulated. We can no longer afford a Federal fiscal policy based only on short-term considerations, from fighting inflation in one year to fighting recession in another, while neglecting the root source of fiscal crises.

By removing tax blocks to progress, our bills would contribute more than any other possible Government action to our economic well-being and national security. In enabling the economy to grow much more rapidly and consistently than in recent years, these bills would counter the challenge of Russian communism for world economic leadership; encourage other nations outside the Communist orbit to reorganize their tax systems to permit more rapid development out of their own capital; increase the supply and mobility of venture capital, thus insuring a rebirth of the American genius for the starting and development of businesses; provide new and better job opportunities; insure adequate revenues for military preparedness and all other necessary Federal expenditures; smother inflation with growth.

These bills advocate the principle of tax reduction whereby there would be scheduled annual cuts of individual taxes and corporate taxes over a period of 5 years. After the first reduction, further scheduled reductions would go into effect if budget expenditures were not in excess of $77 billion or, regardless, if the reductions would not result in budget unbalance. In addition, the bills would establish by statute more realistic depreciation service lives; defer the capital-gains tax on sales of long-term capital assets which are reinvested within the taxable year; and reduce the rates of tax on estates and gifts.

Because of the widespread interest that has already been manifested in this meritorious legislative proposal, my able cosponsor the gentleman from Florida [Mr. HERLONG] and I have prepared a section by section analysis description of the purposes and provisions of our bills.

Sections 1 and 2 of the bills amend the Internal Revenue Code by adding new tax tables relating to annual reductions from January 1, 1959 through 1963 for individual taxpayers, including the rates applicable to heads of households. Section 3 of the proposals covers the new rate tables for the optional income tax where the taxpayer has adjusted gross income of less than $5,000.

Thus, beginning with January 1, 1959, there would be five annual coordinated reductions in all the graduated individual tax rates with the first bracket ultimately being reduced from the present 20 to 15 percent. The top graduated rate would be reduced from the present 91 to 47 percent over the 5 years, subject only to the postponement featurs of the legislation covered in section 5 below.

Section 4 of the bills amends code section 11 relating to the tax imposed on corporate taxpayers. The present law provides for a corporate normal tax of 30 percent on taxable income and a 22-percent surtax on taxable income in excess of $25,000. The legislation provides five annual rate reductions spread between the normal and surtax. The first 3 reduction would reduce the normal tax 1 percentage point each year reducing this from 30 to 27 percent. The last 2 corporate tax reductions would reduce the surtax from 22 to 20 percent. Thus, at the end of the reduction period the corporate rate would be 47 percent, the same as the top individual graduated tax rate. The following summary will illustrate the scheduled corporate reductions:

Jan. 1, 1959:	
Normal	29
Surtax	22
Combined	51
Jan. 1, 1960:	
Normal	28
Surtax	22
Combined	50
Jan. 1, 1961:	
Normal	27
Surtax	22
Combined	49
Jan. 1, 1962:	
Normal	27
Surtax	21
Combined	48
Jan. 1, 1963:	
Normal	27
Surtax	20
Combined	47

Section 5 of H.R. 3000 and H.R. 3001 would add a new section 22 to the code setting forth the criteria to be considered in postponing any scheduled tax cut. At the time of introduction of the bills, we explained the mechanics of postponement as follows:

Taking the President's 1960 budget estimate as the benchmark, the legislation provides that income tax rate reductions may be postponed after those to be effectuated as of January 1, 1959. Postponement would be made in the event of determination as of November 15 in any year that spending for the fiscal year is running in excess of $77 billion, and a state of budget unbalance is threatened.

While the postponement procedures may be applied separately as between corporate and individual tax rate reductions, every postponement of an individual tax rate cut must be accompanied by a postponement of a corporate tax cut. The only limitation on this linkage is where the result would be to postpone a corporate reduction for more than 1 year.

The bills further provide that each scheduled reduction in either the individual or corporate tax may be postponed for only 1 year with the schedule of subsequent reductions also being moved ahead 1 year. Thus, if spending should not be kept under control, it would be possible to space out the income tax cuts over a maximum period of 9 years without new enabling legislation.

The legislation places the responsibility for initiating postponement in the hands of the President. Balance has been struck as between the Congress and the Executive in the final exercise of postponement authority.

This balance arises in that adequate opportunity is afforded the Congress, and its tax writing committees, to review the Federal revenue requirements as related to the proposed budget. The bills provide that Congress may take several alternative actions. When the President has postponed a scheduled individual rate reduction from January 1

to July 1, the Congress may, by means of a joint resolution approved before May 15, act to make the reduction become effective as of July 1. In the alternative, a scheduled reduction may be further postponed by the Congress until the next January 1. The same alternative disposition may be made with respect to corporate income taxes. Thus, the Congress may make effective on July 1 a previously postponed corporate reduction or postpone it further until January 1.

Provision is then made under the bills that where the Congress has not so acted by joint resolution the President, by May 15, may further postpone until the next January 1 any corporate or individual cut previously postponed. The criterion for such postponements under the presidential authority "shall be used so as to permit the maximum possible reduction to take effect on July 1 next in the taxes imposed by sections 1, 3, 11, and 3402 without causing an imbalance in the budget of the Federal Government for the following fiscal year."

Subsection 5(d) of the bills provides that a total postponement of any date upon which a scheduled rate reduction shall take effect cannot be for more than 1 year. Subsection 5(e) is a deferral provision wherein if a scheduled reduction is postponed under any of the alternative procedures outlined above, subsequent rate reduction dates not affected by the current postponement "shall be deferred for 1 year." It is by virtue of this postponement authority and the deferral provision of the bills that the rate reductions scheduled for 5 years may be deferred for a maximum of 9 years without revising the statute. Subsection 5(f) of the bills proposes definitions of the terms of reference "imbalance in the budget," "rate reduction date," "current fiscal year" and "following fiscal year."

Section 6 of the bills would amend code section 167 by adding new provisions relating to the tax treatment of depreciable property. The intent of these provisions is that their use be at the election of the taxpayer. This new approach would add six broad statutory classifications of property subject to depreciation and also set forth the maximum useful life to be applied to such classes, as follows:

Classification	*Maximum useful life, years*
Buildings	30
Standard and general-purpose machinery and equipment, including buildings useful only to house such machinery and equipment	12
Furniture and related equipment	10
Special-purpose machinery and equipment, including buildings useful only to house such machinery and equipment	6
Miscellaneous small equipment chargeable to capital account, including office machines	4
Automotive equipment	3

There are several limitations set forth in applying these provisions. The statutory reduction would be applicable only as to property with a useful life of 3 years or more and involves new acquisitions of business plant and equipment. The advantages of this reduction in useful life is phased out over a 5-year period so that on property acquired in the first year affected taxpayers may take only one-fifth of the amount of reduction. As to property acquired in the second and each succeeding years, an additional one-fifth of such amount may be taken each year during each of the succeeding 4 years as to property acquired in each of such later years, with this limitation terminating entirely after December 31, 1963.

For example, assume a taxpayer acquired standard and general purpose machinery, which, under present law, would have a useful life of 16 years. Under the bill, the property would then fall into the standard and general purpose machinery category and for that property acquired in 1959, would have a useful life of 15½ years: 16−12=4÷5=⅘; 16−⅘=15⅕. Property in the same classification acquired in 1960 would have a useful life of 14⅖ and so on for property acquired in succeeding years until 1964, at which time the property acquired would have a useful life in this category of 12 years.

The bills also provide that except for taxpayers whose accounting is prescribed by a Federal or State regulatory body, the reductions in useful life of depreciable property "shall be applicable only to taxpayers whose books and records are kept in accordance with the determination of useful life there set forth."

As previously stated, we believe:

In practical effect, the new lives available for use in regard to property acquisitions in the fifth and succeeding years would permit an average increase of one-third in the rates of depreciation allowances. These increases would come on top of the liberal alowances in early years under the sum-of-the-year's digits and double declining balance methods, made available to taxpayers through the 1954 revenue code, and the extra first-year allowance granted to small business taxpayers in the legislation of 1958.

Section 6(b) of the legislation amends code section 1231, relating to capital gains and losses on property used in the trade or business, by providing that property subject to the special rule for depreciation shall not be entitled to capital gains treatment "except to that portion of the consideration received on the sale or exchange which exceeds the original cost or other basis of said property in the hands of the taxpayer." Thus, there is a limitation on the extent to which the long-term capital gains privilege may be applied to the adjusted basis of depreciable property.

Section 7 of the bills would add a new code section 1037 providing for the nonrecognition of gain on certain sales or exchanges of capital assets.

Our intention in offering this amendment is as follows:

In accordance with the precedent already established on the sale and repurchase of homes, our bills make statutory provision for tax-free transfer of capital by individuals, but not by corporations, from one investment to another when the transactions are completed within the taxable year, and the investments sold have been held by the taxpayer for at least 6 months. The result would be a deferral of tax on long-term gains until such time as the taxpayer disinvests. We have included this application of the rollover principle in the legislation since the only possible justification for taxing at any time the proceeds from sale of a long-term investment is that the seller is disinvesting with the intention of using capital gains as income for consumption purposes.

This deferral of tax on long-term gains is accomplished by providing that if capital assets are sold by an individual and within the same taxable year other such assets are purchased, any gain shall not be recognized to the extent that the aggregate purchase prices of such assets exceed the adjusted basis of capital assets sold during the year. Capital assets include those as defined in code section 1221 or property used in the trade or business as defined in code section 1231(b)(1). Where the purchase of capital assets results in such nonrecognition of gain there must be an adjustment to the basis of each of the capital assets purchased and held at the end of the taxable year. These adjustments to basis "shall include a reduction by an amount equal to the total amount of gain not so recognized allocated to each capital asset so purchased in the proportion that the purchase price bears to the aggregate of the purchase prices of all such assets" purchased and held at the end of such taxable year.

For example, assume a taxpayer electing to apply this provision at the end of his taxable year to asset A costing $2,000, asset B costing $3,000, and asset C costing $5,000 purchased during such year. For the same taxable year under the bills, assume a gain from sales of other capital assets in the amount of $4,000 was elected not to be recognized. This nonrecognized gain would be allocated to the assets held in proportion to their purchase price so that asset A would have its $2,000 basis reduced by $800, asset B would have its basis reduced by $1,200, and asset C would have its basis reduced by $2,000. Therefore, the basis of the assets for the purposes of measuring gains on such assets on future transactions would be as follows: Asset A, $1,200; asset B, $1,800; asset C, $3,000.

In other words, as to assets purchased during any year any tax-free gain must be proportionately allocated to each such asset. The formula for allocation is the ratio of the purchase price of any one asset in relation to the total of purchase prices of similarly acquired assets during the same tax year. The right to invoke this nonrecognition or "rollover" of capital gain may be made at the election of the taxpayer.

Section 8 of the bills would reduce the top rate of estate tax and proportionately reduce the lowest and intervening rates. Section 9 would reduce the gift tax rates. Upon introduction we outlined these reductions as follows:

Instead of establishing a new formula for setting tax rates on estates and gifts, our bills would simply bring the top rate of estate tax down to 47 percent to coincide with the top rates of individual and corporate tax after 5 years, and consistent with the present relationship, reduce the top rate of gift tax to three-fourths of this figure, or 35.25 percent. All lower rates would be re-

duced in proportion. Thus, the estate tax rates would range by taxable brackets from 1.75 to 47 percent, compared with the present 3 to 77 percent, and the gift tax rates from 1.25 to 35.25 percent, compared with the present 2.25 to 57.75 percent.

Section 10 of the bills amends the withholding provisions of the code—section 3402—so as to conform the withholding tables and rates with the forward scheduled individual income tax reductions provided under the bills. Section 11 would amend the code provisions relating to declaration of estimated tax by individuals—section 6015—and corporations—section 6016—to make it clear that such declarations could be filed on the basis of the tax rates in effect on the last day prescribed for the timely filing of the declaration of estimated tax.

Mr. Speaker, in closing we hope that this analysis will be helpful in furthering the objectives of our bills and understanding of the methods by which we seek to attain these objectives. Federal fiscal policy needs a new look—a long-range look that will provide greater economic growth, greater stability to Government revenues, and greater incentives to taxpayers. We believe our bills would contribute more than any other possible Government action to our economic well-being and national security.

Observation on Cuba

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Evening Star of February 18, 1959, and a letter from an Indiana schoolgirl:

[From the Washington Star, Feb. 18, 1959]

GFWC PRESIDENT REPORTS ON CUBA

(By Mary L. Vaughan)

Cuba's population is wholeheartedly backing, by almost 100 percent, their new Premier Fidel Castro. That's the opinion of Miss Chloe Gifford, just back from a firsthand check of Cuba's two member clubs of the General Federation of Women's Clubs, which she heads.

As president, she is overseer to nearly 11 million women spread around the globe in approximately 13,000 member club organizations.

Miss Gifford toured San Juan, St. Thomas, Jamaica, and Cuba, leaving here on the first day of February and arriving back in Washington last Saturday.

Her mission included visiting with officials of the GFWC member clubs in Havana—the Lyceum and Tennis Lawn Club and the Havana Women's Club.

The latter club, she stressed, took no active part in the revolution.

BACKED CASTRO

Lyceum members, however, backed Castro 100 percent and worked actively for him while transporting supplies and living in caves in Oriente Province for 2 years, Miss Gifford said.

In addition to her GFWC overseeing duties, Miss Gifford visited the revolution-torn areas in Cuba in a double capacity as vice president of CARE.

During her mission she helped distribute 25,000 CARE packages of food, clothing, and medical supplies.

The people in Cuba, she observed, back Premier Castor and buck the U.S. Government.

"They have great bitterness toward the U.S. Government," she stated, "but they differentiate between the citizens and our Government. They think our Government supported and furnished ammunition and guns to Batista."

Miss Gifford, while observing the adulation to Castro paid by the Cuban population, had reservations on that score.

"As a purely personal observation," she commented, "the people of Cuba worried me since I have never seen such dedication, such adulation given to one man as they are giving to Castro. It is dangerous—he is but 32 years of age and may find it difficult to keep his feet on the ground and not become a dictator."

CUBA NEGLECTED

Miss Gifford said she was distressed by the fact a country like Cuba "only 1 hour's flying time from this country" has been neglected in relationships.

In touring the rebel territory, Miss Gifford addressed the Cuban village people.

"I stood on a jeep and smiled and waved since I speak no Spanish," she revealed. "I did not attempt to interfere in their politics but brought greetings from the American people and wished them hope and prayers for unity and good government."

It was Miss Gifford's first visit to Cuba, she said. In Havana, she stayed in the Conrad Hilton Hotel when Premier Castro also was a fellow resident but she caught not even a glimpse of him.

"On the elevators I rode up and down many times with the rebels who wore beards and guns slung over their shoulders," she noted.

"They were most polite, always smiling and helpful," she added.

VISITS OFFICERS

Miss Gifford said she visited with the GFWC member club presidents—Senora Rosario Rexach de Leon of the Lyceum and Mrs. William T. Wright of the Havana Women's Club.

Miss Gifford said her trip will result in more active participation between the parent GFWC and its Cuban club membership.

Miss Gifford, of Lexington, Ky., will be seen by television fans on Friday night when Edward R. Murrow visits her local GFWC living quarters on his "Person to Person" show.

MARY'S CATHOLIC CIVICS CLUB,
Decatur, Ind., Feb. 4, 1959.

DEAR MR. POWELL: Today, Sister Joan of Arc read to us from the CONGRESSIONAL RECORD, January 27, 1959, pages 1117 to 1118, the speech you made on Cuba. We, the members of Mary's Catholic Civics Club, wish to congratulate you on the fine, just, and honest report you made to the House on Dr. Castro. Sister has been reading to us the true side of the Cuban situation from Catholic periodicals, so we knew, but many, who read only the secular press didn't. We are glad that you suggested to the House Members that United States rally to the Cuban hero instead of denouncing him.

Since my name is Powell too, sister asked that I write to you. I am in the seventh grade of St. Joseph's school, Decatur, Ind.

It is through our Representative E. ROSS ADAIR that we get the CONGRESSIONAL RECORDS. With those and other material Mr. ADAIR is sending, we hope to be able to organize debate matter for our mock congressional sessions this month.

We belong to a national club sponsored by the Commission on American Citizenship in Washington, D.C.

Sister and the club join me in saying, "God bless you and more power to you."

Sincerely yours,

PATRICIA POWELL.

Public Housing and the Federal Budget

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mr. TABER. Mr. Speaker, a balanced budget is the most critical goal which must be attained in this session of Congress. It is up to Congress, but here is a picture of just what makes this goal so difficult to reach.

The Constitution provides that no moneys be withdrawn from the Treasury of the United States without an appropriation authorized by law. For the last 20 years, it has been customary for several congressional committees to draft legislation providing for a so-called back-door approach to the Treasury, instead of going to the Congress and asking for an appropriation when said legislation calls for money to be spent for any purpose. This is done with a provision which authorizes the head of an agency, like the Housing Agency, to go to the Secretary of the Treasury, deliver to him a note or notes for whatever amount they might wish to draw, and apply it against the total sum which is made available by the bill. With such a provision, an agency can use the money without restraint, and can do just about as it wishes with it. The agency is not required either annually or at any other time, to go before a committee of Congress, and say what it would do with the money. There is no annual or other review provided for its operations. It is just a freelance in the spending of the money.

Clause 4 of rule XXI of the House rules provided for the solution of these problems and the appropriation of money through the Appropriations Committee. To quote the rule:

No bill or joint resolution carrying appropriations shall be reported by any committee not having jurisdiction to report appropriations, nor shall an amendment proposing an appropriation be in order during the consideration of a bill or joint resolution reported by a committee not having that jurisdiction. A question of order on an appropriation in any such bill, joint resolution, or amendment thereto may be raised at any time.

This has been interpreted in several parliamentary rulings in the House of Representatives over the past 15 or 20 years in such a way that congressional committees other than the Appropriations Committee could bring in a bill with a provision for the back-door approach to the Treasury, such as I have described, and as a result of it, we have had a tremendous amount of irresponsible legislation. Over $5 billion was appro-

priated last year by the Congress through the back-door method. Congressman HOWARD W. SMITH, of Virginia, has introduced a resolution, which is now up for consideration before the Rules Committee, which resolution would do away with this practice and force those people who have been avoiding a proper justification for withdrawing money from the Treasury to come before the Appropriations Committee for their money.

Conditions have come to pass where there has been no review of a lot of these Federal expenditures. It is absolutely necessary if we are going to maintain the liberties of the United States that we keep in the Appropriations Committee of the Congress the power to appropriate funds. If we allow legislation to continue to make provisions such as the recent housing bill passed by the Senate; namely, to turn over $3.7 billion to the Public Housing Administration to spend on public housing without any restrictions whatever and without any control and without any review over the 5½ years that is the period covered by the authority written into the bill, the Congress is simply shirking its responsibilities. Time after time, we find cases where expenditures have been made and will be made that the Congress did not approve and that the very people who are urging this type of legislation did not approve themselves. For instance, there is no control in the housing legislation as to what sort of construction there should be; there is no such thing as an attempt to maintain a good, clean job. The housing bill, as it presently is before the House committee, calls for $1.5 billion for urban renewal, $3.7 billion for housing, $400 million for college housing loans, and for veterans' housing, $300 million. The Founding Fathers who drew the Constitution, after having gone through a long period of war with Great Britain to obtain their liberties, thought that it was necessary to place a provision in the Constitution prohibiting the spending of money without an appropriation. When there is no appropriation of money, frankly, it appears to me as though the language was not sufficient to comply with the Constitution requirement for the proper appropriation of funds. With that in mind, Congressman SMITH has prepared and has before the Rules Committee House Resolution 161. It would require that these funds should pass through the Appropriations Committee, after being authorized by other committees by bills coming from them. It would require an annual review of what is going to be spent and what it is going to be spent for. We must protect our people from what is going on through a bloc of bureaucrats. Surely, that would save more money than any other action that we could take at this time. This resolution is the only way to restore to Congress the power to appropriate money given it by the Constitution.

These various projects—the public housing construction program where buildings are erected and rented to people who have incomes as high as $10,000 a year—are probably the most ridiculous of our governmental expenditures. The rents that these people pay are calculated to just above cover the cost of the maintenance of the buildings and the accessories. They do not pay a substantial amount into the Treasury. They pay no taxes upon the buildings and we are taxing the poor people who have been thrifty enough to buy and pay for their own houses, to pay for the cost and maintenance of these public housing projects.

Many of these property owners have less income than the people who are living in these public houses, and if there is any project whatever that we could get along without, this is it.

The urban renewal projects and the college housing projects and the veterans loan project can be taken care of by local and private capital, if the proper efforts are made to provide that sort of thing.

Somewhere, somehow, there must come a sense of responsibility and of meeting our obligations to the Government of the United States; to the necessity for keeping down our Federal budget so that we can prevent any more outbreaks of the inflation which has plagued the United States terrifically since the end of World War II.

The Now Indispensable Dulles

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I am inserting into the RECORD a very fine editorial appearing in the St. Louis Globe-Democrat Thursday, February 19, 1959, in tribute to John Foster Dulles.

My Democratic friends in the Congress and who write newspaper columns and comment on the news as radio and television news commentators might well read this editorial and explain, for the benefit of their constituents, readers, and listeners, why Secretary Dulles' illness has produced this great change of attitude on their part.

I suggest that the reason for the change lies in the fact that they have been placing American foreign policy into partisan politics in a snide and indirect way, and all the time they have been protesting that foreign policy should not be the subject of partisan attack. Now that they think that building up Secretary Dulles' stature is no longer a threat to this kind of undercover attack because he will not remain on the scene to embarrass them with his prestige, they praise him. I suspect that their real purpose is to try to appear to be nonpartisan and objective so that they can continue their partisan sniping of the Eisenhower administration.

If anyone reading this who does not have the privileges of the use of the CONGRESSIONAL RECORD would care to comment on this editorial or my comments, I would be glad to place their remarks in the RECORD.

The editorial follows:

THE NOW INDISPENSABLE DULLES

John Foster Dulles, afflicted with a probably incurable cancer, has suddenly become an outstanding patriot, a genius of American statesmanship, the indispensable man in the State Department.

Only a month, a week ago nothing like such prestige attached to his name.

Long, bitter critics of the Secretary of State now view with jittery foreboding his possible departure from the cold war arena, where for six terribly difficult years he has been the West's bulkhead against each Red crisis in the Soviet's campaign for world aggrandisement.

Yet this is the same Mr. Dulles whose resignation has been demanded in some quarters for more than a year. This is the same architect of U.S. policy who has been mercilessly grilled and blasted in the Senate, whose comments have been ridiculed or turned into dirty words.

This is the same Secretary Dulles who has been flayed also in allied capitals.

Today many of the same men in public life, who made him so frequently the butt of lacerating criticism, call him a "great Secretary of State" and express fear at his loss in a time of "desperate need."

Among such are Senator FULBRIGHT of Arkansas and Senator MANSFIELD, Montana's minor sage of foreign affairs.

This overnight reversal of political opinion is somewhat nauseating. It is understandable, justified. But it makes many sincere observers of our foreign conduct sick at the stomach.

The desperate illness of Mr. Dulles evokes natural feelings of sympathy. But that is not responsible for this shift in critics' attitude. Men with any kind of knowledge about the dangerous power complex look with grave trepidation at possible loss of Foster Dulles.

One reason assigned for the sudden upsurge of Dulles repute is that we are in the midst of a delicate crisis over Berlin and Germany. He has laid most of the plans for allied cooperation in this issue, and for the foreign ministers conference.

But Secretary Dulles has confronted a virtually incessant series of crises vis-a-vis Russia and China during this administration. He has drafted and led strategy to balk Soviet and Peiping threats time after time.

He is doing the same job now that he has long done. Where were these latter-day back slappers, where was the approval of political potshotters then?

When the crisis chips were down, the Dulles programs were backed on signally non-partisan basis. But after the heat abated, he was again the target for rasping antagonism that sought to discredit his efforts, to lever him out of office.

Now in London, Paris, and Bonn it is regarded as unthinkable that Mr. Dulles should be replaced. Leaders in each of these capitals, however, have often in the past opposed Mr. Dulles and his policies as inflexible, too moralistic.

Sometimes perhaps, Mr. Dulles gave that impression. He has made mistakes. But it was his courage and indefatigable purpose that has thrust backbone into western diplomacy ever since Mr. Eisenhower became President.

The Secretary has exhibited like an oriflamme America's determination to manifest strength in the teeth of Communist threats. He has refused to back down on principle once, his concessions being ones of procedure and approach.

That has preserved peace without frittering away our position in the Far East, in Europe, in the Middle East where the problem has been the most treacherous of all. No other Secretary of State in our history has possessed so much power. The President has

called him the greatest ever to occupy this post, indispensable to U.S. foreign policy.

While indispensable is a relative term—no one is unqualifiedly indispensable—Mr. Dulles has come close to the role. But this is not a sudden development. His efforts, knowledge, and resource in piloting foreign policy have been the same for years, during those same years his foes—sincere and opportunist drivelers—were knifing at his back.

He should remain in office as long as he is able to counsel and direct the Nation's intricate policy abroad. When he is no longer able, he will resign.

Letter From Washington

EXTENSION OF REMARKS
OF

HON. JOSEPH E. KARTH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1959

Mr. KARTH. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to call the attention of my colleagues to an article written by Richard H. Rovere which appeared in the February 14, 1959, issue of the New Yorker.

The article is as follows:

LETTER FROM WASHINGTON

FEBRUARY 4.

For the fourth or fifth time within a week, the Secretary of Defense has insisted that our missile program is coming along fine, that we are spending on it all the money we need to spend, and that the Russians are not to be believed when they claim to be able to strike any point on earth with their long-range missiles. There is a powerful, almost enveloping tendency here, though, to reject Mr. McElroy's word and to assume that his opposite number, Marshal Rodion Y. Malinovsky, the Soviet Defense Minister, was speaking the essential truth when he addressed us from Moscow yesterday and said, "Your arms are too short, gentlemen." Of course, the information available to both men is of such a nature as to allow wide differences of interpretation and a broad exercise of sophistry. Mr. McElroy hasn't seen or counted Marshal Malinovsky's missiles, and Marshal Malinovsky hasn't seen or counted Mr. McElroy's. Even the most pessimistic of informed American observers are inclined to believe that the Russians have not yet achieved the striking power they boast of, and it could well be that, as of this moment, the literal truth would confirm the skepticism that Mr. McElroy showed when he said he doubted whether the Russians have intercontinental ballistic missiles ready for combat today. A figure that is accepted by a large number of people is that the Russians are producing about 15 ICBM's a month; at that rate, impressive as it is, it would take a good many months', if not a good many years', production to give them any assurance of being able to destroy us with missiles alone. But to just about everyone but Mr. McElroy, this is a fact of only secondary importance; nobody, after all, is predicting the firing of missiles tomorrow afternoon. The important truth that is known and conceded, even by Mr. McElroy, is that not a single American ICBM is today ready for military use. Mr. McElroy says that the first few Atlases, an Atlas being an Air Force weapon of superior performance, will be emplaced on a site in California by July 1. But this, too, is disputed by people in the Pentagon and in industry whose acquaintenance with such matters is as great as Mr. McElroy's acquaintenance with soap; they say they will be surprised to see the first Atlas squadron before the end of next year. As far as it is possible to learn, the United does not have, right now, today, a ballistic missile that is, in the local patois, operational and that could reach Greenwich, Conn., from Washington, D.C. (The Redstone, an Army missile, can arch its way over 200 surface miles with a quite satisfactory degree of accuracy.)

The administration's logic, as it is found in Mr. McElroy's testimony before congressional committees and in his statements to the press, is that since we don't have any missiles ready for use and since the Russians don't have enough missiles to destroy every one of our military installations here and abroad, a rough parity exists. It could also be argued that since there is no "missile gap" between the United States and Liechtenstein. The administration clings lovingly to the present tense. But its critics—and on this matter it is hard to find anyone who isn't a critic—seem able to destroy its case by accepting the least terrifying of its figures and projecting them no more than 22 months ahead. It is known for a certainty that the Russians have a wide variety of missiles of less than intercontinental range. These have been in production at a rate doubtless greater than 15 a month for a year, at the very least. The stockpile is assumed by some to be in the thousands and by the most cautious intelligence analysts to be in the hundreds. If their ICBM production has been at the rate of 15 a month for 5 to 6 months, and if they maintain this rate throughout this year and next (the chances are certainly that the rate will be stepped up), the Russians will have a number of intercontinental missiles—somewhere between four and five hundred—that simply will not be subject to the kind of cheerful comparisons offered today by the President and Mr. McElroy. Such a quantity of ICBM's, plus a somewhat greater quantity of shorter-range missiles, would, unless our experts are talking through their hats, put Mr. Khrushchev in a position to employ the finite strategy that we ourselves hope someday to be in a position to employ; that is, to proceed from the assumption that the destructive capacity already achieved is adequate to any earthly requirements for destruction. Mr. McElroy has assured troubled Congressmen that well before this point is reached by the Russians, we shall have a squadron of Atlases emplaced on the west coast. One squadron, 10 Atlases. Even if the first squadron is soon joined by another, the relative position of the Russians will be the same. The gap will be for some certain period a chasm of almost immeasurable size.

Attempts to measure it tend, if anything, to make it seem less awesome than in fact it is. Senator SYMINGTON, of Missouri, has said that "through 1961 our planning envisages the Russians having over four times as many operational ICBMs as the United States." (Senator SYMINGTON has been aided in most of his calculations by an old associate in the Air Force, Mr. Tom Lanphier, now of Convair, which is making the Atlas. Mr. Lanphier surely knows what his plant is doing, and he thinks the 4-to-1 ratio is the most sanguine possible.) But 4 to 1, 5 to 1, even 10 to 1—no ratio reflects what Senator SYMINGTON says is the simple fact that we will at some point be without effective retaliatory power. At that point, there isn't much practical difference between 10 to 1 and and a million to nothing.

It has frequently been recalled in recent weeks that, historically, the most discouraging readings of the Russians' claims for their technology and military strength have been confirmed by the facts when the facts have become known. Some highly discouraging readings have been made in recent weeks, and the effect of them has been to make the moment of most extreme danger seem closer to the present than it does in a reading that merely extrapolates from the facts that are almost universally conceded. There are people with access to all the intelligence gathered by our several agencies who believe that the Russians right now have not dozens or hundreds but thousands of missiles ready for business. There are some students of test performances who regard Mr. McElroy's statement that it was not "our intent or policy to match [the Russians] missile for missile" as a macabre joke; they maintain that if by some miracle we did have the precise number they have, they would still be twice as powerful, because their missiles are twice as effective as those we are currently planning to build. A distinguished military critic, Brig. Gen. Thomas R. Phillips, writing in the Reporter, says that Russian missiles have anywhere from 3 to 5 times the power of ours and that ours are 25 percent behind theirs in accuracy. When these factors are reckoned in, he says, it would take 33 of our most powerful missiles to give us 90 percent assurance of destroying a fortified missile site in the Soviet Union, while 15 of theirs would give them 90 percent assurance of destroying a fortified site on this continent; one of their missiles is worth more than two of ours, and a true matching would require us to have twice the number they have. To be sure, there are estimable men, on and off the Government payroll who dispute this and think that our products are, if anything, somewhat superior. But since we aren't producing our products, the whole matter is academic.

The strategic and diplomatic consequences of the missile gap, and of the possibility of missile warfare even when no gap exists, are absorbing the thoughts of a good many people here; these consequences appear staggering in their dimensions and revolutionary in their nature. One common assumption after another is going by the board. At some stage, it seems plain, the whole notion of mutual deterrence—on which both we and the Russians have placed great reliance—will be of highly questionable validity. To be sure, it is not quite ready for the discard yet. In a general war fought today, manned bombers would still be used by both sides—presupposing, as all but a fairly small number of our strategists do, that the Russians have yet to achieve the capacity for pushbutton extermination. The ability of a handful of manned bombers to get close enough to their targets for retaliatory purposes would seem sufficient to deter any government of sane men—sane enough, that is, to wish to go on living and governing—from taking the initiative. The Strategic Air Command may compare to the Russian forces that could be marshaled for attack as a sheriff's posse compares to a Panzer division, yet even with as little as between 4 and 6 percent of SAC's planes on airborne alert (it used to be said that between 20 and 30 percent were always airborne, well fueled, and carrying bombs, but these figures have lately been challenged without any response from Mr. McElroy's office) we have a capacity for visiting intolerable destruction on the Soviet Union. But the moment the Russians are ready with a truly versatile collection of ballistic and guided missiles, they could—in theory, at least—destroy the better part of our civilization without incurring any danger to themselves except that which might descend upon them when the winds returned to their skies some of the fallout from the warheads rained on us. To achieve a victory so nearly total, they would need a sufficient number of missiles to destroy the missile sites in this country, our SAC bases in other countries, and the few SAC bombers that might come lumbering into Russian air space on instructions from communications centers communicating their

last instructions. The SAC planes might be destroyed by guided air-defense rockets with a hundred-mile range—rockets the Russians claim they will shortly have. Thus, with a well-coordinated war plan, an aggressor could eliminate an adversary without suffering the loss of a single life among his own nationals. Never before in the history of warfare has this been so.

The day is coming, then, when we shall no longer be able to place any degree of trust in the "melancholy paradox," as Churchill put it, of peace being maintained through mutual fear of destruction. As long as piloted aircraft are still useful, terror will be roughly in balance and war will continue to seem inviting only to men with an unconquerable impulse for suicide. But when the Russians are really ready for combat with missiles, then aggression, meaning war, may very well appear a sane idea—even, one can imagine, a prudent idea. The doctrine of "preventive war" may once more make sense—for them, anyway. And this is by no means the worst of it. The balance of terror will still not be restored when—assuming that it ever happens—the missile gap is closed. For the speed of ballistic missiles gives the aggressor an almost absolute advantage over any enemy. The enemy may have the means of retaliation, but he has practically no time in which to decide to retaliate. He may have superb devices for detecting, at the earliest possible moment, that destruction is soaring toward him. His decision, once he has made it, may be communicated at the speed of light, which is still faster than that of any man-made object. But something has to happen between the moment of detection and the moment of response—and that something is quite a lot, and it has to happen in human minds. The procedure by which a decision to retaliate would be made is perhaps the most closely guarded of our military secrets. We know, though, that under the Atomic Energy Act the President is the only person who can authorize the use of nuclear or thermonuclear weapons, so, presumably, the President must be found, given the facts, and given time to make his grave decision. And even before this there has to be some evaluation of the data about the attack. Is the radar working properly? Could it possibly be a flock of geese showing up as missiles? (Geese have been mistaken for weapons on radar.) All ambiguities, presumably, must be filtered out. And then there are the unknown terms of our agreements with our allies. It may be necessary to get in touch with Downing Street or Bonn or the Elysée or Mecca. After evaluation and consultation must come the decision and the communication of it down the chain of command. No doubt the deciding and the communicating can be done in minutes, even seconds. But after all this comes the countdown, which must be gone through as long as all our rockets are fueled with liquid oxygen—a substance that cannot be stored as gasoline is stored in a car. The minimum time for this is about 20 minutes. It is estimated that the maximum elapsed time between the detection of the launching of ICBMs aimed at us and their impact on their targets would be 30 minutes. That leaves 10 minutes for everything else.

There is a possibility of restoring the balance of terror by the development of solid-fuel missiles that could be launched either from concealed and nearly indestructible sites or from mobile ones. Solid, and therefore storable, fuel would eliminate the need for a countdown, and missiles might be launched as soon as a decision has been reached. Indeed, if the means of detection were foolproof and if the necessary legal and political arrangements could be made, an aggressor's launching could simply trigger a retaliatory launching. A mobile site, such as a railroad flatcar or a submarine, or an impregnable one, such as the ocean floor or the inside of a mountain, would—in the foreseeable future, anyway—eliminate the likelihod of all our missiles being destroyed on the ground while the President was being fetched. We have no solid-fuel or mobile-base missiles operational now, and the only one that is in an advanced state of development—the Navy's Polaris, designed for release from a submerged submarine—has a short range, a low accuracy rating, and not very much of a warhead. (And the problem of communicating a decision to a submerged submarine is formidable, to say the least.) The most promising of our solid-fuel projects (it is an odd world in which "promising" comes to mind as a term for an instrument whose use would make certain the end of life over large areas of the globe) is the Air Force's Minuteman, an ICBM that is being designed for firing from anywhere, anytime. The Minuteman may be ready by 1965.

Our arms may prove useless as a deterrent force. We have, however, the capacity for a surprise attack of our own. It would not be preventive war, for we could not conceivably hope to destroy the present Soviet power of retaliation. And even if we had a good number of working missiles and could, in aggression, hope for as cheap a victory as Khrushchev may soon have in prospect, we would not, in our present frame of mind, strike the first blow. We know this, and we keep saying it, but if Khrushchev does not believe us when we say it, he would have to give the most serious kind of consideration to destroying us. Even if he accepted our good intentions, he might reasonably consider bring about our destruction, simply because it would be prudential insurance against an accidental war—the possibility of which increases every time a missile is mounted on its pad, every time a new radar tracking system is set up.

Fortunately, there are deterrents other than American arms. One must be the self-doubt of the Russians. They cannot ever be sure of their ability to destroy our power of retaliation. Another must lie in whatever remains of the consciences of the rulers of the Kremlin; they are human beings, and none of them could relish the responsibility that would be theirs for a willful act of aggression of such magnitude. Still another is in their view of life and history; they wish to inherit civilizations, and believe that they will. And, too, there is a certain amount of deterrent power in their own arms. An attack on a scale large enough to wipe us out would poison their air as well as ours, the more surely since thermonuclear warheads would have to be deposited on American bases all around the perimeter of their world. Furthermore, the destruction of those bases would mean war with the allies who have permitted us to place the bases on their soil. In many cases, the resources and populations which the Russians covet, would be destroyed. For the present, our need for our allies, our need for placing some part of our strength in their hands, may be greater than any need they have for us. In a full-scale war, our overseas bases would probably be useless from a military point of view; the Russians know where all of them are, and they could knock out every last one with missiles. But the existence of those bases is now immensely precious to us, for it greatly complicates any decisions the Russians must make. Still, there are people here who can foresee a day when the rules of the Kremlin might make a cool, purposeful decision—one meeting most of the requirements of good sense as they understand good sense—to lay waste to the United States and several of its allies.

It is not beyond our means to take many steps that would tend to discourage such a decision—to remove from it the elements of good sense and replace them with elements of folly. Some steps would be in the direction of more armament, some in the direction of disarmament. In the peculiar dialectic of the cold war, it seems always necessary to sprint in the armaments race and at the same time do our utmost to call the whole thing off; mobilization and demobilization are simultaneous aims. The Senate Preparedness Investigating Subcommittee is receiving expert testimony to the effect that our missiles program could be greatly accelerated—and specifically that we could double our Atlas ICBM production in the period just ahead. It is also being told that our airborne alert could be more alert and more airborne. The outlook for disarmament and for agreements to diminish the dangers of accidental war seems as bleak as ever at the moment, but the very effort to obtain such agreements in good faith has some of the value the agreements themselves would have. It keeps the issues alive and under discussion, it demonstrates concern, it encourages an awareness of the awful responsibilities of those who possess modern armaments. "We arm to parley," Churchill said, and we can parley to disarm—if not with hope of an early reduction of destructive force, at least with the hope of reaching honorable settlements of political questions by political rather than military means.

RICHARD H. ROVERE.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of February 21, 1959:

WASHINGTON REPORT
(By Congressman BRUCE ALGER, Fifth District, Texas)

FEBRUARY 21, 1959.

The Life Insurance Company Income Tax Act of 1959 was the year's first tax bill and major legislation from the Ways and Means Committee in which I participated as a committee member. Because this bill affects many people (there are even more insurance policyholders than taxpayers), because insurance is a unique corporate type of business, and its taxation is extremely complicated and technical, I had a real tax baptism. Insurance is already the most heavily taxed thrift institution and the trend is well established away from savings in favor of protection only. At the least, I suggested in debate that the economic impact of State and Federal taxes plus this increase should be more carefully studied. While the bill attempted to improve existing law, and did in several ways, I opposed it finally because of the 90 percent increase in taxes over last year which may well result in increasing insurance premiums and in expanding social security, the Government's competitive provision for everyone's future. (My brief analysis of this insurance bill will be mailed to anyone requesting it.)

Labor leaders' joint pronouncements deserve everyone's attention. AFL–CIO's Reuther announced a march on Washington of the unemployed. AFL–CIO's Meany, in Puerto Rico, announced labor's decision to demand more pay and shorter hours. How's that for logic? You are out of work, so your labor leader demands higher pay and Government intervention. Of course, the whole trouble of these two pronouncements

springs from the fallacious unconstitutional reasoning behind the 1946 Employment Act which implies that the Federal Government is responsible for employment.

In economic fact, this cannot be, regardless of the political and demagogic appeal. Nor do I think Reuther and Meany believe it either. They know, too, that elbow grease, initiative, and work provide employment, not another government made-work contract which must first drain the tax money from the people. The fact that government does not first get the money in before spending it does not change the simple economic logic that if you spend more than you take in, live beyond your income, you build inflation resulting in weakened currency and ultimate economic crash. The logic of Mssrs. Reuther and Meany is consistent only with that of socialists, not with freedom and free enterprise. If, because of government control and big spending economic freedom is lost, then necessarily all personal freedoms will go. This attempted economic security sought by government handout is not security at all, but a cancellation of all our freedoms, even as the prisoner in jail has the security of food, clothing and housing but lacks real freedom—to direct his life minute by minute, day by day, as he sees fit.

Battle of the budget department (U.S. News & World Report, Feb. 13). "Democrats are pushing programs they know the President will reject. Bills are framed to offer huge sums of aid to large groups. The political strategy: Show that the Democrats want to help people, but that a Republican President won't let them." Political attempts of this kind to take credit and place blame by spending our taxpayers' money, along with the labor leaders' demands, is absolutely contrary to the economic philosophy of free enterprise, the American way. Perhaps we should remember the 10 cannots, a modern addition to the Ten Commandments.

"You cannot bring about prosperity by discouraging thrift. You cannot help small men by tearing down big men. You cannot strengthen the weak by weakening the strong. You cannot lift the wage earner by pulling down the wage-payer. You cannot help the poor man by destroying the rich. You cannot keep out of trouble by spending more than your income. You cannot further the brotherhood of man by inciting class hatred. You cannot establish security on borrowed money. You cannot build character and courage by taking away man's initiative and independence. You cannot help men permanently by doing for them what they could and should do for themselves."

It was this philosophy of economic liberty which Abe Lincoln personified and which I endeavored to present in speeches over Lincoln's birthday. Liberals, the big spenders charging our costs of government to the future, as I see it, are doing something absolutely immoral, charging our bills to our children and grandchildren. Taxpayers today can vote. Taxpayers as yet unborn cannot vote. Let's unburden our grandchildren. Further, let's not talk about cutting our debt and taxes without practicing what we preach, namely, by cutting down the wasteful government spending programs and those in the welfare field.

George Washington's counsel in his "Farewell Address" has never been disproved: "As a very important source of strength and security, cherish public credit. One method of preserving it is to use it as sparingly as possible, avoiding occasions of expense by cultivating peace, but remembering, also, that timely disbursements, to prepare for danger, frequently prevent much greater disbursements to repel it; avoiding likewise the accumulation of debt, not only by shunning occasions of expense, but by vigorous exertions, in time of peace, to discharge the debts which unavoidable wars may have occasions, not ungenerously throwing upon posterity the burden which we ourselves ought to bear. The execution of these maxims belongs to your representatives, but it is necessary that public opinions should cooperate."

So, it's up to the voter—that's all there is to it. When will the people recognize, praise, and demand fiscal responsibility of the Congress? Now is the time.

A People-to-People Ship

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mrs. BOLTON. Mr. Speaker, on February 10, 1959, a group of private physicians and public spirited business leaders, with the enthusiastic endorsement of President Eisenhower and the medical and dental professions of the United States, announced one of the finest citizen efforts yet launched in the field of foreign relations.

Identified as project HOPE—health opportunity for people everywhere—the People to People Health Foundation announced plans to send the converted hospital ship *Consolation* on a continuing good-will mission to southeast Asia. This will be a floating medical center, visiting nations in that area of the world at the invitation of the medical professions of those nations—a truly people-to-people gesture of friendship.

The plan is to stay long enough in each area to give nationals of each country a chance to learn the latest in American medical technology. The ship will carry the latest in equipment, drugs, skilled doctors, dentists, and nurses. In addition, drugs, training aids, and equipment will be left behind for use in each country.

Expansion and improvement of medical teaching by the profession in countries visited will be a primary objective of the mission. The ship will also operate as combination floating hospital center medical schools, training and treatment center, a base for medical, nursing, and sanitation teams, and a logistical center for medical and health and exchange programs.

With the hope that everyone will get behind this splendid effort, I should like to include at this point in my remarks an editorial from the New York Times of February 9, headed "A People-to-People Ship":

A PEOPLE-TO-PEOPLE SHIP

The plan to take the Navy hospital ship *Consolation* out of mothballs and send her on a year's visit to Southeast Asia is most imaginative and at the same time relatively simple. The vessel will be a combination hospital and medical school. She will carry a complement of about 200 doctors and an equal number of nurses.

The possibilities of this operation are enormous. It is strictly a "people-to-people" project, appropriately sponsored by the People-to-People Health Foundation. The necessary funds will be provided from private sources, and the ship will be operated at cost by the American President Lines.

A first objective, of course, is to bring medical care to some remote areas where help is needed. The ship will actually serve as a hospital, a clinic, and a laboratory. Presumably it will stay for a considerable time in some ports where it is especially needed. But the plans go beyond this. The ship will also be used as a training school for persons in the various areas, who can get a sound first-hand look at certain techniques that would not otherwise be within their reach. In turn, those serving on the ship will have an extraordinary opportunity to make observations, to exchange experiences with persons in the field.

We have repeatedly commented on the need to make the exchange of technical skill and information and the actual giving of assistance as simple, human, and "person-to-person" as is possible. A congent criticism leveled against some of our programs has dealt with the plethora of blueprints, redtape, and the lack of human contacts.

The voyage of the *Consolation* should be subject to no such criticism, since it will attempt to go directly to the heart of the exchange of skills and the giving of aid. The ship itself will be seen. Its doctors and nurses will be there. And persons with whom we are concerned will realize that other persons really care about them and their welfare. There should also be no difficulty in obtaining the funds to pay for this mission. They could not be spent in a better cause.

An Answer to the Wheat Problem

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mr. ULLMAN. Mr. Speaker, on February 18, 1959, I introduced H.R. 4749, a bill which would establish a domestic parity plan for wheat.

I am convinced this legislation is a sound approach to our present wheat problems and I am hopeful that it will receive prompt congressional attention.

The February 5 issue of the Oregon Farmer contained an excellent article describing this program. I think Mr. Clancy Jean, executive vice president of the Oregon Wheatgrowers League is to be commended, not only for this fine statement, but also for his consistent and valuable work in support of the wheatgrowers of America:

GROWERS SEEK AN ANSWER TO THE WHEAT PROBLEM—SUGGESTED BY THE NATIONAL ASSOCIATION OF WHEATGROWERS: A MODIFICATION OF THE TWO PRICE PLAN AND BUSHEL ALLOTMENTS

(By Clancy Jean)

Only a person completely sheltered from newspapers, magazines, radio, and television doesn't know that wheat is the No. 1 farm problem in the United States today.

It might be of some interest to take a look at what the wheatgrowers have to say about the problem, since it is they who, in the final analysis, will have to make the necessary adjustments if a path is to be blazed out of the present maze.

When the National Association of Wheatgrowers met for its ninth annual convention in Denver just before Christmas, growers took

a long, hard look at their own situation and at the national picture.

Essentially, they gave cognizance to two basic factors: (1) There's lots of wheat. Further, in any evaluation of the present program, which resulted in the 1958 wheat crop of 1,450 million bushels, it is evident that present production control laws are inadequate. It would appear that, with respect to this point, they would be in agreement with Secretary Benson. So, the growers say a new approach is needed to stabilize production.

(2) From the grower's standpoint, the most pressing problem is that of maintaining sufficient income to purchase the products of industry and labor, which he needs for his operation as well as to retain a satisfactory standard of living in face of reduced acreage and rising costs of production. Thus, a new approach is definitely needed to stabilize income.

In developing their plan the Nation's wheat growers kept four basic concepts in mind:

Wheat growers' net income must be maintained if they are to reduce production below the current level;

The buildup of CCC stocks must be stopped and gradually reduced to a normal level;

Further reduction in acreage of wheat must not be shifted to other crops.

Increased yields per acre must not be reflected in increased Government holdings of wheat.

What is needed, the growers say, is to stop the buiudup of Commodity Credit's stocks, and even reduce them, while also reducing production through a program that takes increased yields into consideration and prevents diverted wheat acres from creating problems with other crops—do these things and maintain growers' incomes.

To accomplish this the Nation's wheat producers are proposing a production and income stabilization plan.

First off, they say, do away with acreage allotments and checking of compliance along with current marketing quotas—and substitute for these marketing allotments expressed in bushels.

They want marketing allotments based on the wheat base acreage for the average of the 1952–53 planted acreage. Each farm would receive a bushel allotment. This would be arrived at by multiplying the base acreage by the normal yield per acre, factored to the county allotment. Normal yields, they say should be based on the period that provides the most equitable relationship between counties and States.

For example, it would have worked out this way for 1958:

	Bushels
Estimated amount used for food in the United States	485,000,000
Estimated amount of U.S. exports	430,000,000
Total estimated demand	915,000,000
Less amount of wheat to be moved out of CCC stocks each year	75,000,000
National marketing allotment	840,000,000

The plan also calls for price supports of $1.60 per bushel for the national marketing allotment. This allotment, as shown above, would be spelled out for each farm in bushels and there would be a price support on this amount of $1.60 per bushel.

In addition, certificates would be issued on each grower's share of the 485 million bushels used for food in the United States. These certificates would be redeemable in an amount to return to the grower full parity on that portion of his production. Using 1958 as an example, food uses of wheat were equal to about 60 percent of the national marketing allotment suggested by the plan.

But, in order to be eligible to receive these certificates, the grower would have to put at least 20 percent—but not more than 30 percent—of his wheat base in the conservation reserve. Moreover, wheat growers insist that neither the $5,000 limitation nor the depletion of the soil bank base requirements should apply under this plan. They recognize, moreover, that a suitable cover must be maintained on the acreage placed in the conservation reserve.

Nor is this all the plan includes. The growers further believe that redemption of the certificates should be provided through the sale of the certificates to processors. This provision is taken from the domestic parity plan, long advocated by wheatgrowers. This would relieve the taxpayer of a major part of the costs of the stabilization plan, it is pointed out.

Wheatgrowers have long held that they are entitled to full parity for at least that portion of their crop that is used for food consumption in the United States.

The proposal, officers of the National Association of Wheat Growers maintain, would save the Federal Government an estimated $500 million per year, based on current costs. A condensed list of the possible savings shows the program would save the Federal Government $100 million from reduced export subsidies; $75 million for the annual storage costs of the proposed defense stockpile and remaining CCC stocks; $10 million for administrative costs due to elimination of acreage allotments and market quotas; $310 milion, brought about by not only arresting the annual increase in CCC stocks, but also by moving 75 million bushels from CCC stocks each year.

Additionally, the growers' plan calls for no restrictions on the use of wheat on farms where produced or when sold to other farmers or to bonded feed processors.

As outlined, the plan would provide a wheatgrower with income from four sources: (1) He would receive $1.60 (approximately 65 percent of parity) for his share of the national allotment, which is computed to be 840 million bushels for 1958. (2) About 60 percent of his bushel quota would be eligible to receive certificates, which when redeemed would provide him full parity on this part of his production. (3) He would receive soil bank payments from placing 20 to 30 percent of his wheat base acreage in the conservation reserve, which is a requisition of the plan in order to obtain certificates. And (4) should his production exceed his bushel allotment, this wheat could be marketed only to bonded feed processors, other farmers, or fed on his own farm—at no support level at all.

To implement the program, the growers believe that at least 500 million bushels of the present CCC stocks should be set aside in a defense stockpile. The wheatgrowers point out that stockpiles of food are equal in importance to munitions and strategic materials and this stockpile, like others, should be maintained as part of our national defense program. This is generally recognized as the minimum level of carryover advisable under current world tensions. The growers also note that costs of storage could be greatly reduced if bids for this defense stockpile were asked on a 5-year contract with a schedule of premiums and discounts that would permit turning of stocks by warehousemen.

The National Association of Wheat Growers insist the proposal will work only if adopted in its entirety. The association proposes that the plan be offered to farmers in a national referendum. Eligibility to vote would be based on those eligible to vote in the last wheat marketing quota referendum, and a simple majority of those voting should be sufficient to make it effective.

We Tolerate the Saturday Evening Post Editorials—But Just Barely

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the February 14, 1959, edition of the Saturday Evening Post and an editorial comment on the Post's opinions by my hometown newspaper, the distinguished Eugene Register-Guard:

[From the Saturday Evening Post, Feb. 14, 1959]

WE TOLERATE DEMOCRACIES OR DICTATORS, AS NATION'S INTEREST DEMANDS

Apparently following Dr. Milton Eisenhower's advice to embrace democrats and brush off dictators, the State Department recognized the regime set up by Fidel Castro in Cuba before Castro had even arrived at the capital. Immediately the Castro regime proceeded to demonstrate its democratic attributes by bumping off some of Batista's followers without trial and announcing the trial of hundreds of "war criminals." Since Nurenberg, the doctrine that a general in a lost cause is ipso facto a war criminal is presumably democratic. Nevertheless, Castro's acts, plus certain items in his history, might suggest the wisdom of letting the dust settle before deciding that Castro was just the democrat to embrace.

There appears to be considerable confusion in the ranks of those who think we should eschew dictators and embrace democrats. Some of those who took a lofty line toward Perón have no compunction about offering aid to Sukarno, who is doing a fair job at dictating in Indonesia. Others want us to recognize Mao Tse-tung's dictatorship over Red China—a dictatorship which even Yugoslavia's dictator Tito has criticized as too tough—but are horror-stricken because we haven't kicked dictator Trujillo, of the Dominican Republic, in the teeth.

What it all shakes down to is that an adult country shakes hands with democrats or dictators, whichever is in the national interest of the United States. We are polite to Franco because we need missile bases in Spain. We refuse to deal with Red China because of its threat to our security in the Pacific. We are generous to Tito because we hope to ferment continued discord between his type of communism and the old family brand put out by Moscow. We tolerate Trujillo and tolerated Batista because, with the Communists penetrating Latin America, it is a good idea to deal with men who can keep the Red penetrators under control.

Why we were so promptly cordial to Castro is more difficult to understand. As mentioned above, he has been trying and shooting his erstwhile rivals in true dictator style. He seized British property on the ground that the British Government had sent arms to Batista, as it had a perfect right to do. If the standard of "by their fruits ye shall know them" is still in force, Castro wouldn't rate high as a democrat. Indeed the Soviet press greets his victory as a fatal blow to "American imperialism" in Cuba.

But so squeamish has everybody become about dictators—except for Red ones like Mao, Khrushchev, and Tito—that a Latin American who overthrows a dictator is automatically embraced as a democrat. In England, which once would have sent a sharp demand to Castro to give back that prop-

erty or else, the London Daily Telegraph rebuked the Government for giving arms to Batista in the first place. And the United States, whose embargo on arms to the Batista regime is to a considerable extent responsible for Castro's triumph, has appeared indifferent to the precise nature of his regime.

Our advice, for what it is worth, is to forget "images" and judge these regimes according to their impact on the national interest of the United States. Once that simple standard is raised, it will be a lot easier to decide whom to embrace and whom to brush off.

[From the Eugene (Oreg.) Register-Guard, Feb. 17, 1959]

SOME QUESTIONS ABOUT QUICK RECOGNITION

The Saturday Evening Post, in an editorial, questions the readiness with which this country recognized the new Cuban Government of Fidel Castro. Would it not have been better, the magazine wonders, if we had waited for the dust to settle before giving Castro the benefits of U.S. recognition? The magazine goes on to be critical of some of the strong-arm stuff that went on in Cuba early this year, and asks why so many are so tolerant of Castro, who beat a dictator, yet so prone to advocate recognition of dictators like Mao Tse-tung.

The criterion for recognition, says the Post, should be the national interest of the United States, that and nothing more. We should "shake hands with democrats or dictators, whichever is in the national interest of the United States," says the Post.

We find several holes in the Post's arguments:

1. Recognition does not necessarily mean approval. We recognize Franco's Spain, Khrushchev's Russia, Tito's Yugoslavia, Trujillo's Dominican Republic, and Stroessner's Paraguay. Yet, few Americans approve of these regimes any more than we approve of Red China, which government we don't recognize. There seems to be little correlation between approval and recognition. Recognition, indeed, is not a warm embrace, but rather an official handshake.

2. Who is to determine the national interest of the United States? Is it not possible that our speedy recognition of the Castro government will make it less likely that Castro, a man who needs friends, will turn to Moscow? And is that not very much to the best interest of this country?

3. Today's best interests may turn out to be fodder for tomorrow's recriminations. From 1941 to 1945 the United States embraced the Communist regime in Russia. With American troops being shot at by Germans, it seemed in our best interest to encourage and help those who were shooting Germans. Included, to no small degree, were the Russians. Today, some of those who put the most faith in Saturday Evening Post editorials argue that we should not have been so helpful to the Russians because the Russian regime is, and was, per se evil. They criticise us for not having made a value judgment 15 years ago, but call us foolish if we attempt to make value judgments today.

4. If we were wrong in not waiting for the dust to settle before recognizing Castro, how settled should the dust have been before we made our choice? We waited 15 years before recognizing Russia. It has been 10 years since the Communists kicked out Chiang. Didn't we wait long enough in the Russian case, and have we waited too long in the case of China?

5. As we indicated in objection No. 2, sometimes "best interest" is a long-range gamble. If Spain is a hotbed of intrigue, with a revolution ready to blow up at any moment, as some observers think, should we withdraw recognition from Franco now, so that we'll appear to have been right when the new regime comes in? Would we have been wise to have withdrawn our representation in Batista's Havana when Castro's strength became apparent?

6. What ever happened to morality? How can one argue that it's right to urge revolution against the de facto government of China and wrong, because of national interest, to urge revolution against Trujillo?

Garnishment

EXTENSION OF REMARKS
OF

HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1959

Mr. LANKFORD. Mr. Speaker, the second of a series of articles dealing with garnishment in the District of Columbia is inserted in the Appendix of the RECORD:

[From the Washington Post, Feb. 2, 1959]

FORTY-SEVEN THOUSAND EIGHT HUNDRED AND SEVENTY-SEVEN GARNISHEED UNDER ANTIQUE LAW

(By Morton Mintz)

The District's bad debt law will be 58 years old March 3. No birthday parties are planned.

The garnishment law may some day, perhaps this year, undergo radical surgery in Congress. Meanwhile its get-up-and-go is positively youthful.

Last year, for example, it kept a couple of platoons of deputy U.S. marshals hopping around the city with 47,877 writs of attachment to be served on employers.

Because March 3 happens to fall on a Tuesday, a municipal court judge will find himself marking the law's birthday by spending hours hearing, granting, and denying requests for exemption.

Joining in this observance, a solemn one, will be numerous victims of garnishment, busy executives who have left their jobs to bring in payroll records, and many lawyers. It's really just another day—nothing special.

Let it be said that the law does have a band of devoted friends, the easy-credit operators. The reason for their devotion, of course, is that their friend the law lets them use the court as their collector.

The clerical staffs of the municipal court's small claims (up to $50) and "M" ($50 to $3,000) divisions compiled the following figures at the request of the Washington Post. They are for the year 1957, the last for which complete information is available:

Suits asking judgment against debtors filed by—	In small claims	In M division	Total
Hollywood Credit Clothing Co., 703 7th St. NW	1,471	2,311	3,882
Marvins Credit, Inc., 734 7th St. NW., and the same firm trading as Eiseman's, 7th at F St. NW	429	1,976	2,405
Crown Co., Inc., 827 7th St. NW	669	760	1,429
Bernard and Bertha Goldberg, copartners trading as Long's Clothiers, 731 7th St. NW	481	839	1,320
Leon A. Tashof, trading as New York Jewelry Co., 719 7th St. NW	342	927	1,269
Union Clothiers, Inc., 415 7th St. NW	652	526	1,178
Royal Credit Co., clothing, 741 7th St. NW	405	819	1,024

USERS OF SYSTEM

These seven firms lead the list. No one else sought so many judgments against debtors.

There is one exception, but it only emphasizes the point: The Chesapeake & Potomac Telephone Co. But the phone company, unlike the other firms, a spokesman said, has almost never used a judgment as a springboard for garnishment; almost invariably it has negotiated settlements.

The phone company, as a public utility, must give service to all applicants, except where a customer's credit has not been established (in that case, it requires a deposit).

A total of 58,225 cases were filed in the two court branches. The seven easy-credit firms filed 12,507 of these, or roughly 1 out of 5. Hollywood alone filed about 1 in 15. Each suit can lead to one or more wage attachments.

The combined business volume of the seven firms is known to be well into the millions. Hollywood's president, Herbert Kapiloff, in an appearance in municipal court on July 18, 1949, was told by Judge Milton S. Kronheim, Jr.:

"You are the owner of the business; you set the policy."

Kapiloff replied:

"Yes, sir; I am the owner, but we have 45,000 accounts, and I cannot watch each of them."

In a letter to the editor published in the Washington Post on July 23 of that year, Kapiloff said, "We file suit only as a last resort, after there has been a clear default in payment and the debtor by his conduct indicates no intention to pay."

LAW IN OPERATION

Yesterday's article illustrated some faults in the garnishment law; today's will take a closer look.

Who gets the bill? Persons who had nothing to do with an easy-credit purchase frequently find their wages attached to pay for it. Usually the unknowing guarantor is the husband or wife of the customer, but sometimes the name entered on the account is that of a relative. And there are cases in which an unrelated person's name has been used, for example, a landlady-customer's roomer.

If the supposed guarantor establishes that he is not liable for the debt he is in the clear. But if he should have the misfortune not to get the summons (it can be served on another adult on the premises, even on the purchaser who may wish to keep him in ignorance); if a default judgment is declared against him, and if the creditor sits tight for 90 days before attaching his wages—then the judgment is almost invulnerable to attack, and the guarantor must pay.

LOSS OF TWO CASES

Hollywood Credit recently lost two cases in this area:

A relative bought $100 worth of household goods under the name of Mrs. Blanche Wright, 2651 Nichols Avenue SE. The firm discovered the misrepresentation and sued the relative and then Mrs. Wright. Her first knowledge of the entire matter came when her wages were attached (the attachment was later set aside). She filed suit charging Hollywood with malicious abuse of the legal process. The store's lawyers said the attachment was made "in the regular course of collecting" and without malice. A $1,000 verdict in her favor was returned by a municipal court jury last December 9.

Harston Hall bought $91.25 worth of clothing in 1953. His wife Eula, 1327 U Street SE., said she had nothing to do with the purchase. The Halls later separated. The store sued her for the sum in 1957 and obtained a judgment. The municipal court

vacated the judgment and stopped the attachment. Despite this, she contended, the store went ahead and attached her wages, and the court upheld its action. But she appealed, and last Monday the municipal court of appeals upheld her. Judge Thomas D. Quinn said the store had abused its garnishment powers. Further, he added, "the existence of an ulterior motive may be inferred from this action which appellee is alleged to have done with full knowledge of the situation."

NO PROTECTION

Nonresidents of the District: However weak the exemption provisions are for District residents, they offer no protection at all for residents of Maryland, Virginia and other areas outside the District. The key point under the law is not where the purchase was made, but whether the customer's employer has an office in the District. If the employer does, the debtor's wages can be attached even if he made the purchase in Timbuktu, lives and works in Timbuktu and never set foot outside of Timbuktu.

Exemptions: The law says that 2-months' earnings, "not to exceed $200 each month," shall be exempt from attachment if the debtor is head of a household. (Sixty dollars if he is single.) However reasonable this might sound, it is so vague and weak that it breeds these troubles:

If the head of a household has earned less than $400 in the 2 months immediately preceding issuance of the attachment and wants an exemption, he must ask the court for a hearing to certify that he is head of a household. His employer must bring in pay records to prove the debtor's earnings.

Pending the court determination, his wages are frozen for a week to 10 days.

If he does not apply for an exemption he cannot get it; his wages will be attached. At least three out of five debtors do not apply.

Successive attachments may be obtained on a debt until it is satisfied. An exemption does not carry over from one attachment to another. Therefore, the debtor, if he wants an exemption, must go through the court process each time his wages are garnisheed.

A man may get one exemption. But, by an accident of the calendar, there comes a month in which he has five instead of four paydays, putting him over the $400 mark for 2 months.

CONFUSION CAUSED

This is one of the instances in which the vagueness of the law causes major confusion. For some judges interpret it to mean that only the sum in excess of $400 can be attached, while others say the entire sum can be attached and there is no exemption. It depends on which judge is on the bench. No case testing the interpretation of the judges in either group has ever been taken to the municipal court of appeals.

Senator JOSEPH S. CLARK (Democrat, Pennsylvania), put the case against the law's exemption provision this way:

It "is unworkable and economically unsound in that the majority of defendants never take advantage of it and it promotes a coercive influence on defendants due to the holdup of the defendant's salary until the litigation is determined."

Disrespect for judicial process: Chief Judge Leonard P. Walsh of the municipal court, says the garnishment law breeds this disrespect because the court is "used as a collection agency * * * rightly or wrongly, the employer and employee receive mandatory demands on them in the name of the court * * * the court appears to be in cahoots with the seller."

CREDIT FOR BANKRUPT

As the law now operates, even a bankrupt can get credit.

There is one case in which a mentally-ill woman made some purchases at three easy credit stores. Her husband did not know he was being made responsible for the debt. The upshot was that his pay was attached so many times that he lost his job and he was declared a bankrupt. Despite all this and the additional fact that he himself was a financial incompetent, two of these same stores again sold to him on credit.

A member of a District Bar Association group that studied the laws of 48 States says there are "probably more garnishments per capita here than anywhere else."

There were almost 48,000 of them here last year. And each of them, Municipal Court Judge Kronheim told a Senate District Subcommittee "is a tragedy—not a tragedy in a theater, but a tragedy for people consisting of flesh and blood."

Some intimates of the garnishment law believe the legislators who fathered and amended it through the years would be horrified by the true nature of their child. They might agree with Judge Kronheim that it is a monster.

In Memory of the Twelve Hundred

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mr. RHODES of Arizona. Mr. Speaker, there is a nationwide appeal for funds to construct a worthy shrine on the USS *Arizona*. This great ship, sunk by Japanese bombs on December 7, 1941, rests on the bottom of Pearl Harbor. Its metal sides are rapidly eroding, and the appearance it presents hardly does honor to the memory of the men who are entombed there.

One of our fine veteran educators of Arizona, Mr. Harold W. Smith, superintendent of the elementary schools of Glendale, Ariz., feels very strongly concerning the need to do something, not only to make the *Arizona* a fitting last resting place for those who gave up their lives, but to remind the Nation of the debt we owe to them and the many other brave men and women who perished on December 7, 1941. Mr. Smith's thoughts have been expressed in the following poem:

IN MEMORY OF THE TWELVE HUNDRED
(Who died about the battleship *Arizona* at Pearl Harbor, December 7, 1941)

They lie beneath the sea in watery graves of steel.
In their dark tombs they cannot see or feel
The sunshine and the light;
Theirs is the dark, the black eternal night.
Entombed in sacrifice that freedom might survive,
They now are dead while we are still alive.
Confined within the walls of dank and Stygian grave,
Those honored dead, they speak in pleading voice
On every wave that washes overhead and seals them in the night,
Reminding us that through the life they gave,
We still may walk in sunshine and in light.
Give us the grace, humility, and power
To build within our hearts an altar
Where burns the flame of freedom.
May we not falter till liberty and justice
Walk hand in hand wherever men abide.
Then shall those honored dead be free to walk with us
And see the reason why they died.

—*Harold W. Smith.*

Kentucky Depressed Areas

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mr. SILER. Mr. Speaker, it is a good time today and at this moment to emphasize and reemphasize again the economic conditions as they now exist in southeastern Kentucky and in other places at the present time. It is much better, I believe, for us to work up some jobs of ordinary livelihood for our own people than to continue to build airfields for Afghanistan or multimillion-dollar highways for Siam, as we have continually been doing under our foreign aid programs of the past few years.

My own bill, H.R. 3696, would, if adopted, serve to correct conditions and to invite industry into our depressed areas all over America through giving those industries income-tax exemptions that are willing to move into depressed areas and furnish jobs to the unemployed people. And the beauty about this entire proposal is that it neither requires any appropriation nor adds any employees to the Federal payroll.

In order to indicate the conditions now existing in one southeastern Kentucky county, I would like to call your attention to an article in the February 23, 1959, issue of Time magazine. These conditions cry out for correction. The need is jobs. The article follows:

KENTUCKY

NEVER A TIME SO BAD

"This mining town I live in is a sad and lonely place
Where pity and starvation are pictured on every face."

—*Harlan County Ballad.*

The pine-backed Cumberland Mountains walling off Kentucky's Harlan County from the rest of the world breed into the Harlan-born a primitive defiance. In years past, Harlan moonshiners disdained to dodge revenuers; safe on impenetrable hilltops, they patted rifles and taunted Federal agents with doggerel. Harlan justice was rudimentary; seldom was a killer hanged, but often one murder was avenged with another. And when the United Mine Workers set out 30 years ago to organize Harlan's prosperous coal mines, pitched battles between bloody Harlan's miners and company police brought out the National Guard so often that guardsmen were on first-name terms with miners they tossed into jail by the scores.

But bloody Harlan's defiance has long since given in to chilling despair. As the United States puts recession behind it, most cities and towns are speeding up production lines or hunting up new industry. Harlan County's one industry—mining—is dying; because of geography the county is unlikely to find others. Hundreds of unemployed coal miners are in privation's clutch, haunted by the specter of expired unemployment compensation and dwindling food supplies. Kentucky's Governor A. B. (Happy) Chandler has declared Harlan an emergency area. President Eisenhower was informed of the distress last week by Kentucky's two Senators, JOHN SHERMAN COOPER and THRUSTON B. MORTON. Private agencies make the rounds regularly with minimum food and clothes.

Prosperity's victims

Harlan's crisis has a combination of sources. For one, demand for its rich bituminous coal will never again match the good old day of the twenties, when production zoomed to 14.5 million tons a year. For another, Harlan's miners, members of the U.M.W. for the past 18 years, are in a sense victims of other miners' prosperity. Rising labor costs (Harlan operators have so far refused to sign a new U.M.W. contract under which miners would bet $14.25 a day to enter a mine, 76 cents more per ton to load coal) have spurred mine owners to mechanize. But Harlan's shallow (32 in. to 48 in.) seams make mechanization impractical. A third reason: rail costs from the heart of the Appalachian soft coal field have soared.

Ten years ago, 32 big mines were operating; today there are 9. The number of working miners has dipped from 12,500 in 1950 to 5,000. Few other jobs are available. Harlan is all hill and hollow, and the hollows are too narrow for farming or factories.

Rusty red dog

Despite the billion tons of rich bituminous coal still underground, conveyors and tipples are being sold for scrap metal; white-frame company towns such as Red Bud, Golden Ash, and Kenvir are boarded up and rotting; in Closplint and Punkin Center, streets rust-colored from a half century of "red dog"—slate and clinker dust—are quiet and deserted. Miners who could afford to have gone off to Paducah, Louisville, Cincinnati, or even Chicago. Others, who could not, are in worse trouble than in the depression thirties. In Kenvir (population 800), where the Peabody Coal Co. closed its mine a year ago and left 450 jobless, miner Orville Gibson, 44, stays behind because he cannot afford to move his 10 children. Hoping to find work in one of the smaller mines still operating, Gibson meanwhile feeds his family U.S. surplus rice, flour, and cornmeal, gets clothes and shoes from the Baptist Church.

Says Levi McGeorge, pastor of the Closplint Church of God: "I've been preachin' the gospel for 25 years, and I've never seen a time so bad." Adds 63-year-old Ben Middleton, a third-generation Harlan resident and a power in county Republican politics: "I watched this county build up, and now I'm awatchin' it go down. I don't see no hope."

Representative Daniel A. Reed

SPEECH
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. DULSKI. Mr. Speaker, I want to join with my colleagues in paying tribute to a fine man and a great American, Representative DANIEL REED.

I have been in Congress only a few weeks and had looked forward to his kindly assistance and wise counsel. I envy those who have had the privilage to receive his advice and guidance.

Mr. REED may not always have been in agreement with others, but he respected their thinking. Any time he participated in debate, he gave factual and concrete analysis of his thinking. Mr. REED was rugged in work but mild in heart, and was one of the great humanitarians of our time.

The good Lord has called him to his reward. Not only the State of New York but the entire country has sustained a great loss. We will find it most difficult to replace a man of his stature.

I would like to extend my sincerest sympathy to Mr. REED's wife, his son, and family.

Crime Prevention Is Concern of All

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD I include herewith an editorial entitled "Crime Prevention Is Concern of All," which appeared in the February 13, 1959, issue of the Messenger of Madisonville, Ky.

The editorial is as follows:

CRIME PREVENTION IS CONCERN OF ALL

This is National Crime Prevention Week. And if people are to judge by the reports which come at stated periods from J. Edgar Hoover and the Federal Bureau of Investigation, such a special week is badly needed.

During this week, civic clubs and other groups all over America are making special efforts to enlist the citizen in a greater program of crime prevention. Such a program, if properly planned and carried out, could prove to be one of the most worthwhile efforts of our crime-ridden age.

It is a sad fact, but true, that crime and rackets and easy money and big gangsters and the little gangsters who bear the unprintable name conspire to make crime pay in a big way—financially, that is. Some there are who think the total take of crime and rackets in the United States today rivals the gross national product—which means the total of goods and services produced and rendered by the law-abiding citizens of the United States of America.

People once thought that setting up strong walls and doors, posting guards and patrols, and other like measures would be effective crime preventatives. History shows these are but deterrents. The criminal too often has found means to penetrate these defenses.

True crime prevention must be a long-range matter, one in which all persons are enlisted from their youth.

Children need to be taught the need for self-control, the basic requirements of discipline, the fact that law and order are essential to modern society.

The children who learn these and related facts tend to grow into what we call law-abiding citizens.

Their elders have some lessons which they, too, can learn for the good of all.

The example of parents, the lives parents live, the manner in which parents obey the law instead of working to evade it, these things make a greater impression on their children than do words by the hour.

Nor should we minimize the effect of crime prosecution and the manner of its punishment.

A "slap on the wrist" for murder may satisfy the "bleeding heart" element, but it may so influence children and others that they, too, come to place a small price on human life.

Efforts to fix a parking ticket may seem unimportant to an adult, but they can fix in his child's mind the fact that anything is all right if you can get by with it through influence or other means.

So long as this age lasts, crime will be with us because there are those who disregard all but their own desires. But we can reduce the amount of crime by controlling our own actions and teaching our children to be law-abiding citizens.

We can also speak up for law and order, and back it with our votes at the polls.

Are Goods Being Priced Out of Market?

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mrs. ST. GEORGE. Mr. Speaker, for some time now there has been a cloud on the horizon no bigger than the palm of a man's hand. This cloud, though small, is very black and is made up of inflation and of the fact that we are being priced out of the world's market.

The following article by Harold B. Dorsey appeared today, February 23, in the Washington Post and Times Herald. The article gives the facts that we do not want to face, and tells a story we do not want to hear.

Mr. Speaker, when the storm breaks, it will be too late to face the facts or to listen to the story:

ARE GOODS BEING PRICED OUT OF MARKET?
(By Harold B. Dorsey)

The recent weakness in the price of crude oil both here and abroad, points up a condition that permits some generalizations on the subject of commodity prices, a matter of very practical interest at this particular juncture when there is so much talk about inflation.

The explanation for the price weakness in oil is quite simple. There's just too much oil in relation to current and intermediate-term demand. But this fact seems to be true of a great many other commodities.

Stimulated by Government price supports which have cost the American taxpayers billions of dollars, we now have a condition of overwhelming surpluses for practically the entire agricultural group. Very recently there was a cut in the domestic price of lead, in spite of the fact that we are experiencing an industrial recovery and have placed a partial embargo on lead imports. Our industrial recovery has increased the demand for copper and this has permitted some increases in the price. However, the industry's leaders are loath to see the price of the red metal climb much further because they fear that their customers will be driven to purchasing aluminum, of which there is an abundance.

There seems to be growing realization that the price of steel is already high enough to encourage imports of certain types of steel for the seaboard markets and that the price of steel included in fabricated products is already so high that it is helping to price such products out of world markets.

A friend recently returned from Europe tells us that he asked the head of one of the large foreign automobile producers if he was alarmed by the prospect that the large American auto manufacturers were going to put a small car on the market. The foreign manufacturer was entirely complacent about

his prospect, feeling positive that he would be able to serve the American market with a better value because his costs were lower.

There recently have been two published examples of English bids to supply electric power generating equipment to the United States at prices substantially below the lowest bid of the domestic manufacturers. In these instances, everybody's bid had to conform with the same specifications; so the lower foreign bid was probably a fairly accurate measurement of contrasting United States with foreign costs.

But how about textiles, where prices have been firming recently? In the first place, the prices are rising from a level that was practically profitless. Fortunately, the industry's inventories were low enough and demand was recovering enough to permit some price increases to offset the currently rising wage costs. Here again, it is quite clear that foreign production costs are lower than those of the United States industry, which happens to be a leader in the employment of American labor.

All of these facts pertaining to conditions that are operating in a negative way on commodity prices suggest that our price structure may already be too high as a result of (1) artificial price supports stimulating production and discouraging consumption, or (2) the wage-price spiral which is pricing some goods out of either domestic or foreign markets, or both, or (3) the complete restoration during the postwar period of foreign production facilities, and (4) the tremendous strides on the part of foreign producers in the direction of improved efficiency.

At least in retrospect, it is clear that the inflationary wage-price spiral could operate as long as the demand for goods both here and abroad was abnormally high as a result of (1) the restoration of producers' equipment abroad, (2) the sharp expansion of producers' and distributors' equipment in the United States, and (3) when there was an expansion of private debt at a rate that could not possibly continue without trouble. More recently, signs have developed that productive capacities both here and abroad may have been temporarily overexpanded. At any rate, that seems to be the story that is currently being told by an analysis of the supply-demand price conditions of important industries.

No doubt it will be contended that the foregoing condition does not represent excessive capacity or overproduction, but that the problem is associated with underconsumption. That is the argument presented to support recommendations that demand should be stimulated by Government deficit spending and by liberal credit that would stimulate another wave of excessive expansion of non-Government debt. The weakness in the argument centers around the simple fact that debt has to be repaid. The interest charges and repayment on debt must necessarily be a subtraction from the purchasing power of future earnings.

As pointed out in this space last week, interest charges on the Federal Government debt for the next fiscal year are budgeted at $185 per average family of four. And the servicing of private debt subtracts stil further from the purchasing power of current earnings. And whenever there is a sharp deviation from that principle, we head for trouble. There is an old economic adage which says: "There ain't no such thing as a free lunch."

The evidence is not all in yet, but the clues that are coming to hand are beginning to suggest very strongly that our price structure may already have been inflated to the point where workers and their output are being priced out of their respective markets.

Fair Trade Legislation

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mr. HARRIS. Mr. Speaker, on January 7, 1959, I introduced a bill—H.R. 1253—to establish a national fair trade law. This legislation would make it lawful for a manufacturer to establish and control, by notice to his distributors, stipulated or minimum resale prices for his trademarked or brand-named merchandise, if such merchandise is in interstate commerce, or is held for sale after shipment in interstate commerce, and is in free and open competition with merchandise of the same general class produced by others.

The bill would make it unlawful for a distributor, with notice of applicable stipulated or minimum resale price on such merchandise, to sell, offer to sell, or advertise such merchandise in interstate commerce at a different, or lower price, as the case may be. Any person suffering, or reasonably anticipating, damage by reason of violation of this legislation may sue in any State or Federal court of competent jurisdiction for damages and injunctive relief and be entitled to recover the cost of the suit, including a reasonable attorney's fee.

This bill is for the purpose of aiding small business from the onslaught of unrestrained, cutthroat competition of large chainstores, department stores, and discount houses which have been flourishing as a result of a breakdown of effective State fair trade laws. It is substantially identical to the bill recommended by the Subcommittee on Commerce and Finance of the House Committee on Interstate and Foreign Commerce in the last session of the 85th Congress.

My attention has been brought to an excellent statement on this subject by Mr. Ed Wimmer, which appeared in the January 12, 1959, issue of the Cincinnati Enquirer. Mr. Wimmer is vice president of the National Federation of Independent Business which has a membership of approximately 120,000 members made up exclusively of independent business and professional men.

Under leave granted to extend my remarks in the RECORD, I should like to include Mr. Wimmer's statement:

CONSUMPTION CUT BY CHEAP PRICES—UNFAIR TRADE CREATES MONOPOLY, DESTROYS JOBS, REDUCES TAX REVENUE

(By Ed Wimmer)

The growing realization that unfair competition is not only destroying thousands of businesses, but is lessening production and decreasing employment in the distribution field, promises passage of a strong fair trade law during this session of Congress. As summed up by John W. Hubbell, vice president of the Simmons (mattress) Co.: "In the wake of price cutting, there is a shortened markup and profitless selling by the retailer. This creates a chain reaction, which results in the unwillingness of most stores to sell this merchandise at an inadequate markup. In fact, the salespeople in the stores are compelled to discourage purchase of profitless items, leading to misrepresentation and a diminished volume of total goods sold."

Let me ask you: shouldn't a manufacturer who spends millions to develop and market a quality product, and who spends more millions to establish acceptance, have the right to protect that product from a type of competition that ruins its reputation and sales?

The discounter claims that once he obtains ownership of a product by purchasing it from the maker or a distributor, that it is his to do with as he pleases—no matter what the consequences. He loudly claims that any attempt to protect the maker or reputable distributors from his depredations, is harmful to the consumer.

Fair traders, like ourselves, have never believed that predatory competition is good for anyone but the most predatory, and it is good for them only so long as their unscrupulous practices are unexposed. When an item is offered as a lure—and is sold at or below cost—its sale provides no profits to the seller, so he must make up for the loss in one way or another. His competitors may meet his tactics for awhile, but soon they quit handling the bootlegged product, which caused layoffs at the factory, in the stores, and in all other channels affected by an unsteady flow of goods.

There is a false impression in this country that cheap prices result in more buying, but in every area of the economy where cutthoat competition has been at its worst, volume goes down, tax revenues are reduced, jobs disappear, stores are emptied, salesmen and clerks are laid off, expansion and modernization plans are dropped, advertising revenue falls, and public confidence wanes. Isn't this what we had in 1932—with hamburger 6 cents a pound?

Even in the case of cheap milk sales no increased consumption showed up in the worst hit areas; except in home deliveries where consumers bought their regular needs at regular prices. When they quit home delivery for the low price offers consumption dropped off.

This is a profit country and if legitimate profits are not widely spread throughout the economy there is no real expansion, no new venture, no real progress in any direction. When consumers deprive a service station operator of his profits by demanding trading stamps or buy gas in a price war, they help themselves only for the moment, for by depriving others of their just returns for their services, goods, or labor, the prosperity level of the community is hurt that much, setting in motion the chain reaction mentioned by Mr. Hubbell.

Companies like Sunbeam, Bissell, Fisher Pen, Parker Pen, Champion Spark Plug, E. I. Lilley, Colgate, and others, who have fought for fair trade laws, are not inefficient people looking for an umbrella, as the discounters claim. They are reputable firms who know that fair wages and fair profits must come out of fair prices and that unfair competition destroys all three.

The Late Honorable Daniel Alden Reed

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent, I include in

the Appendix of the RECORD the following telegram from the St. Bonaventure Alumni Association, of which our late colleague, Daniel Alden Reed, was a member:

WASHINGTON, D.C., *February 19, 1959.*
Representative KATHARINE ST. GEORGE,
House of Representatives,
Washington, D.C.:

We have suffered great loss in the passing of our distinguished honorary alumnus Daniel A. Reed and join with all his friends and admirers in their expression of sympathy on this sad occasion.

WASHINGTON D.C. CHAPTER ST. BONAVENTURE UNIVERSITY ALUMNI ASSOCIATION.
WILLIAM J. ANGER, *President.*

"And All Her People One"

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech which I delivered last Friday night, February 13, before some 300 Oregon Democrats gathered for a fund raising dinner in Salem, Oreg.:

EARTH MIGHT BE FAIR

On January 4, the Sunday just before the convening of the 86th Congress, I attended a church service in Washington, D.C., invoking the blessings of God on the work of this Congress. One of the hymns, "Turn Back O Man," was familiar but it took on a particular meaning for me in connection with the jobs we Democrats have to do in Salem and in Washington, D.C. You may remember the exhortation, "Turn back O man, forswear thy foolish ways."

Here is the second verse:

"Earth might be fair and all men glad and wise,
Age after age their tragic empires rise,
Built while they dream, and in that dreaming weep,
Would man but wake from out his haunted sleep,
Earth might be fair and all men glad and wise."

Earth might be fair. We have the resources, human and physical. This evening I will talk about some foolish ways we might well forswear and about four places on this earth: Latin America, Washington, D.C., Oregon, and China.

Yesterday morning I was in Venezuela as a guest of the President who was formally inaugurated today. A few weeks ago I went to Cuba and spoke with Fidel Castro. Next weekend I shall confer with him again and make a speech in Santiago near San Juan Hill where Americans and Cubans mingled their blood on the battlefields in their common cause against the Spanish oppressors.

THE POLICY WAS TO KOWTOW

In my first term in Congress I accepted invitations twice to Puerto Rico and once each in Costa Rico, Colombia, Venezuela, and Honduras. As you may remember, my interest in this area arose from my investigation into the disappearance of Gerry Murphy of Eugene. The Dominican official explanation of his death was officially rejected by the United States, but only after a period of reluctance during which I learned, to my surprise and dismay, that our usual policy was to kowtow to non-Communist dictators.

Certainly this is a foolish way we must forswear, and we are in the process of doing just that, if earth is to be fair. We cannot attempt to lead the free world and appear to be faithless to our own revolutionary origins and deepest traditions of freedom.

It is a surprise for me, and at times a little embarrassing, to see how famous I am in Latin America and how newspapers up here refer to me as a Latin American "expert" or "specialist." All I have done is reaffirm that we norteamericanos remember our own Revolution against a tyrant. We like governments of and by the people based on law. We hate tyrants. Nothing very new or radical about that position, except that somehow our State Department had given the impression in Latin America that democracy was only for us and that we preferred to deal with "strong man" governments. This was wonderful for the Communists but not for us. The United States was identified with the tyrants and the Communists with the democratic elements opposed to tyrants.

A CHANGE FOR THE BETTER

It is gratifying to be able to say that our official policies are changing for the better in this respect, thanks to the Vice President's exciting trip, Milton Eisenhower's report, and perhaps some of the protests made by me, the New York Times, the AFL–CIO, and many others.

In all these matters I am conscious of my ignorance and I try to keep in touch with experts, including those in the State Department. Generally, my activities for democracy and against dictators have been warmly approved by career men in the Department of State. Recently I received an enthusiastic letter from the top man in our Embassy in Havana with respect to my visit in Cuba.

NOT FOR THE GOP ALONE

Yesterday was the 150th anniversary of the birth of Abraham Lincoln, a man I refuse to give to the Republicans, a man much respected and loved in Latin America. One hundred and one years ago Lincoln said: "Our reliance is in the love of liberty which God has planted in our bosoms. Our defense is in the preservation of the spirit which prizes liberty as the heritage of all men, in all lands, everywhere."

Let us now leave Latin America and turn to Washington, D.C., that city of alcohol, protocol, and Geritol. We do have a feverish pace. Last week my very able right-hand man, Jack Billings of Eugene, collapsed to the floor by his desk and had to be carried out on a stretcher. The doctors finally decided he had had a coronary without damage. He spent 4 days in the hospital and is now back at his desk.

As in Salem we in Washington, D.C., face great and urgent legislative challenges. We Democrats with our majorities have the opportunity and the responsibility. In Washington Senator JOHNSON has outlined a fine legislative program, a positive program, which I will be discussing as I travel around the Fourth Congressional District in the next few days.

"JUST A POLITICIAN"

The other day my colleague, the gentleman from Georgia, PAUL BROWN, told me about the politician who found a farmer in the backyard milking a cow. The farmer's wife called from the house to ask who he was and the farmer answered, "Just a politician." "You come right in the house," she yelled back, "and bring that cow with you."

Politicians are, as the libel lawyers put it, objects of fair comment which, you may have noticed, often includes a lot of unfair comment. "If you can't stand the heat, stay out of the kitchen," Harry Truman advises.

Alben Barkley and several brother Senators were once on a junket in a Middle Western State. Their bus stopped at a crossroads store. Alben and another Senator got out to stretch their legs. Alben spotted a native leaning against the store and proceeded to impress on him what a superduper Congressman this man had working for him in Washington. As they got back on the bus, the other Senator asked Alben, "By the way, what is the name of the Congressman from this district?" "Darned if I know," shrugged Barkley, "just some guy like you and me, trying to get along."

IN THE PUBLIC EYE

We politicians are, after all, only human beings, human beings often under tremendous strains. Of course, this is true in other lines of work except that the results do not receive so much public attention.

Let us consider the case of our two Senators. We talk about this privately. I think it is time to say something publicly. DICK and WAYNE were not getting along as we would wish. WAYNE's reception of DICK yesterday in the Senate and DICK's remarks are most encouraging. Both these men drive themselves hard. They are conscientious, intelligent, and courageous. They are human beings.

In partisan politics there is a tendency to choose up sides, a sort of polarization along adversary lines. This hasn't happened but it could happen. The Knight-Knowland rift didn't help the Republicans in California, nor would a MORSE-NEUBERGER split be an advantage to us in 1960.

I know that a few of you here tonight and some who are not here have already decided you are for one Senator and, hence, against the other. I tell you this is wrong. You don't and you can't know enough of all the circumstances to make any such judgment.

NO SIDES TO CHOOSE

I tell you this is unnecessary. The differences between them have not kept them from working effectively together on almost every issue. Naturally some of the newspapers try to blow the matter up. Last year I saw them quietly conferring in the Senate at a time when, if you believed some of the newspapers in Oregon, they were practically at each other's throats. Of course the Republicans want to encourage them to fight each other. How foolish of any Democrat to help in any way.

The test to apply to our Senators is not how amicably they get along but rather what they accomplish for the peace, prosperity, and freedom of the Nation. By this test they rank high on any list of leading Senators. They deserve our support and our friendship and I believe they have both. We are proud of them and their deeds which have earned them outstanding national reputations for political courage and intelligence. We grieve when they do not get along. We hope and pray that, for their own peace of mind, their differences will end. We will do all we can to speed that day.

NOT SAINTS, NOT LOST SINNERS

A politician, like anyone else, makes mistakes. Excessive adulation and excessive vilification are heaped on him. Seldom is he seen as just a guy trying to get along, to do this important, complex, and trying job as best he can.

Earth will be fair indeed when more citizens will evaluate their public officials as human beings, not as irreproachable saints or as unredeemable sinners.

Turning now to Oregon where the earth is fair in so many ways, but where too many persons are unemployed and where our per capita income is distressingly low. Our State is 100 years old tomorrow and naturally we look forward as well as into the past.

Certainly this celebration should call for a political truce. I congratulate Bob Holmes

and the Democrats for their nonpartisan spirit in this matter. I reproach the few Republicans who delayed the issuance of the invitations to Mrs. Franklin Roosevelt, the Trumans, and Mr. Hoover. The centennial has no room for petty politics. The next hundred years will give us ample time for both petty and grand politics.

WHAT IS ESSENTIAL?

I read the Governor's inaugural address with great interest. Much had merit, just like the messages the President sends to Congress. What we now look for is deeds to match words. The spirit, however, seemed to me to be defeatist as indicated by his slogan, "Is this essential or merely desirable"? To the extent it has any meaning it denotes conservatism, caution, fear, when what we need, if earth is to be fair, is courage and confidence in the future of our great State. Hope, not desperation, is what we need now.

Oregon should stride into its second century, erect and unafraid. Is it essential that our children be able to go to college or just desirable? Only 18 out of every 100 of Oregon's eligible young men and women enter a 4-year college now. Is it essential that we have a full-time parole board or just desirable? Is it essential that Oregon families eat three meals a day or merely desirable?

Governor Hatfield's historic slogan belongs in history. It cannot help him or you or me answer our problems of progress in the present and future. All it really shows is a Republican attitude of despair and defeat.

OUR PROBLEMS ARE CHALLENGES

Our present economic position is bad. The latest figures from the Department of Labor show that 10.4 percent of the insured Oregon workers are drawing unemployment benefits. This is the highest in the Nation. We were also atop this dubious pinnnacle in January of 1957. Last year, in January 1958, we were one-tenth of a percent from the top with only Montana edging us out for this tragic booby prize.

We have areas of chronic unemployment. The Labor Department's list of major labor surplus areas includes Portland, Albany, Coos Bay, Eugene, Pendleton and Roseburg. Our per capita income figure for 1957 was $1,914, California's was $2,504, Washington's $2,128, and the national average was $2,027.

Between 1940 and 1953 the average Oregonian made 1.2 percent to 11.9 percent more money than the average American. Since then, that is since the coming of the Republican Eisenhower administration, Oregon's personal income has risen but not as fast as the national average, with the gap growing even wider. We Oregonians make our living mainly from our timber resources, then, much less, from agriculture and tourists. Each area is capable of tremendous expansion. Our potentialities give us no reason for despair. We can hope to provide our citizens with many desirable services. Our problems are challenges, not chains.

TRADE WITH MAINLAND CHINA

I want to conclude by recommending a change of national policy that could help Oregon become a prosperous State, in fact, a truly maritime State. Oregon fronts on the Pacific Ocean, a great highway for trade. We can only improve the benefits to cost ratios for harbors like Reedsport and many others if we open up trade with mainland China and vicinity. We now enforce a total embargo on our trade with China, a policy that began in 1950. The position of the administration remains as stated to me in a letter from the State Department April 17, 1957, "This country definitely intends to continue the embargo."

We who want this trade resumed only ask that we be permitted trade with China on the same basis we now trade with the Soviet Union. This of course means trade in only nonstrategic items.

China's trade is estimated at about $500 million per year.

In 1931 Oregon and Washington sent 314 million board-feet of lumber to China, whereas in 1956 these States only sent 299 million board-feet to all other nations. In terms of 1954 dollars the 1931 China trade in lumber alone would have meant $16,221,004 for operators, woodworkers and longshoremen in these two States. A similar situation exists for wheat and flour.

POTENTIAL IS STAGGERING

Ivan Bloch, a leading industrial consultant in Portland, says "potentials of this trade stagger the imagination." He predicts "a great possibility of numerous new jobs and industry in the Pacific Northwest if trade with China is reopened."

Restrictions on trade only serve to postpone, but cannot prevent, the development of the military power of Red China. Effects of embargoes are now evaded by purchase or barter from other countries of the items which we refuse to ship to Red China. To say that certain items cannot be shipped to Red China and then permit them to be shipped to Russia, from where they are forwarded to Red China, serves no purpose so far as hampering the Red China regime is concerned. What is accomplished is to strengthen the ties between the Communist countries. On the other hand, increased trade between the United States and Red China would be a means of weaning her away from the Soviet bloc.

Removal of barriers to trade with China would greatly benefit Japan, whose primary market has historically been the Asiatic mainland, mostly China. Resumption of trade with China would reduce the need for the export of many Japanese goods to the United States. Opening of the Chinese markets to Japan would remove from competition in the domestic markets of the United States many goods which are now a primary target for domestic protectionists.

TRADE FOR TRADE'S SAKE

Questions of trade and of diplomatic recognition of the Peiping regime can be considered separately. Trade should be considered on the basis of "trade for trade's sake" and trade questions not mixed with international politics. Efforts of "Yankee traders" were prime factors in the greatness achieved by the United States. That trade should not be unduly hampered now, trade itself being the greatest weapon in the hands of a diplomat and, if skillfully used, can be a great instrument of government policy.

Some former "China traders" are of the opinion that United States machinery, trucks, automobiles, metals, specialized equipment of all kinds, petroleum, and certain agricultural products could now find a good market in China. The Peiping regime has indicated interest in the purchase of capital goods and petroleum. Trade is now conducted by the Peiping regime, which tend sto bypass traders and warehouses to deal directly with governments, or, if that is impossible, directly with producers in the country from which they purchase goods.

Advocates of increased trade see a market for large quantities of capital goods continuing over many years. They are dissatisfied with restrictions which keep them out of the trade and permit Great Britain and other European country traders to lay the foundations for possible future trade. United States trade with mainland China would contribute to an improved standard of living for the Chinese people, creating a market for many of our consumer goods. Chinese people would be able to see how much better goods are produced in the United States.

A SOURCE OF IRRITATION

The United States must create friendships with other peoples. Increased trade with China would remove a source of irritation. The smoothing of trade relations would pave the way toward long-range adjustment of Asian problems. Hostility is determined by many factors other than economic strength; a strong industrialized Red China would not necessarily be an increased threat to the United States. Rather, Red China, through economic strength, will be in a position to assert independence of the Soviet Union and to oppose further Soviet penetration of the Chinese economy. Since trade with the West would not be a temporary, but a continuing benefit to China, it would be difficult to see why she would endanger that benefit by action which would threaten the United States, since China would have so much more to lose by any such action.

American policy should be based on considerations of the benefits to the West from trade in nonstrategic goods as well as consideration of that portion of trade which benefits the Communist world. Certain goods, when sold, are strategic to the selling nation's economy. Where trade yields a net advantage to the West, it should be allowed and should be used, if possible, as an instrument for extending Western influence inside the Communist borders.

The blockade is ineffective. The Red China regime has not been undermined, but only forced to rely almost exclusively on the Soviet Union. The time for a change in our policy is here.

Last Year the Oregon grange strongly endorsed this point of view.

Senator Knowland has been removed from politics. In January last year the California Democratic Council urged resumption of trade with China.

SENATOR MORSE ON DULLES POLICY

On July 4, 1957, Senator MORSE said, "One of the results of the shortsighted Dulles policy is to turn over to our allies the economic advantages of trade in nonstrategic goods. Pacific coast States are suffering great losses as a result of the boycott."

Henry Ford II, in January of 1957, pleaded for realism with respect to trade with satellites. He asked: "Shouldn't we give the people of Red China some alternatives to their present ties with the Kremlin?"

Even President Eisenhower in June of 1957 said, "I am personally of the school that believes that trade, in the long run, cannot be stopped * * * I don't see as much advantage in maintaining the differential as some people do, although I have never advocated its complete elimination." The "differential" to which he refers is the additional embargoed list for China over the list for the Soviet Union. It is, of course, too much to hope that the President's views would be reflected in action.

THE TIME IS NOW

My chief legislative project in the 86th Congress is the removal of this embargo. Nothing could mean more to Oregon's economy. I am having the necessary legislation drafted. I am encouraging the organization of the many persons who believe strongly in the political and economic benefits of trade with China. We are, I am sure, more powerful than the miscalled China lobby and the committee of one million. I am talking with Pacific coast Congressmen like JACK SHELLEY, of San Francisco. I am gathering evidence from Government departments, shipping companies, and elsewhere. I hope that the Committee for Trade with China, now being formed, will soon send a delegation to Washington to confer with congressional proponents, with the Secretary of State and the President. If it is not possible to arrange immediately for a congressional sponsorship of a trade mission to China, then the Committee for Trade with China should sponsor such a mission. I would gladly be a member of such a mission

and I know other Congressmen and other Oregonians who want to be included.

The time for Oregon to became a maritime State is now.

FOOLISH WAYS, FOOLISH WAYS

Oregon's unemployment must go down and her per capita income must go up. Foolish ways, such as no new construction starts for public works, tight money policies that depress the lumber market, trade policies that cut us off from natural markets—all these and more foolish ways must be forsworn if our earth will be fair and all men glad and wise.

It is up to us Democrats to provide the leadership. We will meet the challenge both in Salem and in Washington, D.C. We will go forward into another hundred years of achievement for the families who make Oregon their home. We Democrats believe that we can improve our society if we are determined and if we use the abilities God gave us—and if we are not afraid to make mistakes from time to time and start again.

We Democrats are fully in accord with the closing verse of "Turn Back O Man":

"Earth shall be fair, and all her people one,
Nor till that hour shall God's whole will be done.
Now, even now, once more from earth to sky
Peals forth in joy man's old undaunted cry,
'Earth shall be fair, and all her folks be one'."

Thank you very much.

UMWA Vice President Kennedy Says Russians Would Cut Your Throat

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1959

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Hon. Thomas Kennedy, vice president of the United Mine Workers of America, appearing in the United Mine Workers Journal of February 15, 1959, in which he advises Soviet friends in the United States that Russians would cut your throat.

KENNEDY RAPS SOVIET FRIENDS IN UNITED STATES—SAYS RUSSIANS WOULD CUT YOUR THROAT

(EDITOR'S NOTE.—UMWA Vice President Thomas Kennedy is a longtime foe of communism. His hatred of that philosophy is based on personal observation of "Commies" at work here in the United States and on what he has seen during his extensive travels in foreign lands. Recent Soviet attempts to lure the United States down the primrose path of peace and coexistence reminded Kennedy of similar attempts in the past. In a recent speech, he warned that this was only another approach toward Russia's real goal, world domination and control. He formalized the thoughts he voiced in that speech into a formal statement for the press. The full text is printed below.)

Is history being repeated? In the late 1920's a distinguished public relations firm in the United States started to build up a case in the public's mind for recognition of the Soviet Union of Russia by the Government of the United States. This public relations outfit represented some of the largest industrial and financial interests in this Nation.

At that time the United Mine Workers of America opposed recognition of Russia and pointed out the dangers involved if our Government accorded such recognition. Briefly, we pointed out that it would result in all of the consular agencies of Russia in the United States being the means of infiltration, propaganda, espionage and everything else, which subsequently proved to be correct.

The basic policy of Soviet communism is for world domination and control. In fact, one of the founders of this ideology is quoted as saying that "Russia could live and coexist with other governments and with other countries to the point where it was necessary to accomplish world aims."

At the present time in the United States, it seems to me that vigorous attempts are being made build up cases for the American people to coexist and get along with Russia. The recent visit of Soviet Deputy Premier Anastas I. Mikoyan to many sections of the United States was probably the principal propaganda effort thus far in support of the coexistence program.

It is surprising to me in my travels to talk to people throughout this country who mostly voice the same opinion on this subject. I might emphasize, however, that this attitude comes not from among the ranks of labor or among the officers of labor unions, notwithstanding that officers of a subordinate labor union, under guise of freedom of speech, held meetings with Mr. Mikoyan during his American visit. This maneuver on the part of these individuals will be exploited in Russia and I venture the statement that there is very little, if any, freedom of speech in Russia.

From our experience with the Soviets, the first attempt to make inroads in the United States was to attempt to destroy the United Mine Workers of America. In their efforts to accomplish that purpose, a union was formed in Moscow called the National Miners' Union. Fortunately, however, the mineworkers of the United States resisted the infiltrating tactics of the Soviet regime. As an illustration of the attitude and action of the United Mine Workers of America, the leaders of the Communist movement were driven out of the State of Illinois with pick handles. Furthermore the Commies held a convention in Pittsburgh, Pa., which was the first and last they held anywhere in the United States.

If the American people adopt the program that is being built up for them, we can look for repetition of what happened in the past. Personally I have no desire to work with, or coexist with, people who would cut your throat at the opportune time. Russia, at this moment, through bartering arrangements brought about as a result of subsidies and loans, is helping to destroy the American coal and other markets in Europe, insofar as American exports are concerned. They are also bartering with the Scandinavian and Latin American countries. They have made barter arrangements with France and Belgium. In fact, just recently the West Germans purchased a million tons of brown coal in Eastern Germany. Furthermore, France has been importing Russian anthracite to displace American anthracite at a much higher cost to the consumer than American anthracite.

As further proof of why we should mistrust Russia on all fronts, I would point that a recent State Department release of information concerning the shooting down of an unarmed American plane should be enough to open up anybody's eyes. This is just another instance of Russian policy over the years and, in my judgment, it will continue to be their policy. However, despite the fact that Russia has been putting the knife into our backs in all of these economic and military situations, they still have the gall to ask us for cooperation and coexistence, which to my mind is utterly ridiculous.

As one who is a little familiar with the situation in Europe, I am putting these few words together as a matter of information and hope they will be of some value and interest to the American people and our Government.

A Tribute to the Late Daniel A. Reed

SPEECH
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. MASON. Mr. Speaker, when our colleague, DAN REED, passed away, a towering oak fell making a great gap in the forest of men that time and time alone can fill. This House of Representatives will not be the same without DAN REED.

Several years ago I spoke for Congressman REED in his congressional district. On that occasion I said that his people must have selected him to represent them in Congress as the Israelites of old selected King Saul, their first king. They looked around for a man who stood head and shoulders above the common crowd. As the Good Book expresses it:

He was higher than any of the people from his shoulders and upward * * * there is none like him among all the people.

DAN REED towered above the rank and file of men. Physically, mentally, morally, and spiritually he stood head and shoulders above the average member of society. He was a man among men, a leader, an inspiration to others, a man of strong convictions, steadfast and true.

Congressman REED will be missed—by his friends, by his people, but most of all by those who were near and dear to him.

To his loved ones and to his friends I offer the following comforting words from an unknown poet. They are words of faith and hope in the midst of sorrow and loss:

THERE IS NO DEATH

There is no death! The stars go down
To rise upon some other shore,
And bright in heaven's jeweled crown
They shine forevermore.

There is no death! The dust we tread
Shall change beneath the summer showers
To golden grain, or mellow fruit,
Or rainbow-tinted flowers.

There is no death! Although we grieve
When beautiful familiar forms
That we have learned to love
Are torn from our embracing arms.

Although with bowed and breaking heart,
With sable garb and silent tread,
We bear their senseless dust to earth,
And say that they are dead.

They are not dead! They have but passed
Beyond the mists that blind us here
Into the new and larger life
Of that serener sphere.

Tho' disenthralled and glorified,
They still are here and love us yet:
The dear ones they have left behind
They never can forget.

Appendix

The Conspiracy Is Unfolding

EXTENSION OF REMARKS
OF

HON. ROLAND V. LIBONATI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. LIBONATI. Mr. Speaker, time is of the essence in everything but medical science. But if we wait long enough, we may discover that the cocoon—plot—comes first, and then after the chrysalis—scheming—stage, we may get a butterfly—conspiracy.

And so it is with Krebiozen, as the persevering and innocent Dr. Andrew Ivy battles his way through the barriers set up by the opposition—more and more the conspiracy unfolds.

I notice that on the board of directors of the American Cancer Society are familiar names; one, a powerful, important, and influential person who has been a star performer in the Krebiozen question from the very beginning. No wonder the American Cancer Society first, sidesteps the issue, then procrastinates about the technicalities involved in the tests, and finally after nearly a year, issues a flat refusal.

A distinguished attorney and counselor, the Honorable Thomas N. Clifford, of Baltimore, became very interested in the Krebiozen issue because of his tremendous interest in the cancer problem and the scientific efforts to arrest or control its ravages upon the human family. These letters speak for themselves. No wonder Mr. Clifford is disgusted. So are many other civic-spirited citizens.

The great tragedy of this generation is the iron handed grip of control that the American Medical Association, in its unbending and unyielding arbitrary will, exerts over the fearsome attitude of its unsuspecting membership: We set the policy—right or wrong.

The letters follow:

NOVEMBER 26, 1958.

AMERICAN CANCER SOCIETY,
New York, N.Y.

DEAR SIR: I would appreciate it very much if you would send me some information with respect to the new drug Krebiozen.

I would like to know if you have tested the same and if so, what was the result of your tests.

Very truly yours,

THOMAS N. CLIFFORD.

AMERICAN CANCER SOCIETY,
New York, N.Y., December 9, 1958.

Mr. THOMAS N. CLIFFORD,
Attorney and Counselor at Law,
Baltimore, Md.

DEAR MR. CLIFFORD: I have your letter of November 26 relative to Krebiozen.

The American Cancer Society is doing everything possible to find a preventive or effective treatment for cancer. However, it has a responsibility also to protect the public against being misled in regard to unproved methods of treatment, no matter how earnest or how loud spoken their supporters may be.

As you probably know, case records of patients treated with this preparation were investigated several years ago, not only by the American Medical Association but also by other groups of physicians and scientists experienced in cancer research. The conclusions of all these groups was that they could find no evidence that Krebiozen had any value in the treatment of patients with cancer. Up to the present time, no information has been made available to us which would justify the belief that these conclusions were no longer valid.

Recently, the American Cancer Society has had some correspondence with the Krebiozen Research Foundation relative to a possible further evaluation of this preparation on the basis of what is claimed to be additional evidence not previously considered. This proposal was considered by several groups of distinguished scientists, expert and experienced in cancer research. After full consideration of this proposal, these groups of scientists advised the American Cancer Society that the proposal does not provide a scientifically valid plan for conducting an objective and meaningful evaluation, inasmuch as the plan proposed has many defects when compared with the well-established scientific methods now existing for the test of products proposed for human use.

These were three points that were particularly unsatisfactory:

1. The plan did not provide for the trial to be conducted by an independent group of clinical investigators recognized as being objective and competent by the scientific community at large.

2. It did not permit an opportunity to determine whether physicians generally can obtain the same results, since it provided for the administration of the drug by the proponent only.

3. It provided no clear-cut standards for measuring either the results desired or defining or measuring the results to be obtained.

The American Cancer Society reiterates its willingness to support the testing of any substance proposed for the prevention, treatment, or cure of cancer provided the substance is available for testing under the well-established scientific methods known and accepted for all products proposed for human use, and further, provided that satisfactory preliminary evidence exists that the substance has shown promise of being useful in the treatment of cancer.

I hope that the above explanation will be helpful to you in understanding the American Cancer Society's position in regard to Krebiozen and to the support of cancer research in general.

Sincerely yours,

H. A. PRESS, M.D.,
Associate Director, Professional Education.

DECEMBER 16, 1958.

AMERICAN CANCER SOCIETY,
New York, N.Y.

GENTLEMEN: I have your letter of December 9, 1958, and I am enclosing a copy of Senator DOUGLAS' letter to me and a copy of his statement on this matter. I am further sending a copy of your letter to me and my answer to your letter along to Senator DOUGLAS in order that he may have the same available to him for his use before the appropriate committees of Congress.

As to the second paragraph in your letter, you state that case records of patients treated with Krebiozen were investigated several years ago not only by the American Medical Association but also by other groups of physicians and scientists. You do not mention who these other groups of physicians or scientists are. As to the American Medical Association, you do not state that this medical association conducted any test, you only state that case records of patients treated with this preparation were investigated. You do not say how many patients were used in the course of your test nor the exact nature of the tests which you ran. In short, just from your letter, I must conclude that the tests or investigations were on the skimpy side.

Senator DOUGLAS states in his proposal of August 22, 1958, that errors were made by the developers of Krebiozen but that errors have also been made by the opponents of Krebiozen. He then went on to say, "Variout statements of fact have apparently been made about numerous cases alleged to have been treated with Krebiozen in an effort to discredit the use of that preparation." He then goes on to state that Dr. Ivy is not only a world-famous physiologist and scientist but that on the basis of a long acquaintanceship with him, he, Senator DOUGLAS, trusts Dr. Ivy's personal integrity. If a man of the stature and integrity of Senator DOUGLAS feels that way about Dr. Ivy, I feel that the least that should happen should be a thorough examination of Dr. Ivy's product and contention.

Further in your letter of December 9, you refer to a proposal by the Krebiozen Research Foundation with respect to new evidence. You then turn down the idea of testing the product even with the new evidence mainly on the basis that the proposal did not provide for a test along certain traditional scientific lines.

I cannot believe your point 1 that the trial cannot be conducted by an independ- group of clinical investigators. With Senator DOUGLAS' services available, I see no reason why a group from the American Cancer Society, a group from the American Medical Association and a group suitable to Dr. Ivy cannot jointly evaluate the test, if necessary, publishing majority and minority reports.

Your refusal to accept or even suggest on your own any mutually acceptable independent group of clinical investigators is exactly the same as if two litigants in a legal matter could not get to court because the defendant kept claiming no suitable judge or group of judges could be found in the United States and, therefore, the defendant could not be sued.

As to point two that the test would not provide an opportunity to determine whether physicians generally can obtain the same results since it provided for the administration of the drug by the proponent only, I am utterly astounded. If the new product has any value, who is going to be able to demonstrate the value of it, the men who created it and are familiar with it or someone who is not familiar with it. Furthermore, the purpose of the test at this time is not to determine whether physicians generally can

obtain the same results as the proponents but to determine if the product has any value. If it is proven that the product has any value, I have no doubt whatsoever that the practicing physicians can easily master the procedure used by the proponents of the method.

As to point 3 that no clear-cut standrds for measuring the results desired or defining or measuring the results to be obtained, this is equally confusing. The results desired are immediately clear to any and every layman. They are purely and simply either a cure of the disease or any degree of improvement. The simple idea being that even if there is some degree of improvement the treatment may have some value which can be further developed.

As for obtaining a precise measurement of the results of the treatment, I think you are quibbling over trivial technicalities. The person who is sick and dying of cancer is quite competent of judging any favorable result in his condition. I admit that this is not a scientific test and must be accepted with limitation and only gradually applied to larger numbers of people but it is certainly one of the many ways of measuring results. Furthermore, any doctor can easily measure marked improvement merely by observing the patient before and after treatment and questioning the patient before and after treatment. In addition, the patient can be photographed both before and after treatment so that a larger group of doctors can then make their own evaluation of results with a case record of photographs, tests and observations of the physicians' treating the patient. Last but by no means least, the patients themselves would be available to other doctors for further questioning.

As to your next-to-the-last paragraph in which you state that you are willing to support the testing of any product providing the substance is available for testing under the well-established scientific methods known and accepted for all products proposed for human use and provided further that satisfactory preliminary evidence exists that the substance has shown promise. I am amazed at your scientific rigidity in approaching a problem that has defied analysis by all ordinary approaches.

What you are saying in plain English is two things; first, that unless a substance or method of treatment is available for testing under certain traditional time-honored, ancient methods, you will not consider testing.

The second point that you make is that you are, in effect, saying that the product has to be practically proven to be a cure before you are willing to test it. If you are going to sit back and wait until a product is proven beyond any doubt to have value before you test it, what is your organization doing with its contributions?

Furthermore, how can you determine whether or not a substance shows promise of being useful unless and until you first test it? That is the purpose of testing to see if a product shows promise.

From the standpoint of the general public, it is totally immaterial whether a cancer cure is discovered by Drs. Ivy and Durovic or by another group of doctors, or by chemists or druggists or other groups. The essential thing is that a cure be discovered, and the only truly scientific procedure is to run down each and every possible clue.

In conclusion, if you are going to insist upon elaborate screening techniques and procedures before even testing any products, I, in turn, have no choice but to apply a similar set of elaborate qualifications and screening techniques before responding with a financial contribution upon the approach of any of your solicitors.

Very truly yours,

THOMAS N. CLIFFORD.

JANUARY 6, 1959.

Mr. THOMAS N. CLIFFORD,
Attorney and Counselor at Law,
Baltimore, Md.

DEAR MR. CLIFFORD: In response to your letter of December 16, 1958, I would like to develop for you the circumstances which led up to a consideration by the American Cancer Society of the proposal made by Dr. Ivy last February.

In the summer of 1957 in response to the query of a science writer we stated publicly, and to Dr. Ivy directly, that any proposal for an objective test of Krebiozen would receive careful consideration by our advisory committees and by our board. In their collective responsible opinion this plan did not provide for a valid and objective test of Krebiozen. We have made known to the Krebiozen Research Foundation the reasons for this decision.

In the first place the society rejected Dr. Ivy's proposal because it called for a joint committee of the Krebiozen Research Foundation and of the American Cancer Society to arrange for and conduct a so-called "double blind controlled test." Under this plan it was further stipulated that the substance was to be administered to the patients solely by Dr. Ivy who is the principal spokesman for the drug. It was obvious to our advisory committees and to the Board, that a test under which the arrangements are to be made by a committee on which the promoters of the drug are represented equally with the group presumable responsible for the objectivity of the test, and in which the principal spokesman for the drug is the person to administer it to patients, was not objective within the scientific meaning of this word.

Our Board considers that unless the test is carried out wholly independently of the Krebiozen Research Foundation the results would have no real significance and would not be generally accepted by the doctors who treat cancer. The Board felt that to assent to and participate in a test of the sort proposed by Dr. Ivy would in effect by aiding and abetting a procedure which could serve no useful purpose.

In the second place, the proposed test gave no basis for determining whether the substance, when administered by physicians generally would produce the same results because no independent appraisal by others was to be permitted. To have validity, one of the primary criteria of any scientific experiment is the ability to duplicate it with similar or comparable results by other investigators.

In the third place, the proposal provided no definite standards for measuring either the results anticipated or the results obtained. The final step in the test as proposed was to record Dr. Ivy's opinion as to which patients had been given Krebiozen and which had been given mineral oil. On a pure guesswork basis he would have a 50–50 chance of being right. On the basis of his selection of patients who had received Krebiozen and those who had received mineral oil the cancer society would have been placed in the position of seeming to certify as to the efficacy of this drug. Our board felt that this would have only further confounded an already thoroughly confused situation and misled thousands of patients suffering from the disease.

Moreover, the proposal from the Krebiozen Research Foundation required that plans for a so-called double blind controlled study be agreed upon by the society prior to a study of the case histories of patients who have received the drug, which are stated to be on file with the foundation. Obviously, one would be working in a partial vacuum in attempting to define the conditions of any evaluation without knowledge of results already achieved.

There were other objections to the test but these were the essential reasons for our board taking the action it did.

The American Cancer Society is responsible not only for exploring all possible avenues in its search for an answer to cancer but equally for protecting the public from the unhappy results which would follow if unjustified confidence were placed in any particular substance which would delay cancer victims from receiving the only treatments presently known to produce a cure—surgery or radiation.

However, there are now, and there always have been, channels open to Krebiozen which, if followed, will produce conclusive results.

The society does not operate clinics or research laboratories of its own and therefore cannot conduct tests itself. For many years, however, it has supported the experimental investigation of drugs and substances which may be useful in the management of cancer. Its purpose in this program is to provide support to qualified investigators in the expectation that from this program a cancer cure will be developed.

As we repeatedly pointed out the American Cancer Society would welcome any arrangement which Dr. Ivy makes with a responsible laboratory receiving financial support from the American Cancer Society for them to test Krebiozen as they are currently testing thousands of other drugs. The results of these tests would then be published by the scientists or clinicians who carried them out and Krebiozen would have to stand or fall, as does any other drug, on the collective results.

This research procedure has been responsible for the discovery and testing of the many compounds now being used in cancer therapy. To mention some which are being used by physicians in the treatment of this disease we list Triethylene thiophosphoramide, Triethylene melamine, and other nitrogen mustard derivatives, 6-mercaptopurine, 5-fluro-premidine derivatives, Methotrexate, and other antimetabolites, isotopes, hormones, and so on. If Krebiozen has a useful place in this armamentarium, it can be established beyond argument in the same way that the efficacy of these other drugs has been established.

The above facts make it clear that the society did not refuse to test Krebiozen but that it refused to participate in a procedure which, in its responsible opinion, would serve no useful scientific purpose and which might well have further misled the public.

To repeat, avenues of scientific appraisal are open for Krebiozen. What is closed is any proposal under which the Cancer Society would lend its name to a test which is not carried out on a scientifically acceptable basis. Any test in which the society is involved must be conducted and documented in accordance with the impeccable principles of the medical profession and the scientific community at large.

The onus of delay and of obstruction rests clearly with those promoting Krebiozen and not with us nor with the medical profession. If there was any reliable evidence that Krebiozen is useful in the treatment of cancer, we believe its proponents have a moral responsibility to submit this substance properly to the scientific community for an assessment of its work.

This is the position of the society whose affairs are directed by openminded, public spirited citizens serving the interest of their fellow citizens without pay and without hope of personal gain.

Sincerely yours,

H. A. PRESS, M.D.,
Associate Director, Professional Education.

JANUARY 15, 1959.

AMERICAN CANCER SOCIETY,
New York, N.Y.

DEAR SIR: I received your letter of January 6, 1959, and have read it very carefully and thank you for your time and effort in answering my letter.

One of the main reasons that led me to write you was that from time to time in the course of drawing wills, I, and for that matter many other lawyers, are called upon, especially for elderly people, to recommend certain worthy charities as recipients for donations. Thus I, as well as many other lawyers, are frequently called upon to answer all sorts of questions such as "Is it a worthy charity?" "Why don't they do this?" "Why don't they do that?" "Which one do you prefer?" Not to mention the obvious questions, as "Would the donation be eligible for a tax deduction?"

You can naturally understand my legal predicament, besides whatever personal feelings I may have on the matter, when I discovered Senator DOUGLAS' resolution to force the testing of Krebiozen.

I must frankly and honestly state that your refusal to test the drug under any procedure other than your own constitutes, in my mind, behavior that is either out of date in this modern, changing, and fast-moving world or else is evidence of stiffness on your part that having once taken a certain position you will under no circumstances change and submit to a test that might prove you wrong.

Upon reviewing your correspondence, it seems to me that your basic position is simply that unless the test is done 100 percent the way you want it done, that is by the time honored, traditional methods, which, incidentally, have not led to any results in this particular disease, you will not consider any method of testing Krebiozen.

Basically, it seems that your objection to the Krebiozen plan as per paragraph 3, page 1, of your letter of January 6, 1959, was that Dr. Ivy, who is the spokesman for the drug, would administer it and that there would be equal representation by the Krebiozen Research Foundation and the American Cancer Society.

Apparently, you seem to feel that there is something unfair about equal representation. Neither I nor any of my clients ever felt that this is the American viewpoint.

As to your objection to Dr. Ivy administering the drug, it is inconceivable to me that you would even want or allow someone else to administer it since on the first trial, at least, obviously the best results could only be obtained by the person most familiar with the drug who would know just how to vary dosage with individual need.

Furthermore, I consider it totally unfair to Dr. Ivy not to allow him to conduct the test. Since this refusal to test Krebiozen has blown up into such a national issue that it is now before Senators in Washington, Dr. Ivy is in the position of being either a hero or a quack. If he is a hero, he should be honored; if he is a quack, he should be exposed. However, assuming that Krebiozen has merit, it would be unfair to Dr. Ivy to let some person unfamiliar with it test the drug, have a failure not due to the drug but due to improper administration of the drug and thereby have his medical reputation ruined—not to mention the loss to the public of a valuable treatment.

And what incentive to research does anyone have if he looks at the case of Dr. Ivy and reads your letters in which the American Cancer Society refuses a test based on equal representation.

On page 2, paragraph 5, of your letter of January 6, 1959, you state that the American Cancer Society is responsible not only for exploring all possible avenues in its search for an answer to cancer but also for protecting the public from unhappy results that would follow if unjustified confidence were placed in any particular substance which would prevent cancer victims from receiving treatment presently believed to be more beneficial.

I am very much afraid that your society is not doing its duty under your own definition per paragraph 5, page 2, of your letter of January 6, 1959, since first of all, I think the general public feel and is under the impression that you are diligently searching the length and the breadth of the land for every treatment or rumored treatment and taking steps to have it tested. To find that this money is not being so used would be quite disturbing to them.

Furthermore, under your definition of your responsibility, I would also feel that you have a duty to expose quacks and fakes. The only way to do this is to test their products and, I think, any developer of a drug is entitled to equal representation in the test under the most elementary rules of fair play.

With reference to your next to the last paragraph in which you state that the onus of delay rests with those promoting Krebiozen and not with those of the medical profession, I agree with you as to the fact that it is not the fault of the medical profession. A doctor engaged in practice does not have the time to do research. Furthermore, he does not have funds pouring into him with which to subsidize tests. No blame can possibly be laid at the feet of the practicing physicians.

However, to have one group of doctors led by Dr. Ivy claim they found helpful treatment and then to find an organization such as yours which has received public funds and is a trustee of the public's money do nothing except form committees to decide whether or not to test the material is unfair to the public.

It borders on the absurd that a group of doctors led by Dr. Ivy should have to appeal to a U.S. Senator to try to get the American Cancer Society, who have been collecting research funds from the public, to test a possible cure under conditions of equal representation.

In addition to everything else, I personally, have some doubts as to the legality of your position. You have received public funds, you are administering these funds as a trustee with a duty to search out and make tests for cancer cures and a responsibility as per page 2, paragraph 5 of your letter of January 6, 1959, to protect the public from unhappy results such as being preyed upon by charities and even well-meaning but misguided people. If your funds are not applied diligently toward these ends, then I doubt that a court would let you retain these deposits of public money placed with you under public trust.

Very truly yours,

THOMAS N. CLIFFORD.

JANUARY 30, 1959.

Mr. THOMAS N. CLIFFORD,
Baltimore, Md.

DEAR MR. CLIFFORD: Your letter of January 15 has been referred to me for reply. This letter, which I have read with care, raises a number of questions, in part general and in part legalistic, as to the decision of the American Cancer Society not to sponsor a test of Krebiozen under the terms proposed by Dr. Ivy and the Krebiozen Foundation. You question also the procedures which led to this decision.

As Mr. Runyon's letter to Mr. Davis explained, the American Cancer Society does not have research laboratories under its control or cancer patients under its care but supports cancer research in the universities, medical centers and hospitals of the country. Grants for the support of research projects are made upon the recommendation of advisory committees which consist of scientists from all parts of the United States, experienced and distinguished in various aspects of cancer research. The only way, therefore, that the American Cancer Society could proceed to get any further test of Krebiozen made would be to go to certain cancer hospitals and request them to undertake such a test. The fact however that our advisory committees consider Dr. Ivy's proposal scientifically unsound and unacceptable make it clearly impossible for us to proceed further with this proposal.

The Cancer Society has never received a request from a responsible group of investigators for the support of a proposal for the test of Krebiozen. If the Society did receive such a request, it would receive careful consideration and very probably would be granted.

Your letter also questions the legality of the position of the ACS in this matter. Relative to this I can only say that on our board of directors and on the various committees which passed upon this request, we have a number of able lawyers—individuals, I might add, who are just as anxious as anyone could possibly be to find an effective preventive or cure for cancer.

Very truly yours,

HAROLD S. DIEHL, M.D.

Repeal of Wartime Excise Taxes

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. OSMERS. Mr. Speaker, on February 3, 1959, I introduced H.R. 3983 to repeal excise taxes on jewelry, furs, cosmetics, luggage, motor vehicles, appliances, telephone calls, and admissions to cabarets, theaters motion-picture houses, concerts, and operas.

These World War II taxes have long been a deterrent to business growth and they are still in effect even though World War II ended nearly 14 years ago.

Under unanimous consent, I include in the Appendix of the RECORD an editorial on this subject from the Bergen Evening Record, Hackensack, N.J., which appeared on February 5, 1959:

OLD TAXES TOO DESERVE HONORABLE RETIREMENT

Representative OSMERS, Republican, Ninth District, has just commented on a classic shortcoming of Government, one which all public officials understand but few care to discuss: it's a tough job to repeal a tax. Once a tax is imposed, even though it be at a specific time for a specific purpose, there it stays long after the time has expired and long after the purpose, if any, has been served.

Mr. OSMERS pointed out that only one of the special excise taxes enacted during World War II has been repealed. It was on the transportation of property. All the rest are still being collected, and the war ended 14 years ago.

The Ninth District Representative makes this argument:

Wartime excise taxes were placed against commodities like jewelry, luggage, or photographic equipment not so much to raise revenue as to discourage purchase. In an expanding economy what we want to do is encourage buying, but there the excise taxes stay. If they are repealed the stimulated interest in buying at resulting lower prices

will raise more revenue for the Government through business income taxes than is being raised through the excise taxes.

Mr. OSMERS must have looked into the arithmetic of this argument. But, whether new tax income of one kind will offset taxes of another kind lost by repealing the excises, they ought to go. Mr. OSMERS has introduced a bill to accomplish just that, and it would be a refreshing change and an economic shot in the arm to see a tax repealed.

Congress Should Have More, Not Less, Control Over TVA—H.R. 3460 and Similar Bills Should Not Pass

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. JENSEN. Mr. Speaker, a reading of the record of TVA from its inception in 1933 discloses that TVA has engaged in a progressive assumption and usurpation of powers that Congress never intended it should have. In fact, TVA officials and its proponents have from time to time denied the authority and the intention to do the very things that were later assumed or claimed. Such an agency should have greater congressional control, not less.

It would take volumes on volumes to set forth all the various statements and claims that TVA and its proponents have made relative to the future programs or actions of TVA, and the record of failure to perform in accordance with such claims or contentions. A few of the more obvious failures of TVA to act in accordance with the expressions of its officials and proponents are here noted.

In regard to the cost of TVA, the author of the TVA bill in the House stated that the entire proposed TVA program could be completed for less than $150 million. An opponent who prophesied at the time that it would be a billion-dollar program was only half right. It now has cost $2 billion in money appropriated out of the U.S. Treasury, in addition to the loss of freedom and initiative of the people in the TVA region itself due to the autocratic power placed in the hands of a three-man board.

Surely an agency that has had almost unlimited and dictatorial control of the spending of over $3,760,000,000 from its inception to June 30, 1958, and whose annual gross income now approaches one quarter billion dollars, should have more congressional control, not less.

TVA's 14,600 employees are under the almost unlimited control of the three men who run TVA. It would seem more proper to provide that these 14,600 TVA employees come under the United States Civil Service Commission laws and regulations as do most Federal employees, rather than to continue or expand the almost unlimited control that three men now have over these TVA employees.

TVA DENIED IT PLANNED TO CONSTRUCT STEAM PLANTS

TVA told the U.S. Court of Appeals with reference to the Sheffield steam plant near Wilson Dam that was turned over to TVA:

Said steam electric generating plant has not been and is not being operated and there is no plan or intention to operate said plant now or in the future, or to construct or operate any other steam electric generating plants.

This contention to a high U.S. court was made in order to obtain a favorable ruling on the question of the legality of TVA's operations and program. The record of failure on this point is highlighted by the later operation of the steam plant in question and the construction of many other steam electric plants by TVA, one of which is now boastfully claimed by TVA to be the largest steam electric plant in the world.

Such action clearly indicates that the people's representatives in Congress should have more, not less, control over the operations and expansions of the TVA power empire.

TVA told the U.S. Court of Appeals that TVA "has disposed of and will dispose of only such electric energy as is generated from waterpower inevitably created by the operations of the said dams for navigation and flood control and which is not needed for governmental purposes and which would otherwise be wasted."

Today more than 72 percent of the electric power TVA disposes of comes from steam electric plants This is another indication of why TVA cannot be trusted and should have more congressional control, not less.

TVA officials have gradually usurped or assumed a utility responsibility for the area in which they operate, and after such assumption try to claim that Congress by its action in providing the bond issue to purchase the Tennessee Electric Power Co. properties gave TVA such a utility responsibility.

This of course is not in keeping with the TVA position before the congressional investigation of TVA in 1938. At that time a high TVA official who was in charge of the negotiations for acquisition of the Tennessee Electric Power Co. system said in reply to a question as to whether TVA intended to purchase the Tennessee Electric Power Co. steam plants:

In the case of the acquisition the plan has been that TVA would acquire the hydro plants in the Tennessee River system and the local public agencies would acquire the major steam plants.

And in regard to operation of these steam plants the same official also said:

My point on it is this, that these steam plants are located near these large cities. TVA at the present time is not set up to operate these large steam plants where the local public agencies would have a substantial organization and crew, and very probably the operation of the steam plant would fit in better with the organization setup of those agencies than it would with ours.

Take the Memphis situation, for example, there is a large steam plant at Memphis, which the city will probably purchase in case of an acquisition. Now, that plant would very probably be operated by the city to support our service to Memphis. In recognition of the support to our service to Memphis we would make an adjustment in our power bill. But the city would operate the plant, and I think that arrangement would be better than TVA operating the plant because we would have to maintain a steam plant personnel over in Memphis for that purpose alone. And the same thing would apply at Nashville.

Of course the record is clear on the failure of TVA to follow this claimed program for acquisition and operation of the utility company steam plants.

As a matter of fact, the contracts TVA executed with these local public agencies were "captive" contracts that prevented the very type of operation TVA told the Congress it intended to accomplish under the proposed bond issue amendment to the TVA Act. There can be no question that the distributors of TVA power such as Memphis, Nashville, Chattanooga, Knoxville, and others could have constructed steam electric plants to provide for the load growth of their respective areas that was in excess of the hydroelectric capabilities of the TVA system. Such operation could have been integrated with the TVA system for maximum benefit and economy.

TVA officials also told the Congress that the TVA power contracts with the industrial customers provided for cancellation and utilization of such power for the preference customers of TVA.

I can find no record of any cancellation of such contracts in accord with these TVA statements. In fact TVA has, over the years, steadily promoted and increased the sale of power to industry.

This is but another example of why TVA cannot be trusted with more corporate power but should have greater congressional control.

TVA officials have from time to time attempted to claim that they have not encouraged industry to locate or move to the TVA territory. Yet a TVA Director early in TVA existence made it quite clear that TVA did have a policy or intention to promote such industrial expansion in the TVA area. He said in a speech:

I am very definitely of the opinion that it is the Authority's duty to encourage and stimulate the growth of large-scale industry in the Tennessee Valley area. We are making provision for one of the largest hydroelectric developments in the world, with a potential 3 million horsepower available. We are expending and expect to expend, millions upon millions of dollars in construction activities, all looking toward the development of more and more power. Although we are bending every effort to greatly increase the use of electricity in the home and on the farm, it is obvious that only a large-scale industrial expansion will absorb the great pool of power which is thus being created. As we lay our plans for developing this cheap power in great quantities, it seems to me to be mandatory that we also lay plans for utilizing it in an industrial expansion program.

And a few years later at a congressional hearing this same TVA Director said:

But industries don't set themselves up in a region automatically. There must be some organizing force, with technical and research

facilities. We believe it is appropriate that some of this technical and research work should be undertaken by the Tennessee Valley Authority as an agency of all the people.

One could spend a full year in going over the thousands and thousands of pages of TVA record of its claims and contentions in public speeches, releases, and congressional testimony and the record of later failure to act in compliance with one after another of the earlier claimed actions, programs, and policies. This record gives abundant reason why TVA cannot be trusted with more corporate power but should have greater and more strict congressional control than it has had in the past.

The three TVA directors now have more power than three good men should want or more than three bad men should ever have. The present congressional control of TVA as now interpreted by TVA and as acquiesced in by some committees of Congress gives them almost unlimited control over the spending of nearly one-quarter billion dollars a year. To relieve them of even the present limited control should be unthinkable to any representative of the American people who has sworn to uphold the Constitution of the United States and its American form of government. Steps should be taken to reestablish the congressional controls that are inherent under the Constitution.

The Constitution of the United States provided for three separate branches of government. This was to act as a system of balances and checks. The people's representatives in Congress were given a most important task of writing the laws for the executive department to administer. The Constitution also provided for the House of Representatives to initiate the revenue measures needed to provide the funds necessary for the operations of the Government. This authority to provide revenues and the authorization and appropriation of the funds needed to carry out the various acts of Congress was the check on the operations of the executive department through control of the purse strings. To relinquish this inherent control as provided for by the Constitution would be a betrayal of the oath of office to uphold the Constitution. It is quite clear that under H.R. 3460 and similar bills the legislative branch would be relinquishing its responsibility to maintain the check provided for by the framers of the Constitution. TVA needs more control by the people's representatives in Congress, not less.

Last year in the discussion of H.R. 8002, Congressman after Congressman stood on the floor of the House to say that there was a great need for more control by the Congress on the funds being expended by the executive department. Certainly this need for greater congressional control applies to TVA as much, if not more so, than to any other executive department of the Government.

If TVA had operated in the manner in which its officials initially told the Congress it was going to operate, then there would be less need to insist on greater control. But after 20-odd years of progressive failure to so operate and the gradual but continuing usurpation and assumption of powers not intended by the Congress, it is time to call a halt. TVA needs more congressional control, not less.

Under unanimous consent, I include along with my own remarks, an editorial from the Argus, of Rock Island, Ill., dated December 1, 1958:

TVA, 25-YEAR FRAUD

One of the largest and most amazing projects of the 20th century, the Tennessee Valley Authority, is starting on its second quarter-century.

Built at the taxpayers' expense, at a total cost of $1.5 billion, it is the Nation's largest power generating enterprise.

It buys more coal than any enterprise in America. It generates more power annually than all of France. It is now studying the possibilities of utilizing atomic power.

Yet when the TVA act was established, power wasn't even mentioned in the purpose preamble. The whole project was put over, and was approved by the U.S. Supreme Court, as a flood-control scheme.

It is concerned also with navigation, develops fertilizer and reforests eroded areas.

Originally intended to utilize hydroelectric power, it gets 75 percent of its electricity from steamplants—an aim originally disavowed.

It has the backing of hot-eyed southern conservatives who receive its cheap power at the expense of the rest of the Nation, of wild-eyed radicals in the North and of plain and fancy crackpots everywhere.

Norman Thomas, the Socialist leader, called it the only genuine socialistic measure of the New Deal.

Intended to serve electricity only to valley homes and farms, it distributes 51 percent of its power to U.S. defense agencies.

And it isn't satisfied with that. It seeks the authority—which was denied in the last session of Congress—to issue bonds for the construction of more plants.

It disavows any intentions to expand, but Philip Sporn, head of the American Electric Power Co., says a careful study of its proposal shows it would be able to take in 25,000 more square miles—a 30 percent increase—where private utilities now operate, and that it might go even farther.

That would be fully in accord with TVA's history.

It can move with confidence because it has a tremendous tax advantage over the private utilities. The latter pay 23.4 percent of their revenue from electric operations to State and Federal governments. TVA pays 5 percent to local and State governments and nothing to Washington, though it has returned $250 million on its original investment, at the rate of 4 percent.

TVA paid only $4,148,000 in taxes in 1956, last year for which figures are available. But it did better than some Government power schemes at that. The Hoover Dam project pays $600,000 a year to Nevada and Arizona, but all other Federal power projects pay no taxes. If they were taxed at the rate of private utilities, they would pay a total of $82,523,610 into all governments.

What they fail to pay has to be made up by taxpayers in all parts of the country. As one utility executive put it, TVA's waters flow through three States and drain the other 45.

And TVA uses its 4-to-1 tax advantage to club the private companies out of existence.

This will continute as long as the American people, through their Congress, allow TVA to get away with it.

The private companies are asking that TVA be sold off to private and municipal interests. But TVA is still fighting to expand and will renew its bonding request in the next session of Congress.

There is a big principle involved in this unfair advantage which TVA is allowed to use against private companies. Congress ought to stop it.

Even if there were no such principle, the Nation as a whole should be tired of subsidizing the relatively small area which uses cheap TVA power. If private companies were operating throughout this area, Federal tax money would be swelled and the load on the rest of the Nation would be reduced accordingly.

TVA is a fraud against free enterprise and a fraud against the Nation's taxpayers.

The New Jersey Labor Herald Calls for a National Labor-Management Assembly, and Declares a True Labor-Management Accord Could Usher in a New Era of Enlightened Capitalism Which Would Excite the Admiration of the Entire World

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, the New Jersey Labor Herald, a fine labor paper officially endorsed by the New Jersey State Federation of Labor, affiliate of the AFL–CIO, recently called for a national labor-management assembly to be held in Washington, D.C. It said that a labor-management accord could usher in a new era of enlightened capitalism that would excite the admiration of the entire world. In fact, it is the sole hope for the survival of free enterprise in America, as organized labor is the greatest bulwark against the Communist menace.

In a recent speech at the University of California, Deputy Under Secretary of Labor Millard Cass said:

Labor and management can, however, do more for themselves and for the country by trying to get along together than by trying to harm each other.

It is apparent that New Jersey Labor Herald proposal is bearing fruit. At the New Jersey congressional dinner in Washington on February 5, 1959, Mr. Lansing Shield, president of the New Jersey State Chamber of Commerce urged that a labor-management accord be reached through a conference.

A labor-management conference was proposed by the New Jersey Labor Herald editorially in December 1958 in the following language:

We respectfully submit the suggestion for convening of a semiannual labor-management assembly, preferably in Washington sponsored, but not dominated, by government, composed of 10 representatives each, from labor and management. We are confident that AFL–CIO President George Meany would welcome such an opportunity.

I include here the text of the editorial for the information of my colleagues because of its importance:

THE WITHERED OLIVE BRANCH

In the spirit of the Prince of Peace * * * whose birth is celebrated at this season, we once again extend a sincere invitation of labor to the masters of American industry, to cease sharpening their spears * * * and agree to confer with leaders of organized labor, in the hope that our tremendous joint powers might, at long last, be devoted to the future welfare of our country.

Surely, the millions of dollars wasted by the National Association of Manufacturers and U.S. Chamber of Commerce, in financing hate-labor campaigns, could more profitably be utilized in helping such fields as higher education * * * or, even the sincere enhancement of sound labor-management relations. To fair, hard-headed business executives this certainly must appeal as "good business."

The only losers when and if labor-management peace is finally achieved, would be the hired mercenaries of NAM who would lose their soft jobs. These parasites thrive solely during times of travail—generated mostly by themselves.

In a recent speech at the University of California, Deputy Under Secretary of Labor, Millard Cass, pointed out that "Labor and management, can and should, do more for themselves and for our country by trying to get along together, than by trying to harm each other." This desirable cooperation should not be too difficult of achievement, he said, when one considers the fact that over the past decade the total working time lost by strikes, has been only one-third of 1 percent.

This is a remarkable record when more than 80,000 collective bargaining contracts are negotiated annually—95 percent without a strike or lockout.

Labor-management accord could usher in a new era of enlightened capitalism that would excite the admiration of the entire world. In fact, it is the sole hope for the survival of free enterprise in America, as organized labor is the greatest bulwark against Communist menace.

An excellent beginning has already been made in several important industries of national magnitude, including the sprawling electrical field. It is interesting to note the success of periodic conferences, on the national and regional levels, by the National Electrical Contractors Association and International Brotherhood of Electrical Workers, which deal with every phase of the industry through a council on industrial relations. There are a number of other industries in which joint energies are being channeled into plans for the common good.

They are successful because they spell good business, higher production, and better profits and wages without benefit of Government meddling.

We respectfully submit the suggestion for convening of a semiannual Labor-Management Assembly, preferably in Washington sponsored, but not dominated, by Government, composed of 10 representatives each, from labor and management. We are confident that AFL–CIO President George Meany would welcome such an opportunity.

Here is a major objective for the newly elected president of the NAM, Mr. Stanley C. Hope who, because of his long and distinguished business career, must realize the potentialities of such an accord and the benefits that could flow from it, for the workers, management, and what is of utmost importance—this last real bastion of freedom in a world torn asunder by power-maddened tyrants parading under the blood-soaked banner of communism.

North Dakota Legislature Urges Reinstatement of Local Grain Testing by Agriculture Department

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. SHORT. Mr. Speaker, hardship has been suffered by North Dakota farmers as a result of the Department of Agriculture's ruling that local testing programs for grains subject to an application for a Federal loan must be abandoned in favor of testing at one central station. Where farmers could previously take their grain to local elevators for moisture content and grading purposes, they have found that the new central testing program occasions delays of from 3 to 6 weeks on the approval of loans.

Mr. Speaker, the North Dakota Legislature is justifiably concerned about the effects of this so-called testing system, and has forwarded me the following Concurrent Resolution F:

HOUSE CONCURRENT RESOLUTION F

A concurrent resolution memorializing the Secretary of Agriculture to reestablish a local testing program for grains that are subject to an application for a Federal loan

Whereas it has long been the practice of the Agricultural Stabilization Committee to permit local elevator operators to test grain for moisture content and grading purposes prior to the approval of a loan thereon by the Agricultural Stabilization Committee; and

Whereas such policies have now been changed to require that such testing and grading be carried on at one central station; and

Whereas such central testing practices result in a delay of from 3 to 6 weeks in the approval of loans with a resultant inconvenience and often hardship to the owners of the grain who are seeking a loan thereon from the Agricultural Stabilization Committee: Now, therefore, be it

Resolved by the House of Representatives of the State of North Dakota (the Senate concurring therein), That the Secretary of Agriculture is hereby urged to discontinue the central testing system now in existence, and that the Agricultural Stabilization Committee accept the results of tests carried on by local elevator operators for the purpose of approving processing and approving applications for grain loans from the Agricultural Stabilization Committee; and be it further

Resolved, That copies of this resolution be forwarded by the secretary of state to the Secretary of Agriculture and each member of the North Dakota congressional delegation.

HJALMAR C. NYGAARD,
Speaker of the House.
GERALD L. STAIR,
Chief Clerk of the House.
C. P. DAHL,
President of the Senate.
VIC GILBREATH,
Secretary of the Senate.

I am today contacting the Secretary of Agriculture on this problem, and it is hoped that the Department will reinstitute its former policy of local testing.

Leslie L. Biffle Signally Honored

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. GATHINGS. Mr. Speaker, recently my constituent, the Honorable Leslie L. Biffle, was recognized signally by a vast number of well-wishing friends on completing 50 years of public service in the Nation's Capital.

I include a newsletter distributed under date of January 23, 1959, regarding this tribute to Mr. Biffle:

LESLIE L. BIFFLE SIGNALLY HONORED

Thoroughness, attentiveness to duty, loyalty to friends, and hard work brought fame and distinction to Leslie L. Biffle, of Piggott, Ark. He was honored at a magnificient testimonial dinner after 50 years of outstanding public service in the Nation's Capitol. More than 1,200 friends swelled the grand ballroom to overuowing in the swank Mayflower Hotel. The requests for tickets had to be shut off a few days before the banquet was held for lack of space in the five ballrooms which were thrown together for the event. The $15-a-plate dinner featured music and songs by recognized artists, addresses by leaders from both major political parties, and presentation of gifts.

Here are some of the tributes paid to Les Biffle by speakers on the program:

"He's affable, courteous, and deserving of our admiration and esteem."

"His personality endeared him to the hearts of all of us."

"Distinguished public servant, who knew what the word 'loyalty' meant."

"Only man who could whisper to Senators without moving his lips."

"The Senator at Large from the United States."

"His counsel was sought. He was adviser to those in the highest places of responsibility."

"He never forgets a friend and never fails to reward one."

"Confidant of Presidents."

"A pinnacle few men attained."

"Walking encyclopedia."

"He makes no demands; all he asks is to do something for his friends."

"Never puts off until tomorrow * * * did his job to perfection."

Former President Truman said at a news conference while in office, "They don't come any better than Les Biffle."

"The Arkansas Polister of 1948." (This label given him was due to his activities during the presidential campaign of that year in which he dressed as a chicken peddler and drove through several States in a dilapidated pickup to get the tenor of the voters in rural America. He reported that the trend was to Truman.)

The words of praise came with genuine fervor and earnestness. It was evident that each of those who made remarks admired

and respected the soft-spoken Arkansan who had served as Secretary of the U.S. Senate and in many other capacities over the past 50 years.

Senator JOHN L. MCCLELLAN, the toastmaster, introduced celebrities from Government and business. He read the laudatory joint resolution which was passed unanimously by the Arkansas General Assembly commending Mr. Biffle's outstanding public service. Mr. and Mrs. Biffle were presented wristwatches and a large color television set.

The lavish function featured a musical spectacular and other numbers which were concluded at a late hour.

THE MENU

Fresh fruit cocktail, terrapin soup, hearts of pascal celery, mixed olives, grilled heart of filet mignon sur canope with mushrooms, sauce perijourdine, asparagus tips polonaise, potatoes au gratin, salade verte (mixed green) de saison, Lorenzo dressing, coupe aux marrons, ice cream with whipped cream, cakes, coffee.

Life Insurance Company Income Tax Act of 1959

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. KNOX. Mr. Speaker, last week the membership of the House of Representatives approved legislation known as the Life Insurance Company Income Tax Act of 1959.

Since 1921 this area of taxation has posed a most difficult and perplexing problem. It is therefore appropriate for me to compliment my committee chairman and each fellow member of the committee who have labored so diligently and with such efficiency to prepare this legislation for consideration.

The insurance company of today is not the simple protective agency of yesterday, but rather today it serves its policyholders as bank and protection agency. The result has been that the savings operation has become so intertwined with the pure insurance function that it is difficult to determine who is the beneficiary of the investment income. The problem of taxing the company's income and not the income necessary to meet long-range contingencies and commitments is difficult of solution.

It is my belief that this legislation takes the most practical and effective approach to the problem. No longer will this industry be taxed by means of a fictitious formula that taxes investment income of a company even though that company sustained a net loss on its year's operation.

This bill, H.R. 4245, departs from the present unequitable system by including the various types of income in the tax base. The underwriting gains which were previously untaxed are now included in the tax base along with the free investment income and with capital gains.

Although I concur generally with the approach this legislation takes to the solution of the problem, it was with some hesitancy that I voted affirmatively. I question whether there has been sufficient consideration given to what the economic impact will be under circumstances of retroactively imposing such a substantial tax increase on this industry. We must be certain that this legislation will not result in such a burden as to discourage saving through the purchase of life insurance. It is essential to the future economic well-being of this country that our people are encouraged to provide for their own future security.

It must also be noted that the insurance industry is heavily taxed at the State level and the cumulative burden of all taxes must be weighed in considering the appropriateness of a particular tax.

It was for these reasons that I felt compelled to express my views on the possible ramifications of this bill. I am confident that during the legislation's further study in the Congress careful consideration will be given to these economic factors.

Military Draft Versus Sound U.S. Defense

EXTENSION OF REMARKS
OF
HON. ROBERT W. KASTENMEIER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. KASTENMEIER. Mr. Speaker, a small minority of us sought a 2-year extension of the draft in order that a thorough and comprehensive review might be made of our military manpower procurement problem. Our efforts failed, and the majority of my distinguished colleagues voted to continue the draft for another 4 years. I opposed this arbitrary extension in order to point out to the people the urgency of the need for a reevaluation of our manpower problem in the military service. To this end, my "nay" vote proved most successful. My mail has been overwhelmingly in support of the position I took. Under the leave to extend my remarks in the RECORD, I include the following editorials from the St. Louis (Mo.) Post-Dispatch and the Waukesha (Wis.) Daily Freeman, which are in support of my position:

[From the St. Louis Post-Dispatch]

THE DRAFT IS OUTMODED

If the Armed Forces are to have the newest and best weapons that science and industry can provide, they should have men who are fully qualified to use them. Therein lies a manpower problem. A vastly improved National Defense Establishment could be had if a way were found to solve this manpower problem, the crux of which is the draft. The draft simply is not supplying the type of recruits that are needed, nor is it fair to the youth of the land.

As matters stand right now, military conscription is necessary until some better substitute can be devised. The draft inspires many to volunteer so that they can pick their own branch of service as well as the time they want to begin serving. If there were no draft, there would be insufficient volunteers. This is proved by the fact that during 1948–49 the armed services tried to maintain a combined force of less than 2 million men without draft quotas—and failed miserably.

There is little chance to devise a substitute for the draft between now and June 30, when the law will expire unless extended. It seems certain to be extended. The House voted last Thursday, 381 to 20, to extend it for 4 years.

Why would it not be wise to extend the bill just for 2 years, and during that time have a joint congressional committee, or a civilian-military committee, study the manpower problem seriously in an effort to reach a solution?

A good long look at the draft and how it has been functioning is badly needed. The Army is the only service using the draft. In recent months it has called about 8,000 men per month; less than 7,000 are inducted for the 2-year period of duty. About 90,000 sign up annually for a 6-month period of service followed by 5 years in the Reserve or the National Guard. Thousands of others volunteer for duty in the Air Force, Navy, Marines and Coast Guard, which do not depend on draftees.

Some 1,200,000 youths come of military age every year. According to the Pentagon, some 660,000 persons enter the services, only 180,000 being inductees. Thus the chances are excellent the vast majority of the class that attains military age every year will not see service. That is not fair to those who are drafted or who volunteer.

Reference is sometimes made to the military pay increase bill which was passed last year by Congress after it had somewhat watered down the Cordiner report which stressed the need for better pay to keep the best men in the service. The matter of higher pay begs the question for those who enter in the lowest ranks. And even the higher pay now permitted is not sufficient to retain many of the very best and most badly needed men.

Surely a group of men such as those who turned in the Rockefeller and Johnson committee reports should be able to find a better solution to the manpower problem. The draft, as it stands now, is badly outmoded in this era of atomic-powered submarines, radar, ballistic missiles, and space satellites. A thoughtful study to devise a space-age substitute is needed.

[From the Milwaukee (Wis.) Daily Freeman]

MILITARY DRAFT VERSUS SOUND U.S. DEFENSE

Second District Congressman ROBERT W. KASTENMEIER was among 20 Members of the House of Representatives who last week voted against extension of the military draft for 4 more years. His position is sound and the people of this district should give full approval to it. We are particularly impressed with the reasons for his vote when he said:

"I am convinced that our future military position requires an immediate and comprehensive study of how we can best maintain a well trained and highly skilled military force to operate the equipment developed in this age of nuclear weapons and space travel.

"Therefore, I supported unequivocally the 2-year draft extension coupled with a thorough national review of the entire manpower problem. The 2-year extension failed. I could not in good conscience support the arbitrary 4-year extension, which to my way of thinking is merely sweeping our military manpower problem under the rug for another 4 years. It is my belief that our future military security depends on how quickly we reevaluate our needs in the light of recent technological advances."

The Freeman has been a consistent foe of the universal military training system under which the armed services are operating. The day Congress adopted this legislation it was installing an outdated form of military service which has become more grotesque in its application with each passing year.

The longer the United States extends the Military Draft Act the more unprepared it will be to meet tomorrow's national defense requirements. This act is guilty of fastening onto the Nation a wasteful and unnecessary program of nonpreparedness. It is forcing young men into military service who have no business there, who through no fault of their own are contributing nothing to the national defense and because of this are wasting their own time and the time of those attempting to instruct them. Considerably more important, the Nation is spending billions of dollars unnecessarily going through the motions of giving these men a smattering of useless military training simply to satisfy the advocates of universal military training, who claim that every red-blooded American boy should know how to shoulder a gun and dress in a fatigue uniform.

The study Representative KASTENMEIER is requesting would, if it is done honestly and impartially, reveal that an immediate return to voluntary enlistment is the Nation's best course. It would give our military services an opportunity to appeal directly to those who by personality, mentality, and interest would make the type of military personnel we require. The effective defense of this country is no longer dependent on how many young men who are able to carry a gun can be mustered. If we continue to rely upon the safety which was once found in numbers, the United States will fall victim to its own monumental error. We must put an end to thinking of military service as a necessary physical exercise which every youth must taste to qualify him for manhood. As KASTENMEIER says, unless we reevaluate our needs in the light of recent technological advances we will fall as far behind the times in an effective national defense program as we have in the conquest of outer space.

The Neighbors Are Important

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from the Evening Herald, Rock Hill, S.C., February 16, 1959:

THE NEIGHBORS ARE IMPORTANT

In trying to build friends, the United States often overlooks its near neighbors.

For that reason, President Eisenhower's meeting this week with Mexico's new President, Adolfo Lopez Mateos, is important.

Mexico is an important link with Central and South America, where U.S. stock does not rate as high as we'd like.

Eisenhower and Lopez Mateos are to meet in Acapulco, Mexico. What they'll talk about may never be announced—just as no announcement was made 3 years ago when Eisenhower met with Mexico's President Adolfo Ruiz Cortines in White Sulphur Springs, W. Va.

But the need to build better understanding must be in the front of both men's minds.

Mexico's lower level of education and lower standard of living throw up roadblocks. The language barrier slows the spread of better understanding. Anti-American feeling has been something of a political tradition in Mexico—although this feeling is not nearly as strong as it used to be. Mexico is 98 percent Catholic, whereas the United States is predominantly Protestant.

Still, there are forces pulling the two countries together.

The United States is Mexico's main customer. And Mexico, in turn, buys more of its supplies from the United States than from any other country.

The United States has given Mexico about $109 million in net aid since World War II—far less than it has given many other countries, but still a big help.

Half a million Mexicans come into the United States each year to work as migrant farmworkers. They pick up some knowledge of U.S. customs, which they take home with them—though it must be added that some of these workers are abused and take home bad impressions.

Relations between the United States and its near neighbors become more important every day. Long neglected fields close to home could stand a lot more cultivation. One of those fields is Mexico.

Hate Literature

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. OSMERS. Mr. Speaker, on January 9, 1959, I introduced H.R. 1934 which curbs hate mailers by prohibiting the transmission through the mails of matter calculated to arouse racial hostility.

Under unanimous consent, I include in the Appendix of the RECORD a January 25, 1959, editorial and a February 2, 1959, article, both of which were published in the New York Times:

[From the New York Times, Jan. 25, 1959]

HATE LITERATURE

It is now reported that the distribution of racist and hate literature in this country reached a new postwar high last year. The chairman of the national executive board of the American Jewish Committee, in making this report, made some suggestions about constructive community action to meet this menace. He urges against unilateral retaliation, giving undue publicity, and the entering into logical disputes. He hopes for better support for interfaith community programs.

This is good as far as it goes. No one can criticize generosity and moderation. But the menace must be met on a sterner ground. The hate literature is not merely a matter of interfaith misunderstanding. It is directed, not just against Jews, but against Negroes, Roman Catholics, liberal Protestants, and indeed against any and all men of good will who wish to solve the problems of community living on the basis of reasonable understanding.

When this literature can be tied up to overt action such as bombing of public buildings or organized lynchings it becomes a problem in the preservation of public order, of life and of property and thus touches the law itself.

Manifestly, some of our legislative processes need to be tightened up in this field. Most of our statutes concerning the distribution of printed matter are concerned with only two things, obscenity or fraud. And it is possible for the hatemongers to do incalculable damage without being even faintly obscene (although some of them are) and without the provable intent to defraud.

We are jealous of the right to print and publish and distribute expressions of free opinion. But, as an eminent Justice of our Supreme Court once pointed out, the right of free speech does not permit a person to raise a false cry of "fire" in a crowded theater. The legal ground upon which the hatemongers can be met is complicated and occasionally tricky. For this reason, there must be more, and more careful, study of how to meet what is an obvious danger to our freedom, our social dignity and our community self-respect.

[From the New York Times, Feb. 2, 1959]

HEAD OF HADASSAH ASKS U.S. LAW TO BAN HATE LITERATURE SPREAD

(By Irving Spiegel)

The head of Hadassah, the women's Zionist organization of America, called on Congress last night to enact legislation to ban the distribution of hate literature.

Dr. Miriam K. Freund, president of Hadassah, declared that "the activities of the hatemongers and bigots in the United States give aid and comfort to those forces which seek our destruction."

"Soviet leaders," she added, "seeking to undermine American prestige abroad, have chided us about the existence of hatemongering in the United States."

She spoke at the opening session of a four-day midwinter conference at Hadassah's headquarters, 65 East 52d Street. Hadassah has 318,000 members.

Dr. Freund told the delegates, representing every section of the country and Puerto Rico, that an increasing distribution of hate literature "betrays an apathy of Americans toward this crucial problem."

She declared that President Eisenhower should take the lead in a campaign against bigotry, hate and discrimination.

"The activities of the hatemongers and bigots," she said, "provide a vehicle for foreign governments to strike at certain religious, racial and ethnic groups in efforts to divide the American people.

"Soviet publications are only too eager to play up incidents that present America in a derogatory light."

Dr. Freund disputed First Deputy Premier Anastas I. Mikoyan on his assertion that the Jews within the Soviet Union had the right to develop their cultural facilities.

"But he says the Jews want to become a part of Russian culture," she said. "It is inconceivable that three million Jews would decide overnight to scuttle their Jewish cultural heritage."

Discussing President Eisenhower's proposed budget for foreign aid, Dr. Freund declared that the requested $3,930 million must be increased by Congress to provide larger funds for vital economic assistance programs.

Mrs. Alexander M. Dushkin, chairman of the Hadassah Council in Israel, said that Hadassah facilities there were being prepared to aid in receiving the expected heavy influx of immigrants.

Brotherhood

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. OSMERS. Mr. Speaker, on January 9, 1959, I introduced H.R. 1933 which will severely punish "hate bombers" by prohibiting certain acts involving the importation, transportation, pos-

session, or use of explosives, and H.R. 1934 which curbs "hate mailers" by prohibiting the transmission through the mails of matter calculated to arouse racial hostility.

In this connection, I ask unanimous consent to include in the Appendix of the RECORD a poem, which is extremely timely and fitting in these material days. It was written by the author of such famous songs as "Honeysuckle Rose," "In the Mood," "Memories of You" and "S'posin'." Andy Razaf, the uathor of these songs and this poem, was a resident of Englewood, N.J., in my congressional district, for many years. He is now residing in Los Angeles, Calif.:

A MIXED-UP WORLD

There's plenty to do in this mixed-up world
For all of us each day,
Sweeping the dirt beneath the rug
Is not the honest way.

Let's clean up the human misery,
Hypocrisy, greed and hate,
And practice the noble things we preach
Before it is too late.

Too long have we worshiped material things,
With our eyes on worthless goals,
Improving our gadgets and machines
But not improving our souls.

Too long have we turned away from God
And disobeyed His commands;
Too many speak of serving Him
With unwilling hearts and hands.

The angels must weep as they look at man,
Now striving to conquer space
Before he has learned to conquer himself
And make earth a decent place.

What can we hope to do on the moon
Or on some planet afar?
When so much good is left undone
Down here, right where we are!

North Dakota Legislature Asks Early Action on Bills To Start Construction of Garrison Diversion Unit

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. SHORT. Mr. Speaker, at the time the Garrison Dam was started, there was a clear understanding and a tacit promise that the irrigation development in North Dakota should go forward with all possible speed. This golden promise of irrigation benefits was to help compensate us for the loss of our lush river bottom lands, above Garrison, which were flooded out when the dam was completed, and to help stabilize agriculture in a large area of the State. 460,000 acres were taken for Garrison Reservoir and 88,000 acres of North Dakota lands were taken for the Oahe project. Till now, despite the promise, not one single irrigated acre has been developed.

The North Dakota Legislature, now in session, is understandably concerned that no action has yet been taken on the diversion unit, and I am pleased to call to the attention of my colleagues the following concurrent resolution, which has the unanimous support of North Dakota's delegation in Congress:

HOUSE CONCURRENT RESOLUTION H

A concurrent resolution endorsing and approving the Bureau of Reclamation project plan report on the Garrison diversion unit and supporting and urging early enactment of desirable and needed modifying and confirming legislation authorizing the construction thereof

Whereas the Garrison diversion unit, Garrison division, Missouri River Basin project, located in North Dakota (and a small segment in South Dakota) was in general authorized by the Flood Control Act of 1944, and when developed will:

1. Enhance the future economic welfare and prosperity of the people of the State, particularly those within the project area;

2. Provide for the eventual irrigation of over 1 million acres of land periodically subjected to drought which will result in a more diversified and stabilized agriculture in a large region of North Dakota;

3. Replenish and restore the depleted waters of several lakes, rivers, and streams and augment the levels and flows therein; and

4. Make available within affected areas water diverted from the Missouri River for irrigation, domestic, municipal, and industrial needs, production of hydroelectric power, recreation, fish and wildlife, and other public beneficial uses; and

Whereas the construction of the Garrison diversion unit will result in a greatly expanded and more dependable agricultural and business economy in North Dakota, which will result in an accelerated population growth and increased prosperity in the area; and

Whereas the investigations and studies by the Bureau of Reclamation indicate that the project is economically feasible and the Bureau advises that it is in a position to initiate construction thereof as soon as appropriate modifying legislation now pending in Congress has been enacted and funds made available; and

Whereas the farmers in the project areas and all North Dakotans have shown a definite interest in and demand for the early construction and development of the Garrison diversion unit: Now, therefore, be it

Resolved by the House of Representatives of the State of North Dakota, the senate concurring therein, That the 36th Legislative Assembly of the State of North Dakota favors and approves the Garrison diversion unit, and respectfully urges the appropriate committees of Congress to schedule hearings at the earliest date possible on S. 147, H.R. 1891, and H.R. 1963 to make certain provisions in connection with the authorization and construction of said unit, to the end that construction thereof may be undertaken as soon as possible; and be it further

Resolved, That copies hereof be mailed by the secretary of state to Hon. James E. Murray, chairman, Senate Committee on Interior and Insular Affairs; Hon. Wayne N. Aspinall, chairman, House Committee on Interior and Insular Affairs; Senators William Langer and Milton R. Young; Representatives Quentin N. Burdick and Don L. Short; Hon. Fred A. Seaton, Secretary of the Interior; Hon. Fred G. Aandahl, Assistant Secretary of the Interior; and Hon. W. A. Dexheimer, Commissioner, Bureau of Reclamation.

HJALMAR C. NYGAARD,
Speaker of the House.
GERALD L. STAIR,
Chief Clerk of the House.
C. P. DAHL,
President of the Senate.
VIC GILBREATH,
Secretary of the Senate.

Is It Evil To Own a Large Farm?

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. GATHINGS. Mr. Speaker, propagandists are busy in an effort to build up resentment against a farmer because he owns or operates a sizable acreage. These people would lead one to believe that a large operation is wicked and evil since such farmers allegedly receive the major part of Government benefits.

If that argument were valid it could just as well be argued that the farm programs are just a dole or handout to farmers irrespective of the size of this participation by them.

A few days ago I received a letter from Mr. Lloyd Godley, of Osceola, Ark., on this subject. The writer of the letter is a farmer, general manager of the Mississippi County (Ark.) Production Credit Association, and one of the Nation's foremost agricultural leaders. His letter is recommended reading.

I am attaching also my reply to Mr. Godley's letter:

OSCEOLA, ARK., *February 11, 1959.*

Hon. E. C. "TOOK" GATHINGS,
House of Representatives,
Washington, D.C.

DEAR "TOOK": Why is there such a persistent drive to sway public opinion on our farm problems by condemning larger than family-size farming operations?

It is distressing that some of our stanchest friends seem to have succumbed to the idea that bigness in agriculture is evil. They say that big farmers get most of the price support money, but ignore the fact that 20 percent of the farmers grow 80 percent of the crops.

Farmers, large or small, do not generally approve of discrimination because of the size of a farming operation. They feel that we should have a sound farm economic program, not a farm relief program.

Most people are aware of the fact that our Nation has been made great because of every man's privilege of becoming as big as his energy, inclination, and ingenuity will permit. They do not believe that the farmer should be singled out by his Government as being one entitled to less consideration than those of other economic groups.

A few days ago I was talking with a typical so-called family-type farmer and here is what he said. "My son likes farming and I would like to send him to an agricultural college for a degree in agriculture. He and I have talked it over and we have just about decided that it may be wiser for him or any other ambitious farm boy to prepare for some other field. Here is my son's thinking and I agree with him, the Government will in the years to come limit the benefit of farm programs to small operators. In that case the ambitious farmer who wishes to fully apply his managerial ability will be materially handicapped by Government restrictions relative to the size of his farming operation."

I could not disagree with the thinking of this father and son.

Most certainly I do not wish to criticize those very fine and able Congressmen and Senators who are devoted to the cause of agriculture, but I do think it is a disservice to the cause of agriculture when farmers are divided as to the size of their operation and

when one group is set apart as deserving of less consideration because of his apparent success.

This farmer's son could prepare to enter big business, big industry, or big labor without fear of economic restrictions or reprisals and with the knowledge that he would be permitted full exercise of his managerial and executive ability. But, not so in agriculture if limitations become law. It would be easy to understand if this were the enemies of agriculture advocating this policy, not the friends.

Our farm leaders who have joined themselves together for the purpose of formulating programs to present to the Congress are constantly haunted by the fear that program benefits will be limited to a certain size farming operation.

If we may console ourselves by the fact that no compulsory program has ever had limitations due to size of operation then we may be led to believe that none ever will.

On the other hand, if all big farmers were exempt from allotment compliance we would indeed be buried by surplus.

To be sure we farmers have much unfair competition but it doesn't come from the legitimate farmer. It comes from those who make their money in some other business and enter farming as a fascinating hobby.

If there can be any legal way, this type of farming should be eliminated but not at the expense of honest-to-goodness farmers who have through their own efforts built up a large farming operation.

No industrial corporation has ever had tariff benefits limited because of the size of the business, nor has any fast tax write-off or any other subsidy been limited to industry or business because of size—then why discriminate against agriculture.

What we need is farm legislation that will permit agriculture a fair share of the national income. It should not be tied in with social legislation.

When farm people have a stable expanding income consistant with the progress of the other segments of our economy, farmers will set and maintain their own social pattern which will not be inconsistent with the well-being and traditions of this Nation.

It is a fact that small farmers have made a mighty contribution to the social and economic structure of this Nation, but they have never been deprived by law from expanding to the full extent of their ability.

They should never be so handicapped.

Many farmers believe that the issue of "limitations" is the greatest stumbling block in the road to sound and permanent farm legislation.

I am writing this with the hope that a farmer's viewpoint may be of value to you in your deliberation on this vital issue.

With best wishes, I am

Sincerely,

LLOYD GODLEY.

FEBRUARY 19, 1959.

Mr. LLOYD GODLEY,
Osceola, Ark.

DEAR LLOYD: Your letter is greatly appreciated and so clearly depicts the valid and sound arguments in opposition to payment limitation movements which have grown up in recent years. I have in my file an earlier letter from you on this subject which I prize most highly. This story needs to be told and reiterated.

It is true that larger farm operators receive the greater return from benefits provided by the Government. The message is being related and emphasized as if such a person is a culprit, scoundrel, or grand rascal. His participation in these programs is greater since his contributions in volume output are larger. It is an effort to poison and prejudice the minds of the American people that the large farmer should be made smaller. That theory—if carried to its ultimate end conclusion—would mean that if a person had saved his money and lived frugally and acquired new holdings from time to time he would find himself confronted with a movement to split up his operations among his less fortunate brother farmers. That type of philosophy is not in keeping with the principles of equality of opportunity to the citizen. The incentive of the individual should be encouraged under our system.

You are right when you say that no effort is being made to penalize large industry. Subsidies for railroads are not being made on the basis of the length of the line or the amount of equipment and other properties that the railroads possess; subsidies to the airlines and steamship people have no such limitations. Fast tax writeoffs have benefited all size operators. Your letter is most convincing, plausible, and informative upon this subject; and I am grateful to you for writing me.

With personal regards and best wishes, I am,

Yours sincerely,

E. C. GATHINGS.

Gov. G. Mennen Williams

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. RABAUT. Mr. Speaker, it seems to me especially appropriate on the occasion yesterday of the birthday of a distinguished American statesman, G. Mennen Williams, six times Governor of Michigan, to insert in the CONGRESSIONAL RECORD an extremely informative and capsule biography of this brilliant and effective leader of our time.

Governor Williams is easily one of the foremost Americans of this generation and has contributed enormously to the wise administration and progressive leadership of one of the most powerful States of the Union.

This biography is particularly pertinent because it reached the people on the occasion of the election of the Governor for the sixth time to the highest office within the gift of the people of his Commonwealth:

G. Mennen Williams, the first man in the Nation's history to win six consecutive terms as Governor of a State, was born in Detroit, February 23, 1911, the son of Henry P. Williams and Elma Mennen Williams. He attended the Detroit University School, Salisbury School, Salisbury, Conn., and was graduated from Princeton University in 1933 with an A.B. degree, and from the University of Michigan law school in 1936 with a J.D. degree. His scholastic attainments are indicated by his membership in Phi Beta Kappa at Princeton and the Order of Coif at the University of Michigan.

He began his career of public service in 1936 as an attorney for the Social Security Board in Washington. From that time, through the days of World War II naval service in the Pacific, on to his unmatched record of governmental and political leadership, Governor Williams has devoted his life to public service.

In 1938, he became assistant attorney general of Michigan. In 1939–40, he was executive assistant to Frank Murphy, then U.S. Attorney General; and in 1940–41, he was special assistant to the U.S. Attorney General, Criminal Division.

After service on the Carriers *Essex, Bunker Hill, Hornet,* and *Yorktown,* he was separated with the rank of lieutenant commander in March 1946. During his war service, he received 10 battle stars, the Legion of Merit with Combat V, and three Presidential citations.

On his return from war, he became Deputy Director of the O.P.A. for Michigan, and later was named Democratic member of the Michigan Liquor Control Commission. He resigned the latter post in 1948 to run for Governor of Michigan, and in that successful effort began a new chapter of his remarkable career.

Six times the people of Michigan have elected him to the highest governmental position within their power to bestow. This repeated endorsement of his executive leadership did not come about by chance. It reflects the fact that his administrations have given the people of Michigan—businessmen, farmers, workers, nationalities, minorities, schoolteachers, the aged, housewives, all the people—the kind of governmental and political leadership they want in these times.

Governor Williams is nationally known for his firm adherence to programs for the common good, for his executive and political leadership, and for his deep personal faith in the spiritual values which underlie our Nation and its democratic processes. He is a devoted family man, a scholar, a traveler whose journeys have taken him across Europe, into Russia, Africa, South America, areas of the Far East, into Israel and the Middle East, and across the Nation from its borders to its shores.

In 1937, he married Nancy Lee Quirk of Ypsilanti, Mich. They have one son, Gery, a student at Princeton, and two daughters, Nancy and Wendy, in school in Lansing.

James W. Riddleberger

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. HARRISON. Mr. Speaker, there has been favorable, and bipartisan, reaction to President Eisenhower's nomination of Mr. James W. Riddleberger to head the International Cooperation Administration, which is responsible for the management of the foreign aid program.

Mr. Riddleberger is from Woodstock, in the Seventh Congressional District of Virginia, which I have the honor to represent, and is a member of a widely respected Shenandoah Valley family. His many friends share the pleasure of this new recognition which has come to a distinguished career officer of the Foreign Service of the United States.

Under leave to extend my remarks, I include an editorial which appeared in the Roanoke (Va.) Times of February 21, 1959:

RIDDLEBERGER: MAN WITH SKILL

A dispute between the State Department and Republican National Chairman Alcorn over who shall head the International Cooperation Administration apparently has been settled by President Eisenhower. As a successor to James H. Smith, who resigned last month, the State Department favored

Henry R. Labouisse, a highly regarded career officer presently directing United Nations relief work among Palestinian refugees.

Chairman Alcorn is reported to have objected strongly to appointment of Mr. Labouisse because the latter once registered as a Democrat in Connecticut. Mr. Alcorn is said to have insisted that the job of running the Agency which administers the foreign aid program be given to a deserving Republican.

Mr. Eisenhower's new choice for the post is James W. Riddleberger, member of a well-known Virginia family, whose home is at Woodstock. Mr. Riddleberger is now Ambassador to Greece and has no known political affiliation. He is a graduate of Randolph-Macon College and a veteran of the diplomatic service. He was chief of the State Department's Division of Central European Affairs immediately after World War II and later Ambassador to Yugoslavia where he served for nearly 5 years. In the latter post he had a leading role in the Trieste settlement between Yugoslavia and Italy.

Mr. Riddleberger's qualifications have been tested in numerous difficult and sensitive situations abroad. He stands high in the esteem of congressional leaders, Democrats and Republicans. If confirmed by the Senate—and that appears to be a virtual certainty—he will bring to his new task a broad background of knowledge of foreign affairs and demonstrated skill in diplomacy.

They Never Quit

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. SCHERER. Mr. Speaker, the New York Journal-American, in an editorial on January 27, 1959, entitled "They Never Quit," calls attention to the unremitting attack over the years against J. Edgar Hoover, the Federal Bureau of Investigation, and the House Committee on Un-American Activities.

The members of the Committee on Un-American Activities are grateful for the support of this fine newspaper. With such backing by the press I am certain that the American people are not going to be misled by the current vicious campaign to discredit the committee, the FBI and its great Director. The editorial follows:

THEY NEVER QUIT

It has become clear that the pseudo-liberals, anti-anti-Communists and leftists have singled out two targets for 1959. One is to discredit J. Edgar Hoover and the FBI. The other is to wreck the House Committee on Un-American Activities.

The attack on Mr. Hoover and the great organization he heads has taken the form of articles insidiously slanted to undermine confidence in the fairness and meticulous care to protect both witnesses and accused by which the FBI operates.

The attack on the House Un-American Activities Committee is more open. Representative JAMES ROOSEVELT, California Democrat, has introduced a resolution to junk it and shift its jurisdiction to the Judiciary Committee.

He continued to press the attack yesterday and based his objections to the committee on the fact that "it has subpenaed people who were former Communists after having learned their names from the testimony of friendly witnesses."

What would he have the committee do—subpena members of sewing circles?

The committee has been vilified for years by peseudoliberals, anti-anti-Communists and leftists because it has been one of the most effective forces we have for exposing the Communist conspiracy.

Fortunately, there is every reason to believe it will keep on being so. A far greater Democrat than JIMMY ROOSEVELT, by name of SAM RAYBURN, is adamantly opposed to the ROOSEVELT resolution and promises it will be overwhelmingly defeated if it ever reaches the floor.

But this effort together with the smear campaigns against Mr. Hoover and the FBI are a challenge to vigilance. The counterfeit liberals and the others never give up.

The United States, Thought of Abroad as Materialistic and Without Interest in Cultural Affairs, Subsidizes Music and Art at State, County, and City Levels of Government—George Antheil, Famous New Jersey Composer, Dies

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, the president of the Trenton Symphony Orchestra Association, Joseph D'Annunzio, recently advised the city commission of Trenton, N.J., the Mercer County, N.J., Board of Chosen Freeholders, and Mercer County Counsel Joseph S. Bash that the Trenton Symphony Orchestra has been operating 37 years as a nonprofit organization. In all that time, he said, it has depended for its support on its patrons, donors and subscribers. He added that unless they were able to get some additional aid this year the Trenton Symphony Orchestra could not carry on.

Mr. D'Annunzio, one of the leading businessmen of Trenton, N.J., pointed to the substantial subsidies provided their orchestras by other cities in the United States. Philadelphia, he said, gives the Philadelphia orchestra $100,000 each year and $50,000 for operas; Detroit gives the Detroit symphony $50,000 yearly; San Francisco gives its orchestra $45,000 plus free use of two auditoriums. Baltimore, Atlanta, and Denver each give their orchestras $60,000; St. Louis provides $75,000; Milwaukee and Indianapolis each gives their orchestra $50,000.

In Indiana, according to Mr. D'Annunzio, a State law was passed in 1941 making it mandatory for the educational fund to contribute to the orchestra. Many U.S. cities furnish auditoriums free of cost for orchestral concerts, in return for which the orchestras agree to make a limited number of student tickets available at reduced prices.

Showing sympathy for the financial woes of the Trenton Symphony Orchestra, the City Commission of Trenton, N.J., has agreed to do what it could to help out. One of the steps under the study by the city commission is the purchase of $5,000 worth of concert tickets every year for distribution through the city schools. The Mercer County Board of Chosen Freeholders is considering a similar step.

A NEW JERSEY STATE ART COMMISSION PROPOSED AS A LIVING MEMORIAL TO GEORGE ANTHEIL, WORLD-FAMOUS COMPOSER, WHO WAS BORN AND EDUCATED IN TRENTON, N.J.

Actually, of course, the arts at home and the arts as a vital part of our foreign policy overseas are but two sides of the same coin. The New York Times on January 12, 1959, reported that two New York State legislators, Senator MacNeil Mitchell, Republican, and Assemblyman Bentley Cassal, Democrat, are sponsoring a bill to create a 15-member New York State Arts Council. This plan has the support of many cultural leaders in our country. If this plan is good for New York State, with all of its myriad art groups, it should be equally good for New Jersey's cultural groups, like the Trenton Symphony Orchestra, to establish a similar arts council in New Jersey. Such an arts council would be most appropriate as a living memorial in honor of George Antheil, one of New Jersey's world-famous sons, who died recently, it has been suggested by William H. Falcey, county clerk of Mercer County, Trenton, N.J., a leading backer of the Trenton Symphony Orchestra and a member of the board of governors of the orchestra.

A number of States, among them Indiana, Louisiana, Maine, Massachusetts, Minnesota, North Carolina, Pennsylvania, Utah, Virginia, and Wisconsin have established State agencies of various kinds to assist the arts through such means as advice, grants-in-aid, and so forth. The States thereby have aided theaters and orchestras, managed museums and libraries—the New Jersey State Museum and the New Jersey State Library are outstanding examples of this—arranged for exhibits and supervised the artistic improvement of State buildings and whole sections of cities.

A New Jersey State art commission would be able to make an important contribution to our own fine cultural organizations, such as the Trenton Symphony Orchestra.

There is deep concern with the finer things of life on the part of our people away from the great cities, and surely if there is a native American cluture it is expressed at least as much by the Trenton Symphony Orchestra as by the Metropolitan Opera Co. After all, there are more than 700 such orchestras spread across our country from coast to coast and from Canada to Mexico. In the world of today the race is for political, economic, scientific, and cultural supremacy. In this situation in which we find ourselves, cultural organizations, such as the Trenton Symphony Orchestra have a major role to perform in raising the standards of our people and acquainting them with our noble cultural heritage. We must understand our own culture and assist our own artists in order to better understand and

appreciate the culture of other peoples—this is basic to our country's continued leadership of the peoples of the free world and to the hope we give to many of the people in the totalitarian states that they, too, will one day be free.

I include here several items relating to the Trenton Symphony Orchestra and George Antheil from the Trentonian, the Trenton Evening Times, and La Nuova Capitale:

[From the Trentonian, Jan. 23, 1959]

TRENTON'S SYMPHONY IN TROUBLE

The news that Trenton's 37-year-old symphony orchestra may expire because of financial ills is distressing indeed, even though it has been apparent for some time that the Symphony Association was encountering heavy going.

As Joseph D'Annunzio, Sr., the association's president, makes clear, the group has been caught in a squeeze from which it cannot escape unless aid is forthcoming. Because of its limited budget, the association cannot book the type of artists who would draw well. Consequently, receipts are insufficient to maintain the operation. Two types of aid are suggested—subsidization by the city and county and increased public support.

The value of the symphony to the Trenton area cannot be overstressed, and the lack of public support is not readily understandable. Perhaps the difficulty which now besets the musical enterprise will serve to engender the support it needs to complete this season and to plan for the next one.

[From the Trenton Evening Times, Jan. 22, 1959]

THE ORCHESTRA'S PLIGHT

The Trenton Symphony Orchestra has been one of the city's major cultural assets for 37 years. It had its origin with a small group of enthusiastic and talented local musicians whose number grew with the passing years and whose artistic merits gained substantial recognition. Although cultural enterprises are seldom attended by impressive financial success, the Trenton Symphony has managed to attract adequate patronage and support and to survive even the economic stringencies of the long depression era.

Ironically, it is in a period of at least relative affluence that the orchestra is experiencing its most acute financial difficulties. Announcement has been made that unless the city and county provide "substantial aid this year" the orchestra will find it necessary to close its career.

This is bad news for music lovers of Trenton and it is a far from creditable reflection upon the city's cultural standards. The Trenton Symphony Orchestra has come to be recognized as a musical organization of fine quality and one whose programs over the years have been of a high order. It has earned public support.

[From the Trenton (N.J.) La Nuova Capitale, Feb. 6, 1959]

NEED FINANCIAL AID OR SYMPHONY MUST QUIT

The president of the Trenton Symphony Association told the Mercer County Freeholders yesterday that unless the orchestra receives substantial financial help it will not be able to prevent a concert series next year.

Joseph D'Annunzio also indicated at a closed conference with the county board that the symphony may even have to cancel two of its three remaining concerts this season unless it obtains additional funds.

D'Annunzio said the association would try its hardest to finish the season, but that its financial picture was so dark it might be physically impossible to do so.

The symphony president declined today to reveal how much financial aid he sought from the freeholders.

He said he would meet tomorrow with the city commission to present a similar appeal. The freeholders turned D'Annunzio's request over to its budget study. County Counsel Joseph S. Bash said he wasn't sure whether the county could legally give financial aid to the symphony.

D'Annunzio said the symphony's board of governors would meet on Friday to decide the orchestra's future. He said a decision would have to be made soon because detailed plans for next season's concerts must be made far ahead of time if it is found feasible to continue.

In a letter to the freeholders, D'Annunzio pointed out that the Trenton Symphony has been operating for 37 years as a nonprofit organization and is so recognized by the Internal Revenue Bureau. In all that time, he said, it has depended for its support on three sources—ticket sales, patrons, and honors, and the generosity of a few civic-minded individuals on whom the association could depend at the end of each season.

"Our position is somewhat changed insofar as being able to expect financial aid from the latter source now," he said, "and unless we are able to get some substantial aid this year it will be quite impossible to carry on."

D'Annunzio pointed to the substantial subsidies provided for orchestras in other cities. Philadelphia, he said, gives the Philadelphia Orchestra $100,000 each year and $50,000 for operas; Detroit gives the Detroit Symphony $50,000 yearly, San Francisco gives its orchestra $45,000 plus free use of two auditoriums. Baltimore, Atlanta, and Denver each give their orchestras $60,000, St. Louis provides $75,000, Milwaukee and Indianapolis $50,000.

In Indiana, he said, a State law was passed in 1914 making it mandatory for the educational fund to contribute to the orchestra.

"All of these cities furnish an auditorium free of cost for the concerts and the orchestras agree to have a limited number of student tickets available at reduced prices," he said.

"In Trenton nothing has ever been done for our orchestra."

D'Annunzio told the freeholders that the Trenton symphony has only one paid employee. All others are volunteers. More than 60 percent of its budget is for musicians' payroll, 6 percent is for soloists, 4 percent for war-memorial building rental, and 30 percent for other expenses such as printing of tickets, brochures, music rental, postage, telephone, advertising programs, etc.

He pointed out that through the generosity of the Mifflin Piano Co. the orchestra never has had to pay for the use of pianos or organs for its concerts.

"Our board of governors feels that this civic project is Trenton's outstanding cultural asset," he continued, "and that we are all richer for having had it these many years.

"Men in public life are realizing more than ever their responsibilities for the welfare of the people and that bread alone does not satisfy the soul."

[From the Trenton Evening Times, Feb. 20, 1959]

PLEA FOR SYMPHONY

Sir: Upon returning from a 3-week trip out of State, I was aghast to find newspapers, local and Philadelphia, reporting that the Trenton Symphony was in dire straits, financially, and that if the city would not come to its rescue, disbanding of the orchestra was imminent.

For shame, Trenton. How can such a situation exist in a city which for generations has been proud of its culture?

Saving the symphony should be the work of every man, woman, and child in and around Trenton—from the mayor, through the chamber of commerce, to the lowest grade in the schools.

What about the people behind the scenes of the symphony, who have given so much for so little? Are you not willing to stand behind them?

Every successful symphony has its city 100 percent behind it.

In practically every major orchestra in this country you will find men, who, because of their great artistic ability, have been recruited from the ranks of the Trenton Symphony, nearly every one a first-chair man. The roster reads like a "Who's Who in Music."

Good music, like good bread, is a real staff of life, for, like bread, which from time immemorial has been the symbol of bodily nourishment, so music is the symbol of cultural advancement. Guard your musical knowledge and appreciation as you would a priceless jewel. Without it, you sink into the abyss of cultural degeneration and one of the greatest gifts ever offered man is denied you.

LEONA RUTH STODDARD.

[From the Trentonian, Feb. 14, 1959]

GEORGE ANTHEIL DIES AT 58; NOTED MODERN COMPOSER

Former Trentonian George Antheil, 58, noted author and composer Thursday night died of a heart attack in his New York home, of 610 West End Avenue.

Born in Trenton, Antheil was graduated from Trenton High School in 1918. He made frequent visits to Trenton with his family and at one time wrote "McKonkey's Ferry" a musical based on Washington's crossing the Delaware, using Trenton as the background.

He conducted some of his own compositions with the Trenton Symphony Orchestra during one of his longer visits here.

Antheil toured Europe as a concert pianist, and then in the late 1920's became the first American ever to hold the position of assistant music director of the Berlin State Theater.

Returning to the United States in 1933, he became musical director for Eastern Paramount Studios, and composer for Hollywood Paramount and Columbia Studios. With his young bride, Mrs. Boske Markus Antheil, he moved back to Trenton. It was here a few years later that his wife became a United States citizen.

As an author, he contributed many articles to Esquire magazine on endocrinology, wrote, "Every Man His Own Detective," and "Death in the Dark."

His book "Bad Boy of Music," was based on his own experiences as a modern composer, and told at length of his boyhood in Trenton.

His most recent efforts have been scores for the "Twentieth Century" series on CBS and music for "Happy Journey" which is to appear next season.

Funeral arrangements have not been completed. He is survived by his sister, Mrs. Justine McTighe of Delaware Avenue, New York, and his son, Peter, 22, who attends a west coast school.

[From the Trenton Evening Times, Feb. 13, 1959]

HEART ATTACK FATAL FOR GEORGE ANTHEIL—TRENTON PIANIST AND COMPOSER WON WIDE ACCLAIM

George Antheil, the gifted Trenton composer and pianist, died last night at his home, 610 West End Avenue, New York City, at the age of 58. Death was attributed to a heart attack.

His sister, Mrs. Justine McTighe and her husband, Arthur D. McTighe of 40 Delaware

Avenue, were summoned to the composer's home shortly after 9 o'clock last night. Word was also sent to the composer's son, Peter, 22, who is a student at a west coast college. He flew into New York today.

Funeral arrangements have not yet been completed.

Antheil, one of the world's great composers of what has been termed "modern music," always regarded Trenton as his real home, although many of his years were spent abroad or in California where he composed his highly original scores and also music for the motion picture industry.

BORN IN TRENTON

He was born here, the son of Mr. and Mrs. Henry Antheil, Sr., attended the old Hamilton School, and graduated from Trenton High School in 1918. From time to time he returned to Trenton for visits with his family and on one of these trips composed his unique opera "Helen Retires" which was based on the life of Helen of Troy. This superb work was created at the home of his parents on North Broad Street, near Academy Street.

Although Antheil had numerous first-rate compositions to his credit, including some symphonies which have been played by the leading orchestras of the United States and Europe, he was especially well-known for a single composition he had written in his early days. This was the "Ballet Mecanique," scored for xylophones, electric bells, a player piano, and airplane propellers.

CREATED SMALL RIOT

At its premiere in New York City reaction from both critics and the audience was so violent that a small riot broke out among those attending the performance. Years later, when the same composition was played again, there was only applause for the man who had helped to create a new style for the modern age.

Antheil began to study the piano at the age of 6. At 10 he began composition lessons with Constantin von Sternberg in Philadelphia, and later with Ernest Bloch.

An opportunity to tour Europe arose when a Philadelphia concert manager sought a soloist of the "fiery, ultra-modern variety." Antheil practiced the piano for 36 hours straight, got the job, and proceeded on a concert tour of the continent that resulted in his being dubbed the "Bad Boy of Music." In later years he recalled his experiences in an autobiography, "Bad Boy of Music," in which he wrote at length of his boyhood in Trenton.

His First Symphony was given its premiere by the Berlin Philharmonic Orchestra in 1922, and it was said to be the first symphonic piece in which jazz was recognized.

MORE TIME TO WRITING MUSIC

It was around this time that Antheil gave up personal appearances to devote himself almost entirely to writing music. He went to Paris and among his friends and acquaintances were counted Gertrude Stein, Pavel Tchelitchew, Ezra Pound, and Ernest Hemingway. It was there, also, that he met a young woman, member of a prominent Viennese family.

He married her and for a number of years later on they resided in Trenton. It was in Trenton that Mrs. Boske Markus Antheil became an American citizen.

Antheil wrote such stage works as "Transatlantic," an opera, and a ballet, "Fighting the Waves." Several years after his return to the United States, the composer began to do film scores for Charles MacArthur and Ben Hecht. These included "The Scoundrel" and "Once in a Blue Moon." In 1936, he became a composer for both Paramount and Columbia studios.

After writing the scores for many other films, including the original production of "The Buccaneer" and "Make Way for Tomorrow," Antheil wrote an article for The American Scholar in which he propounded the idea that serious music could be written for the films.

A prolific writer, he contributed many articles on endocrinology to Esquire magazine, and his interest in police activities (he was an honorary member of the Paris detective force) led to his writing of "Every Man His Own Detective."

The composer's recent creations included "The Capital of the World," a ballet based on a short story by Hemingway. It was performed by the Ballet Theater in 1953. He also did the film score for "The Pride and the Passion" and his third opera, "Volpone," was presented in New York in 1953.

He also composed scores for various television shows, including the "Twentieth Century" series which is presented over the Columbia Broadcasting System. He wrote the music for "Happy Journey" in which Alfred Drake is to appear next season.

His association with Trenton resulted in several compositions which had a local background, the outstanding one being "McKonkey's Ferry" which gave a musical version of the crossing of the Delaware by Washington.

And on one of his longer visits here he conducted the Trenton Symphony Orchestra in some of his own compositions.

No matter where he went, whether it was on the Riviera, in Paris, Berlin, or north Africa, he made news. Once he was reported lost and stories were flashed across the Atlantic to that effect. It turned out that he was not lost. He had just failed to keep up contacts.

Federal Aid to Depressed Areas

SPEECH

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. VAN ZANDT. Mr. Speaker, on February 23, or yesterday, I introduced H.R. 4878, a bill to aid depressed areas.

It might be said that what we need right now is not new bills to aid depressed areas but an act signed by the President which would bring Federal assistance to the scores of communities in the United States which have for years been plagued with chronic unemployment. I fully agree with this view.

My record in favor of depressed area legislation is crystal clear.

For years I have cooperated with my colleagues on both sides of the aisle interested in this type of legislation and my disappointment was as great as theirs when the President vetoed the Douglas-Spence bill last fall.

Mr. Speaker, on the subject of Federal aid to depressed areas there are some excellent bills pending before this session of Congress. In this connection, it would not be difficult for me to support the bill introduced by my colleague, the gentleman from Pennsylvania [Mr. FLOOD], and its companion bill in the Senate introduced by Senator DOUGLAS, of Illinois.

At this point, however, it is pertinent to ask—and I do so in all sincerity—why solicit a repetition of last year's veto by having the Douglas-Flood bill given similar treatment since it resembles to a marked degree the Douglas-Spence bill in the 85th Congress.

Frankly, the possibility of another veto is cause for great concern.

While there is no one in the Senate or the House who would stoop to playing politics with the misery of unemployment, we cannot ignore the fact that unless a bill is enacted the suffering of the people in the depressed areas is not going to be alleviated.

Mr. Speaker, among the sponsors of depressed area legislation there exist two conflicting points of view.

To begin with, in principle the administration has endorsed aid to depressed areas.

In addition, the two great major political parties also endorsed the principle in their 1956 platforms.

Therefore, the question that Congress must resolve is the extent of aid to the depressed areas of the Nation.

In an effort to reach this common objective, it is imperative that reasonable people should be willing to compromise.

In this connection, it is my belief that the President will find it possible to accept a reasonable compromise between the administration bill and the Douglas-Flood version of the legislation.

In my plea for a reasonable compromise, it must be thoroughly understood that I am not presuming to speak for the administration nor have I had any consultations with administration leaders on the subject.

Mr. Speaker, let us be practical and face the facts concerning depressed area legislation.

In the event of a Presidential veto of the Douglas-Flood bill, I have been unable to find anyone willing to flatly predict that the veto will be overridden by the House of Representatives.

The fear of being unable to override a veto is based on the fact that it requires two-thirds of the votes cast to accomplish that purpose.

Therefore—looking the facts right in the face—when you review the position of those Members of the House today in relation to their last year's vote on the Douglas-Spence bill, one finds that the margin of victory would be insufficient to override a possible Presidential veto of the Douglas-Flood bill.

Mr. Speaker, to improve our chances of enacting depressed area legislation, I introduced H.R. 4878 a bill which represents a compromise between the administration's approach and the Douglas-Flood proposal.

With a few exceptions, my compromise bill, H.R. 4878, offers the same types of aid contained in the Douglas-Spence bill vetoed last year.

For example, instead of making every depressed area eligible for the same types of assistance, my bill provides different degrees of Federal assistance based upon the level of chronic unemployment and the need in such areas.

In this connection, it is my belief that areas which have suffered greater levels of unemployment should be entitled to a greater degree of aid than those communities whose problems of unemployment are of a lesser degree.

Briefly, my bill, H.R. 4878, provides for the following programs:

First. Technical assistance: Depressed areas would be eligible for technical assistance to help the communities to appraise their physical and human resources, which would prepare them to plan constructive programs to attract new businesses and expand existing businesses in these areas.

Second. Community loans: Depressed communities would be eligible to receive loans from a revolving fund of $100 million.

We know that the conventional lending facilities in depressed areas are not as venturesome as those in growing and expanding communities.

The fund would put the depressed areas on a more equal footing with other communities in attracting new jobs.

Third. Public facilities: some communities need improvement in public facilities before they would become sufficiently attractive to new businesses which might desire to locate in these areas.

My bill provides for an establishment of a $25 million revolving fund from which these communities would be able to borrow.

While the figure may appear modest, attention is called to the fact that legislation is pending before the House which would establish special funds for community facilities.

Meanwhile, under my bill, H.R. 4878, a smaller fund would be allocated and earmarked to aid depressed areas.

In addition, the most depressed communities which do not have the sufficient resources to borrow funds would be eligible to receive grants up to a maximum of $25 million.

At this point, let me stress that this is not an annual appropriation but is intended to be a $25 million revolving fund from which these communities would be able to borrow.

The administrator of the program would be expected to limit the grants only to communities with the greatest need for aid and which do not have sufficient resources to repay the loans in the foreseeable future.

It should be stressed that this is no giveaway program; under the provisions of my bill grants would be made only for projects which would provide lasting improvements and thus broaden the economic base of the communities.

Fourth. Vocational training and subsistence: One of the big problems of the people in depressed areas is the fact that many of their industries have declined or disappeared and, consequently, the demand for the skills acquired by the people in these areas has also diminished or vanished.

In order to enable these people whose skills have become obsolete to gain new employment, we must provide facilities to retrain them.

But many have been unemployed for a long period of time, and it would be unreasonable to expect that they could undergo an effective period of vocational training without any means of support.

Consequently, while the unemployed are undergoing training and if they are no longer eligible for unemployment compensation, they would be receiving subsistence payments equal to the average unemployment insurance in their States during the period while they are undergoing training, but not for a period exceeding 13 weeks.

Only the unemployed residing in the communities with the highest level of unemployment would be eligible for this type of aid and the total amount that would be appropriated for this program would be limited to $5 million a year.

Mr. Speaker, in brief, these are the provisions of my compromise bill, H.R. 4878.

They are modest, but at the same time will provide a sound program of Federal assistance to depressed areas.

All of us are deeply concerned by the latest reports about the rise of unemployment.

Experience has shown that the people in depressed areas are the ones that are mostly hit by any rise in unemployment and are the last to recover from the onslaught of recession.

Therefore, it is urged that we enact the program contained in my compromise bill, H.R. 4878, as a realistic means of providing an effective program to aid the chronically depressed areas of the Nation.

Since the cost of depressed area legislation has proved a stumbling block in the past and impeded our efforts, let me point out that the cost of the Douglas-Flood bill is $389.5 million as compared to the cost of the administration bill which is $53 million.

By way of contrast, my compromise bill, H.R. 4878, will cost $158 million or just about midway between the cost of the Douglas-Flood bill and the administration bill.

Mr. Speaker, at this point in my remarks I should like to include the following comparative analysis of the provisions and costs of the Douglas-Flood, administration, and Van Zandt bills:

Main provisions of the Douglas-Flood, administration, and Van Zandt bills

Douglas-Flood bill	Administration bill	Van Zandt bill
Title: Area Redevelopment Act	Area Assistance Act of 1959	Same as administration bill.
Purpose: To establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically depressed areas.	To assist areas to develop and maintain stable and diversified economies by a program of financial and technical assistance and otherwise, and for other purposes.	Do.
Organization: Establishes the Area Redevelopment Administration as an independent agency.	President appoints an Area Assistance Administrator who reports to the Secretary of Commerce.	Do.
Criteria for area eligibility:		
a. Industrial areas with unemployment of 12 percent for 12 months; or 9 percent for 15 out of 18 months; or 6 percent for 18 out of 24 months, or 15 percent for 6 months if causes are not temporary.	a. Labor market areas where the nontemporary unemployment rate (1) is currently 6 percent and (2) has averaged at least 6 percent—	a. Same as administration bill.
	(a) for 4 out of preceding 5 years and has been 50 percent above national average.	a(2)a. Designated category I.
	(b) for 3 out of preceding 4 years and has been 75 percent above the national average, or	a(2)b. Designated category II.
	(c) for 2 out of preceding 3 years and has been 100 percent above the national average.	a(2)c. Designated category III.
	(3) Also, nonagricultural employment has declined, or has increased less than in the country as a whole, during preceding 5 years. (Loans and technical assistance grants.)	
b. Rural areas with the largest number and percentage of low-income families and having a condition of substantial and persistent unemployment or underemployment. (NOTE.—The term "redevelopment area" may include 1 or more counties, or 1 or more municipalities, or a part of a county or municipality.)	b. "1 industry" towns, small towns in rural areas and rural low-income areas (technical assistance grants only.)	
Loans:		
a. $100 for industrial redevelopment areas	a. $50,000,000 for eligible labor market areas	a. Same as Douglas-Flood bill.
b. $100 for rural redevelopment areas	(NOTE.—Area assistance fund to be financed by congressional appropriation.)	b. $25,000,000 for public facilities (categories II and III only).
c. $100 for public facilities.		
(NOTE.—Area redevelopment fund to be financed by public debt transactions.)		
Terms for industrial loans:		
a. Up to 65 percent of project cost for 30 years with interest at Treasury cost plus 0.5 percent minimum of 10 percent State and local and 5 percent private funds.	a. Up to 35 percent of project cost for 25 years at rate of interest to be determined; at least 15 percent funds from State or local sources.	a. Up to 33⅓ percent of the project cost for category I, 50 percent, category II, and 75 percent category III; at least 15 percent from State or local sources.
b. Loans for land, construction and machinery	b. Loans for land and buildings only	b. Same as Douglas-Flood bill.
c. Loans must be approved by the official State or local development agency. If none exists, the Administrator appoints a local redevelopment committee.	c. Loans must be approved by State development agency	c. Same as administration bill.
d. Project must be consistent with an overall economic development program.	d. Project must be consistent with an overall economic development program	d. Same as administration and Douglas-Flood bills.

Main provisions of the Douglas-Flood, administration, and Van Zandt bills—Continued

Douglas-Flood bill	Administration bill	Van Zandt bill
Grants: a. Provides $75,000,000 for community facilities grants	a. No grants for community facilities. However, amends title II of the Housing Amendments of 1955 to give first priority for public facilities loans in areas of substantial and persistent unemployment.	a. Provides $25,000,000 for community facilities (category III only).
b. Provides $4,500,000 annually for economic studies and technical assistance grants.	b. Provides $3,000,000 annually for technical assistance grants. Of this amount $1,500,000 is available for "1 industry" towns, small towns in rural areas, and low-income areas not otherwise eligible.	b. Same as administration bill.
Technical assistance: Information, advice, and technical assistance limited to redevelopment areas.	Technical assistance on economic development available to all areas.	Same as Douglas-Flood bill but Federal share limited to 33⅓ (category I), 50 percent (category II) and 75 percent (category III).
Housing amendment: Amends Housing Act of 1949 to permit industrial development of urban renewal areas and the Housing Act of 1954 to extend urban planning grants to industrial redevelopment areas.	Amends Housing Act of 1949 to permit industrial development of urban renewal areas and the Housing Act of 1954 to extend urban planning grants to industrial redevelopment areas.	Same as Douglas-Flood bill.
Vocational training: Provides for vocational training through the Secretary of Labor and the Secretary of Health, Education, and Welfare. If State vocational education agency is unable to provide facilities and services, administrator may contract for them.	Provides for vocational training through the Secretary of Labor and the Secretary of Health, Education, and Welfare.	Do.
Retraining payments: Secretary of Labor makes retraining subsistence payments for up to 13 weeks for those undergoing vocational training or retraining.	None provided	Same as Douglas-Flood bill but limited to category III communities.
Total costs: $369,500,000 in loans and grants, including $10,000,000 annual ceiling on retraining subsistence payment. (Other costs not specified.)	$53,000,000 in loans and technical assistance grants. (Other costs not specified.)	$158,000,000, including $5,000,000 annual ceiling on retraining subsistence payments (other costs not specified).

Summary costs of the Douglas-Flood, administration, and Van Zandt bills

	Douglas-Flood bill	Administration bill	Van Zandt bill
Loans:			
Industrial areas	$100,000,000	$30,000,000	$100,000,000
Rural areas	100,000,000		
Public facilities	100,000,000		25,000,000
Total	[1] 300,000,000	[2] 30,000,000	[1] 125,000,000
Grants (annual):			
Public facilities	75,000,000		25,000,000
Technical assistance, annual	4,500,000	3,000,000	[3] 3,000,000
Total loans and grants	379,500,000	53,000,000	153,000,000
Administration	(?)	(?)	(?)
Retraining subsistence training payments to States	[4] 10,000,000	None	5,000,000
Vocational training	(?)	(?)	(?)

[1] Financed by public debt transactions.
[2] Financed by congressional appropriation.
[3] Not specified.
[4] Annually.

Mr. Speaker, in connection with depressed area legislation, let me state that I have no pride of authorship.

My sole desire is to aid the people in the depressed areas and to attain such a laudable objective the spirit of compromise should be dominant in our minds.

As one who represents two chronically depressed areas in Pennsylvania with unemployment as high as 14 percent of our labor force and which has plagued us for years, my goal is that Congress enact without delay an effective bill in a form acceptable to the President, thereby eliminating the prospects of another presidential veto.

Mr. Speaker, the residents of the 269 depressed areas of the Nation are entitled to this type of legislation, and it is my sincere hope that we can compromise any differences and enact a depressed area bill without further delay.

Judicial Tyranny Can Be Met

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. HARRISON. Mr. Speaker, in brief comment yesterday on the proven determination of the citizens of Warren County, Va., to retain their constitutional control over the education of their children, I included in the Appendix certain editorial comment.

Now, under further leave to extend my remarks, I should like to bring to the attention of the House a news article and two additional editorials.

From the Richmond (Va.) Times-Dispatch, of February 20, 1959:

PRIVATE SCHOOL PRINCIPAL IN WARREN PROUD OF CLASSES

(By Ed Young)

FRONT ROYAL, February 19.—The office of the principal is a city block from the nearest classroom of the Warrent County Educational Foundation's private high school here.

On the wall of an anteroom hangs a small, framed certificate of which the principal, John Pond, is inordinately proud. It announces that the school has been recognized by the State board of education as an accredited high school.

It is the Warren County Educational Foundation High School in which all of the county's white high school students now are enrolled, and in which they chose to remain when Warren County High School reopened Wednesday under court orders to admit 24 Negro pupils.

There is no present expectation that the private school, financed by contributions from in and out of the county, will continue in operation beyond the end of the current session. Next fall, presumably, those of its 780 students who have not been graduated will reenroll in Warren County High.

THEY ARE SITTING TIGHT

But for the present they are sitting tight, leaving the public high school to 23 Negro pupils who have been enrolled.

Pond, a tall, long-legged, dark-haired Hampden-Sydney College graduate, was assistant principal of Warren County High when it was closed last September 12 to prevent integration. He was one of 26 of the high school's 41 faculty members who signed a teaching contract with the educational foundation. Like the others, he is staying with the foundation but will be offered a contract to return to Warren County High next fall.

He says he believes the foundation's students are somewhat more serious about their studies than when they were enrolled in the expensively equipped county high school. And there is no doubt in his mind that the white children are getting an excellent education in the private schools.

"When Warren County High closed last fall and they were left without a high school, they suddenly realized what they had lost," he said. "You know, you sometimes have to lose something before you appreciate what it meant to you."

Thousands of dollars in solicited and unsolicited contributions have been poured into operation of the foundation's school since it opened. Most has gone for teacher salaries, some to the county to pay for school bus transportation for students, a little for school equipment. Thousands more must be spent before the 1958–59 term is completed.

NOTHING FOR FACILITIES

But for facilities, the foundation has had to pay nothing.

The private school is scattered over a

radius of about 3½ blocks, near downtown Front Royal. Five different buildings with about 30 classrooms are being used—three of them Sunday school buildings for Methodist, Baptist, and Episcopal churches; one a museum for the United Daughters of the Confederacy; one a rather ramshackle former private home of frame construction that served as a youth center before the private classes moved in.

Each building generally serves one grade, from the 8th to the 12th. There are 95 12th graders—seniors who will receive the first diplomas from the foundation next spring. About 200 are enrolled in the largest grade, the 10th, and nearly that many in the 8th.

Three times each week, chemistry students have 2-hour laboratory classes at Randolph-Macon Academy, a prep school in the town.

Pond says the only classes offered at Warren County High not available at the foundation's school are agriculture, home economics, and shop, and that agriculture and home economics could be offered if there were sufficient demand.

The principal can visit on foot all the various buildings serving the private school in the space of 30 minutes, and does so daily. He, himself, teaches one class, general science.

BLACKBOARDS, NO DESKS

At the Methodist Church, a block from Pond's office near the county courthouse, 10th graders are taught on the third floor in Sunday school classrooms. There are blackboards, but no desks. The students seem serious, are quietly attentive.

"If you stayed, you would like what you see," says J. M. Brownlee, an English teacher, who leaves his class for a moment to greet visitors.

A block distant is the old youth center, where senior classes are in progress on the first and second floors. A sign on the wall announces a dance for the seniors, who plan a trip to Washington to see Congress in action.

"We have social events quite often," says Pond. "About the only thing we don't have is student clubs, and I'm not so sure that's bad."

The school paper and annual are missing this year. But seniors have arranged for the taking of individual photographs to be exchanged.

Juniors are planning for the annual junior-senior prom. And the basketball team, playing under the foundation name, has had a winning season.

Another block and you come to the UDC building. Exhibits have been stored away to make room for the youngsters, but still adorning the walls are pictures of Lee, Jackson, Davis, Mosby. There is unusual noise from one downstairs classroom and it turns out to be a typing class for 10th and 11th graders. There are classrooms upstairs, too.

Next door is the public library where, Pond says, "You see a lot more students these days than you used to."

UP-TO-DATE LIBRARY

About 15 are there. It is quiet, as libraries are, and up to date.

A half-block away is the Baptist Church Sunday school annex. Ninth graders are here in six classrooms fashioned from what used to be a private home.

Around the corner is the Episcopal Church. A room in the stone parish house serves as a study hall for eighth graders. Across the street in the cinderblock Sunday school building there are seven classrooms, only six of them used.

Three classroomas are in the basement, three on the ground floor. A teacher steps into the hall and rings an old-fashioned hand bell. It is 11:25 a.m.—time for classes to change.

On your tour, you pass the Front Royal elementary school. It is a large, handsome school with 1,260 students, all white. Four Negroes have applied for admission, and may have to be enrolled next September.

Who knows, Pond observes, this too may be empty in the fall.

From the Shreveport (La.) Journal of February 19, 1959:

ALL PRAISE TO FRONT ROYAL

All praise to the people of Front Royal, Va.

When the Warren County High School at Front Royal was finally reopened on a integrated basis Wednesday in compliance with the Supreme Court's idiotic race-mixing decree, not a single white pupil showed up. Again today, the white pupils stayed away.

The 22 Negro pupils who gained admission to the previously all-white school found themselves still segregated. With ten teachers and a principal on hand in obedience to court orders, the situation which resulted represented a new high in absurdities created by the Supreme Court: One white instructor for every two Negroes—and no acceptable public school facilities at all for the white children.

The majority of the 1,000 displaced white pupils calmly continued their studies in emergency private, segregated classes.

Front Royal now takes its place with Little Rock in showing the parents of America how to save their children from the socialistic existence to which judicial crackpots would doom them. Every time the courts force racial integration upon a white school, simply keep the white pupils away and send them to private schools instead. With no white students available to attend the public schools, State legislatures certainly will have no obligation to continue operating the institutions for Negroes alone.

The really glorious aspect of the situation in Front Royal is that the Supreme Court is powerless to impose its senseless will further upon the white parents and their children. Against the unity of determined citizens who are willing to build a new school system rather than submit to its tyranny, the Supreme Court is as impotent as the reasoning on which its race-mixing decision is based.

Front Royal's display of strength could not have come at a better time. Just a few days ago an Associated Press reported trumpeted to the world that the proud old State of Virginia had calmly thrust aside the color barrier. He theorized, apparently, that if two Virginia communities would yield to token integration, the whole State would capitulate.

Thank God for the people of Front Royal.

From the Staunton (Va.) News-Leader of February 22, 1959:

FEDERAL DESPOTISM STUMPED

Someone has asked a good question: Will Federal Judge John Paul, of the western district of Virginia, jail the 1,000 or so white students who have prevented integration of the Warren County High School? They have done this by simply staying away, most of them attending private schools, or public schools in other communities. Isn't this outrageous defiance of the court order to integrate, and of the overriding power of the Federal Government?

The logic of the various Federal court rulings in integration cases clearly dictates condign action against the students, their parents and the teachers conducting the private school serving white students in Front Royal. They have conspired to thwart the court order. Lacking enough cells in which to confine them, the logic of Federal actions since the illegal 1954 Supreme Court decision against segregation in the public schools could move on to herding them in a concentration camp. Federal despotism toward southern Americans hasn't gone quite that far, although it did in the case of Japanese-Americans after Pearl Harbor.

Warren County has given the Nation an example of gallant passive resistance to Federal despotism. Its people, under orders as to how to run affairs which constitutionally were always theirs to run until the Supreme Court presumed to make law in 1954, have reacted with dignity, determination and orderliness. Let Judge Paul try to punish them if he dares. To do so, he would have to overlook again the fact that the Supreme Court did not order integration—it ruled that there must be no exclusion from public school's on account of race. Judge Paul, who has joined the judicial despots in his old age, could be impeached for trying to exceed the arrogance of his nine old superiors in Washington.

Toward a Budget Based on National Goals Rather Than Political Expediency

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. McGOVERN. Mr. Speaker, one of the most intelligent discussions of the Federal budget that has come to my attention was offered by Mr. Nate White in a recent column of the Christian Science Monitor, which follows:

WHY NOT TRY A PROGRAM BUDGET?

(By Nate White)

Washington's budget debate would be more effective if less emphasis were put on the words "spend" and "save" and budget "balance" and more on what is known as "program budgeting."

Current news from Washington tends to separate the sheep from the goats. Everyone who is against the Eisenhower budget is labeled a "spender," and those who are for it are called "savers." This name calling does not produce much economic light.

The United States is a great and powerful nation, and it is not on the brink of economic collapse, as some oversea sources—particularly those with interest in gold stocks would like to argue. Inflation in the United States has been serious and every possible effort to stop it should be encouraged. But this inflation is considerably less than the rate of inflation in other nations. It is not an inflation which is going to push the country into sudden crisis.

The budget debate, therefore, is not a crisis debate—that is, having to do with a threat of sudden collapse if the buget is not balanced—and it should not be discussed in these terms.

Program budgeting is budgeting in which the administration and the Congress determine what the United States must do to progress, grow, and gain superiority in the missiles race, and at the same time take care of its urgent needs for better schools, handle the unemployment problem better, and give greater consideration to the needs of the young people who every year enter the productive force.

The Nation, having determined what it needs to do, should then tailor the program budget to accomplish this end. If this means higher taxes—and the programs are desirable and economically achievable—then a budget with higher taxes is required.

Program budgeting, however, cannot be done as a once-a-year, all-out thing in which hairs are split every year over dollars spent.

Program budgeting is long range. It is achieved in the councils of government, preferably where the Executive and the Congress work together. It cannot be contained within 1 year for a nation as large and strong as the United States. A program necessarily requires consideration for its long-range effect, and it can be achieved step by step economically over a period of years. Some years will take more money than others as a matter of practical necessity.

Over a period of say 5 years the overall picture should show a budget surplus rather than a deficit if the program budgeting is carefully done and tax revenue progressively planned to take care of it in each stage of the program.

In program budgeting it is necessary for the Executive to work closely with the Congress in the planning stage. The system today, calls for extensive examination by the Congress after a budget is submitted.

In the present usage the yearly budget is an economic anachronism. It is useful as an educational tool for both the Congress and the public. As a budgetmaking process for a great nation it is an outmoded system.

The budget can never be made the supreme objective in government or business. If it is, the cart has been put before the horse, and the government and the business which does this will not make progress. They will stagnate and fossilize. On this point business leaders and careful students of the Federal budget agree.

In a business, the stewards of the business decide what they wish to accomplish in a given period of time. An automobile company, for instance, determines when it wishes to launch a new automobile, when it wishes to expand its research, and so on, and it budgets for this purpose. It spends money on a new product in order to gain future profit.

A Federal, State, or local government can bring order into its financial affairs if it sets its objectives and budgets for them.

The threat in the current debate is that the Nation's overall objectives will be lost sight of on the issue of spend versus save. This is not keeping the eye on the ball.

Economic growth is the ball. How to budget best for this progress—so that progress is assured—is the real issue. Program budgeting holds the answer.

The Federal Budget

EXTENSION OF REMARKS

OF

HON. EDWIN E. WILLIS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. WILLIS. Mr. Speaker, the people know more about a balanced budget and deficit financing than we give them credit for. They know that from personal experience. For example, they know that when they live within their means, they are operating on a balanced budget. They know that when they spend more than they make, they are going into debt, which is exactly the same thing as deficit financing. There are a few of them who do not care one way or another, but most of them do. They know that their habits should not be more costly than their own purse can buy. And make no mistake about it, they expect the President and the Congress to find a way not to spend more money than the Government takes in. We will be hearing more and more about this subject, and so far as I am concerned, I am willing to stand up and be counted right now.

But first let me say, Mr. Speaker, that I do not believe in name calling. I want to express my personal views without regard to conservative, liberal, Democratic, Republican, or any other kind of partisan politics.

In my opinion, the most serious threat to our economy is inflation. Deficit spending breeds inflation and inflation in turn reduces the value of the dollar. In his "History of the French Revolution," Carlyle once said, "You cannot quench fire with oil. You must choke a deficit or else it will swallow you." In short, I believe in and have made it a practice in my own way to vote against deficit spending and for a balanced budget. In fact, I believe we should try to go one step farther. We should strive to spend less than we take in and apply the difference against the public debt, because I, frankly, do not see how we can hope to have a general tax reduction until that is done. If we cannot do it now, how can we expect to do it in case of a more serious national emergency.

Now, in Government as in business, a budget is composed of two parts, the income and the outgo. When the one is equal to the other, then the budget is in balance. But when the proposed expenditures exceed the anticipated revenues, then the budget is out of balance. We cannot have our cake and eat it too, and in this situation, in order to bring it back into balance, we must either reduce the expenditures or increase the taxes. That is exactly the position the President found himself in when he received the estimate of income and expenses from the Budget Bureau. In other words, the Budget Bureau estimated the outgo to be more than the income under all existing taxes, and they had to either trim down the expenses some more or propose new taxes. They chose to recommend new taxes. That is the hitch.

Let us take a look at the President's budget itself. We call it the budget for the fiscal year 1960, but it actually covers the period from July 1, 1959, to June 30, 1960. It is a very complex document, containing over 1,000 pages and weighing over 10 pounds. It provides for the operation and services of every branch of the Government in every congressional district and in every section of the country. We refer to it as the President's budget because in the final analysis, the occupant of the White House, whoever he may be, directs the policy of his administration and has the right on a broad scale to reduce or increase the expenditures of this or that department or function of our Government. We all know, however, that the President himself does not and cannot possibly be expected to prepare his budget. The job is done by the Bureau of the Budget, which is the right arm of the President. It is a big job, indeed, and a year round checking and bookkeeping operation. Every single item of proposed expenditure, and each and all demands made upon our Government must be weighed and considered, approved, increased, shaved down or disapproved. They cannot possibly please everyone. In the end, some people feel that the proposed expenditures are too low, while others, with equal sincerity, believe that they are too high; some people, or some sections in the country, are glad, some are half-pleased, some are displeased, and still others are downright mad. As I said, a few people just do not care, but most of them are dead serious in wanting to know at least one thing: does it balance? It is to these people that I address myself.

Well then, does this one balance? The answer is "Yes," provided the Budget Bureau has correctly estimated the expenses at $77 billion; and provided they have correctly estimated the revenues, under all existing taxes, at $76 billion, and provided further that Congress adopts their recommendations and imposes $1 billion of new taxes to make up the difference. In order to make my points clearer, I speak in round figures throughout.

I want to be more specific. After screening the demands of all the Federal departments and agencies, including requirements for public improvements, flood control, navigation, highways, public housing, veterans, welfare and social security, agriculture, postal services, the administration of justice, and the manifold other functions of our Government; the interest on the public debt and the staggering cost of our national defense, the Bureau of the Budget estimated that the expenditures for the next fiscal year, which actually covers the period from July 1, 1959, to June 30, 1960, will amount to about $77 billion. So much for the outgo.

Now let us consider the estimated income for the same period, July 1, 1959, to June 30, 1960.

For the information of Members of Congress and others, the Bureau of the Budget issued a pamphlet entitled "The Federal Budget in Brief." According to this pamphlet, the income of our Government from all sources and under all existing taxes for the fiscal years 1957, 1958, and 1959 was as follows:

Fiscal year:	*Income (in billions)*
1957 (July 1, 1956, to June 30, 1957)	$71
1958 (July 1, 1957, to June 30, 1958)	69
1959 (July 1, 1958, to June 30, 1959)	68

Mr. Speaker, it is perfectly obvious that if the business trend in the last 3 fiscal years should continue, the estimated expenditures for the next fiscal year, amounting to $77 billion, would far exceed the income. And if that should happen, the proposed budget of the President would be way out of balance. But in the pamphlet I refer to, the Bureau of the Budget states that "with continued vigorous economic recovery" the revenues during next fiscal year will amount to about $76 billion. Now the Bureau of the Budget has been operating as an agency of the executive department of the Government for a very long time.

And I respect their expert opinion. They certainly are in a much better position than I am to make an educated guess about anticipated revenues. I am sure that they would not deliberately mislead Congress. In fact, it has been their practice to stay on the conservative side over the years. I know they are sincere, and I hope they are right. Nevertheless, their estimate of income is certainly based on an optimistic business outlook, and that is why I said that the budget, as presented, is in balance, "provided they have correctly estimated the revenues."

But let us assume that the estimates are correct and that the income from all sources and under all existing taxes will turn out to be $76 billion against their estimated expenditures of about $77 billion. At this point the budget is still out of balance, and as I previously indicated, in order to bring it into balance, the President and his advisers had to either recommend trimming down the estimated expenses or increasing the revenues somehow to the tune of about $1 billion. Do you realize what $1 billion is? Let me illustrate. If you placed 1,000 dollar bills one on top of the other, the stack would be as high or higher than the Washington Monument. Or put it this way. Using round figures again, only about 1 billion minutes have gone by since the birth of our Lord, Jesus Christ. Take up your pencil and figure it for yourself.

In any event, in order to make up the difference between the income and the outgo, whatever that exact figure might be, the President wants Congress to make sexen new tax adjustments.

But, Mr. Speaker, a rose by any other name would still smell the same. In plain language, they want Congress to impose a brandnew tax on jet fuel, raise the general gasoline tax, raise the postal rates, raise the income tax of life insurance companies, raise the taxes on cooperatives, and reduce or juggle the 27½-percent depletion allowance, which is another name for raising the taxes on income derived from oil and gas. They also suggest an adjustment of other fees and charges so that persons receiving special services will more nearly pay the cost of those services. I do not know exactly what is meant by this particular item. I might be able to go along with the general idea, but I will want more information about it. In fact, all the proposals have been made in such very general terms that we will not know what each one means in dollars and cents until the administration bills are actually introduced.

I recognize that certain tax injustices have developed over the years and I believe that this should properly be the subject of a broad study by the Committee on Ways and Means, but I doubt that this can be done overnight, so to speak. I have great respect for the Committee on Ways and Means and if and as they make recommendations, I will most certainly consider them.

And I want to say that I, for one, applaud the President's determination to balance the budget. I am for it because I firmly believe in fiscal integrity. In short, I agree with the President on the necessity for a balanced budget but I disagree with him on his way of achieving it. He recommends that we do it by first increasing taxes, while I think we should first try to do it by reducing certain expenditures.

My policy will be this. I will study each item of expenditure and each item of appropriation as they are presented on the floor for debate. I realize full well that different people in my congressional district, or in any other given area for that matter, have different ideas about where to cut and we have to try to reflect the views of the majority. Even that becomes a difficult task at times, but we have to do the best we can under the circumstances existing when we cast our votes.

But when all my votes for expenditures are laid side by side with those for appropriations, they will spell out a balanced budget. In other words, I will not personally vote to spend more than we take in. And I think that, at least, is the general feeling of the people I represent. Just to give one example, I am quite sure that the people of my district would prefer for me to vote to cut down on foreign aid rather than to vote for an increase in the gasoline tax. As a matter of fact, I have always voted against all foreign aid. The President's budget calls for almost $4 billion for foreign aid. If we should eliminate this one item in toto, as I will vote to do, or if we even cut it in half, the budget would not only be in balance, without new taxes, but there would be enough left to boot to apply a sizable sum against the national debt.

The Nation's Capital Is Not a Cultural Backwater—A Report on the National Cultural Center and Culture in the Nation's Capital

---

EXTENSION OF REMARKS
OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, the able drama critic of the Washington (D.C.) Post and Times Herald, Richard L. Coe, reminds us that—

When the White House announced the names of trustees for the National Cultural Center, it also announced that the advisory committee would be appointed next week. That was 4 weeks ago.

Mr. Coe might well have gone on to say that the legislation establishing the National Cultural Center passed the Congress on August 22, 1958, and was signed into law by the President on September 2, 1958. He might have pointed out that the President at that time asked a number of national organizations in the fine arts field, including the National Music Council and the American National Theater and Academy, to submit names for the advisory committee. These names were submitted but, as Mr. Coe has pointed out, the appointments have not been made.

Mr. Coe made the point last week—February 21, 1959—that—

"Next month," said HEW Secretary Flemming, when asked about when the first meeting of the auditorium trustees would be held. "Next month" was the answer to the same question last month.

In its February 23, 1959, issue Time magazine referred to the Nation's Capital as a city that has long been known as a cultural backwater." In the same report Time praised the Washington Opera Society, its promising ballet company, and the fine National Symphony, whose reputation has grown steadily, until it today is not far from the top echelon of U.S. orchestras.

The New York Times hailed Washington's opera for a recent production which was attended by Walter Lippmann, the Secretaries of Commerce and the Air Force, and a sprinkling of ambassadors. It said "there will be an opera troupe to move in" the National Cultural Center when and if it is realized.

The Board of Commissioners of the District of Columbia recently established a National Arts Committee which represents all of the many cultural groups and great institutions in the Nation's Capital. This committee will have a national and internaitonal importance, and will contribute to the new image of America abroad which is developing.

The District of Columbia Recreation Department, created by the Congress in 1942, is carrying out its mandate to establish activities in the arts. One of the most progressive and forward-looking cultural programs of any American city has been established. The department sponsors a summer music festival, as well as the outstanding Washington Civic Opera Co. The latter company is directed by Frederick Fall, a distinguished European opera and symphony conductor. A resident company, it gives hundreds of people in the Washington, D.C.-Baltimore, Md., area an opportunity to participate in cultural activities which would otherwise be denied them.

The groundwork is clearly being laid in the National Capital for resident companies in the performing arts which one day will be of great national importance and which will encourage the development of similar companies in many other American cities. When this transpires the United States, once thought of as materialistic, will be able to assert its cultural leadership throughout the world.

I include articles from the New York Times, Time magazine, the Washington (D.C.) Post and Times Herald, and the Washington (D.C.) Star which attest to the fact that the Nation's Capital is definitely not "a cultural backwater":

[From the New York Times, Feb. 22, 1959]

CAPITAL REVIVAL—AN OPERA TROUPE GROWS IN WASHINGTON, D.C.

(By Howard Taubman)

Though sound is in abundant supply in the Nation's Capital, one must have sharp ears to hear any euphony in it. But underneath the tocsins of the public servants, the murmurs of the diplomats and the clamor of the politicians, one may discover, if one

listens carefully, shy noises that are music. For Washington is making a determined effort to build up its musical institutions.

The city on the Potomac was once regarded as a horrible example of a world capital that was provincial in its neglect of the cultural amenities. Compared with London, Paris, Rome, Berlin, and Moscow, it looked like an esthetic desert. Foreigners who liked to scoff at the United States would point to the paucity of artistic activity in Washington as another demonstration of American materialism.

The comparison was never quite fair, for Washington has always been an artificial city, a Government center whose population fluctuates substantially with shifts in party power. Nevertheless, there seemed to be a basis for the charge that the community cared for little but the political and social game. The symphony orchestra was in the doldrums; there was no opera, and apart from Zelda Fichandler's Arena Stage, no continuous theater.

BURIED IN COMMITTEE

Some citizens complained that Washington was missing an opportunity. No longer a village on Foggy Bottom, they insisted, it ought to behave with the pride of a great capital. It ought to be a showplace in the humanities and arts. Conscientious Congressmen introduced legislation to promote this aim, and generally it was interred in committee.

Last year, however, a law was enacted to make possible a cultural center in Washington. It avoided committing the Government's money, but arranged for official approval of an apparatus to raise $25 million and build a center. When this project will become a reality is open to speculation. In any event, no one need be puffed up with optimism.

Fortunately, some Washingtonians have not waited for cultural amelioration wafted on wings of Government action. In recent years the National Symphony Orchestra has had an infusion of energy. Its conductor, Howard Mitchell, has brought a modern point of view to program making. By means of good ideas and personal drive, he has strengthened and orchestra, lengthened its season, and magnified its prestige.

For several years an opera company has been taking shape. The organization, backed by local people, was formed in September 1956. It began its active career with "The Abduction From the Seraglio" on January 31, 1957. It used professional elements on the stage and in the pit. Economies were urgent, of course, and properties were borrowed, including some from the Turkish Embassy.

OPERA COMPANY

In April the Opera Society of Washington followed with a Menotti program: "The Old Maid and the Thief" and "The Unicorn, the Gorgon, and the Manticore." Like the Mozart production, the Menotti twin bill had two performances. One could not say that the company was swollen with ambition.

In its second season, the Opera Society ventured on three productions: "Fidelio," "Ariadne auf Naxos," and "Cosi Fan Tutte." Each had three performances.

In the current season, the third, four works are on the agenda: "The Marriage of Figaro," Monteverdi's "Orfeo," and "The Rake's Progress" have been presented, and "Falstaff" will wind up the schedule.

This repertory is enough to make clear that this is no ordinary company. It has no interest in pursuing success down the easiest road. "Bohéme," "Traviata," and "Carmen," admirable works all, would be obvious selections if one wanted sure-fire attractions. But the Opera Society, much as it enjoys sellouts, prefers pieces likely to be less familiar to its clientele. To the company's great delight, productions like "Ariadne" and "Figaro" have played to full houses.

NATIONAL SYMPHONY

The general manager of the enterprise is Day Thorpe, music critic of the Washington Star. Mr. Thorpe is a brave man, and his paper is generous to let him risk his reputation on the firing line. Critics everywhere are indebted to him, for he proves what a protean lot we are. Who but a critic could do his job and manage an opera company with his left hand, as it were? Mr. Thorpe, of course, does not review his own productions. That would be too much of a good thing, wouldn't it? The Star uses guest critics for Opera Society openings.

The company operates on thoughtfully conceived principles. Its standards are professional, but it does not depend on big names. Its objective is ensemble spirit. It pays its Figaro and Don Curzio the same fee, and it expects both to be equally prepared. The singers, though young, are generally experienced; quite a few come from the New York City Opera.

GENERAL MANAGER

The orchestra is the National Symphony. For each of its productions the Opera Society takes over the orchestra for an entire week, and it is thus available without interruption for rehearsals and performances. The chorus, made up of singers with professional training, is local. So is the conductor, Paul Callaway. Stage directors and designers may be brought in from New York and other cities.

"The Rake's Progress," the most recent production, cannot be used as a gage of the Opera Society's accomplishments. But, in spite of misfortunes, it was a performance of which the company and the city need not have been ashamed.

Less than 24 hours before curtain time, a 23-year-old tenor, Sgt. Mallory Walker, took over the role of Tom Rackwell and carried on with amazing aplomb, though he had not had a rehearsal. In the main soprano part there was Phyllis Frankel, who had replaced another singer and had learned the role from scratch in less than 10 days.

In a way, this miserable luck turned out to be good luck. It showed that the company was resourceful enough to survive the buffetings of fate. "The Rake's Progress," by the way, gave evidence of its durability, for its music was appealing in the face of a handicapped performance.

The Opera Society's budget this year is about $100,000, with half coming in at the box office and the remainder from contributions. If the company could raise more money, it would undertake more productions. At the moment, it has no choice but to play in the Lisner Auditorium, where part of the orchestra must be stationed in front of the limited pit. But, much as a proper opera house would be welcome, the company is the important thing. If the Washintgon Cultural Center ever materializes, there will be an opera troupe to move in.

[From Time magazine, Feb. 23, 1959]

CAPITAL CULTURE

It was the kind of disaster-and-triumph series that makes opera legends. Rehearsing the part of Anne Trulove in Washington's Opera Society production of Stravinsky's "The Rake's Progress," the soprano was felled by a virus; she left the role to Baltimore's Phyllis Frankel, a singer who studied for an operatic career with famed Soprano Rosa Ponselle, has appeared with New York City Opera. Then the title-role tenor came down with laryngitis during dress rehearsal, was replaced by Mallory Walker, a 23-year-old soldier from Fort Myer, Va., where he is singing in the U.S. Army Chorus. Walker had never sung the Rake role before but had learned it as understudy, hopes to become a professional singer after he gets out of the Army. Finally, Tenor Hugues Cuenod lost his voice, responded enough to frantic, last-minute medication to carry off his role.

Despite the crises, audience and critics last week applauded. Said the Washington Daily News' Milton Berliner: "A topnotch performance."

CULTURAL BACKWATER

Much of the credit for Rake's success goes to its director, tiny (5 feet 2 inches) Paul Callaway, 49, organist and choirmaster at Washington Cathedral (Protestant Episcopal), who organized the Opera Society in 1956. In a city that has long been known as a cultural backwater, the company was financed by contributions averaging $100, plus some sizable gifts from Washington society's cave dwellers, including Mrs. Herbert May (formerly Mrs. Merriweather Post), Mrs. Robert Low Bacon, Mr. and Mrs. Robert Woods Bliss.

Deciding from the start to limit the repertory to rarely heard operas performed in their original language, Director Callaway set such a high standard with last year's staging of Richard Strauss' "Ariadne auf Naxos" that one critic feared listeners would expect a triumph every time. In fact there have been many triumphs, including stand-out productions of Mozart's "Cosi fan Tutte" and Monteverdi's "Orfeo." Audience response matched the performances: paid season subscriptions rose from 322 in 1957 to nearly 2,000 this season.

PROMISING BOOM

Last week's production of the 8-year-old "Rake's Progress" brought out as rare an operagoer as Walter Lippmann, also the Secretaries of Commerce and the Air Force, a sprinkling of ambassadors—all of whom seemed to glow at Washington's cultural boom. The opera company is not alone. Washington also has a promising ballet company and the fine National Symphony, whose reputation has grown steadily, today is not far from the top echelon of U.S. orchestras. This season the orchestra hopes to repeat last year's feat of landing in the black. Propelled by Conductor Howard Mitchell, the symphony this summer goes on a 10-week Latin American tour, also gives some 30 concerts a year for visiting teenage tourists.

Last week the National Park Service prepared to add a final touch to Capital culture. By 1965, it hopes to restore Ford's Theater, which failed after Lincoln's assassination, was long used as a museum. Needed for the project: $1,750,000.

[From the Washington Post and Times Herald, Feb. 23, 1959]

D.C. CULTURE IS DEFENDED BY HAYES

Concert manager Patrick Hayes gave the back of his hand to Time magazine yesterday.

Hayes spoke over Radio Station WGMS and said he was sorrowed at a short phrase in this week's issue of the news magazine.

The phrase is: "In a city (Washington) that has long been known as a cultural backwater." A Time writer used it in a story describing the success of the Washington Opera Society's production of Stravinsky's "The Rake's Progress."

Washington makes out pretty well in the magazine story, which sees recent art and theater activity here as indicative of a cultural boom, but Hayes wasn't placated.

"Today, the back of my hand goes to Time magazine," he said.

He commented on the Time writer's statement that a final touch to the cultural boom would be the restoration of the old Ford Theater, where Lincoln was assassinated. Hayes doesn't think that's the final touch and he doesn't think the city's in such bad shape right now.

Hayes said, "Between now and 1965, while we wait for restoration of the Ford Theater, we will have to suffer along with our backwater.

"All we have to look forward to are the daily showings at the National Gallery of Art, the Corcoran, Freer and the Phillips and half dozen or so smaller galleries. Scholars will have to get along as best they can at the Library of Congress and the Folger Shakespeare Library. Music lovers will have to be content with about 1,000 programs of merit each season * * * Our six universities in the area * * * will lumber along culturally. The National Theater will continue to book shows and now and then an Old Vic Company will visit us."

CZECH BASSO IMPRESSIVE IN OPERATIC EXCERPTS

(By Paul Hume)

The Washington Civic Opera Association presented an evening of operatic excerpts last night in Roosevelt Auditorium. Frederick Fall conducted, and the difficult assignment of simulating the operatic orchestra was handled in yeomanly manner by pianists Paul Higinbotham and Richard Weilenmann.

The stage was simply set with four large candelabra, against which the chorus was arrayed, some 60 strong.

The evening was especially fortunate in the presence of the Czech bass, Jan Rubes, of the New York City Center Opera. Rubes, who has been heard here in past productions of both the Civic Opera and the Opera Society, contributed the evening's noblest moment in his impressive delivery of Sarastro's "O Isis and Osiris," from Mozart's "Magic Flute." With the men of the chorus, this was an elevated scene.

It was Rubes also, later in the evening, who gave us the touch of real theater that removed us from the school auditorium and the well-meaning level of things with his remarkably well handled Coronation Scene and Death of Boris, from Moussorgsky's "Boris Godounoff."

It was interesting to note how warm his voice became in the second scene, which he sang in Russian, precisely as it had in the Mozart, in German. His first "Boris" scene, and his opening scene, from Smetana's "Bartered Bride," were in English, and neither of them came off as well as the succeeding episodes. Frankly, there are moments in the role of Boris that lie too high for Rubes to negotiate at all. But his voice in its middle and lower registers has a voluninous sound that he used with great effect.

Working in front of a plain curtain in the middle of a spotlight, he yet captured the drama and tenderness, the fear and hope of the final scene with telling impact. The chorus, properly behind the scenes, sang the closing lines, and learned the minimal Russian needed. Their work in the Coronation Scene, which is a great wall of choral sound, was alert, though they could not provide that real mass of tone needed. How much easier they would have found it to sing "Slava" on those high lines rather than the awkward "Glory." But we must pretend to like our opera in English. If a chorus can learn a little Russian, surely it can learn a little more.

The evening's other soloists included Lida Brodenova, soprano, who sang in scenes from "Bartered Bride;" Carolyn Friday, soprano, and Jacob Barkin, tenor. Miss Friday, also imported from New York, joined Barkin in the last act duet from "Traviata," and later sang Marguerite's spinning song and Jewel Song, from "Faust," before winding up the evening with Barkin and Rubes in the closing scene from that opera.

Miss Friday was not in happy estate. Her Violetta was routine, her "Roi de Thule" dull and flat, and her Jewel Song shrill, accompanied by an unceasing waving of the arms in a kind of night-clubby way. There are sopranos in Washington and Baltimore who sing better than Miss Friday. The Washington Civic Opera, which usually makes a point of giving the home team the nod, will probably not make this mistake again.

Barkin was in excellent voice in arias from "Rigoletto" and "Faust," as well as in his ensemble roles. It was nevertheless disturbing to see him singing of the most romantic love, with the attractive Miss Friday right next to him, while he kept his eyes glued to his little black book. In programs such as this, one is expected to have the thing in mind.

Frederick Fall displayed his customary sound knowledge of the subtleties and nuances of every scene.

[From the Washington Evening Star, Jan. 29, 1959]

JAN RUBES STANDS OUT IN OPERATIC EXCERPTS

(By Day Thorpe)

The Washington Civic Opera Association last night put on an evening of music from various well-loved operas, using the local talent of its chorus, Jacob Barkin, tenor, and Lida Brodenova, soprano, together with two able pianists, Paul Higinbotham and Richard Weilenmann, and importing two stars, Jan Rubes and Carolyn Friday. It was a relaxed unassuming and often quite enjoyable evening.

Miss Brodenova is a one-time opera singer who now, after her retirement, is teaching at Mount Vernon School. That her voice is past its prime is of much less moment than that the musical style and eloquence with which she imbues her singing could be an object lesson to many a younger artist. Her aria, sung in Czech, from "The Bartered Bride" was natural and appealing.

Miss Friday, a talented young soprano with a pleasant voice, was suffering from bronchitis. Cantor Jacob Barkin is one of Washington's best tenors. His strong and romantic voice is heard in synagogue, opera, and oratoric.

It is surprising that a good singer whose musical life is so close to operatic music makes not the slightest effort to act or live his role. It is not that Cantor Barkin is a poor actor—he simply does not act at all, but sings his notes without any histrionic emotion, usually from a score. Of course, last night's show had neither staging nor sets, but the other singers created their situations by effective pantomime.

Dr. Fall's mixed chorus of about 50 voices sings for the love of it. More rehearsal would help it, for it is a bit ragged. Mr. Higinbotham, to whose lot fell most of the accompanying, was excellent throughout a long evening of many styles of music.

That leaves us with Mr. Rubes, bass of the Toronto Opera. It was he who gave the concert its real character and kept the customers happy. He is a singer of tremendous vitality, a rich and smooth voice and exceptional acting ability. His two solo scenes from "Boris Godounov," one sung in English, the other in Russian, coming as they did intermingled with a variety of quasi-amateur operatic numbers, gave the evening its charge of electric excitement which it needed to make it memorable.

Mr. Rubes' aria of Sarastro from "The Magic Flute" was marred by the glee club sound and the false entrances of the men's chorus, while his fine comic aria from "The Bartered Bride" was vulgarized beyond all excuse by the paltry cliches of the English translation.

In considering this evening of opera, put on by the D.C. Recreation Department, one must remember that it is created with virtually no budget. The interest of Congress in opera in Washington will, of course, blossom with the advent of an opera house—until that time it is concerned only that other world capitals outshine us. The recreation department does quite well with what it has to do with, but I wonder if it could not put together an operatic evening of more unity and dramatic intensity. That would be a question more of ingenuity than money.

Rural Development

EXTENSION OF REMARKS

OF

HON. JOHN E. HENDERSON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. HENDERSON. Mr. Speaker, the rural towns and communities of this Nation are presently under great pressure. Farm population in some of these areas has been steadily decreasing. Young people, raised, educated, and trained at great expense, have gone elsewhere to make their contribution to society. The cost of public services has skyrocketed in the face of declining area income.

Ironically, while many of our rural towns are caught in a squeeze between declining incomes and rising costs, our cities and industrial areas are struggling desperately to meet the overwhelming demands put upon them by an influx of people attracted by the high level of jobs and wage rates prevalent over the past decade.

The decline of many rural trading centers and crowded conditions in our cities are two sides of the same coin. Both problems arise from the same cause. Both can find a partial solution in sound programs to develop, to their fullest potential, the resources of our rural towns, trading centers, and farm communities. The Nation needs more effective programs of resource development in rural areas: Industry dispersal, strengthening of small businesses, better organized farm marketing and processing, and programs of training and education that will build skills into the area.

It is true that Federal and State agencies and many private groups, such as chambers of commerce and civic clubs, are spearheading resource development programs in many parts of the Nation. Certainly the Federal-State rural development program now going forward in some 30 States, is a big step in the right direction. Ohio's two pilot counties, Guernsey and Monroe, in this program are located in the 15th Congressional District.

However, I wish to point out that we have only begun to scratch the surface. A much greater effort will be needed at all levels, an effort that fully mobilizes both Government and private services and personnel, if "rural development" is to solve the grave national problem of our declining small towns, with all the economic, social, and political calamity this problem implies.

Pointing out that "the situation calls for some real thinking on the part of leaders in all farm communities," the American Farm Bureau Federation's magazine, Nation's Agriculture, printed last year an objective review of the whole issue of farm-town development. I commend this article to the attention of my colleagues:

WHAT'S AHEAD FOR YOUR COMMUNITY?

What happened last time a farm house burned down in your community? Was it rebuilt or did the family move off, leaving a neighbor to work the land?

Look around and see what happened to the 80-acre farm that used to support a family. Chances are it has been combined with another to make a practical-sized family farming operation.

Consider the main street of the closest town of less than 500 population. Think about how many business firms there are compared to 10 or 15 years ago.

Does your church have more trouble making its budget than it used to? How is the local school getting along? Capable teachers won't work for a song any more. Also they want good buildings and equipment.

If your community has been keeping education up to standard, you have probably found that the taxload per acre is getting rather heavy.

After you have thought about these various problems you may come to this conclusion. Farming as a business has gone through some terrific changes in recent years, adapting a great many new methods.

Most of the communities in which this business is carried out have not yet adjusted to these rapid changes in agriculture. Technical advances are often made in a short time—the social adjustments that they cause may take a generation.

It is difficult for the smaller number of people you have left on the farm to support the same churches, schools, organizations, and business firms that were formerly used by many more folks.

In 1940, farm people made up 23 percent of the total population. Now they represent only about 12 percent. This fact has meaning for every farming community in the Nation.

Looking ahead, it appears that the heavy migration of workers from farms is apt to continue. Dr. Harry J. Reed, Coordinator for the rural development program of the U.S. Department of Agriculture, points out that there is underemployment on more than one-third of the farms in this country.

The U.S. Department of Labor predicts that between 1955 and 1965 the number of professional and technical workers will increase 37 percent—at the same time they expect a 15 percent drop in employment of farmers and farmworkers.

This situation calls for some real thinking on the part of leaders in all farm communities. A decision must be made—either by default or after some careful study. The decision is whether to do nothing and watch these people leave the home community or to attempt to provide employment for them where they are now.

Assume you do nothing and the number of farm people in your area continues to decrease at the same rate as in recent years. There are some changes that will eventually occur in your neighborhood and community, whether you like it or not.

Reorganization of schools is one of the first things that you will face with a shrinking farm population. In many places this has already happened. The total number of school districts in the United States decreased from 110,000 in 1944 to 66,000 in 1954.

Most people hate to see the small, local high school pass out of the picture. There is lots of loyalty for the basketball team and so on.

However, there is a need to be realistic. Over one-half of the young people growing up in rural areas today will not farm. They deserve the best of schooling so they can compete on an equal basis in whatever occupation they choose. Also, college can be difficult if you don't have thorough training in chemistry, physics, and higher mathematics.

Not only is it difficult to provide topnotch education in too small a high school, but it is costly to taxpayers. By expanding the boundaries of the high-school district, the tax cost per acre may be held down somewhat.

In reorganizing school districts, one approach is to maintain local grade schools close by and then send the high-school students to a larger, centrally located school. PTA groups can be built up around the elementary schools and they can be a center for some social activities.

If the school leaves, chances are the local church will go also. Rural churches in all parts of the country are finding the going is tougher each year. We find that in some denominations, national church organizations are now wrestling with the problem of what their policy shall be toward providing ministers for small, rural churches.

With a rapidly growing population, there often are not enough young clergymen to meet the needs. In many cases country churches will be forced to consolidate because no minister will be provided.

With today's modern roads and automobiles, it is not unreasonable to drive 10 miles to church. By joining together with another church in a larger town, you may be able to have a strong active group that does not face the perennial problem of raising enough money to keep going. Often small towns are trying to support two or three churches of different denominations and it is very discouraging because of small attendance and heavy costs.

There is much reluctance to give up small country or village churches because of memories and tradition. However, the young folks are going to the larger towns for amusement and it may be better to have the church there, too, so that more of their recreational activities can be associated with the church.

You can easily see that if the high school and the church move to the larger county seat town, much of your social activity is going to take place there also. This is a gradual thing but it is taking place all the time. More farmers are belonging to service clubs in town. Farmer-merchant dinners and other such activities pull them into town.

Also farmers' interests are more similar to townspeople's than in past generations.

The passing of the smalltown merchant is one of several sad things in all this transition. Many of them today are living on their capital, unable to realize that the need for them has passed.

An Iowa State College sociologist comments: "Small grocery stores, the small independent hardware stores, general stores, and men's and women's clothing stores of the typical small Iowa community now have to compete with the larger, more specialized business houses of the county seat town. They no longer have the advantages which were gained from monopoly of position in the days when people were restricted pretty much to shopping in the area in which they lived.

"The local merchant who has a relatively small volume of business cannot operate on the markups that are being used by his large competitors who make their incomes on the basis of a rapid turnover of inventory."

The further decrease in farm population in the future will aggravate the problems of the smalltown businessman even more. This is especially true if the school and church are moved on to a larger town.

Farmer cooperatives also have to consider their position in this changing agriculture. Midwest creameries are an example of a need for consolidation in order to cut down per unit costs of production. One dairy industry expert mentions that in some areas as many as 6 to 12 plants are handling a volume of milk that might be processed cheaper by 1 plant. These co-op plants often compete fiercely for milk or cream, and routes overlap considerably.

Let's say that the leaders of your community decide to try and keep the people where they are, rather than to make the many adjustments listed above. The first thing necessary is to provide gainful employment for them. Basically, this can come from a more intensive type of agriculture or from industry.

If there is an outlet for specialty crops, they can use up a lot of extra labor. For instance, a Tennessee community found they could profitably produce peppers for a canning factory.

A Louisiana parish, going out of cotton production, faces a choice as to what type of farming to go into. Some suggest going into cattle. This will not require many of the farm workers now living there and will eliminate most of the existing business firms. One planter suggests using supplemental irrigation to raise sweetpotatoes, strawberries, or other high labor crops so the small farmers can remain in the area.

In an agricultural development program for Gadsden County, Fla., our research people suggested raising fall vegetables to use the available labor after the shade tobacco was harvested. With the coming of supplemental irrigation and new marketing practices, it is now practical to raise vegetables in places where they could not be considered a few years ago. The demand is growing for many specialty crops.

Bringing in a new industry is certainly an effective way to provide employment for people not needed in agriculture and to keep local business concerns going. A survey has shown that each 100 factory jobs create enough new business to provide $590,000 more personal income each year and $360,000 more in retail sales.

Attracting a new factory to your town is not easy. Hundreds of other towns are working hard at the job. It is not uncommon for a company to pit two or three towns against each other and give the plant to the one that will promise the most.

Many towns have established industrial development corporations for the purpose of encouraging the location of industry in their areas. Sometimes a tract of land is bought and set aside for industrial use.

It is often best to obtain outside help in deciding the types of industry that will be most desirable and those that can operate profitably in your town. Companies want to know their costs if they locate there and what labor conditions are like. It takes skilled research to size up a town and present the information about it in the best form.

Recreation is a possibility that you don't want to overlook in considering opportunities for employing local people. With the large amount of leisure time available to city workers, there is more interest in fishing, boating, camping, and hunting than ever before.

The main thing is to get a really good inventory of the resources in your community and then act in an organized manner to develop these to their fullest extent.

It takes real leadership and some effort on everyone's part, but many communities have found that they can do a good job of farming, attract an industry to provide extra employment for workers not needed in agriculture and then weld all of this together into a group that is proud of its churches, schools, and its good standard of living.

The Puerto Rican in New York

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Ruth Gruber, which appeared in the New York Herald Tribune of December 6, 1958:

THE PUERTO RICAN IN NEW YORK

(By Ruth Gruber)

Street gangs, until this year, were almost unknown in Puerto Rico. Not only are street gangs a new phenomenon, according to Puerto Rican authorities, they are a New York export.

The leaders of the two or three gangs that have made headlines this year are largely boys who were in trouble in New York and whose families brought them home to Puerto Rico.

Puerto Rico's youth are still not "shook up" at home. Gangs, vice, and narcotics, though they exist, are still largely alien to the Puerto Ricans in Puerto Rico. Less than one-third of 1 percent of Puerto Rico's youth are registered as delinquents. What happens to them when they migrate to New York is another story, a story of the tragedy of upheaval, of rejection, of prejudices.

The leaders in Puerto Rico are doing a good deal of soul-searching to understand these changes. During a recent visit to Puerto Rico I spent long hours with Gov. Luis Muñoz-Marín, his wife, Dona Ines, Commonwealth officials and the man on the street, discussing the problems of Puerto Ricans in New York.

Certainly anyone who has driven through the hills of Puerto Rico, talked to the kindly jibaros living a pastoral unhurried life in a little wooden shack, or watched the people in the mountains, dressed in their Sunday best, clustering happily around their little country store, the "colmado," listening to jukebox music which floods out to the road, or seen a whole family at night in a one-room shack, the door wide open, securely absorbed in a television program, soon realizes the problem these people face in adjusting to the hectic, competitive, pressure-ridden life in New York.

In the hills, the jibaro lives in a small shack surrounded by sunshine and air and green living things. When he washes his face in his bowl of water, he throws his water out of the window. He is sharing his water with the universe. But when he comes to New York and throws his water out of the window, it is not the universe. It is a slum on East 110th Street. Up in the hills, sitting under the stars, he doesn't worry about time. If he feels like singing at midnight, he sings and he disturbs no one. But in New York, if he sings at midnight, he will probably be waking 10 families who have to get up at 6 the next morning.

Yet Puerto Ricans have adjusted faster to New York in 10 years than most immigrant groups adjusted in a whole generation. Puerto Rico is the only country that has followed its people to New York, to watch over them, help them adjust to the new culture, help them find jobs, and overcome some of the bewilderment and frustrations of being the last-comers.

Through the Office of the Labor Department of the Commonwealth of Puerto Rico, known familiarly to all Puerto Ricans as "the office," located at 322 West 45th Street. Governor Muñoz told me "we give help and information to the people in New York. We have maintained a fruitful exchange of information with the governments of New York City, Chicago, etc. We send teachers of English into New Jersey to the farm workers' camps. We pay for the teachers. No other country ever did this. That's why I think the adaptation of the Puerto Ricans is quicker already, and will continue to be quicker than all the other groups which came in.

"Someday," the Governor said, "I hope to spend about 3 weeks living in New York incognito, and see how the Puerto Rican people are living and get a spontaneous relationship with them."

Earlier this year the Governor's wife spent such a day in New York, although it was as difficult for her to be incognito among the thousands of people who love her as it would be for her husband.

"I am sick at what I saw," she told me one evening in San Juan. "I think we should try to keep our people here. It is a terrible destiny for people to emigrate. They are better off here. They have schools here, milk stations, everything—but not enough work. They talk of progress when they go to New York. It is heartbreaking. I know what they are going through for progress. They are warm and kind people. But look what happens to them in New York.

"Gangs prosper in New York partly because there the young people try to go out of their anonymous existence. They become a kind of Robin Hood—to get publicity, to get their pictures in the papers. Here gangs won't prosper because here the boys are not anonymous. A seamstress is a very respected person here. Her son is a very respected person. We have no gangs here because the family is very strong. In New York this changes. Family life is broken. The woman usually gets the first job—in needlework. If the husband doesn't get a job, he deteriorates. In New York, he is no longer the head of the family. The children begin to leave the house. How can they live in that terrible housing? People make fine conciliatory speeches. That is not enough. Now is the time to be strong and honest. They have to enforce the law on the landlords. We need leaders, real leaders, who will live right among the people and teach them to help themselves. That's what we are doing in Puerto Rico and that's what we must do in New York. It doesn't matter whether the leaders are white or Negro or Puerto Rican. It just matters that they help our people to help themselves."

Not all the Puerto Ricans in New York live in slums. According to Joe Monserrat, director of the New York City office of the Migration Division of the Commonwealth, about half the Puerto Rican population lives in decent houses in the city and in the suburbs.

"The painful and tragic thing," he told me, "is that most New Yorkers assume the Puerto Ricans are all living in slums. But New York is divided into 352 health areas. Puerto Ricans live in every one of them. There isn't a section of the city where Puerto Ricans don't live. Yet you don't hear of those people. The great majority of Puerto Ricans are fair-skinned enough to be able to buy houses in Westchester, N.J., and even Greenwich, Conn., and many of them do.

"There is a tremendous dynamic and cultural life being lived by Puerto Ricans in this community," he said. "There are Puerto Rican art exhibits. There are Puerto Rican plays being produced in Spanish. Two groups of young people are struggling to develop off-Broadway theaters. We have a group of young second-generation Puerto Ricans called the Hispanic Young Adult Association who maintain a list of every available scholarship in the United States, so that qualified students may apply. A lot of industries would fold up if there were no Puerto Rican workers."

The young second-generation Puerto Rican men and women working at the office of the Commonwealth, fine-looking men like Joe Monserrat and Joe Morales, wince under the stereotype of the Puerto Rican. They feel they have their own contribution to make to life in New York. Some of them disagree emphatically with the argument that the Puerto Ricans were better off in Puerto Rico.

"My father," one of them said to me in New York, "would never agree that he should have stayed in Puerto Rico, instead of coming here when I was a baby, and giving me my chance to go to college. Nor would the fathers of my friends who are engineers, doctors, social workers or flyers in the Air Force. Sure we began in the slums. But I don't know that the slum left a mark on me. I think the fire-escape education made it possible for me to understand my people better and to help them.

"Yet even we second-generation Puerto Ricans know what prejudice means. My 6-year-old daughter is darkskinned. She came home from school one day and said, 'Daddy, why am I different?'"

He swallowed hard as he said it. "Maybe that's why I'm working so hard for the Puerto Ricans coming here now, so that their sons and daughters and my daughter's daughter won't have that kind of wound."

Effects of the Federal Tax on Gasoline

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. COLLIER. Mr. Speaker, with the possibility of an additional Federal tax of 1½ cents per gallon on gasoline, I believe we ought to take a good look at just what we are doing to automobile travel these days.

Just how far Government is going to go to absolutely smother the American automobile owner, I dont' know. But it would seem to me that we are heaping more and more onto the shoulders of the folks who drive automobiles, 75 percent of whom use their cars for business purposes or to drive to and from their place of employment. Automobiles are more of a necessity than a luxury these days.

It has been suggested in justification of this legislation that this additional tax revenue is needed to foot the bill for the Federal highway program. If this is true, then why was only $2.1 billion of the 1958 revenue from gasoline taxes allocated to the highway trust fund, while $1.5 billion was funneled into the general fund of the U.S. Treasury?

At the present time, taxes on the most modestly priced new cars with a discount price of $2,500 amount to $600. This is $100 in excess of the $500 distribution cost and nearly half of the $1,400 manufacturing cost. But this is only part of the story. First, the manufacturer pays $490 in taxes, including the Federal excise tax, which amounts to about $200; property, income, and other classified taxes must be figured at approximately $150; and taxes in the price of purchased materials and parts, about $140.

Then the car moves to the dealer, who, in turn, is gouged by the tax bug. Prop-

erty, income, and other such taxes are levied against him to the extent of $20. This is one of his costs of doing business and helps get the final price of the automobile up to $2,500.

Finally comes the buyer or consumer into the picture, and if he looks closely he will find that taxes are not playing him any favorite. Boldly included in the $2,500 discount price are these items: State sales tax, $75; license and title fees, $15; total, $90.

How simple it would be to exercise just a little fiscal prudence when we are voting on the appropriation bills and on those pet projects that eat into the Federal budget each year. A little bit of fat trimmed from one pork-barrel project and a little bit from another would easily fill the hole in the Federal highway trust fund and the proposed 1½ cents tax on gasoline becomes unnecessary.

I petition the Members of this body to read carefully the article from the publication Oak Leaves, of Oak Park, Ill., which so vividly points out the inequity of the increased tax on gasoline—a necessary commodity for the American people who are already overloaded with State and Federal levies:

PROPOSED GAS TAX INCREASE WOULD COST VILLAGERS PLENTY

Forty times around the equator.

Place the pennies from a suggested increase in the Federal gasoline tax around the hemisphere, and in 1 year as estimated by the Automobile Manufacturers Association, they would reach around the globe 40 times.

What would this increase, proposed by President Eisenhower in his annual budget message to Congress, mean to residents of Oak Park and River Forest?

In Oak Park, it could result in owners of passenger automobiles paying out $201,262 more in gasoline taxes in 1 year than they paid in 1958.

In River Forest, passenger car owners could pay an additional $48,850 over the amount they paid in Federal gasoline taxes last year.

The President proposed that the tax on every gallon of gasoline be raised from 3 cents to 4½ cents. Proceeds from the increased tax would go into the highway trust fund to "preserve the pay-as-we-go principle, so that contributions from general funds to build Federal highways will not be necessary." Enactment of the tax rests with Congress.

To determine the effect of this proposal on suburbanites who drive automobiles, Oak Park and River Forest officials were asked about the number of cars and trucks owned in these suburbs.

Figures taken from the number of auto stickers issued during the past year indicate that Oak Park residents applied for tickets on 20,600 passenger autos and 796 trucks. In River Forest, 5,000 applications were filed for autos and 350 for trucks.

If the new tax increase were passed, how would it affect your pocketbook for the next year? From A.M.A. statistics, it has been estimated that the average suburban car owner drives his car 9,348 miles per year, averages 14.36 miles to the gallon, and uses 651 gallons of gasoline per year.

As an Illinois resident, you pay about 30 cents per gallon for gasoline. Of this amount, 5 cents is earmarked for the State tax, 3 cents for the Federal tax, and seven-eights one hundredths cent for an occupation tax.

The total tax on each gallon of gasoline amounts to about 30 percent of your gasoline bill. For comparison, you are paying about three times as much for gasoline taxes, as you would pay for a luxury tax on furs or jewelry.

Determined from the average figures quoted, you are paying about $56.64 per year for State and Federal taxes on gasoline. If the suggested cent and a half increase were passed, you would be paying 10.2 cents on every gallon. Apply this amount to your car's yearly consumption of fuel, and it will boost your tax bill from $56.64 to $66.41—an increase of $9.77.

Federal receipts from gasoline taxes are not providing enough to meet the costs of the new highway program, stated Washington officials. The word is that the highway trust fund will wind up this year about $900 million short. How much would the Federal Government stand to gain by the tax increase from Oak Park and River Forest residents?

Multiplying the number of autos in Oak Park (20,600) by the individual revenue which the tax would bring ($9.77), it seems motorists would be paying out $201,262 above what they paid last year. Truck owners (796) would be taxed for an increase of $19.53, yielding additional revenue of $15,545.

The suburbanites of River Forest, who own 5,000 automobiles, would be assessed for an additional $48,850, while firms owning trucks (350) would increase the Federal purse by $6,835.

J. W. Lemon, of the American Petroleum Institute, 624 South Michigan, Chicago, read a report from the institute. "In the fiscal year of 1958, the Federal Government collected $3.6 billion from special excise taxes on gasoline.

"Of that amount," he continued, "$2.1 billion was allocated to the highway trust fund while the remaining $1.5 billion went into the general fund of the Treasury."

A Proposal for Individual Voluntary Deferral of Tax in Peak-Income Years

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I respectfully submit the following article, which appeared in the Journal of Taxation of October 1958. The authors of this article, Mr. Carl M. Esenoff and Mr. Herbert L. Beckett, are good friends and outstanding citizens of the district which I represent. Their thoughtful and unique appraisal of this one facet of our country's income tax structure is worthy of your attention:

A PROPOSAL FOR INDIVIDUAL VOLUNTARY DEFERRAL OF TAX IN PEAK-INCOME YEARS

(By Carl M. Esenoff and Herbert L. Beckett)

(NOTE.—The high tax cost of bunching income into a few peak years is acknowledged to be one of the great evils of our progressive income tax system. Many proposals for averaging to eliminate this harsh tax treatment of those with fluctuating incomes have been offered. All such plans have suffered from being too complicated. The plan proposed here is exceedingly simple. It would permit the taxpayer to control his top bracket in any year, would spread out peaks of income, and would not reduce Government revenues and would have all the necessary controls built into it. Administration by the Government would be simple. While policy matters of this kind are not the usual business of the Journal, your editors are so struck with the appeal of this plan that we want to expose it for consideration by taxmen. Comments will be welcomed.)

Many authorities on income tax matters recognize that a means of averaging income over a period of years would be a desirable change in the Federal income tax laws. The results of measuring and taxing earnings on an annual basis are extremely harsh on any taxpayer whose income fluctuates from year to year. Taxpayers thus affected include farmers, members of professions, executives, wage earners, actors, athletes, businessmen, and many others.

A number of relief provisions have been adopted to alleviate somewhat the inequities of the annual tax. Particular reference may be made to the tax treatment of compensation for services rendered over 36 months or more (sec. 1301); the special provisions relating to income from certain inventions, artistic works, back pay, and compensatory damages for patent infringement (secs. 1302, 1303, 1304); the net operating loss carryover and carryback (sec. 172); reporting of income on an installment basis (sec. 453); the capital gain provisions of section 1202; and the regulations which permit farmers to report on a cash basis even though required use of inventories would more clearly reflect income as generally defined.

The deferral of income has received much attention in recent years. Pension and profit sharing plans (sec. 402) are becoming very popular; the increasing millions of dollars which are placed each year in these trusts and income from such trust investments are, to a great extent, escaping the current annual tax and the special relief provisions will permit many millions of such funds to escape Federal income taxes entirely. The employee stock option provisions of the code (sec. 421) permit deferral of income and special tax treatment for taxpayers who qualify. Adoption of the Jenkins-Keogh bill would permit deferral of income by another group of taxpayers, the self-employed. (Reference to the Jenkins-Keogh bill here is not intended to indicate an objection to such a bill, since in equity self-employed taxpayers should be entitled to treatment similar to employees.)

Other methods of deferring income are constantly being devised, without specific congressional or Treasury Department approval, by executives, entertainers, and many other taxpayers whose income may be expected to decline in later years. All of these plans for deferral of income seriously diminish the current revenues from income taxes with benefit to a very small percentage of all the taxpayers. If such plans for deferral of income are to be expanded, the resultant burden on taxpayers who cannot participate will consequently become greater.

Many plans for averaging of income have been advocated and considered by congressional committees and other authorities on income taxation. However, all such plans which have come to our attention have involved serious accounting problems with respect to maintaining income averages and recomputing taxes for the millions of taxpayers. Further special legislation to provide the relief for special groups or particular types of income would only make our tax laws more complicated. All of the income averaging plans of which we are aware provide for methods whereby the taxpayer keeps his income, but adjusts the tax based on retroactive computations. Our proposal considers only prospective elections.

Furthermore, our proposal presents what we believe to be a practical and easily administered plan which is designed to accomplish the following objectives:

1. Remedy the present inequities which result from the graduated tax rates as ap-

plied to income determined on an arbitrary period of 12 months.

2. Provide the U.S. Treasury with greater funds than are presently received during years of high income and high tax rates.

3. Permit the U.S. Treasury to hold certain funds without interest.

4. Provide a means and an incentive for all taxpayers to save for retirement or periods of economic depression.

5. Provide a method whereby Congress could exercise better control during inflationary periods, as well as periods of depressions.

6. Eliminate the necessity for further special group tax relief and perhaps allow for the repeal of some such laws previously adopted.

The plan briefly is this: Every individual taxpayer would be permitted to take a deduction in computing adjusted gross income for amounts deposited with the U.S. Treasury Department. Such deposit would be represented by a deferred income certificate. The certificates would bear no interest and would be redeemable on demand subject to a deduction for the estimated tax applicable to such certificate. In the year of redemption, the face amount of the certificate redeemed would be included in gross income and the deduction for estimated tax would be taken as a tax credit.

This plan would permit each individual taxpayer to average his income in the future at his own election by turning in to the U.S. Treasury any amount of income on which he did not desire to pay income tax in that year. In exchange for the cash thus deposited, the taxpayer would receive the noninterest-bearing certificates. The deferred income certificates would be nontransferable and could not be used as collateral on loans. However, since the certificates would be redeemable in cash at the option of the taxpayer, he could have income whenever he chose to pay tax on the deferred amounts.

Thus, under the plan, in the year of deposit, instead of receiving income taxes which might vary from 20 percent to 91 percent of the income, the Treasury Department would receive 100 percent of such deferred income. These funds would be used without payment of interest until the taxpayer redeemed the deferred income certificates. A simple procedure could be that, at the time of redemption, the taxpayer would prepare a form which would be comparable to the declaration of estimated tax form. The face amount of the certificates redeemed, less the estimated tax attributable to taking such income into account in the year of redemption, would be paid to the taxpayer. The taxpayer's tax return for the year of redemption of deferred income certificates would include the face amount of such certificates as income. The income tax would be computed in the regular manner, just as if the income had been earned in that year; the taxpayer would claim credit for tax withheld from salaries and wages, tax withheld from deferred income certificates, and other payments on estimated tax.

The deferred income certificates included in the estate of a deceased taxpayer could and probably should be subject to a special income tax. Any of several formulas might be applied. The deferred income could be treated in a manner similar to compensation for services rendered over 36 months or more (sec. 1301); or perhaps the tax could be computed as if earned in a period of not more than 5 years, the only variation in years being the first 4 years after enactment of the plan.

At first glance, it might appear that this income deferral plan would provide undue benefit to the taxpayer with a large income. This would undoubtedly be true with respect to the taxpayer who deferred large amounts of income for a few years; then realized little or no income and spread the deferred income over many years. However, it is our guess that this would not be the case with an unduly large number of taxpayers. Furthermore, interest savings would compensate for some of the loss of tax revenue from such taxpayers. On the other hand, the interest savings and the special taxes at death would probebly equalize the long-term tax burden of most of the taxpayers.

This plan for deferral of income would surely appeal to all classes of taxpayers. There would be an incentive to save by deferring income—always with the thought of providing financial security in the future and the possibility of paying less income tax.

The wage earner and the small salary earner might well make deposits for deferred income certificates—80-cent dollars which might some day come back to him as tax-free dollars.

The cash basis farmer could sell his crops at the most propitious time without regard to his income in that particular year. The excess income could well be deferred to a time when his farm income was down. He might defer income for 1, 5, 10 years or even longer, but that deferred income could always be a source of great satisfaction as well as very helpful in time of diminishing income.

The businessman, professional man, and the executive would probably defer considerable income. All could look to financial security as a result of the backlog of deferred income. Inasmuch as the income of these taxpayers is often greater during the later years of their lives, it is probable that substantial sums of deferred income would be held interest free for many years.

The highly paid actor, entertainer, athlete, or others who might have high earning capacity for only a few years could earn without regard for taxes and could defer income.

The present schemes for income deferral, converting ordinary income to capital gains, and earnings abroad might be less attractive. Taxpayers could devote time once more to earning income and security rather than searching for tax loopholes. Incomes would surely be increased and more money would flow into the U.S. Treasury in the form of taxes and deferred income. Some groups of taxpayers might benefit more than others, but surely the Treasury would benefit through interest savings and higher ordinary income during the normal productive lives of taxpayers.

During inflationary periods, high tax rates would cause more deferral of income. This would provide the U.S. Treasury with extra funds and would be more of a curb on inflation than high tax rates alone.

Lowered tax rates when there was danger of recession or depression would encourage taxpayers to realize their deferred income. This could place money in the hands of many taxpayers and would have a stabilizing effect on our economy. Taxpayers holding deferred income certificates who suffered unemployment, ill health, or other temporary periods without earnings could be helped over such period by cashing their certificates. While there might be a loss of tax revenue in individual cases, the income produced from spending of the deferred income could well produce more tax revenue from others.

The Challenge of Educational TV

EXTENSION OF REMARKS

OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. UDALL. Mr. Speaker, perhaps the most exciting recent development in the field of education is the impact of educational television. In response to the promise of this new media, the gentleman from Alabama [Mr. ROBERTS] and I are sponsoring bills—H.R. 1981 and H.R. 2926—which would provide grants of $1 million to each of the 49 States to encourage the establishment of statewide educational TV networks. A similar bill, sponsored by the chairman of the Senate Committee on Interstate and Foreign Commerce, the senior Senator from Washington, passed the other body last year, and hearings have already been held this session by that committee on identical legislation.

In order to underscore the challenge presented by educational television and the hope it holds out for improvement of our educational system, I am appending to these remarks an article written by Loren B. Pope, education editor of the New York Times, which appeared in that newspaper a few days ago. The principle points made by Mr. Pope are these: First, that educational TV offers striking new opportunities for better teaching; second, that ultimately educational TV may both improve teaching techniques and produce substantial accompanying savings in basic school operation outlays; third, that educational TV may open a new door to a broadened program of adult education; fourth, that educational TV has already proven itself as an effective media for specialized instruction and programs which enrich the school curriculums.

Mr. Pope's article follows:

EDUCATION IN REVIEW: TELEVISION CLASSES ARE SEEN AS MEANS TO BETTER TEACHING AT LOW COST

(By Loren B. Pope)

Teaching by television is the fastest growing development in the history of American education. This powerful means of communication offers new opportunities for better teaching at—many educators believe—a saving in teachers and buildings, since it makes much larger classes feasible.

While there was practically no use of television in the schools 4 years ago, more than 550 school districts and 110 colleges use it today. Another 240 colleges give credit for a nationally televised physics course.

Last week the Fund for the Advancement of Education completed a report on the results of the first year of a 3-year test. And New York State started the second semester of a much less specific experiment to learn the value of television as a supplement to the classroom teacher's efforts. The two projects have produced many of the same benefits and problems.

The fund's program involved 223 schools and 40,000 students in 14 States. In 110 comparisons, the performance of television students was superior to that of control students in 68 cases. The differences were large enough to be statistically significant in 38 of the 110 cases, and 29 of them were in favor of the television classes.

LARGE CLASSES

Because the television students were taught in large classes—ranging from 175 in elementary schools to 500 in high schools—several systems reported substantial savings. Dade County, Fla., with 5,600 pupils in the television schools, reported saving the equivalent of 27 teaching positions and 29 classrooms. The savings, the fund reported, were not made at any sacrifice in quality.

No student received all of his instruction by television. The courses taught varied widely. In the elementary schools, television classes usually were in science, social studies, physical education, health, and safety.

Reading, writing, and arithmetic were taught by conventional methods in small classes.

In junior and senior high schools and television instruction was usually in mathematics, English, physics, chemistry, and history.

Methods also varied, but in general an elementary teacher had about 5 minutes to prepare the students, with the aid of a teacher's guide, for a 20-minute telecast. Afterward, the teacher answered questions, stimulated discussion, reinforced the main points of the telecast or went beyond it. In junior and senior high schools the telecasts were usually about 30 minutes long.

ENRICHMENT PROGRAM

In New York the State Department of Education finances what it calls an enrichment program of about 15 hours a week of television instruction plus offerings for teenagers and adults and for inservice training of teachers. The programs, broadcast over channel 11 from New York City, use outstanding teachers in the metropolitan area.

They can be viewed over an area in which 60 percent of the States school children live. But, because of lack of television sets, it was estimated that only about half, or 1,500, of the schools in the viewing area outside the city, and 262, or one-third of the schools in the city, use any of the television lessons. There are an estimated 350 sets in the city schools. Parent groups and the board of education are buying 110 more sets.

The program's use is largely limited to elementary schools because the television classes, which began after the start of the term, do not mesh with many junior and senior high school's rigid class schedules.

For elementary schools, 7 hours of 20-minute telecasts are offered in languages, science, art, music, and social studies. For junior and senior high schools there are nearly 8 hours of 30-minute telecasts in physics, history, English, mathematics, science, and languages. Board of education officials report that fewer than 20 junior high schools, and still fewer senior high schools, use any one of these courses.

FAVORABLE REACTION

The reactions of both teachers and students in two elementary schools were generally favorable. Typical were the responses of the third grade in Public School 40 at 320 East 20th Street to a televised science lesson. Nearly every child gave full attention when the television teacher announced she would tell how phonograph records and tapes save sounds. When she asked who was the first to make records, a dozen hands shot up. When she asked semirhetorical questions, there was a scattering of spontaneous answers.

Afterward, they said they looked forward to the lessons and volunteered a half a dozen things they had learned. A few contended the programs were either too elementary or too advanced, but most of the class pronounced them just right.

Their teacher, Mrs. Cynthia Thorne, found the television lessons stimulated an interest that helped her to do a better job. The television teachers usually are well prepared and have a wide variety of resources and visual aids not available in most classrooms.

As in the fund's program, the television lessons filled in weak or special areas—music, art, and science. They also function, by example, as an effective teacher-training device.

PROBLEMS MET

Identical problems were confronted in the New York and the fund programs. One of the principal ones was welding the telecast and the classroom followup into a unified teaching effort. One aspect of this problem is how to get a steady feedback of questions from students and suggestions from classroom teachers. Another is how to adapt the new technique to the varying abilities of students reached in a single telecast.

The New York program is being evaluated this semester by surveys and by controlled tests. The fund's tests are continuing this year, with 402 schools and 90,000 pupils.

Those involved do not see television going beyond a supplemental role. Rather than displacing teachers, they see it helping to hasten a better or more efficient way of using instructors, which is needed just to stay even with demand. They predict it will be used increasingly to spread the influence of the very best teachers, or to give small rural schools the benefit of courses and teaching available to large ones.

They also predict that because television's potential for presenting new concepts has such unplumbed possibilities it will stimulate important new revisions and expansions of course content.

Alabama Waterways Development a Major Municipal Interest

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. RAINS. Mr. Speaker, we in Alabama are acutely conscious of the importance of our waterways and in recent years our State has made remarkable progress in waterway development.

The Honorable I. I. (Zeke) Fox, mayor of Alexander City, Ala., discussed municipal interest in the waterway programs at a recent meeting of Alabama mayors with our congressional delegation here. Mayor Fox's statement was of considerable interest and I would call the attention of Congress to Alabama's river development program.

Following is Mayor Fox's statement:

ALABAMA WATERWAYS DEVELOPMENT A MAJOR MUNICIPAL INTEREST

(By I. I. (Zeke) Fox, mayor of Alexander City)

Alabama's system of waterways is one of her greatest assets. There are more than 1,600 miles of navigable and potentially navigable streams within the boundaries of the State as determined by the Corps of Engineers, U.S. Army. Alabama ranks fourth in the Nation in improved waterways for navigation, although less than one-half of the potentially navigable streams are improved.

There are approximately 700 miles of navigable waterways that have been improved and have a channel of at least 9 feet in depth. These include the Tennessee, Warrior-Tombigbee, the Chattahoochee to Columbia, Ala., the Gulf Intracoastal Canal, and Mobile Bay.

Development of the above rivers for navigation and allied purposes has materially increased the economy of not only the adjacent areas, but has strengthened the economy of the entire State and the southeastern region. This is evidenced by the expansion and location of industrial plants along and within the basins of the improved waterways. New industries located within the Tennessee and Warrior-Tombigbee Basins will approximate 65 percent of all industries that have located within the State of Alabama during the past several years. Records indicate that since 1955 the Warrior-Tombigbee Valley has secured a total of $287 million in capital investment in industry. The Tennessee Valley since the improvement of the river some 20 years ago has shown a phenomenal growth in the expansion and location of new industry and commercial enterprises which represent capital investments totaling hundreds of millions of dollars. Another indication of the growth of the area is the increase in tonnage on the river—in 1933 there were only 940,000 tons of commodities transported on the river system, and in 1957 shipments in excess of 12 million tons were moved on the river, representing a saving in transportation costs of more than $21 million for that year.

WATER FOR TRANSPORTATION AND INDUSTRY

The excellent economic conditions prevalent in the Tennessee River Basin are directly attributed to the ample water and power available for transporting, processing, and manufacturing which has lured industry to that area. The resulting growth and improved economy here is in sharp contrast to that in areas not possessing improved navigable waterways.

For many years the Tennessee River has been developed for navigation, hydro-electric power, flood control, soil conservation, and other water resource programs. The entire system has a total of 31 major dams (the majority of these are multiple-purpose) and in addition has seven large steam plants producing electricity.

The Warrior-Tombigbee River is one of the oldest Federal navigation projects in the United States, the original system of locks and dams having been completed in 1915. A modernization program which has been underway for the past several years has replaced some of the old locks and dams with high dams and modern locks. The Corps of Engineers' program is well under way with two new locks and dams having been completed, a third now in its third year of construction, and recently a fourth dam was approved by the Board of Engineers for Rivers and Harbors.

FAST STEPUP IN TRANSPORTATION TONNAGE

Records indicate that the first year following improvement of this river for navigation a total of only 407,245 tons were transported, whereas today the river system is handling approximately 5 million tons of various commodities annually. Indications are that tonnage on this system will continue to mount as it serves not only the industrial center of Alabama, namely, Birmingham, but numerous other towns along its course which are rapidly forging to the front industrially.

The Intracoastal Canal has for many years been operated by the Federal Government and is of untold value to the economy of the State of Alabama and especially to the southwest or Mobile area. Mobile has more than doubled its population within a period of 20 years and its rapid growth has been attributed to improvement of the waterways along the coast, Mobile Harbor, and improvement of the State docks. This area has come to be known as an industrial empire and the majority of the industry has located in the area within the past two decades. It is evident that the Mobile area will continue to grow more rapidly than other sections of the State because of its accessibility to ample water for all purposes.

The Corps of Engineers are now improving the Chattahoochee River, having completed the Jim Woodruff multiple-purpose dam near Chattahoochee, Flo., in 1957, and are now in the process of constructing the Walter F. George multiple-purpose dam at Fort Gaines and the Columbia lock and dam at Columbia. It is assumed that Congress will continue to make appropriations to complete these dams and their completion will provide navigation from the Gulf of Mexico to Phenix City, Ala., and Columbus, Ga. Development of this river system will provide greater economic

benefits to the southeastern area of Alabama, southwestern Georgia, and northern Florida. Indications are that commerce has already been stimulated by the improvement of this waterway and the economic growth of the area is certain to follow completion of the projects now under construction.

EIGHTY-FIFTH CONGRESS VOTES FUNDS

The 85th Congress appropriated sufficient funds for the Corps of Engineers to conduct a traffic survey of the Choctawhatchee-Pea River system to determine the feasibility of navigation on these rivers. The citizens of this area have been exceedingly enthusiastic in their requests to the Corps of Engineers and Congress for improvement of this waterway. Again it can be stated that the entire area will prosper from the improvement of this waterway if it is found to be economically justified.

The proposed Tennessee-Tombigbee Canal was authorized by Congress several years ago, however to date no improvements on this proposed waterway have been initiated. The Corps of Engineers has recently completed a study to determine the continuing economic feasibility of this proposed connection of the Tennessee River with the Tombigbee at Demopolis, Ala. The Engineers have not released the report to date, consequently it is not known whether or not the project will be economically justified. In the event the feasibility of this connecting water link is established, it will make accessible the north, midwest, and east, save approximately 700 miles of water transportation, provide markets for the South's many products, and reflect considerable savings in transportation costs on grains and other products from the North and Midwest. While navigation is available from Demopolis to Mobile, three additional counties in Alabama would be served by this connecting waterway and, of course, these counties would greatly benefit from the improvement.

IMPROVEMENT OF COOSA-ALABAMA NEEDED

The largest unimproved and longest river system in the State of Alabama is only partially developed and this development has been accomplished by private capital. The Coosa-Alabama River System is the second largest in the southeastern region and is only exceeded in size by the Tennessee River. This waterway traverses the State from the southwest to the northeast, a distance of approximately 600 river miles. The commercial tributary area comprises approximately 26,000 square miles in the States of Alabama, Georgia, and Tennessee. There are 29 counties within the State of Alabama wholly or partially within the drainage area of this river system, more than one-third of the entire area of the State is within its basin, and it contains a population of approximately 1 million. For many years the upper section of the river has produced hydroelectric power at the three dams constructed by the Alabama Power Co. more than 30 years ago. You will recall that Congress authorized the issuance of a license to the power company to construct four additional hydroelectric power dams on the Coosa River and the first of these namely, Weiss Dam, is now under construction. When these dams are completed they will double the capacity of electric output for the river system.

The Coosa-Alabama River System was authorized by Congress in 1945 and additional studies have been made since that time, the most recent one being completed last year by the Corps of Engineers. This report definitely indicates the continuing economic feasibility of the entire river system for navigation. Plans for development of this river system consist of two multiple-purpose dams and one navigation dam on the Alabama River and installation of locks in the three dams already constructed on the Coosa and the four dams to be constructed by the power company.

RIVER NEEDS FIT INTO EXECUTIVE POLICY

The river system is unique in that it complies with the present administration's policy and was brought to the attention of Congress by the President of the United States on January 6, 1955, and I quote from his state of the Union message as follows: "At the foundation of our economic growth are the raw materials and energy produced from our minerals and fuels, lands and forests, and water resources. With respect to them, I believe that the Nation must adhere to three fundamental policies: first, to develop, wisely use, and to conserve basic resources from generation to generation; second, to follow the historic pattern of developing these resources primarily by private citizens under fair provisions of law, including restraints for proper conservation; and third, to treat resource development as a partnership undertaking—a partnership in which the participation of private citizens and State and local governments is as necessary as is Federal participation.

"The Federal Government and local and private organizations have been encouraged to coordinate their developments. This is very important because Federal hydroelectric developments supply but a very small fraction of the Nation's power needs. Such partnership projects as Priest Rapids in Washington, the Coosa River development in Alabama, the Markham Ferry in Oklahoma already have the approval of this Congress. This year justifiable projects of a similar nature will again have administration support."

FEDERAL RESPONSIBILITY FOR WATERWAYS DEVELOPMENT

Traditionally through the years it has been the responsibility of the Federal Government to improve waterways throughout the Nation for navigation and other purposes as the founding fathers of this Government stated in effect that the inland waterways of the Nation would always be free for transportation of commerce.

It is the responsibility of the Federal Government to construct the projects as authorized by the Congress and in accordance with the established plans of the Corps of Engineers. Local participation in certain improvements is already underway and it is now time for Congress to expedite construction of the locks and dams on the rivers that have been determined economically feasible.

Complete development of these rivers will ultimately mean more to the cities and towns of Alabama than any other single natural resource.

We urge your continued efforts to secure funds to expedite construction of these projects in order that the entire State of Alabama may reap the abundant economic benefits that are rightfully hers.

Good Question

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. BYRNES of Wisconsin. Mr. Speaker, the spenders are now engaged in a fantastic effort to convince the Nation that black is, after all, really white; that evil is composed largely of good, and that a balanced budget is, after all, only the last refuge of scoundrels.

These attacks on the idea of a balanced budget are nothing less than attacks on the idea of responsibility itself. They are, to me at least, incredible. I cannot believe that the American people, with their instinctive distaste for the welsher, will succumb to the argument that our national strength lies in the permanent refusal of Congress to pay for what it proposes to spend.

Yet, as the President has asked, if we cannot live within our means in these prosperous times, when are we going to do it? As the editorial from the Washington Star which I include as part of my remarks points out, if we do not have a balanced budget in 1960, we will never have one. We will have adopted perpetual deficits as a national policy and inflation as a national way of life and the outcome of that fatal decision can only be national weakness and ruin:

GOOD QUESTION

President Eisenhower answered a question with another question at his news conference yesterday. Queried about his repeated insistence that the Federal budget for fiscal 1960 should be balanced, the President replied: If we cannot live within our means as prosperity is growing and developing, when are we going to do it?

This is, perhaps, a distressingly old-fashioned sort of attitude and quite out of keeping with some of the fuzzy-headed theories of today that only budgets written in red ink are worthy of forward-looking governments. Of course those who are wailing loudest in protest against a balanced budget today would wail even louder, if possible, in a time of depression. And it is a matter of record, as the President pointed out, that no "fetish" was made during the sharp 1957–58 recession of trying to maintain a balanced budget in a period when emergency Government aid helped turn the tide to recovery. But the economic indexes show that this recovery has been steady and substantial since last spring.

There must be others who share with Mr. Eisenhower his wonder at the fact that "suddenly a balanced budget is getting to be a bad word," and his belief that "it is rather a good thing to be a bit frugal and say that we can live within our income." Our answer to the President's question is that if we do not do it in a time of developing prosperity, we will not do it ever. And if we do not, then we can set our sights on disaster—rather than progress or security.

A Triumph of Character

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 18, 1959

Mr. BOSCH. Mr. Speaker, I wish to take this opportunity to join with the friends and admirers of John Foster Dulles, Secretary of State, in wishing for him a speedy recovery. While I may not have always agreed with Secretary Dulles, I have respected his devotion to duty, in a most exacting job, on behalf of the people of the United States. He has truly been a Rock of Gibraltar in his dealings with Communist Russia and, in

these times of crisis, Berlin, his advice and guidance is essential in steering our future course.

Under leave to extend my remarks, I include an editorial by David Lawrence which appears in the February 27, 1959, issue of the U.S. News & World Report.

The editorial follows:

A TRIUMPH OF CHARACTER

(By David Lawrence)

They ridiculed his phrases—but now they are singing his praises.

Why is there today wide acclaim for John Foster Dulles, Secretary of State, when only yesterday there was such bitter criticism? Americans have been told repeatedly by Democratic Party spokesmen for the last 2 or 3 years that the United States has "no friends in Europe," that our allies have been "alienated," that the administration really has had "no foreign policy," and that Mr. Dulles is to blame.

Still more recently, certain Members of Congress made the headlines by crying out that our policy is "inflexible," that Mr. Dulles is "too rigid," and that we should get off "dead center."

The Kremlin, of course, has long been saying through its propaganda—over the radio and to newsmen through Soviet Ambassadors everywhere—that the main obstacle to the ending of the "cold war" is John Foster Dulles. If only he could be removed as Secretary of State, the Communists have said openly, everything would be rosy.

Plainly the Soviets do not like Mr. Dulles because he will not appease, he will not surrender, and he will not barter away the basic principles of international morality for the sake of expediency.

Events have proved Mr. Dulles was right in his stoical resistance to the insidious propaganda of those who sought peace at any price. That's why there has come, at last, a true appreciation of his services, just as he faces the tragic months ahead in fighting cancer.

There have been some occasions when Mr. Dulles has incurred the displeasure of our allies, especially in his stern stand against a punitive war over Suez. But what has happened since proves he was right.

Time and again Mr. Dulles has been assailed for views which were deliberately distorted in the press of the world. Even today, some critics still say he was wrong in espousing the cause of liberation for the peoples of the captive states of Eastern Europe. His plea for liberation was twisted to mean a threat to use military force.

The critics did not—or would not—perceive that moral force has always been the principal weapon in the arsenal of John Foster Dulles.

The Secretary is, however, no pacifist. His phrase "massive retaliation" has stood the test of time—the concept has proved a powerful deterrent of war. He has always been ready, as he once acknowledged, to go to "the brink of war" to show the sincerity of American purpose and a willingness to make every sacrifice for principle. The critics derided this as "brinkmanship," but they witnessed a successful manifestation of it recently in our decision to protect Quemoy and Matsu if it appeared that any military measures taken there by the Red Chinese were to be the forerunner of an invasion of Formosa itself.

Although Congress, by joint resolution in 1955, had given the President full power to deploy our military forces in defense of Formosa, there emerged in recent months some fainthearted men in Congress and elsewhere who exhibited peace at any price weaknesses. They were inclined to a deal whereby Red China would be taken into the bosom of the free nations of the world and we would let bygones be bygones. But Mr. Dulles never forgot the sacrifices made by American boys in Korea—the many who died or suffered grievous wounds to repel the attack of the Communist Chinese, aided openly, as they were, by the Soviets. He could see no reason to reward an aggressor.

In its latest threat, the Kremlin startled the world by trying to detach Berlin from West Germany. The Moscow Government thought the time had come to test out the strength and determination of the West. This was promptly countered by the conference of Secretary Dulles with the heads of the British, French, and West German Governments. Though suffering excruciating pain physically, Mr. Dulles, undaunted, continued to perform his great mission. He was able to bind together the members of the Western alliance. A demonstration of allied unity has in itself proved to be one of the best ways to prevent the Soviets from assuming that the West is weakening. A miscalculation on that point by Moscow could plunge us into war.

John Foster Dulles has steadfastly adhered to principle. He has tenaciously maintained the ideals of free peoples everywhere. He has refused to be bullied by the Communists abroad or disheartened by the snipings of the partisans at home. He has fought for the best interests of the United States just as bravely as if he were a soldier facing the fire of the enemy. The world has indeed witnessed in his skillful conduct of American policy a heroism which will be engraved on the pages of history.

While the years of life itself are numbered, the years of a man's fame are unnumbered. In the career of John Foster Dulles, we see a triumph of courage, a triumph of unselfish devotion to public service, and, above all, a triumph of character.

Senator Hayden Views the Budget

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. UDALL. Mr. Speaker, the senior Senator from my State, the Honorable CARL HAYDEN, last week began his 48th consecutive year of service in the Congress, a record unequalled by any person since the founding of our Republic. In addition, since March 4, 1927, Senator Hayden has been a member of the Appropriations Committee of the other body, and thus has participated in the preparation of more appropriations than any other Member of the Congress.

In my opinion, Senator HAYDEN'S wide experience as a legislator and the deep insight he has acquired over the years into fiscal matters makes his views unusually valuable in analyzing the present budget pending before the Congress. Last week there appeared in some Arizona newspapers a statement by the Senator regarding the controversy over Federal fiscal policies. Mr. Speaker, I believe Senator HAYDEN'S perspective on the budget will be of interest to many of our colleagues, and consequently I am inserting the full text of his statement below:

I can think of no better way to begin a prompt response to your letter of January 29, and the attached editorial than to ask you to look over the enclosed copy of The Federal Budget in Brief for the fiscal year beginning on the first of next July, which is just off the press. The details set forth in the pamphlet should be helpful to you in appraising the financial problem with which the Congress is faced.

At page 18 is a breakdown of the $45,805 million for the costs of major national security which requires 59.5 cents out of the taxpayer's dollar. Paying for the cost of past wars by benefits to veterans, p. 30, and interest on the public debt, p. 32, requires an additional 17.1 cents or a total of over 76 cents of high priority demands against his dollar. Add to that about 5.4 cents for welfare costs, p. 26, and 2.2 cents to maintain the general Government, p. 34, where there is no prospect of reduction, leaves a margin of 16 cents out of which, with difficulty, some cuts could be made.

Only a small part of the $45 billion requested by the President for national security would be required if we could live our own lives in our own way without regard to what is being done in the rest of the world. But to do so we would have to ignore completely the fact that Russian controlled communism is an actual menace which must be met by the free world being prepared to either win a war against it or by being so strong that the dictators in Moscow will be afraid to start a war.

So much has happened in the meantime that there is no possible way to get government back where it was intended to be—in 1776. We now live in a nation where many men, from the Revolution to this day, have been perfectly willing to give up their lives ahead of time to make our Nation free and to keep it free. That very freedom has made it possible to create such favorable living conditions that the average American can now expect to live 20 years longer than he could hope to do when I was born some 80 years ago. That there is an ever increasing number of older people who are no longer capable of supporting themselves is a fact from which we cannot escape. The present social security system and the other welfare activities undoubtedly have their defects, for which time and experience will find a remedy; but something very much like them just has to be in existence, and Congress will do well to hold what they will continue to cost close to 5 cents out of the taxpayer's dollar.

The objective of all Federal aid for the construction of highways is to make it possible to move people and things from where they are to where they are needed in the least time and at the least cost. It is a capital investment which is certain to pay good dividends. To supply the money required to build the needed highways, Congress has provided that the receipts from the Federal excise taxes on gasoline, motor oil, automobiles and accessories shall be deposited in a trust fund in the Treasury, to be available only for the construction and improvement of highways. Since the highway users rather than the general taxpayers pay their costs, highway funds are not included in the Budget.

The tabulation on page 58 of the Budget pamphlet shows that during the New Deal from 1933 to 1940 the public debt was increased by $20,429 million. From 1941 to 1946, the World War II period, the public debt mounted rapidly from $48,961 million to a peak of $269,422 million. The Budget was balanced in 1947 and 1948 with resulting debt reductions, but the costs of the fighting in Korea again caused deficits and there were no payments on the national debt until 1956 and 1957. Expenditures due to the cold war are the primary cause of the existing deficit.

I point out these figures to indicate the situation with which the Congress is faced. The one sure way to balance the budget is to increase the rates of Federal taxation, but nobody wants to pay more taxes. The Constitution provides that all revenue legisla-

tion originate in the House of Representatives. The indications are that the Committee on Ways and Means, which reports revenue bills to that body, will not do more than recommend the enactment of legislation designed to plug loopholes in the existing tax laws which may possibly produce about a billion dollars in additional revenue. That sum will not go very far in taking care of an estimated deficit which could amount to over $10 billion if business conditions do not improve as the President has predicted that they will. We can all join in the hope that he has made a good guess.

Except in time of war, Congress has never, during my service as a member of the Appropriations Committee, granted to any President as much money as he asked for in his annual Budget estimates. At the last session of Congress the appropriations were $600 million less than the Budget requests.

Puerto Rico Is Like Israel

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Ruth Gruber which recently appeared in the New York Herald Tribune. Miss Gruber directs attention to the many similarities between the problems of Puerto Rico and those of the State of Israel:

PUERTO RICO IS LIKE ISRAEL

(By Ruth Gruber)

Puerto Rico and Israel are startlingly alike. Both are new democracies on old soil.

Both are pulling themselves up by the bootstraps with the same dynamic and creative spirit. Both countries, still underdeveloped lands, have begun their own point 4 programs to teach other underdeveloped lands the exciting things that each has learned through 10 years of trial and error.

Both have strong ties to the United States, and stronger and more emotional ties to the people of New York than to any other city in the world.

Each country is led by a man who is a dreamer, an idealist, a statesman, and a shrewd hardheaded politician who controls his party completely.

Luis Munoz-Marin, now 60, the chief architect of Puerto Rico's Operation Bootstrap, became the island's first elected Governor in 1948. David Ben-Gurion, now 72, the chief architect in the re-creation of Israel, became Israel's first Prime Minister in the same year.

Both are strong men in a hurry. Both are philosophers who need constantly to withdraw from the madding crowd to find themselves again, to think, to be purified and regenerated. Ben-Gurion goes to the desert; Munoz goes to the mountains.

Both are prophetic men, poets deeply concerned with ideas and words. Ben-Gurion at 60 was studying Greek to read the classics, and at 70 was studying Spanish to read Cervantes. "To read the classics in translation," he once told me, quoting the Hebrew poet Bialik, "is like kissing a woman through a veil."

Munoz, as a young man, left his native Puerto Rico to live a Bohemian life in Greenwich Village as a freelance writer.

Both want to build a society based not on materialism but on creativity and a better life.

The Puerto Ricans have risen from anguish and misery with a threefold bill of rights dreamed up by Munoz and carried through like the stages of a battle. In the forties, he created Operation Bootstrap, which established new industries, health centers, schools; he led the people up the long road out of poverty, sickness, and despair. In 1952 came Operation Commonwealth. Puerto Rico became a strong democracy within the American Union, the most creative political system of our time. Now Munoz is working on Operation Serenity.

Sitting on the terrace of his mountaintop retreat in Jajome Alto recently, I asked Munoz to tell me about Operation Serenity. He leaned back in his chair. The green fertile land dropped almost perpendicular below us. The sun was setting behind dark mountainous clouds.

"OUR PEOPLE FEEL PROUD"

"Operation Serenity," he said, "is mostly an affirmation of purpose—of not letting our civilization be blinded by economics as an end in itself. To create more personal freedom, deeper, better education—to make it possible for every citizen to have the chance to be just as good as God meant him to be.

"Its essential meaning," he said, "is that through political consciousness and education, the people will realize that the economic effort is a servant of the spiritual purpose, not an end in itself.

"Its practical implications, when it begins to get into policymaking, is the policy of decentralizing cities through zoning and green belts, so that our cities don't grow too monstrous. It is the decentralization of the whole island, placing the new factories in smaller towns.

"You can see Operation Serenity," he said, "in the whole change that has taken place in our country, materially and spiritually. Spiritual energies, creative powers have been released. After 450 years of colonialism, our people no longer feel ashamed. They feel proud."

Last year two and a half new industries opened every week on the island. More jobs were created. More Puerto Ricans stayed in Puerto Rico to live the good life.

Operation Serenity, though less tangible than Bootstrap and Commonwealth, gives deeper meaning to them both.

"You can see Operation Serenity," he said, "in the Puerto Rican who migrates. He carries it with him. You see it in the Casals Festival. You see it in the faces of our people here. In 1940, 35 percent of the familes of Puerto Rico had an income for a whole family of $200 to $300 a year. That's terrific poverty. Now about 3 percent of the population, instead of 35 percent, are down to $300 per family. You still have pockets of extreme poverty, but they are being reduced all the time. We have a growing middle class. Our per capita income is growing all the time. We don't have great wealth but we don't have extreme poverty either."

The miracle of Israel's rebirth and of Puerto Rico's regeneration have brushed off on the rest of the world. Robust children whose modern history is less than 10 years old, they have both become teachers as well as students under their own point 4 programs.

Burma and Ghana have now turned to Israel for technical aid. People from 107 lands have come to Puerto Rico to learn of the three operations. Puerto Ricans have been invited to most of the underdeveloped countries of the world to teach them Operation Bootstrap and Operation Commonwealth, and ultimately Operation Serenity.

Puerto Rico and Israel are showing what small nations can do for each other, teaching other small powers what they have learned in housing, health, sanitation, agriculture, and in building a decent life for the people. Their contribution is more, too—it is the fearlessness of their spirit and the joyousness of their youth.

Each year Puerto Rico receives more than a thousand official visitors who come under the U.S. International Cooperation Administration which has succeeded point 4. Some come as representatives of the United Nations or the Organization of American States. Others are students on scholarships given by the Puerto Rican Department of State. These people care little about propaganda from the United States. They want to learn about Puerto Rico for the benefit of their own people in their own lands.

THEY CAN SWAP KNOW-HOW

The two countries have much to learn from each other. In agriculture, Israel has taken giant steps. Israel was a desert which the Jews are turning fantastically green. Puerto Rico could learn from Israel the art of large-scale industrial farming. True in the west and on the coastal plains, Puerto Rico is doing some good mechanized farming. But in the mountains and the valleys of the interior, Puerto Rico's farmers are still farming like sharecroppers, and some of them are still peons on the land.

In industry, Puerto Rico has taken the giant steps, while Israel's industries have not kept pace with her agriculture. Puerto Rico's gross national income, since she has begun attracting industries from the States, is now over $50 million a year. Israel could learn much too from the island's self-help program, low-cost public housing, slum clearance, and the inspired program of $300 cooperatively built houses.

It is in the problem of migration that the two countries are completely dissimilar. Israel has two million people, Puerto Rico has 2,300,000. But Israel is a land of immigration, Puerto Rico is a land of emigration. The solution to Israel's problem of defense, of security, of making the desert bloom again, lies in the people. Israel needs people and the people need the land. Puerto Rico still cannot feed all its people, whose death rate keeps falling, and whose life expectancy is now 68 years.

There are ties in New York to both Puerto Rico and Israel, ties of friendship, ties of religion, ties of family, and friends. But Israel has created a reservoir of good will in New York, while Puerto Rico remains little known and vastly misunderstood.

Daniel A. Reed

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. BYRNES of Wisconsin. Mr. Speaker, Sunday, February 22, final respects were paid to our late colleague Daniel A. Reed at Dunkirk, N.Y.

On February 21 there appeared in the Dunkirk Evening Observer an editorial which I know all of his colleagues will want to read. It is a wonderful tribute to a great man.

GREAT IN DEED, BELOVED IN OUR HEARTS

Men die, and if they were great enough, an epoch dies with them.

Was Daniel Alden Reed of that stature? The four decades and more in which Dunkirk's first citizen served the nation as one of the most revered and respected men in the Congress bridge the gap from old concepts of America to new; from Victorian attitudes to these modern times; from the

horse and buggy to the space age; from the days when the young giant which was America had not yet flexed his muscles, until today this, our country, is the world's greatest power.

From the days of the First World War, through the greatest and most grievious of depressions, in another great war, in times of perilous peace, in all the days of Hitler and Mussolini and Lenin and Trotsky and Churchhill and Stalin, in the time of Franco and Chamberlain, of Roosevelt, of Hoover, of Coolidge, of Wilson, of Harding, of Truman and of Eisenhower—through all these days Dan Reed was on the stage if not in the precise center. In the grave issues which involved these historic figures and their dramatic times, Dan Deed had to form his judgments and make his decisions.

In four decades Daniel A. Reed as your Representative in your Congress made historic voting decisions in your behalf. He was under your guidance even as he guided and led you. Your grandfather, perhaps your greatgrandfather, voted for or against Dan Reed in his long span of service. Perhaps you agreed with him always; perhaps never, perhaps on some occasions, not on others, but you always knew you were represented by an honest, conscientious, utterly sincere, well-informed and completely courageous man. You might or might not agree but you could always be proud of the man who represented you, proud of his appearance, his integrity and his intellectual capacity. He could defy Presidents when he believed they were in error.

As history unfolds it will be shown that Dan Reed, as a legislator, made some errors, but we think on balance it will be clear that his judgment was right far more often than it was wrong, that his ideas were clear cut, direct and followed a pattern of the oldtime and deeply respected virtues which characterized his country and his countrymen. Conservative? Indeed, yes, but not to the point of obstructionism. Progressive? Yes, but not to the point of radicalism. He could countenance change, and sought it, but he believed that a mighty country need not move on impulse or whim, or be guided by illogical theory. He sought the sound course to a sound destiny. The Nation did not always follow the course which Dan Reed might have charted but it kept closer to it through the vigor of his labors, the persuasive force of his eloquence and his prodigious influence among the colleagues who respected his sincerity and loved him for the sterling qualities of his character.

Dan Reed was in the Congress for a period which embraced virtually one-fourth of the life of the Republic. His life span covered one-half of all the years since this Nation was founded. His public service career, in one form or another, covered well over half a century. In his earlier years he preached civic rectitude in cities from coast to coast. He organized the instruments which guided the growth and development of hundreds of cities. He could move men to a better concept of their civic responsibilities and inspire a spirit of nobler, more unselfish public service. His influence, nationwide, was immeasureably extensive, and always for good. It is doubtful if his hometown or home district audiences have much knowledge or appreciation of the thousands of citizens who were inspired to better citizenship by the towering, almost majestic speaker who preached a lofty doctrine of community service. He believed and put into practice every word he preached.

Reed's great theme in the days of his civic campaigning was the Athenian oath. He inspired hundreds to the grand ideal of transmitting their cities, not only not less, but greater, better, and more beautiful, than they were transmitted to them.

It is not possible to do justice to so distinguished a career in one column, or two, or a hundred. Nor are the paltry words lesser men may write adequate to the task.

Mr. Reed achieved a great age. Only a few, a very few, men now surviving were witness to all the years of his many-faceted career. The aged, stalwart oak may fall but the forest remains. Other branches extend to continue the serenity and protection of the soft shadows. Life goes on and there are no records to tell in adequate fashion the long and beautiful story of what the mighty tree has seen in its day and the service so freely given to those who walked beneath its spreading leaves.

The cold summary which might be written in the record can reveal so little of the real warmth of the life story. For as the mighty oak was the stalwart of the forest, Dan Reed was the stalwart among men. He was a great legislator in the service of all, both a leader and a servant of men. His capacity to serve either as a powerful representative in your business with your government, or as a neighbor, was never withheld. His obligation to his fellows was never evaded. He was never too busy for a friendly greeting, an interested inquiry, a letter of introduction, the adjustment of a pension, a personal contribution, or intercession with a government department in your behalf.

What manner of man was Reed? The word great is a relative term, sometimes loosely and cheaply used. Could you find 200 or 300 men in all the history of your country who played so long and so useful a part in its political guidance? Probably not, and so you will have to conclude that Dan Reed's name belongs in that little list of the outstanding men of the generations. This district will not find his like soon, for even if we be served by approximate capabilities it will take long years to match the experience.

How did Reed rate with all men? No one can say, but to many of us who have known and watched him through the years he was a beloved friend, an inspiring leader, and a splendid example of the sincerity, the decency, the courage, and the intellect we have a right to expect of all men in public life but so rarely get in such rich abundance.

Great men, good men, prominent men, useful men die from time to time and the Nation pauses for mourning in the formal use of the term.

But the mourning becomes personal when the great, the good, the prominent and the useful was also a beloved friend. Great in the records, beloved in the hearts of so many, and in that respect there is no replacement for Dan Reed.

For Limited Warfare, Strong Marine Corps Vital

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. WILSON. Mr. Speaker, under leave to extend my remarks, I ask that a recent editorial, entitled "For Limited Warfare, Strong Marine Corps Vital," from the February 11, 1959, issue of the San Diego Union, be inserted in the RECORD.

The article, reasoned and thoughtful in tone, mirrors the growing anxiety of millions of citizens as they observe the current severe cut in combat-ready Marine Corps units.

We all recognize the difficult problem which faces our country in providing an adequate defense structure in these times. Certainly the decisions as to where our available resources may be most effectively applied are not easy ones to make.

Yet I would be remiss if I did not say that the deep cuts in ready Marine forces are causing grave concern. Certainly, in the atmosphere of these times and in light of the known Communist record of constant pressure, incursions, and criminal adventure, a ready, fighting service such as the Marine Corps should be the very last to suffer cuts in combat units.

The combat units of this famed corps have demonstrated time and again in recent years the highest order of combat readiness, flexibility, and ability to be on the spot in time to stabilize a dangerous situation—prevent a minor conflagration from literally mushrooming into total disaster.

The meaning of these oft-demonstrated capabilities has not been lost on the vast majority of thinking citizens. None of us need be deep students of international relations or high-level strategy to look about us and see no relaxation in the world struggle between East and West. None of us need be military experts to note that time and again we have been forced to move, not with atom-tipped missiles or intercontinental heavy bombers, but with the very type of versatile Marine combat units now being lost to us through deactivation.

It is my sincere hope that just such public expressions of anxiety as are contained in this editorial from the San Diego Union will alert Congress to the prudent need for renewed attention to this serious weakening of our national ability to cope with the ever-present threat of limited war.

[From the San Diego Union, Feb. 11, 1959]

FOR LIMITED WARFARE—STRONG MARINE CORPS VITAL

The Marine Corps is going up against the political gun. More than a third of its fighting strength is due to be cut off in order to reach manpower reductions.

This famed fighting force, the epitome of courage and loyalty, is being reduced from 200,000 to 175,000 men while at the same time the need for a military organization of this type and training is rising with the growing possibilities of future limited wars.

This seems a strange anomaly but that is often the way of government and politics. The American people perhaps may want to have something to say about their Marine Corps.

Public Law 416 specifies 3 Marine divisions, 3 air wings, and support troops. Gen. Randolph McC. Pate, commandant of the Marine Corps, told Congress that in order to reach the required end-strength of 175,000 Marines by June 30 the Marines are being forced to deactivate 2 battalions in each of the 3 divisions, and to delete 6 aircraft squadrons and 100 other aircraft from its 3 aircraft wings.

This, presumably, is a way around the requirements of the law, and also, as General Pate testified, will enable the remaining battalions to be kept at combat strength. Experience in Lebanon and the Far East proved the fallacy, he said, of maintaining units below combat strength.

What has happened to the Marines?

Budget considerations, of course, always dictate the size of military establishments.

But that is in overall strength of a country's defense. The suspicions arise that the Marine Corps is being asked by the Pentagon to surrender some of its fighting role on behalf of the Army—to keep the Army in business, as it were. Too, the drive of the Democrats in Congress to increase domestic vote-getting spending will take more and more money that could go to beefing up the military services. There are just so many tax dollars.

The role of the Marines today is as important, or more important, than at any time in our history. A growing nuclear stalemate increases the possibility of more actions as around Formosa, in Lebanon and perhaps Berlin.

The Marines should be the first to go in. And they should always be ready. The cuts will make it difficult, if not impossible, to keep the Marines a sufficiently large and powerful enough combat force to blunt or counter such major moves of the enemy, or beat him to the first punch.

The Marines may be reduced to a police force, instead of a fighting force.

America never more needed a Navy-Marine team than it does today. This country must be able to reach across the seas, not only with missiles, but with guns, tanks and planes, and men.

You have to apply force, or a threat of force, of the type needed where it is needed—at the moment it is needed. No fighting team can do this better than the U.S. Navy and the Marine Corps. Why dull the spear of our ready power?

Memo From Havana

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. GROSS. Mr. Speaker, Look magazine was one of the first publications in the United States to take seriously the Castro rebellion in Cuba. A year ago, this publication anticipated the downfall of the Batista dictatorship.

A few weeks ago Mr. William Attwood, the foreign editor of Look, went to Cuba to learn firsthand the temper and reaction of the people. His report, to be found in last week's issue of Look magazine, is worthy of the most serious consideration and it is for that reason that I insert it in the RECORD:

INSIDE CUBA'S REVOLUTION

(By William Attwood)

HAVANA, CUBA.—Not many Americans gave Cuba's Fidel Castro much of a chance when Look reported on his rebel movement a year ago (Look, Feb. 4, 1958). He was a Robin Hood figure in the hills—a screwball to some, a bearded bandit to others, a dead man according to one U.S. news agency. Now, he's Mr. Cuba—a winner. But he's still controversial. So I came down here to have a new look at a story that has been making headlines all winter.

Havana has become a gay and relaxed city. The gaudy cruise ship Havana is dead: the tourist brothels empty, the luxury hotels in trouble, the gambling hotels shut down. But the Cuban Havana is joyful. People are no longer afraid. The press, muzzled for so long, is free. I saw Castro's bearded, gun-toting partisans swarm through the streets and hotel lobbies looking like brigands and acting like Boy Scouts. (You couldn't buy one a meal or a drink: "Thank you, but Fidel said no.") There were no cops, but traffic moved and crime was hard to find—perhaps, as someone said, because all the crooks were in Batista's police force.

This was a clean and disciplined revolution. In the words of a longtime Cuban friend, "It was an uprising of decent people against indecency." And for some reason, we wound up on the wrong side.

That is what makes it embarrassing to be an American in Havana these days. As a reporter, you are made welcome everywhere. People are eager to talk to you. At demonstrations, they make room for you—"so that you can see the truth and write about it." But they are hurt and angry, and full of questions: Why did you support Batista so long? Why did you send him military missions? Why do you criticize the executions? Why are you against us?

Some of their questions are hard to answer, especially after you have been here a few days, talking to people you know and trust, getting an idea of what was and has been going on: As a reporter for 20 years in a lot of countries on both sides of the Iron Curtain, I am satisfied that seldom did a regime so deserve to be overthrown as Batista's, and seldom did men—if they can be so called—more richly deserve execution than the thugs who carried out his orders. Yet Batista was our ally—a partner in "hemispheric defense."

This is the real story that has been inadequately reported in America. The few hundred executions of murderers (whose crimes were attested to) have been thoroughly reported because the press has been free to witness them. They made the headlines—as violence seen always does. And they provoked pious indignation among many Americans who didn't know or didn't stop to think of what had gone on before.

The press was not invited to the torture chambers of Batista's police, where sadists were free to indulge in perversions that cannot be printed here. Disgusting things were done to certain parts of people's bodies, things were done to prisoners' wives in front of their husbands, things were done to children. Castro claims that 20,000 rebel sympathizers were murdered during Batista's rule. I checked this figure with the most conservative Cuban businessman I know. He said it was probably accurate, since he knew for a fact that, just since last April, people were being killed at the rate of 50 a day.

This was going on just 90 miles from Florida, behind the respectable facade of a government whose army we were training and (until last March) supplying with weapons. It happened while American tourists frolicked with Havana's B-girls, or crowded its casinos run mainly by American gangsters (who split their take with Batista). And nobody wondered aloud why the city was so full of cops or why the chief of police came to gamble with a retinue of gunmen.

Is it any wonder that every Cuban I talked to was hurt and angry? "If you had protested then," I was told, "we might not resent your criticism so much today." And I was often reminded that Americans who deplored the trials of Batista's henchmen did not denounce the Hungarian freedom fighters for lynching the Communist secret police.

As of now, Castro is to Cuba what de Gaulle was to France in 1944. He can do no wrong. Wherever he goes—and he was all over Havana, day and night, during my visit—he is surrounded by adoring crowds. When I accompanied him through a hotel lobby one evening, it took us an hour to reach the door. He listened to anyone with something to say, and answered anyone with a question to ask. He was exhausted, hoarse, but sustained by that secret source of energy without which no genuine political leader could long survive.

Technically, of course, Castro is not a political leader, but only chief of the revolutionary army. The government is in the hands of his civilian supporters. And as this long victory celebration subsides, new political parties will begin to take shape. The dominant group will be Castro's 26th of July movement, whose program will be modeled on that of Roosevelt's New Deal. An opposition will eventually emerge, also democratic and anti-Batista, but built around elements of the Auténtico Party. Also among the opposition groups will be the Communists, now vainly trying to get aboard the Castro bandwagon; active mainly in Havana, they will do their best to fan the embers of anti-Americanism. (Castro has no use for them, but will let them operate in the open.) Elections will be held within 2 years. Whether or not Castro runs for office, he now plans to keep control of the new army as a kind of watchdog to make sure the government doesn't betray the goals of the revolution—that is, social and economic reform and an end to graft and corruption.

WHO WILL RUN THE GOVERNMENT?

Luckily for the Cubans, theirs is a rich land. It exports more sugar than any country in the world, nearly $700 million worth a year, a lot of money for a nation of 6 million. If the new government succeeds in diversifying and rationalizing the economy and eliminating graft in high places, there is no reason why Cuba won't be stable and prosperous as well as democratic. Tourism may decline if the casinos stay closed, but only the hotel owners (many of them American) seem to be really worried.

The one big problem is finding people to run the government. This was a revolution of young people like Castro (who is only 32), of farmers, doctors, country lawyers, small businessmen, teachers, and clergymen. Or as one Cuban told me, "The peasants, the Rotarians, and the Lions beat Batista. They wanted to clean up the mess in Cuba, but they don't want to run the place now that it's done. They want to go back to their farms and their jobs. I spoke to one top official, just 40 years old, who said that, under Batista, the job he now held was worth a fortune in graft; now, it is just hard work and he is anxious to go home to Santiago and run his business.

Cuba's new government needs our sympathy and help more than our hasty sermonizing about how to finish a revolution we had no part of. It needs to sell us more sugar. Our new career Ambassador, Philip Bonsal, may be able to win back some of the respect for America that was lost by our last two politically appointed envoys. With the knowledge and approval of the State Department, their contact with Cubans was largely confined to the wealthy Batistans they associated with at the Havana Country Club.

The American business community is going to have to get used to dealing with officials who won't demand bribes in exchange for special favors, and with police officers who can't be put on company payrolls in case of labor troubles. For many, the Batista dictatorship represented a kind of stability. But as one businessman remarked, "The competition we'll get now will probably be good for everybody—and we'll save on kickbacks."

SOME LESSONS WE NEED TO LEARN

A visit to Havana these days reminds you that we Americans have other lessons to learn—lessons we should have learned long ago. The first is that we'll wind up on the losing side every time we back unpopular rulers. What happened in Venezuela and Iraq only recently should have taught us this much. Yet we kept three military missions in Cuba right up to the end. Can anyone explain to the taxpayers of the United States what useful purpose the missions were serving there? Did anyone seriously expect that Batista's army was being trained to repel a

Russian cossack charge on San Juan Hill? His troops couldn't even lick Castro, whose army was just 12 strong a couple of years ago.

You hear the argument that since we recognized Batista we had to be nice to him. But we weren't so squeamish about helping the Guatemalan rebels overthrow their pro-Communist dictatorship. And our envoys to other police states like Hungary don't pal around with the power elite there the way we did with the Batista crowd.

Another lesson to remember is that we can no longer take Latin America for granted. The stereotypes don't fit any more. The drowsy peons and the quaint palace revolutions are things of the past. Cuba's popular uprising was a fight for all ideals we claim to stand for against the kind of tyranny that we oppose in the cold war. Yet the Communists, seeing that Castro was bound to win, tried to get in his corner to cheer him on while we stood pat with our protocol and military missions. We can thank our lucky stars that Castro was no Communist; the situation was made to order for them. But if this was going on in our front yard, it might be a good idea to start wondering about the Dominion Republic, Spain, Nicaragua, Saudi Arabia and a few of the other police states we are hooked up with. In this troubled and revolutionary world, it's not farfetched to say that the outcome of the cold war depends on our learning the lessons of this Cuban revolution—and applying them in the future.

Finally, we need better reporting. And we'll get it if we care enough. But who cared about Cuba—even though we fought a war to free it from Spain? Only a handful of American publications bothered to send reporters to see Castro in the hills. The brutality and corruption of the Batista dictatorship were scarcely reported, while millions of American readers were treated to pro-Batista Sunday newspaper supplements, loaded with Cuban advertising. The Washington lobbyist and the three New York public-relations firms employed by Batista served him well; so did all the Cuban editors and journalists who concealed the real facts in exchange for his bribes or subsidies. The U.S. embassy may or may not have reported the facts to Washington; if it did, the reports were filed and locked up.

Anyway, we didn't care enough, and the result is that an American in Havana is embarrassed today. Batista has fled to Ciudad Trujillo with his loot, but he would have been gone sooner and many lives would have been saved if the Americans now carping at Castro had shown some indignation a few years back. One of these days, if we don't learn our lesson, a lot of people may change their minds about what we stand for. And if that ever happens, however big our missiles, we are in trouble.

Union Economic Researcher Calls U.S. Deficit Inflation Threat

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include a very thought-provoking article written by Mr. Solomon Barkin, director of research for the Textile Workers Union of America, which appeared in the Christian Science Monitor on January 5, 1959:

UNION ECONOMIC RESEARCHER CALLS U.S. DEFICIT INFLATION THREAT

(NOTE.—Everyone has an idea on what to do about inflation. In several articles over the past few months, the Christian Science Monitor has presented many views and many facets of the problem. Today, one of labor's most thoughtful research specialists, Solomon Barkin, director of research for the Textile Workers Union of America, discusses the question as he sees it.)

(By Solomon Barkin)

NEW YORK.—The country now faces the paradox of threats of inflation at a time when the price level is stable. Farm prices are dropping sufficiently to offset increases in other sectors of the market. Industry has not yet initiated a general wave of price boosts which would send costs skyrocketing. It is waiting for business recovery to proceed far enough to permit it to apply higher prices without immediate adverse effects. The pressure for rising costs from these sources for the immediate future will be moderate. But the real menace will come from the inept financing of the funds needed to cover our huge Federal deficit.

Big business, the U.S. Treasury, the administration, and the Federal Reserve Board launched an anti-inflationary campaign in the early summer to scare the American people and to thwart labor negotiations in the automobile industry.

The Committee for Economic Development, a businessman's organization, had hardly distributed its report urging tax reductions to aid business recovery when, in late spring, it published its program for controlling inflation aimed at getting restrictive labor legislation.

The administration in mid-August announced a shift from antirecession to antiinflation policies. The Federal Reserve Board also began increasing its margin requirements for stock purchases, raising its rediscount rates, and curbing credit in the commercial banking field.

STOCK PRICE RISE RECALLED

Then followed the investors' flight from the Government bond and mortgage markets into the stock market. Stock prices soared and interest rates moved up. The Government must now raise its needed funds at higher interest rates. Treasury spokesmen are plaintively seeking to quiet these inflationary fears and appeal to the patriotism of investors to buy Government issues. The President, as head of the Republican Party, also changed his tune and began stressing the stability of the dollar. It was only after the election that he returned to the theme of the damage wrought by inflation.

To cope with the problem of rising prices, the CED, business interests, and a few economists urged amending the Employment Act of 1946 to instruct the administration specifically to seek not only maximum employment, production, and purchasing power but also a stable price level.

Most American economists have avoided this position; they believe the present act sufficient and see no need for amendments. This goal has been the overriding objective of the present administration; it requires no additional legislative support.

A third group has maintained that at no time should maximum employment and production be sacrificed for purposes of maintaining a level statistical index of prices.

BOOMERANG HINTED

More serious than the above dispute on legislative purpose are the wide differences among business and labor spokesmen and academic economists on the program needed to keep a stable price structure. Business leaders and the administration appear intent upon achieving this end through the use of indirect monetary controls such as are now possessed by the Federal Reserve Board; the imposition of shackles on trade unions; and the curtailment of Federal expenditures.

Besides being inadequate to stop the upward price movements, they may tend to boomerang—as the current speculation on the stock market suggests—and produce group and class conflicts. They will stop necessary public works and activities and nip business recovery in the bud.

Actually a program for stopping inflation must be broader in scope and rest on a new set of administrative concepts and procedures. Pressures which raise the cost of living come from various sources. The money and capital markets are only one such set of forces. If a price-stabilization program is to be undertaken, many different programs must be coordinated; no one control will do the job.

PRICE PRACTICES HIT

Attention should be first directed to the practices of the large business firms which dominate American industries. Their price practices have been inflationary. Increases in recent years have tended to widen their profit margins. The Senate Antitrust and Monopoly Subcommittee, in reviewing the testimony on the price rises in the steel industry, concluded that "the price increases substantially exceeded the cost increases in 1957 and apparently also in 1956."

It found that the break-even point for the United States Steel Co. dropped to 32 percent of capacity, indicating that higher levels of production would bring huge profit bonanzas. Similar conclusions would be reached with respect to most other large industries.

The proposal has therefore been made that Congress empower the Federal Trade Commission or other appropriate agency to consider the breaking up of some large corporations and to review the propriety of price increases and later informing the American public as to their justification.

Much blame for the current price increases has been directed at trade unions. Actually, they represent a limited area of the American economy. Moreover, salary increases made since 1953 have tended to outdistance wage increases, and the former are not negotiated through collective bargaining.

LEVELS PROTESTED

While there are cases where a trade union drives a hard bargain, they are the result of bilateral agreements and not unilateral decisions as are "administered prices." If restraints are to be imposed, they should be placed on business to limit its willingness to grant wage increases. Wage raises have been moderate where profits are modest.

Trade unions have protested the rising price levels and have sought to induce management to restrain them. But employers have rebuffed union efforts to secure price reductions as they consider them to be beyond the union's province. In this state of affairs, unions have had no alternative but to protect their members against inflation.

Indicative of the degree to which prices have outdistanced the increase in unit labor costs is the fact that unit labor costs in the durable-goods industries increased by 15 percent between 1947 and 1957, while wholesale prices in the same period rose by 53 percent.

One way out of this dilemma is for management and trade union leaders to meet annually to discuss management price and production policies and levels of wage adjustment and seek to reach a consensus on economic policies prior to each annual cycle of negotiations.

SERVICE COSTS NOTED

A third important area is agricultural prices. It is not necessary to maintain inordinately high agricultural prices to protect farmers' income. A full-fledged pro-

gram of agricultural adjustment should be combined with one designed to raise incomes of low-income farmers and help redevelop distressed rural counties.

In the discussion of the rising cost of living, many have underscored the importance of the higher costs of services. People have accepted them as inevitable, failing to realize that they are as amenable to improvement in efficiency as are other industries. Moreover, the efficiency of the services must be advanced if the consumer's price level is to be controlled.

From June 1955 to June 1958 commodity prices rose by 7.1 percent but service costs increased by 10.7 percent. Medical care costs alone soared 12.8 percent. Many people are now seeking to reorganize medical care to provide better care at a lower cost.

It has, therefore, been suggested that a national productivity center for the services be established to promote higher efficiency in the service areas. The Government proposed such agencies to other countries under its foreign-aid program; they should be equally applicable in the United States.

PROPOSALS OFFERED

There is widespread recognition that the authority of the Federal Reserve Board is inadequate to deal with the inflationary and speculative problems of our economy. Current procedures and policies often accelerate speculation and higher costs. A number of different proposals should be considered for this purpose.

One is to increase the Board's authority beyond the commercial banks to embrace the credit and investment policies of all financial institutions and nonfinancial businesses engaged in leading activities. Consumer credit should also be under its supervision.

Closer coordination should be established among the Federal monetary, fiscal, tax, and debt managing agencies.

Special lower interest rates should be provided for loans to small business groups and public agencies which suffer in periods of tight money controls.

Key materials such as steel should be allocated in expansionist boom periods.

A program for controlling inflation in the United States during periods of economic expansion cannot be built on current monetary controls, restricted Federal expenditures, or a program for weakening the trade union movement.

The major sources of inflation are speculation, excessive power in the hands of the big business firms, the failure to improve efficiency in the service industries, and the excessively high agricultural prices. Specialized controls directed at these areas would help stabilize the price level.

Military Pension Law Discriminates

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Bloomington (Ill.) Pantagraph of February 19, 1959:

MILITARY PENSION LAW DISCRIMINATES

When Congress passed the military pay bill in 1958 it broke a 100-year tradition which has kept pay of retired military personnel tied in with active-duty pay. They went up together and by like percentages. This bill provided that members of the armed services who retired prior to the passage of the bill would get a flat 6-percent increase in retirement pay. Those who retire after passage of the bill get much higher retirement pay.

This was done despite the recommendations of such reports as that of the Cordiner Committee, which said:

"Military retirement and its firm tie-in with active-duty compensation is perhaps the most powerful long-term career incentive existing within the military compensation system. It represents a qualified equity of specific dollar value and is, in fact, the principal traditional benefit available to military personnel.

"The Committeee has, therefore, concluded that the incentive value of its existing military retirement program depends to a major degree upon its integral relationship with active-duty compensation and the confidence which has been built up in the military body that no breach of faith or breach of retirement contract has ever been permitted by the Congress and the American people * * *."

The principle that retirement pay, once earned, will continue to be at the established percentages of active pay helps to attract men to military carecrs.

The bill passed last year and now in effect departs from this principle. It creates two classes of retired military personnel. Included in the inferior group are men who fought in three wars. Their sin is having been old enough to retire prior to passage of the pay bill last year.

The bill would at least have been consistent if it had made the break in this traditional policy apply to all retired personnel. But it applies only to those who had retired before its passage.

This is unfair discrimination and should be corrected. Some 31 Senators and 25 Representatives have opened a campaign to correct this defect by restoring the traditional relationship between pay of active officers and military pensions.

This correction would cost $30 million a year, but the cost would decline in succeeding years as death decreases the number of retired personnel affected.

If we want competent military forces led by highly qualified men we must provide incentives. We can best do this by returning to the traditional relationship between retirement pay and pay of those on active duty restored.

Estonian Independence Day

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. MULTER. Mr. Speaker, Estonians are one of the smallest and bravest of the non-Russian nationality groups upon whom Soviet communism was forced in July 1940.

These sturdy and stouthearted people, living in their ancient homeland from time immemorial on the northeastern shore of the Baltic, have had difficulty in maintaining their national independence, yet they have never been completely subdued by their conquerors. For more than 200 years before the First World War their country was part of the Russian Empire, where they lived there under the oppressive regimes of the czars. Nevertheless they succeeded in maintaining their distinct national character and clung steadfastly to their common goal, that of attaining their independence. When the Czar of Russia was overthrown, they had their chance, and on February 24, 1918, they proclaimed their independence.

That was 41 years ago. For about two decades they enjoyed their richly deserved independence in their newly constituted Republic. They lost their independence early in the last war and since then have been suffering under the worst of tyrannies. Today, these helpless but not hopeless people bear the heavy yoke of their Communist taskmasters in the firm belief that in the end they will once more regain their freedom and independence. We in the free world, in observing the 41st anniversary of Estonian Independence Day, ardently join them in that expectation. We pray that they all will live to see that day.

Depressed Areas

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. SILER. Mr. Speaker, I would like to invite the attention of this legislative body to a newspaper editorial that appeared in the Floyd County Times under date of February 19, 1959, supporting my own efforts to produce a sound, workable piece of legislation that should persuade industry to come into the depressed areas of our Nation, yet would require no appropriation, would add no Federal employees to the payroll, would engage in no Socialistic experiment. My bill is H.R. 3696, a measure that would give Federal income tax exemptions to corporations willing to come into stricken eastern Kentucky and into other depressed areas of our country. The Floyd County Times and the Lexington Herald have both supported editorially my efforts and yet both papers are, I believe, Democratic in political affiliation and they both know of my Republican affiliation. Nevertheless, their interest in eastern Kentucky transcends their partisanship in a matter that should always be entirely nonpartisan. The editorial is as follows:

THE USUAL HAIR-SPLITTING ACT

Congressman FRANK BURKE, of Louisville, this week got into the hair-splitting act that invariably holds center stage when any plan is proposed to help eastern Kentucky in its economic distress.

He gave with the sage opinion that Congressman EUGENE SILER'S bill providing for special tax exemptions to industries that locate in depressed areas is unworkable. BURKE said it would be "too hard to tell which plants qualify for special exemptions."

Which, to us, is another way of dodging the eastern Kentucky issue. Why too hard? Could not the legislation itself define what industries would be exempt? Coal mines, it might be agreed, would not be exempt, since the region is a coal-mining center. Nor would any old business or any that would

not employ men or women in numbers sufficient to improve the economy of the area.

Surely this would not be a task too arduous for the Federal Government which has so many thousands on the payroll, this job of determining those bonafide industries entitled to special tax exemptions in return for venturing into this part of America that has so long been verboten to those industries which make and sell things to other parts of America.

Congressman BURKE, according to a news dispatch, left off till the last the clincher. He commended SILER for his efforts but said Congress would "emerge with another type of solution" to the eastern Kentucky problem.

And that is exactly what we fear—another type of solution that doubtless will mean more beans and cheese, more of the dole, nothing of a constructive, permanent nature.

Lessons From Canadian Experience With Self-Pensions

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. Glenn Garbutt, which appeared in the December issue of Trusts and Estates magazine. Mr. Garbutt is an independent management consultant in New York City and an experienced observer in the collective investment and fiduciary fields. He is a former associate editor of Trusts and Estates. His article is based on a marketing study conducted for the Bank of New York, through whose courtesy the article was published:

LESSONS FROM CANADIAN EXPERIENCE WITH SELF-PENSIONS

(By Glenn Garbutt)

(EDITOR'S NOTE.—Under the encouragement of special tax provisions, retirement programs for employed persons have become widespread. But self-employed individuals cannot be their own employees, hence they cannot qualify for favored tax treatment. The inequity in the position of the self-employed was put to an end through legislative action in Great Britain in 1956, and in Canada and New Zealand in 1957. In 1958, the Keogh proposal to permit self-employed individuals in this country to set aside tax-deferred dollars into restricted retirement savings was reported favorably by the House Ways and Means Committee—for the first time since its original introduction in 1951. Late in July the bill passed the House by an overwhelming vote, but, in the Senate the bill was stalled in the Finance Committee for lack of time to schedule hearings and finally, on August 12, after debate on the floor of the Senate, was sidetracked by parliamentary maneuver when offered as an amendment to another tax bill. Nevertheless, the resulting vote on the amendment brought forth a strong show of strength for individual self-pensions, with 32 Senators going on record as in favor—despite the fact that the Senate policy position of both parties at the time opposed such legislation. The opposition, in general, was based on the prospective loss of tax revenue and, in particular, on inadequate time to study the measure. Inasmuch as persons close to the legislative process expect the Keogh bill to be reintroduced substantially in its present form when the 86th Congress convenes in January, the following authoritative report on the Canadian experience with self-pensions is both timely and revealing.)

Taxpayers in Canada, under the terms of legislation enacted on April 12, 1957, are allowed a deduction of amounts up to 10 percent of earned income set aside for the purchase of retirement annuities commencing any time before age 71. The dollar amounts so set aside may not exceed $2,500 a year for self-employed persons, or $1,500 in the case of an employee under a pension plan, including his own contributions to both employer-sponsored and individual plans.

The new legislation represents something more than is implied in the phrase "removal of discrimination against the self-employed," explained Dr. A. K. Eaton, Canada's then Assistant Deputy Finance Minister: "The new legislation opens up income spreading as a new positive policy of general application. It is available to everybody."

This significant tax change was introduced by the Honorable Walter Harris, Minister of Finance, with these observations in his budget speech on March 14, 1957:

"The cash effects on our revenue in the coming year will be negligible, partly because it will take some time for insurance companies and others to design policies and organize plans, and partly because taxpayers will in many instances derive their benefit from a tax refund at the end of the year.

"The subsequent years, if widespread use is made of the plan, it is possible that the annual yield of the income tax may in future be reduced by as much as $40 million. Whatever the subsequent loss in revenue may be it can, however, be regarded as an indication of the volume of provision being made by Canadians toward freedom from financial worry at a time when their earnings power has lessened.

"To me this policy makes good sense. Moreover, the broad effect of this policy will be antiinflationary since it will be an encouragement to increase immediate savings which will be productively employed. Encouragement such as that now proposed is, I think, amply justified and will, I believe, be well received on all sides."

The step taken by the Minister of Finance was in recognition of agitation by taxpayer groups over a 10-year period—primarily on the plea of inequity—rather than of views expressed by financial institutions or the life insurance companies.

The Ministry of Finance had an equally strong record of opposition over the 10-year period. Principal reasons: The expected decrease in tax revenue and the prospective increase in administrative detail, not the question of principle. However, with permissive self-pension an accomplished fact and the first year of experience behind them, finance ministry officials have disclosed that: (1) the changeover was far simpler than anticipated, and (2) the loss of revenue in the first year—unofficially estimated at $7 million—was considerably less than the long-term projection of $40 million made by the Minister of Finance.

PATTERN OF ACCEPTANCE

The Canadian taxpayer has a wide range of choice for the investment administration of his accumulated retirement savings. Commenting upon the freedom of investment, Assistant Deputy Minister Eaton, said:

"I mention this aspect of the law in relation to two matters which in current Canadian thought are frequently referred to on public platforms or in the press: The first of these relates to the degree of Canadian ownership in Canadian industry. The second is the question of the future stability of the purchasing power of the Canadian dollar, whether gradual inflation can be avoided or whether prudence dictates a form of investment providing some hedge against a gradual decline of the value of the dollar. * * * This policy is in line with the removal last year of the restrictions on trustees investing pension funds."

The four general types of investment administration are: (1) Life insurance companies' contracts; (2) Dominion government annuities; (3) trust companies' plans; (4) mutual funds and negotiated investment contracts.

Although discussions leading to the tax amendment continued over several years, passage of the legislation found both the Government and financial agencies unprepared. Thus the Canadian development is revealing, because in the administration of individual retirement savings new methods and procedures had to be evolved.

Life insurance actuaries and officials, for example, were cool to the early proposals for permissive individual retirement plans. Reasons: Restricted policies with a locked up savings side might (1) upset the traditional relationship between the insurer and the insured, (2) encourage the cancellation of existing life insurance policies unless both old and new contracts could qualify for registration, (3) call for new types of policies with variable premium problems, and (4) bring forth agitation for variable annuities.

With the insurance fraternity divided in general as to the desirability of the new legislation, some companies started out with a negative approach, tending to point out problems rather than opportunities to their agents and field men. Consequently, they took a relatively minor part in the early marketing development of this new method of saving.

Companies with a positive approach, on the other hand, received a ready response from the field and a satisfactory experience resulted. Sales results, in fact, indicate that interest in retirement savings among individuals is communitywide and about evenly divided as concerns professional people versus proprietors and management people. A representative sample of over 800 contracts registered through two large insurance underwriters indicates that some two-thirds of registered policies were new contracts issued in 1957, the remaining one-third being old contracts from earlier years. Policies being registered in 1958 are mostly with new people.

Insurance officials in general have found that the new legislation created a considerable educational problem for salesmen and savers alike. While some officials feel that the market opened to the insurance companies is not impressive, other sales-minded officials find the tax-deferment privilege has served as good reason to review present individual insurance programs with satisfactory results, and they assess the possibilities presented as most favorable.

Trust companies, unlike the life insurance companies, had neither the products nor the sales power ready to seek individual tax savers. It was late in 1957 before most of the trust companies completed their plans for handling registered retirement savings.

In general, the trust companies' plans are designed for the use of collective investment, in order to achieve economy of administration and adequate diversification for the pooled accounts of individuals with annual contributions of $2,500 or less. The plans range from a single fund to a combination of funds with different investment objectives.

Some of these plans provide special savings accounts to facilitate the accumulation of allowable contributions. A contributor thus might know his exact income before determining the final amount to be registered, inasmuch as transfers to a registered plan may be deferred to the end of February and still apply to the preceding tax year.

Lacking a field force, the trust companies employed direct-mail and newspaper adver-

tising to call attention to their registered plans, and particularly to point out the advantage of equity investment in the event of further inflation. Now, with retirement savings funds in operation, trustmen feel they have broadened their range of services and that, while the educational problem is formidable, indeed, it opens to them a mass market not heretofore available on a practical basis. In future years, they feel, a large portion of the moneys set aside in retirement savings will be administered by corporate trustees.

Mutual funds worked out two types of retirement savings plans—one similar to the trust companies' type of plan, with a corporate trustee acting as custodian and the mutual funds providing the investment medium and management; the other similar to annuity contracts of the insurance company, with a face amount certificate payable over a period of years.

Canadian Government annuities drew the largest single group of the registrations of retirement savers. There is no comparable investment medium in this country to these annuities, which are administered by the Department of Labor and may be purchased by Canadian taxpayers in amounts between $10 and $1,200 a year. The annuities system is provided at cost—the Government pays all administration expenses and guarantees the fixed yearly income. Premiums may be paid to the Receiver General at any Accounting Post Office.

Director Charles R. McCord, who heads the Government annuity program in Ottawa, commented: "A review of first-year results indicates: (1) A stimulation of interest in general in Government annuities, (2) a revival of interest in many old and dormant contracts, and (3) the attraction of interest in new contracts among men and women under 40 years of age in particular."

Altogether some 60,000 contracts were found to be eligible under the amended tax legislation and these annuitants were advised during 1957. Director McCord revealed that about 15,000 plans were registered—two-thirds of them old contracts, one-third of them new.

Association plans were worked out by professional groups to enable members to take advantage of the tax exemption privilege through contributions to a professionwide program. The Canadian Medical Association, for example, registered a plan with (1) an insured annuity segment—guaranteeing fixed dollar income—administered by a life insurance company, and (2) a common stock investment fund administered by a trust company. The program was designed in the belief that the split-fund type of savings plan would go a long way toward answering the problem of how to put aside for retirement and yet protect savings against the inroads of inflation. Contributing members may decide for themselves how much they wish to invest in each segment of the plan.

The pattern of acceptance of the Canadian Medical Association plan was described by Dr. A. D. Kelly, general secretary of the association, as follows:

"Late in September we mailed information on the plan to 16,000 members and received in return roundly 2,000 registrations, most of them within the tax-year 1957. The split-funded allocations approximated two-thirds to the trusted common stock fund, one-third to the insured group annuity. In dollars of contributions, this amounted to approximately 60 percent in common stocks and 40 percent in group annuities."

This indicates early acceptance of the plan by one of every eight members of the association. However, an equal number of medical men were found to have chosen other channels of registration. Here again, therefore, one out of four is believed to be a proper proportion to use as the early pattern of acceptance by physicians.

Other association plans have been formed but have not been as successful in general as the Canadian Medical Association plan. Some, however, were formed too late for full consideration in the tax year 1957.

OVERALL PICTURE

Taxpayers in Canada have until April 30 to file their income tax returns. Registrations for the retirement savings privilege must be made by December 30 of the tax year, with an additional two months allowed for making the contribution commitment.

Within the tax year 1957, following enactment of the law in April, a total of 32,000 individual registrations were filed with the Department of National Revenue. An estimated breakdown of the different types of investment administration used follows:

Investment administration

	No. of plans
Government annuities plans	15,000
Life insurance contracts (regular cases of annuities and life insurance with savings side registered)	9,000
Trust companies' own plans (excluding association plans)	3,750
Association plans (funded through group annuities and trust companies)	2,250
Mutual funds plans	2,000
Total of registered plans (estimated)	32,000

Of particular interest is the finding that almost one of every four taxpayers who registered through the trust companies failed in the foreshortened first year to make a contribution to their plan within the allowable time limit. Principal reason: Lack of immediate savings ready for long-term commitment.

In summary, then, the study of Canadian experience with self-pensions during the first year indicates that—

Individual interest in tax deferment is widespread, but a relatively small proportion of taxpayers have immediate savings ready to commit under permissive self-pension legislation.

Government and investment administrative officials alike find that 2 to 3 years or more will be required for the pattern of acceptance of individual retirement savings to become fully formed.

The tax revenue loss for the first year—estimated at $7 million—was substantially less than the $40 million projected loss estimate of the Finance Minister.

The educational problem posed by this new form of saving for investment administrators and savers alike is formidable.

These findings lend support to the statement made by Dr. Roger F. Murray[1] at the hearing of the House Ways and Means Committee last January 24, when he said with reference to the proposed Keogh bill:

This kind of provision takes a long time to become fully effective. The bill is only enabling legislation, in a sense; it does not automatically make available the arrangements for a single individual to make his retirement deposit. The needed facilities require time and effort for their development. Even a widespread understanding of the bill's provisions would require months of educational work. We are probably talking about 1960 before really large numbers of the self-employed would know how or where to make a retirement deposit."

Therefore, Mr. Murray concluded, "The loss in current tax revenues represented by the tax deferral would be very modest for several years."

Divine Instructions Relative to Nations That Reject God

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. UTT. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, and apropos to my reintroduction today of a resolution proposing a Christian amendment to our Constitution, I wish to quote the radio message of the Reverend R. J. G. McKnight, delivered on the "Christian Amendment Hour" under the title of "Divine Instructions Relative to Nations That Reject God."

The message is as follows:

"DOWN TO THE REVOLUTION"

That phrase, in Justice Story's "Commentaries on the Constitution," has the deepest significance. Let us recall it, in its setting. He says: "Every American Colony from its foundation down to the Revolution did openly, by the whole course of its institutions, support and sustain, in some form, the Christian religion." We have seen the evidence for that statement in the Rhode Island Compact, which is representative of all the colonial compacts.

To make absolutely clear that they did support and sustain the Christian religion, let us look again at the enacting clause of the Rhode Island Compact. It says: "We whose names are underwritten do solemnly, in the presence of Jehovah, incorporate ourselves into a body politic; and as He shall help, will submit our persons, lives, and estates unto our Lord Jesus Christ, the King of kings and the Lord of lords, and to all those perfect and absolute laws of His, given us in His holy word of truth, to be judged and guided thereby."

Where did the men of colonial times get their conception of a proper enacting clause to stand at the beginning of a civil compact? They got it from God's holy word of truth. Two-thirds of the Old Testament deals with God's relation to nations. They had read the Bible—God's holy word of truth. They believed what they read. For example, they had read the Second Psalm.

Let us read it.

The Psalmist has taken his stand, in vision, upon a high vantage point from which he surveys the nations of the earth. He listens: he hears the sound of rebellion. He waits: the picture becomes clearer. Then, he speaks:

"Why do the heathen rage and the people imagine a vain thing?" He can scarcely believe it is true. "Yes," he says, "it is true."

Verse 2: "The kings of the earth set themselves, and the rulers take counsel together against the Lord, and against His Anointed, saying, Let us break their bands asunder, and cast away their cords from us."

What will be the reaction of the eternal God upon His high throne? The Psalmist tells us: "He that sitteth in the heavens shall laugh" (there is no mirth in that laugh—it is the laugh of absolute scorn)—"He that sitteth in the heavens shall laugh: the Lord shall have them in derision. Then shall he speak unto them in his wrath, and vex them in his sore displeasure. Yet—(notwithstanding this vocal rebellion) yet have I set my King upon my holy hill of Zion."

Then God's "Anointed"—His eternal "Son"—against whom the rebellion is most vocal—steps forward to deliver His inaugural address: "I will declare the decree: the Lord

hath said unto me, 'Thou art my Son; this day have I begotten thee. Ask of me, and I shall give thee the heathen for thine inheritance, and the uttermost parts of the earth for thy possession.'"

Christ is the only begotten Son of God. To Him God the Father has given authority over all nations. And when "the kings of the earth * * * and the rulers take counsel together" against God and His Son—whom He has anointed to reign over the nations—God has made plain what will happen: (verse 9) "Thou shalt break them" (the nations) "with a rod of iron; thou shalt dash them in pieces like a potter's vessel."

It is no small thing for a nation to reject the sovereign King whom God has appointed to rule over all nations. The consequences are tragic. And the history of nations is evidence that the nation that rejects God's Anointed will be shattered like a brittle piece of pottery under a heavy blow from an iron rod. The size of the nation, the importance, the wealth, the influence, the wisdom—these things are no protection against the "rod of iron," when God's hour strikes.

God is fair in His dealings with nations. He gives repeated warnings before the "rod of iron" strikes.

He sent Moses to Egypt; Pharaoh refused to bow to God's demands. Egypt went down into the graveyard of nations.

God sent Jonah to Nineveh, at the peak of Assyria's dominance. The city repented for a period. But the repentance period soon passed, and the "iron rod" descended, and Assyria today is but a memory.

God sent Daniel to Babylon where King Nebuchadnezzar was boasting: "Is not this great Babylon that I have built for the house of the kingdom, by the might of my power, and for the honor of my majesty?" Quite a boast. But read on: "While the word was in the king's mouth, there fell a voice from heaven, saying, O King Nebuchadnezzar, to thee it is spoken: the kingdom is departed from thee." And today great Babylon is buried beneath the sands of the Euphrates Valley.

God sent His servant Paul to Greece and to Rome, at a time when Greece boasted of the excellence of its human philosophy, and Rome ruled the world. The Roman legions were irresistible. Rome was the eternal city—they thought. Paul went to Rome as a prisoner. He was in chains. He told the Romans of Christ, and of His love. He said: "I am ready to preach the gospel to you that are at Rome also. For I am not ashamed of the gospel of Christ: for it is the power (dynamite) of God unto salvation." Rome rejected the gospel, and the "iron rod" fell and the Roman empire was shattered like a potter's vessel. The ruins of the Coliseum are today a warning to powerful sinful nations. How long will it take the world to learn that battleships, airplanes and bombs mean nothing when God's hour strikes and the "iron rod" descends in wrath.

So the Psalmist counsel the nations—every nation—any nation: "Be wise now therefore, O ye kings: be instructed, ye judges of the earth. Serve the Lord with fear, and rejoice with trembling. Kiss the Son, lest he be angry, and ye perish from the way, when his wrath is kindled but a little. Blessed are all they that put their trust in Him."

Lincoln: A Guide for Nixon

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the San Diego, Calif., Union, February 12, 1959:

LINCOLN: A GUIDE FOR NIXON

During this month, which marks the 150th anniversary of the birth of Abraham Lincoln, the still-meaningful words of the railsplitter are being quoted widely again.

There is inspiration for all in the life of Mr. Lincoln.

But if we were called upon to single out one man to whom Mr. Lincoln's life should mean most, our nomination would be RICHARD M. NIXON.

This would be true if we looked only upon the controversy which surrounded Mr. Lincoln during most of his political life. He was a man who gave his views directly. His debates with Stephen Douglas were openly argued and acclaimed. He was widely criticized by all three of his opponents as he ran for President. As President he was denounced often in the press. Things reached a point where his sons were taunted by schoolmates.

Even on the eve of the Gettysburg Address there were fights in the street below his hotel.

Mr. Lincoln remained above it all with "malice toward none, with charity for all, with firmness for the right."

RICHARD NIXON, too, has been controversial during most of his political career. He won his seat in Congress after widely publicized debates against Representative H. Jerry Voorhis. As a Senator and as Vice President of the United States, few have criticized his ability or devotion to duty. But political opponents of this administration have made him their center of attack. Cartoonists have caused one of his daughters to cry as she was taunted in school.

Mr. NIXON is dedicated to young people. He visits many schools to advise students to take an interest in government.

The parallel does not stop there. Mr. Lincoln was greatest during crisis. Mr. NIXON has this quality, also—witness his 1952 fund speech, the President's heart attacks, his experiences with mad mobs in Latin America.

Both were strong in their Republican philosophical fervor for the rights of the individual.

Both men struggled to finish law studies. Both were greatly influenced by early religious training. Both were marked by personal courage. Both profit from the quality of humility.

No one knows what the next chapter will be in Mr. NIXON's life. But he, like most of us, can find inspiration and guidance in Mr. Lincoln's words:

"Let us have faith that right makes might, and in that faith let us to the end dare to do our duty as we understand it."

Columbus, Ohio—All America City

EXTENSION OF REMARKS
OF
HON. SAMUEL L. DEVINE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. DEVINE. Mr. Speaker, recently the National Municipal League and Look magazine honored the city of Columbus, Ohio, as an All America City for high standards of citizen action realized through public improvements made possible by voter approval.

This national award is particularly pleasing to me since Columbus, Ohio, is in the heart of my congressional district. The citizens of that community have, over the years, demonstrated great community interest and local concern with their own problems and have had the courage to do something about it.

Columbus, Ohio, is a fine example of a city that does not find it necessary to always look to the Federal Government for benevolent assistance but to the contrary, in true American tradition, is better satisfied to solve its own problems.

I wish to quote an article from the Columbus Dispatch which details the events at the time the award was made to Paul R. Gingher, chairman of the metropolitan committee, who accepted the plaque on behalf of the city of Columbus:

ALL AMERICA CITY FESTIVITIES OPEN

"All America City" Year in Columbus officially opened at a noon luncheon Friday as Paul R. Gingher, chairman of the metropolitan committee, accepted the plaque on behalf of the city.

Approximately 600 persons attending a luncheon in the Deshler Hilton Hotel were told by Gingher the award came to Columbus because citizens did what they knew had to be done.

The All America City Award is cosponsored by the National Municipal League and Look magazine. Columbus was honored as a 1958 All America City for high standards of citizen action realized through public improvements made possible by voter approval.

Gingher said no one had to tell us we needed new schools, hospital facilities, and sewage improvements.

Columbus knew and met its need through the combined efforts and cooperation of all its citizens, Gingher said.

We have been successful because we are a great American community, he said, with greater things to be done tomorrow.

Philip C. Ebeling, of the National Municipal League, who presented the award to Gingher, congratulated Columbus for its accomplishments since civic improvement efforts were started in 1945.

Joel Harnett, the magazine representative, said "you are better citizens because of your fight and victory in overcoming traffic, school, and municipal problems."

"You are passing another milepost on the road of success," he said. "There are many more mileposts ahead of you."

Alvin W. Jones, president of the Chillicothe Chamber of Commerce, accepted an honorable mention award for his city from Ebeling. Chillicothe placed in the top 22 cities in the 1958 judging although not the top 11 All America Cities.

Protest Against Further Increases in the Gasoline Tax

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to include a letter I received from Harry J. Kennedy, president of the Western Petroleum Refineries Association of Tulsa, Okla. I feel the comments in Mr. Kennedy's letter are very timely and to the point.

The Western Petroleum Refiners Association, organized in 1912, is national in scope, and represents a major segment of the re-

fining industry. Its member companies are located in various areas of the United States. Its roster includes refiners, both large and small. A number of its members have grown from humble starts, to organizations that are large in stature.

The Western Petroleum Refiners Association protests vigorously the proposal recently made to increase the Federal gasoline tax.

The excuse given for this increase is that the Federal highway trust fund, now derived from the Federal taxes on motor fuels, tires, tubes, retread rubber, truck use and one-half the tax on trucks and busses will not be large enough to defray the cost of the Federal road-building program.

The original program, designed for the construction of 40,000 miles of interstate highways, was expected to cost $27.6 billion of which the Federal Government was expected to provide $25 billion. The cost, as now estimated, will be $40 billion and the Federal share $36 billion. The increase in the gasoline tax is proposed as necessary to meet anticipated deficits in the highway trust fund.

This view is erroneous.

Under the present plan, the Federal road-building program is to receive only $2.2 billion in 1959 and $2.8 billion in 1960, but at the same time an additional $1.3 billion in 1959 and $1.3 billion in 1960 is anticipated from Federal excise taxes on automobiles, parts and accessories, and the remaining half of the tax on trucks and buses, which are to be paid into the general fund of the Treasury.

This diversion of the automotive tax receipts from proper allocation to the highway trust fund is the cause of the so-called "deficit." This diversion is also the occasion for the proposal to increase already heavy taxes on gasoline. The answer lies in the deposit of these additional automotive tax receipts in the highway trust fund, where they should have been assigned from the start of the program.

An alternative plan, which assumes a continuation of the present diversion, is to extend the life of the project. Under this plan of "stretching out" the highway construction, only so much of the program would be accomplished within each year, as there is money in the highway trust fund available to pay for it.

GASOLINE TAX INCREASE THREATENS U.S. ECONOMY

The proposal to increase the gasoline tax ignores the function of gasoline in our economy. What has gasoline become in American life? Not so long ago we were considering gasoline as something of a luxury. Now, it affects everybody. It affects everything that is grown, or manufactured, or sold. The automobile, which depends on gasoline, after being thought of as a novelty, a pleasure vehicle, a show-piece for the rich, has become a workhorse, a necessity. The truck, fueled by gasoline, has become a transportation factor involved in literally innumerable business activities. With automobile and truck, you can go anywhere, and take anything.

The American economy is geared to motor transportation. Its cost must not be made prohibitive.

Those who are proposing an increase in the already burdensome share of the tax load which gasoline carries, fail to take into account the fact that no necessary commodity can bear, without limit, the increases in price which are proposed and implied for the future by the proposal.

The vicious cycle is this: More tax—higher prices; higher prices—more tax, etc. The consequence of imposing constantly mounting gasoline tax is that the cycle is unending and self-defeating. When transportation costs rise, they jeopardize the volume to be moved, and an increase in the tax on gasoline is an automatic increase in automotive transportation costs. The national economy needs free-moving commodities. A higher tax on highway fuels is a restraint of trade.

The relation of the gasoline tax to the price of basic petroleum shows in itself how highly the tax on gasoline has been imposed already:

The gasoline taxes of the States already average 6 cents a gallon; the Federal tax on gasoline is already 3 cents a gallon; combined, this is an average of 9 cents a gallon. This average of combined taxes is equal to 80 percent of the refinery price; 54 percent of the tank-wagon price; and 41 percent of the retail price.

If the Congress were to finance the so-called deficits in the highway trust fund by successive increases in the gasoline tax, the combined average of Federal and State taxes would become 115 percent of the refinery price of gasoline; 78 percent of the tank-wagon price; and 59 percent of the average retail price.

It is a fixed principle of taxation that if a tax is to remain productive it must be moderate in amount and it must be reasonably related to the market price (before tax). There gets to be a point in the increase in a tax with relation to the market price of the commodity where the tax defeats the sale of the commodity, or weights it down so as to destroy sales volume and also tax receipts.

THE GASOLINE TAX INCREASE AND INFLATION

Everybody knows that transportation costs must be added to price. The current effort to curb inflationary price increases is wholly inconsistent with any proposal which inevitably increases costs—whether transportation costs or otherwise. Anyone who defends increased taxes on gasoline used on our highways must be prepared to defend inflationary price increases.

Jobs for Relatives

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. AYRES. Mr. Speaker, I believe the following editorial will be of interest to the Members:

[From the Des Moines Register, Feb. 21, 1959]

JOBS FOR RELATIVES

Two of Iowa's new Congressmen have hired close relatives for jobs in their offices. It is difficult to understand this disregard for the long-established public disapproval of this practice.

Representative STEVEN CARTER, Democrat, of the Fourth District, has placed his 19-year-old son on his office payroll at a salary of $11,000 a year. The boy is a part-time student at a university in Washington, D.C.

Representative LEONARD G. WOLF, Democrat, of the Second District, has employed his wife as secretary in his congressional office at $11,000 or $12,000 a year. The exact salary still appears to be in question.

Both Congressmen have defended their actions on the grounds that these members of their immediate family are highly capable and will render very valuable service in their respective capacities.

Both recognize that their actions will be sharply criticized but indicate that they do not intend to be swayed by this criticism.

Both have attempted to justify their actions by pointing out that it is a common practice among Members of Congress.

Representative WOLF added that his predecessor, Henry O. Talle, had his wife on his office payroll at a salary similar to that paid WOLF'S wife.

These explanations and justifications do not make the practice of political nepotism—the hiring of relatives—any more acceptable. It still has all the attributes of overcrowding the public trough. It still bears the label of the worst form of the spoils system.

Much in the manner of smallpox, it does not become a more desirable disease because it has been allowed to become an epidemic and has infected an entire community.

Nepotism isn't so new that a first-term Member of Congress might innocently fall victim to its financial attractions.

The "Encyclopedia of Social Sciences" traces its origin back to the practices of the early popes of the Catholic church who distributed powers, principalities, and titles among their immediate relatives. The practice served to undermine the prestige of the church and contributed greatly to the reformation.

Describing nepotism as an embryonic type of the spoils system, the encyclopedia adds that "nepotism is still common in many countries, although it is frowned upon in communities with more advanced political morals."

If Congressmen WOLF and CARTER have not had the benefit of encyclopedia references they can find discussions of nepotism in almost any high school civic textbook.

Congressman CARTER has spoken very highly of his son's usefulness in research work. Both he and Congressman WOLF might benefit considerably if young Carter were put to work researching the history of nepotism.

Knowledge of the fundamental principles of good government is sometimes as useful and important to the continued tenure in office of a Member of Congress as guiding visiting constituents around the Capitol on sightseeing tours.

Ike Pinpoints Labor Issues

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. ARENDS. Mr. Speaker, under leave to revise and extend my remarks, I am inserting in the CONGRESSIONAL RECORD an editorial "Ike Pinpoints Labor Issues," which appeared in the Daily Pantagraph of Bloomington, Ill., on Friday, February 20.

This editorial is worthy of insertion because it clarifies a major issue confronting us with respect to the much-needed remedial labor legislation. My hope is that this Congress will have the courage to meet the issues with respect to secondary boycotts and certain types of picketing squarely. To do so is in the interest of the workingman himself, as well as the general people:

IKE PINPOINTS LABOR ISSUES

President Eisenhower said at his recent press conference that Congress should enact legislation to curb secondary boycotts and some types of picketing. These proposals, he said, are decent and just.

Therein lies the biggest difference between the administration labor bill and that proposed by Senator KENNEDY.

The administration proposes to deal with the secondary boycott by prohibiting direct coercion of employers to cease doing business with another. It also would ban inducement of individual employees to refuse to perform service.

This is not covered in the Kennedy bill.

The administration bill would make picketing an unfair labor practice, subject to mandatory injunction, where a union cannot establish sufficient employee interest in having a union represent them in cases where the employer has observed the law.

The Kennedy bill proposes only to prohibit picketing for the purposes of extortion.

There are other differences. The administration covers provisions on representation elections, non-Communist oaths for employers, reopening bargaining agreements and procedures for naming an Acting General Counsel of the National Labor Relations Board.

These are not covered in the Kennedy bill.

The Kennedy bill would tighten the definition of a supervisor. The effect would make more supervisors eligible for union membership and thus take them out of the management group.

This is not covered in the administration bill.

The two bills are substantially the same on reporting of union financial conditions, union elections, and collective bargaining elections.

Chairman BARDEN, of the House Labor Committee, has offered a bill aimed at curbing the power of union heads through required revision of the union constitutions. This may not get the support of either group.

Senator MCCLELLAN, head of the labor rackets committee, is drawing up his own bill which should be introduced any time. This may be a good compromise between the two.

But the issues of the secondary boycott and picketing where neither the workers nor the employers want a union should be dealt with in any measure getting congressional approval.

Defense Before All Else

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the San Diego Union, February 9, 1959:

DEFENSE BEFORE ALL ELSE

This Nation—its people and its politicians—must divorce themselves of the idea that sacrifice is reserved exclusively for shooting wars. The harsh truth is that cold wars require disciplines that must be met as soberly and realistically as the sacrifices demanded by shooting wars.

The word "sacrifice" apparently is not in the lexicon of the Democratic spending block in the Congress. The effort to ramrod through multi-billion-dollar housing and airport construction bills is symptomatic of the budgetary schizophrenia which President Eisenhower has attributed to the Democratic spenders.

Schizophrenia is a loss of contact with reality. It certainly is unrealistic to persist in the idea that we can supply all we need in national defense without cutting back on social welfare and without using restraint in desirable but not vital projects.

As yet we have no idea what the final bill will be for national security. Indeed, there is no end in sight. Defense needs are constantly under scrutiny by our military experts. They may well exceed the $40 billion asked by the President in his budget of $77,300,000,000.

National security must take priority over everything else. It is the big issue. Every effort must be made to balance the budget. But if an imbalance results, it must be in behalf of defense, nothing else.

We do not fight wars with pork-barrel legislation. We fight them with hard-muscled air, land, and sea arms. We fight them with missiles and nuclear power. The largesse of the Democratic spenders would be better directed to the Marine Corps, which stands to lose one-third of combat strength; to the retaliatory naval forces asked by Adm. Arleigh Burke, the Chief of Naval Operations. Admiral Burke has warned that antisubmarine warfare is lagging considerably behind the capability to combat enemy submarines.

By July, he said, Russia will have four times as many submarines as the United States.

These are the voices of national security. They must be heard above the clamor of pressure groups, lobbyists, and vote-seeking politicians.

The security problems posed by the nuclear and space ages do not permit a life as usual attitude. They require toughmindedness, a willingness to sacrifice for the greater good. And they require putting first things first. Either we tighten our belts, or we tighten the noose around military and economic survival.

Garnishment

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. LANKFORD. Mr. Speaker, the third of a series of articles dealing with garnishment in the District of Columbia is inserted at this point in the Appendix of the RECORD.

[From the Washington Post, Feb. 3, 1959]

DEBTORS' DILEMMA—BAD RISKS IN EASY CREDIT SYSTEM PROVE COSTLY TO DISTRICT TAXPAYERS

(By Morton Mintz)

District taxpayers foot a hidden part of the bill when an easy-credit operator sells something to a poor credit risk and the debt goes bad.

The costs to the public are largely incurred in both tax- and charity-supported welfare programs, the municipal court and crime.

Richard D. Gibbs, secretary of Peoples Drug Stores, was one of two witnesses who touched on the crime aspect in testimony on May 27, 1957. He told a House District Subcommittee hearing on proposed reforms of the District's garnishment or bad debt law.

"We cannot tolerate these [employees] who are bad credit risks where we are dealing in open merchandise and cash, and we have found them to start stealing in a great many cases. * * * When they do not draw a salary, they are going to eat, and they will get it any way they can. * * *"

Most authorities believe only an insignificant amount of crime stems from attachment of wages. Some observers, however, make these points:

An employer who would unhesitatingly seek the arrest and prosecution of a thief who is unknown to him is less likely to do the same to an employee caught stealing. He may only fire him, being aware that garnishment has left the employee, a human being he knows, without funds for food or shelter.

It is hard to detect some thefts, especially those from a cafeteria or restaurant.

Authorities do not make a special point of looking for garnishment as a root of crime. University of Maryland Criminologist Peter P. Lejins said he knows of no study of the question but added that one should be made.

Previous articles have pointed out the inner and outer pressures on poor persons to buy on easy credit, the tricks used on them, and the calamities that frequently follow for themselves and their families. Here are more costs to the public relating to the same source of trouble, the District's garnishment statute:

DEPARTMENT OF PUBLIC WELFARE

The Washington Post pointed out in 1956 that under the garnishment law the head of a household could be stripped of every cent he earns, even if it means his children will go hungry. Members of the juvenile court advisory committee heard a father plead he was unable to meet support payments because he had to pay other bills. If his wages were attached, he said, he would be fired and unable to support his family or pay his debts. The then juvenile court judge later said this situation is fairly common.

A man fired because of garnishment legally remains "employable," and so he and his family are ineligible for relief. A man who deliberately deserts his family so it can get a support order—and Welfare Director Gerard M. Shea agrees the statute provides an incentive to do this—becomes liable to a year's imprisonment and/or a $200 fine.

But in doing so he makes sure, once the court order is issued, that his children will eat. Authorities say there are many such cases, but no one knows how many. The Department of Public Welfare makes varying welfare payments; an adult with four children gets a maximum of $195 a month.

UNITED GIVERS FUND AGENCY

The Salvation Army estimates it spends at least $3,750 of UGF funds for direct relief—food and rent—to families impoverished by garnishment. Also affected are Family and Children's Service and Catholic Charities.

On a bookkeeping basis, the Legal Aid Bureau, in representing about 500 garnishment defendants a year, accounts for about 1,300 of UGF funds.

THE MUNICIPAL COURT

Last year, deputy U.S. marshals set out to serve 47,877 writs of attachment on employers. There were countless court hearings on requests for exemptions. Just how much waste of both litigants' and taxpayers' funds is involved in all this no one can say for certain.

However, one estimate from a most reliable—and cautious—source is that a more reasonable garnishment statute would save the taxpayers "several thousand dollars a year."

Oregon's First Senator

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. PORTER. Mr. Speaker, on February 14, 1859, Gen. Joseph Lane was

sworn in as Oregon's first U.S. Senator to serve in Congress from the newest State in the Union, Oregon. Editor Charles V. Stanton of the Roseburg News-Review, in my district, has summed up the work of this outstanding man who was later to be candidate for the second highest elective office in our land. His editorial of February 14, 1959, follows under the leave to extend my remarks in the RECORD:

OREGON'S FIRST SENATOR

(By Charles V. Stanton)

One hundred years ago today a man from Douglas County held up his right hand in Washington, D.C., and swore to uphold the Constitution of the United States. Thus Gen. Joseph Lane became the first Senator to serve in Congress from the then newest State, Oregon.

Today appropriate ceremonies are being held at General Lane's tomb. It is a tribute well deserved, for perhaps no man contributed more to Oregon's early success. At the same time perhaps no man in the State's history was more cruelly treated when he remained firm to his convictions.

General Lane was brave and vigorous. He was a serious worker on behalf of Oregon Territory and later the State of Oregon. But General Lane was a firm believer in States rights. When he threw in with the Confederacy on the question of States rights, he was immediately assailed by emotional abolitionists.

Although the War Between the States was fought on a question of States rights and southern rebellion against domination by Northern States, history books have all too often made slavery a primary cause of the war. Actually, slavery was a secondary issue. The Emancipation Proclamation was a document to destroy southern economy rather than settlement of moral issue. But it was a decided victory for the abolitionists of the day.

ELECTED TO CONGRESS

Gen. Joseph Lane was born in North Carolina and, as a youth, moved with his parents to Kentucky. Thus he was steeped in southern beliefs.

Interested in politics, he was an active party worker in Indiana, where he moved as a young man. He served in the Indiana Legislature when barely past 21 years of age, gaining election to the house and later to the senate.

He fought with Indiana volunteer troops during the war with Mexico, where he was advanced through successive ranks from major to general. He was wounded twice.

His prominence and bravery in the war caused President Polk to name him Governor of Oregon Territory, August 18, 1848. He set out overland, arriving in March 1849 to take up his new duties.

He served in 1851 as a Delegate to Congress from the Oregon Territory, then was again made Governor in 1853, but served only briefly before being again elected to Congress.

His congressional work was interrupted when he resumed his military career to conduct the successful Indian war in southern Oregon. Again he was wounded, but fought through the 1855–56 campaigns.

Returning from the Indian fights, he was once more elected to Congress and, when Oregon became a State, he was named as the first Senator from the State. He took office February 14, 1859, the day Oregon was admitted.

SETTLED NEAR ROSEBURG

He was an unsuccessful candidate for Vice President of the United States with John C. Breckenridge.

One of his first acts in coming to Oregon was to find a suitable place for a home.

He decided to locate in the Umpqua Valley. In 1851, 2 years after his arrival, he took up a donation land claim in Douglas County. His property was on Deer Creek, east of Dixonville, on what is now known as the Buckhorn Road.

Because of his sympathies for the South, he lost much of his political influence in Oregon, which had joined the North in the struggle between the States. Emotion was permitted to turn thought away from much of the good General Lane had accomplished for the State.

Today, however, Oregon is proud of this man who was so active in the politics of its early day and who did so much for the Territory and the State.

As we begin the celebration of our birthday as a State, it is most fitting, I believe, that one of the first to be honored is Gen. Joseph Lane, a Douglas County man who was Oregon's first U.S. Senator.

Civil Affairs and Military Government Combat Support Axioms

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article which appeared in the January 1959 issue of the Military Review, U.S. Army Command and General Staff College publication, as a supplement to "CAMG Operations in Atomic Age Warfare," which appeared in the January 1958 issue of the same publication.

This splendid contribution entitled "CAMG Combat Support Axioms" was written by our distinguished junior Senator, STROM THURMOND, brigadier general, U.S. Army Reserve:

CAMG COMBAT SUPPORT AXIOMS

(By Brig. Gen. STROM THURMOND, U.S. Army Reserve)

(This article supplements "CAMG Operations in Atomic Age Warfare" written by Brig. Gen. STROM THURMOND and published in the January 1958 issue of the Military Review—Editor.)

The primary objective of civil affairs and military government operations (CAMGO) is to provide CAMG combat support. Toward this end, all energies, all actions, and all thought must be focused.

For this reason, CAMGO personnel devote themselves to acquiring a more specific, a more practical understanding of the combat commander's needs and problems and of the CAMG support that they can give him to assist in accomplishing fully the combat mission which has been assigned to him.

Before proceeding it would be well to decide what is meant by the term "CAMG combat support."

Referring to the "Dictionary of U.S. Army Terms," published by the Department of the Army in November 1953, as Special Regulations 320–5–1, we find that combat support is defined as: "operational assistance furnished combat elements."

After considering also the definition, therein, of such other terms as combat element, tactical element, and tactical troops, the following synthesis is submitted:

CAMG combat support is CAMG operational assistance furnished in a combat operation. CAMG troops provide CAMG operational assistance in direct support of combat troops, and are engaged under a combat commander, to operate as a part of his unit in combat.

COMMUNISM

Another basic CAMGO objective is to support and implement our national policies. Foremost of these policies is to combat and neutralize Communist social and political orientation of an area liberated by military force from Communist control.

The combat commander, as the one personally responsible for achieving CAMGO objectives, must be fully cognizant of these political military objectives of the Armed Forces of our country. He is the one who must constantly consider the human, political, and economic aspects of the area of his combat operations. The CAMG organization at his disposal is the instrument with which he removes or neutralizes all Communist influences in areas occupied by the military forces he controls. Any neglect of this responsibility will cause a vacuum quickly filled by Communist oriented policy.

Of value in this connection is a little-known study of the 3 years of intensive Communist CAMG planning and subsequent occupation of a community entitled The Reds Take a City: The Communist Occupation of Seoul, by John W. Riley, Jr., and Wilbur Schramm, and published in 1951.

It is evident that our own CAMG planning must include a full comprehension of Communist CAMG planning. As a minimum, our CAMG planning must be directed at neutralizing the effectiveness of Communist aggressive efforts.

Furthermore, we must be constantly vigilant in our awareness that, as an instrument of foreign policy, CAMG is for us as it is for the Communists a weapon for waging war. It is an adjunct to other military weapons, perhaps, but, nevertheless, an essential military accessory for winning not only the war, but also the peace.

MILITARY VERSUS CIVIL AUTHORITY

Still another basic objective of CAMG operations is to provide for the early transfer of responsibility from the military commander to a designated civil agency of government.

CAMGO personnel are not engaged in social or economic experiments or studies for their own delectation or for academic professional interest.

The CAMGO job is to get things done as expeditiously as possible, to achieve actual military operational objectives, and to withdraw as soon as the military operational need has been met.

The pace is quick, not leisurely.

It must be kept in mind that prolonged military occupation is not the task before us.

TRANSFER TO CIVIL CONTROL

In order to facilitate the smooth transfer of control, civilian organizations under military supervision should be introduced early in the more stable parts of the area of operations and gradually replace specialized CAMG units and activities.

It is a cardinal rule, though, that there cannot be divided responsibility for the control of an area. Either the civil or the military authority must control the area. The agencies of either, however, can be used to support the other before and after the transfer of control, which must be accomplished smoothly, whether control is being transferred from civil to military authority or from military back to civil authority.

Historical examples of civilian organizations which served under military control are the United Nations Relief and Rehabilitation Administration (UNRRA) in World War

II and the International Cooperation Administration (ICA) in Korea.

Such civilian organizations, under the control of the theater army commander, and in turn under the supervision of his G5, definitely reduce the requirement of CAMGO personnel. CAMG units replaced move forward to augment the CAMG combat support units.

INTERNATIONAL OBLIGATIONS

The remaining objective basic to CAMG operations is to comply with international treaties, agreements, or customary law.

For this reason, among others, there is in the modern nuclear age army a fifth general staff section concerned with all military-civil matters including the government, economy, inhabitants, and institutions in areas where U.S. Armed Forces are employed.

This insures that the combat commander is properly advised of his responsibilities, of the limitations on his courses of action, and of his capabilities deriving from political, economic, and social factors.

In his estimates of the combat situation, the combat commander carefully weighs these civil affairs and military government factors along with those dealing with personnel, intelligence, operations, and logistics.

The combat commander's decisions are influenced not only by his own and the enemy's relative combat power and disposition of forces, and not only by such factors as weather and terrain, but also by civil conditions in the area of his combat operations.

CAMG ACTIVITY

The CAMG activity is not new to the Army; only the organization of that activity is fairly recent.

Our CAMG experiences during World War I, and the preceding foreign military engagements of our Armed Forces, strongly indicated early in World War II the urgency and importance of organizing the CAMG activity that inevitably accompanies combat operations.

The scope of the CAMG activity is vast; the details of possible actions are numerous; and volumes could be written on each functional segment of the CAMG activity.

Because generalizations often seem vague, there is a need to search assiduously for clear, complete axiomatic statements to identify the elements of CAMG activity.

Concrete definitions are needed, sufficiently comprehensive in scope and in conveying understanding, of the practical part performed by CAMGO personnel as an operational element in the combat commander's organization.

Toward this end, axioms of CAMG combat support will be explored in an effort to determine how to achieve the basic objectives of CAMG operations previously mentioned.

Were warfare conducted in an arena set apart, such as the jousts of medieval knights, or as in many modern military maneuvers on military reservations, the combat commander could limit his concern to the factors of terrain and weather and the dispositions of friendly and enemy forces, their firepower, and capabilities. However, this is not the way it actually happens on the fields of battle.

Wherever we fight there are people, except perhaps in certain parts like the interior of deserts, at sea, or in an arctic region. It is because people interfere with war and war interferes with people that military commanders must consider the effect on projected combat operations of people, their actions, attitudes, institutions, and resources.

COMBAT COMMANDER RESPONSIBLE

Independence of action often results in the belief that subordinates concerned with particular CAMG matters are responsible for CAMG operations.

This is far from true and we must reemphasize again that the responsibility for CAMG operations is lodged only in the military commander of the area to whom CAMG authority has been delegated, whoever he may be, and regardless of whatever other concerns he may have.

The CAMG mission is part of the combat commander's mission. He must accomplish it even without using the CAMGO personnel and units specifically designated and available to him.

The CAMG organization assists the combat commander as any other service assists him in its particular sphere, but he is responsible.

Specifically trained SAMGO personnel, backed by CAMG organizations extending from the front to the rear through all the echelons of command, increase the combat commander's CAMG capability many hundredfold.

And, what is equally important, the combat commander is not compelled to divert from combat tasks personnel whose special training and competence is needed elsewhere to engage with the enemy.

COMBAT ELEMENT

It is the combat element which first contacts the civilian element upon the initial entry of our Armed Forces into enemy-held territory. It is the combat commander who first establishes the military control which must later be transferred to a civil agency.

The manner in which the people are handled at this early moment by the combat commander determines their first and most lasting attitude toward our Armed Forces. That attitude may become actively hostile or passively neutral. On the other hand, that attitude may be cultivated to become one of cooperation and, perhaps, even result in active assistance to the operations of the combat commander.

In view of the tremendous drain upon our own resources of modern atomic age warfare, it is essential that maximum utilization be made of the resources, including manpower, in areas where our Armed Forces are employed.

While it is true that international law requires the combat commander to restore and maintain public order and safety and to provide for the well being of the inhabitants of an area coming under his military control, the combat commander can do this in such a way as will contribute to his combat success.

CONVERSION PROCESS

The conversion of formerly enemy-held territory to reinforce and even augment the commander's combat power, in terms of resource utilization, is a significant aspect of CAMG combat support.

A paradox arises, however, in this CAMG conversion process. In order to exploit efficiently and effectively the resource potential in support of combat operations, it is not only necessary but also desirable to comply with the provisions of international law regarding restoring and maintaining public order and safety and providing for the well being of the inhabitants.

In the resulting climate of good will, CAMG personnel, by working through civil officials, can make labor available for building military roads, bridges, warehouses, bunkers, and other facilities. They can locate and cause to be utilized for military purposes sawmills, stone quarries, workshops, pure water sources, stockpiles of construction materials, raw and processed materials, and many other civilian supplies, services, and facilities.

CAMG WEAPON

In the search for weapons of greater combat effectiveness, it is found that the CAMG weapon, as an instrument of the foreign policy of our Government, has proved itself on many battlefields throughout the world. It delivers on the ground, in the combat environment, an augmentation of combat power—in terms of usable resources—of tremendous magnitude.

Every person, organization, and echelon in the military structure, from the front to the rear, is required to contribute to the support of combat operations. This is equally true of the CAMG organization, and all CAMG actions must be directed toward this common goal, even at the expense, if necessary, of long-range rehabilitation and reconstruction programs in rear areas.

PERSONNEL COMPETENCE

It is of primary importance not only to have the CAMG organization, as such, but also to have the technological and professional competence of CAMGO personnel brought to peak efficiency for functioning in the combat environment.

Because CAMG concerns primarily are operational in nature, it is necessary that CAMGO personnel be thoroughly grounded in the various aspects of military science and tactics. To perform their part in combat operations, CAMGO personnel must have a comprehensive knowledge of the functions of the G3 section. Only in this way can they understand how the G5 section plays its operational role in the integrated staff of the combat commander.

The precept of Thomas Paine unqualifiedly applies: "Where knowledge is duty, ignorance is a crime."

It is the duty of every CAMG officer to qualify himself fully as an alter ego to the combat commander, capable of contributing to estimates of the combat situation and of participating in the formulation and implementation of combat decisions.

COMBAT SUPPORT TASKS

The exploration for axioms of CAMG combat support reveals that there are certain actions which are conditional, while there are others which recur in all cases. It may be concluded from this that CAMG combat support has two categories of tasks—conditional and recurring.

Conditional tasks are such as arise out of U.S. policy with regard to a particular area and the limitations imposed by the natural conditions of the area.

Recurring CAMG combat support tasks, on the other hand, may be defined, in general, as gaining assistance and avoiding interference of the inhabitants, their economy, and institutions in areas where U.S. Armed Forces are engaged in combat.

More specifically stated, recurring CAMG combat support tasks fall into six additional categories:

1. Civil conditions: Preventing and suppressing disease, starvation, unrest, and other conditions which derive from combat relationships and which would handicap or obstruct tactical and logistical operations, and combating enemy efforts to exploit such conditions.

2. Resource utilization: Promoting the availability and utilization of local resources, facilities, and services, and of governmental, economic, and social agencies, for the benefit of the tactical and logistical effort, and denying their use to the enemy.

3. Civil security: Assuring the security of combat troops from civil sources, using public safety agencies to eliminate active and passive sabotage and guerrilla activity, and coordinating civil defense with military area security and damage control operations.

4. International law.—Complying with international law and agreements. This includes provisions for restoring and maintaining public order and safety, for civilian relief supply, and for the care and movement of civilian war and disaster victims, such as casualties, refugees, evacuees, concentration camp internees, displaced persons, and other needy persons.

5. Civil authority.—Reestablishing civil authority; transferring the area from mili-

tary to civil control; and providing assistance to established civil authority in emergencies and disasters and, where indicated, in the routine conduct of government.

6. Military-civil matters.—Providing a focal point for handling all military-civil matters and, thereby, avoiding a diversion of combat and other military personnel from their primary military tasks by concern with civil as well as with military-civil matters.

CONCLUSION

This presentation is intended only to be suggestive of the vast range of CAMG combat support. A great deal of effort is yet required to define in practical terms all aspects of the CAMG capability to support the combat commander's operations.

There must be a mutual understanding on the part of combat commanders and CAMGO personnel of the responsibilities and capabilities of each in this increasingly vital field.

(Brig. Gen. STROM THURMOND is a 1923 graduate of Clemson College. He was admitted to the South Carolina Bar in 1930 and to practice in all Federal courts, including the U.S. Supreme Court. He has served as county superintendent of education; State senator; circuit judge; and Governor of South Carolina. He volunteered for service in World War II and served from 1942 to 1945 in Europe with Headquarters, First Army, participating in the Normandy invasion with the 82d Airborne Division. He served in the Philippines until the war with Japan terminated. A past national president of the Reserve Officers' Association, he is President of the Military Government Association. He was elected to the U.S. Senate from South Carolina in 1954 as a write-in candidate for the term ending January 1961.)

An Address by Adlai E. Stevenson, "Improving Education: A Free People's Responsibility"

EXTENSION OF REMARKS
OF

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. BRADEMAS. Mr. Speaker, more and more the people of America are coming to realize that if our society is to remain free, we must invest more of our material resources in our human resources, in the education of the children of our country.

As a member of the General Education Subcommittee of the House Committee on Education and Labor, I was deeply pleased to see the recent address delivered by the Honorable Adlai E. Stevenson on the subject of education and a free society. The speech was delivered by Governor Stevenson in San Francisco, Calif., on January 26, 1959, at a convention of the National School Boards Association. The address follows:

IMPROVING EDUCATION: A FREE PEOPLE'S RESPONSIBILITY

(Address by Adlai E. Stevenson)

You have asked me to speak on the subject of "Improving Education: A Free People's Responsibility." Certainly the improvement is imperative, and certainly it is the responsibility of all of us; because all of us, in one way or another, are teachers and teach ourselves and others. Parents are teachers. Churchmen are teachers. Editors are teachers. Friends are teachers. Even politicians should be teachers.

But our chief concern today is with the part of teaching that goes on in the public schools where the shape of the future is cast.

The basis for those schools was laid down in a former era when our national air was charged with promise. America was to be a New Eden. And the individual American was to be a New Adam—granted a second chance to raise a new breed of men who would liberate and purify mankind.

This being the heroic hope, the plainest citizen was not long in seeing how and why its realization depended on public education. Let me read from "A Plea For Public Education," drawn up in 1830 by the Philadelphia Working Men's Committee:

"The original element of despotism is a monopoly of talent, which consigns the multitude to comparative ignorance and secures the balance of knowledge on the side of the rich and the rulers. If then the healthy existence of a free government be * * * rooted in the will of the American people, it follows as a necessary consequence, of a government based upon that will, that this monopoly should be broken up and that the means of equal knowledge (the only security for equal liberty) should be rendered, by legal provision, the common property of all classes."

When plain working men could think in these terms, when they demanded a wedding between liberty and learning, freedom and enlightenment, fate itself was bound to be kind to such vision. And so it was. It gave the American an open continent whose rich natural resources held out the promise of material bounties to come. It gave him two oceans as a shield behind which he could experiment, free from outside intrusion. It augmented the ranks of the original settlers with waves of vigorous immigrants who made their difficulties the source of their ideals, and who thought of success as but a down payment on tasks yet to be performed.

The performance of the early American often fell short of the idealized vision he had of himself and his mission. But on balance, America's solid achievements in cultivating the moral and material environment of the New World, captured the imagination of humanity everywhere. Wherever men felt the stirring of a will to remake themselves, it was to America that they looked for a guiding light.

But if this was true in the past, it is only a qualified truth today. In our national conscience, we have, I think, an even keener sense about social injustice than was the case with our forebears. Yet the ironic fact is, that we no longer hold a worldwide monopoly over the meaning of human progress and the way to attain it. Our Communist adversaries challenge our claim everywhere. At every point of human endeavor they exhibit the same restless drive we associate with the generation of Americans who sacrificed the comforts of the present, that they or their children might reap larger benefits later on.

The Russians have a saying that "with good schools and hard work we will earn our place on the earth—and on the moon, too." The zeal of the Russians for education, and their progress in converting an illiterate, backward, agrarian society into a literate, advanced, industrial state in little more than a generation, has been a spectacular achievement. It has not gone unnoticed anywhere in the world, and is profoundly attractive to the poor, less developed nations where illiteracy is still a curse.

Yet the Russians are dissatisfied with their system of education. Just as we are waking up and examining theirs, they are reexamining theirs and making dramatic changes. Already competetive beyond anything we know, they are making it more so. They told me—and Khrushchev is angry about it—that too many of those with university educations are unwilling to work with their hands, and think manual labor beneath them. So instead of 10 years of precollege education, the rulers in the Kremlin are changing it to 8, followed by 2 years of work in farm or factory. During the 2 work years, those who are patient and industrious and demonstrate a thirst for learning will be allowed time off to go to school. If they persevere at both work and studies, they can qualify for higher education after the 2-year work interval.

There is one exception to this new system—those who apply themselves during the first 8 years and show exceptional ability in music, the arts, and mathematics, will not be required to put in 2 years on a farm or in a plant. But for all the others, advanced education will have to be earned on the job. And the effect will be to reduce and upgrade those who go on to higher education.

What the Russians propose to prevent is what we all know so well—that around 30 percent of our students have no purpose in higher education and only take up time of the teachers and hold back the more gifted.

It is well to remember that heretofore education has been the only road to material success and distinction in Soviet society—a society that puts the members of the Academy of Sciences, the professors, artists and intellectuals at the very top of the economic and social structure, both in pay and public respect. But in our fortunate country we have many roads to success. And that very fact has doubtless diminished the value that we place on education, and often encouraged the average student to get by rather than to excel.

Is this attitude then more a product of our culture and our varied economic opportunities than of some defect in our educational system? And if so, what can the school boards and you educators do to create a better public understanding of the importance of education, irrespective of material rewards?

Dr. Robert Hutchins, who has never been accused of flabby complacence about our education, said something last week that is worth repeating:

"History will have trouble with American education in the 20th century. It will see a people who say they are dedicated to education and unwilling to pay for it. It will see an educational system that delivers less education per dollar than almost any other, saying that all it needs is more money. The people and the educators are united only in this: they both want education without pain, either intellectual or financial. History will find it hard to explain how a nation that is one, a nation in which the political subdivisions have almost no relation to social or economic life and very little to political life, can entrust its future to these subdivisions by relegating education to them. History will smile sardonically at the spectacle of this great country getting interested, slightly and temporarily, in education only because of the technical achievements of Russia, and then being able to act as a nation only by assimilating education to the cold war and calling an education bill a defense act.

"We might as well make up our minds to it. If our hopes of democracy are to be realized, every citizen of this country is going to have to be educated to the limit of his capacity. And I don't mean trained, amused, exercised, accommodated, or adjusted. I mean that his intellectual power must be developed."

That is your responsibility—you who are members of our school boards and charged with developing the thirst for learning and excellence of our young people. I don't envy you your job. I know none more difficult, more exacting, more necessary. You have both the anti-intellectualism of so many

communities, the inertia of so many pupils, and the poverty of so many school districts to overcome.

I wish you well—my future, my children's and yours are at your mercy and in your hands—far more of it is in your hands than in the hands of the Army, Navy, Air Force, or Foreign Service, because if you fail they can't save us.

Admittedly American education has had serious defects. I suppose it is because we as a people have never given the education of our young a top priority in our sense of values. Nor is education at the top of the list of alternative uses to which our tax dollar can be put. In the uses to which we can put our individual time, thought, and energy, the problems of education have never had priority. The reason why our scholars and educators don't enjoy the social and economic status which most countries—especially the Communist—have accorded them is that education has never commanded the status which it merits.

Why is this? Now, that we have been jolted into a realization of our inadequacy, why do we find it so difficult to cope with the problem?

The political fact is that education is a national problem which, alone among our national problems, is not handled on a national basis. Such universal problems as security and defense are treated nationally. The Government studies the needs, appropriates the money, raises the revenue, and administers the program. But the governmental function of education has been left to the locality, to the separate community, to the separate school board. The fear of surrendering to centralized control the responsibility for the education of our young is, I think, still valid. Because in a vast country like this, the further you remove the responsibility for education from the locality, the more you endanger the interest and concern and the sense of responsibility of the individual citizens in the community. And what we desperately need is more, not less individual concern for education. Indeed I think this need transcends classrooms, teachers, and all other school needs.

So we are confronted with a great national problem incapable of a national solution. And the deficiencies of our schools are nothing new. As Governor of Illinois, I was struggling with them 10 years before sputnik—that blessed, brazen angel which at last disturbed our slothful slumber.

You know better than I what the urgent needs are and what all the critics of the American schools—the Educational Policies Commission, the White House conference, the Rockefeller report, and all the other reports—say we must have for survival. I don't want to talk about the need for more classrooms, for more counseling and guidance, for better opportunities for the exceptional student, and for better instruction in mathematics, sciences, and languages. I know, too, that an improvement in the working conditions of teachers, in their compensation, in their social status is demanded in every report and every speech on education.

And I know, too, that to bring about these improvements there must be a substantial breakthrough in educational financing. I have talked about it during every congressional election in recent years—and even more emphatically during some recent presidential campaigns.

It is often said that we are now offering much more schooling of a more expensive sort to very many more pupils than was the case 50 years ago. Yet the truth is that, compared to all other public expenditures, the ratio of what we are spending on education is not more but very much less than was the case 50 years ago. And the further truth is, that unless we start at once to divert more of our resources to education, even our physical plant will collapse once it is hit by the present explosion in our population.

The best estimates put the bill for elementary and secondary school education at around $12 billion. In 10 years it will have to be raised to around $22 billion. Today, the bill for higher education comes to around $3 billion. In 10 years it will have increased to around $9 billion—for a total rise of from $15 billion annually to $31 billion annually. With the best will in the world, State, and local governments cannot do the educational job unaided.

But it was not of these familiar themes that I wanted to speak here today. Moreover, I understand you are soon going to hear Dr. Conant's report on his exhaustive investigation of our high schools and their needs. There are, however, some other aspects of education in America which deserve, I think, more attention than they get.

One is teacher training. I will not go so far as to say that every advance in education is made over the dead bodies of 10,000 professors. But it seems to me that we should acknowledge the unhappy fact that our schools of education and teachers' colleges in the main live in isolation from the sources of intellectual ferment in the great universities. Chancellor Kimpton, of the University of Chicago, has reported that these schools of education over the years have developed their courses not in psychology, but in educational psychology, not in physics but in how to teach physics, not in history but in the techniques of teaching history. And all this, reinforced by State licensing laws, has made the student the ultimate casualty. There has been too much emphasis on how to teach a child, rather than what to teach him. Courses in education—especially at the primary level where techniques such as how to read and write must be taught—are certainly valuable. But the emphasis must be restored to teaching teachers the solid content of history, science, English, etc., instead of the techniques of teaching.

I was interested to find this same concern in the Soviet Union, where there is widespread feeling that the pedagogical institutes were overdoing the study of methods at the expense of subject matter. But in the U.S.S.R., a university graduate—who has had no courses in education—is qualified to teach. He may then compensate for this lack by attending one of the 100 in-service teacher training institutes. Here teachers, during free hours in the day or evening, can attend classes in their own fields or get help about specific problems. These schools are, of course, free and attendance voluntary.

Personally, I doubt if we ever again have enough teachers, let alone enough good ones. We will have to have more recourse to the new techniques of teaching by film and television. Happily, the American teacher, no longer dependent on the printed page, can now draw from a vast library of remarkable educational films to open the doors of a child's mind. At last we are learning—and so are the Russians—about the enormous potential in this teaching resource. The easiest, cheapest, best method of presenting more subjects—and sometimes the only method—is films. For example, the Harvey White elementary physics course—now I suppose familiar to all—will in the long run be cheaper than hiring the requisite number of qualified teachers, even if they could be had. And if they could be had, they would probably not be as good teachers as Professor White.

Every change in education is a change in the habits of teachers. Nobody of my generation ever taught with a film or was ever taught by one. And I suspect all teachers have some vague fear of technological unemployment. The facts are, of course, that these new techniques could be used in every course in the United States without throwing a single teacher out of work. The educational demands of the present time cannot possibly be met without resorting to technology as we have in every other field when manpower was short.

I wonder if the introduction of the book seemed to the teachers of those days to threaten them with technological unemployment. Actually, the book, by helping to make possible the rapid spread of education, greatly increased the demand for teachers. The book also did what the film can do: it made it possible for the teacher to increase the value of his own contribution by making it unnecessary for him to do himself what the book could do for him. If the history teacher today had to recite the contents of the textbooks, he would never get around to making his own specific, personal contribution.

But I have saved for the last what is to me the most important problem of education. Some call it excellence—how to make our young people want to excel in their studies; some talk about motivation—how to make education desirable; others complain that our education is too soft, that it fails to challenge the talents of students.

But are they not all expressions of the same thing—the attitude of the parents and the community? Don't we always have to look to the adult community for our ideals and values? Isn't our education, like our politics, just a reflection of us—of the prevailing attitudes and ideals of the adult community? Won't our politics pump up a cross-section of the community? Won't our schools mirror the respect for excellence, and the intellectual motivation of parents and community? Doesn't the curriculum, hard or soft, reflect the demands of the school board, and doesn't the school board reflect the demands of the parents, and are not the parents a cross-section of the community? Isn't it the community that decides whether the school bond issue passes and the board has the money it needs? And, let's face it, don't those among us who emphasize cost too often prevail over those who emphasize value?

I read that students and their families are reluctant to borrow for education. They will buy TV's, autos, washing machines, even travel, on time and credit, but not education for their children. Is it less necessary?

And isn't Dr. Hutchins too often right when he says that what we seem to want is education without pain, either intellectually or financially?

A member of the Chicago Board of Education recently said to me: "A school system reflects with almost terrifying accuracy the concerns of the community it serves. If parents are interested, if children are brought up with books, the whole system shows it. Principals and teachers, of course, can make an enormous difference, but by and large the community's attitude is the controlling factor."

It has been said that a study of the education of a people can be a clue to what a given culture considers important. The overemphasis in our schools and colleges on athletics and athletic ability at the expense of intellectual attainment wouldn't last a day without public approval—probably more accurately public demand.

And when I complain about the status of teachers in this country—that here in the healthiest, strongest, richest democracy the world has ever seen, the teacher, the intellectual, the scholar, by and large, have less prestige, status and compensation than in the Communist countries—couldn't I say the same thing about many school boards? We insist on managing our education locally; yet how much attention does the average taxpayer give to the selection of the school board? And how much respect, honor, and

recognition do the members get from the community?

And, worse of all, the spurt that sputnik gave us is dying down.

It seems to me that education in the importance of education is the most important job of education. Dr. James Killian, of MIT, put it this way recently:

"What we are concerned with basically is the importance which the American people give to the factor of excellence in our society. It is basically important that we achieve a greater respect for learning, a greater pride in intellectual achievement."

I conclude that it is we the people, we the parents, we the community, that are most to blame for the failures of our education. If in their homes and their environment outside the school the child is indulged, how can the school be expected to turn out a better product? The courses that are taught will not be independent of the feelings, attitudes and demands of the surrounding community. If the community wants driver education or bachelor cooking instead of Latin and mathematics, it will get it. And if colleges give scholarships to boys with coordinated bodies rather than to those with coordinated minds, what will a student value?

I think it is time we, all of us, asked ourselves some searching questions about our values, about what kind of people we really are, about who we are, as the psychologists say. As I have said, if our freedom means ease alone, if it means shirking the hard disciplines of learning, if it means evading the rigors and rewards of creative activity, if it means more expenditure on advertising than education, if it means in the schools the steady cult of the trivial and the mediocre, if it means—worst of all—indifference or even contempt for all but athletic excellence, we may keep for a time the forms of free society, but its spirit will be dead.

I believe we have had enough of adjustment, conformity, easy options and the least common denominator in our social system. We need instead to see the pursuit of happiness in terms which are historically proven and psychologically correct. There is no boredom or misery to equal the pursuit of distraction alone. We do not slip into happiness. It is strenuously sought and earned. A nation glued to the television screen is not simply at a loss before the iron pioneers of the new collective society. It isn't even having a good time. No society has ever spent as much as we do on drink and tranquilizers. Can one argue that this is evidence of universal fun?

But perhaps this misunderstanding of the true nature of happiness and of the conditions of its pursuit is simply an aspect of something else—our misunderstanding of the real nature of freedom. I recall the words of the wise Judge Learned Hand, who warned us that freedom would not survive in our Constitution if it had already died in the hearts of the people. We shall not have a free society unless we have freemen.

I doubt if any society in history has faced so great a moral challenge as ours, or needed more desperately to draw on the deepest sources of courage and responsibility. Ours is the first human community in which resources are so abundant that almost no policies lie beyond our capacities for purely physical reasons. What we decide to do, we can do. The inhibitions of poverty, lack of resources, lack of power—do not hold us back. We can accomplish what we aim at. Thus, perhaps for the first time in the world, choice, not means, ends, not instruments, are decisive.

I hope we choose to upgrade education, and quickly. For as Alfred North Whitehead said 43 years ago: "In the conditions of modern life, the rule is absolute—the race which does not value trained intelligence is doomed. Not all your heroism, not all your social charm, not all your wit, not all your victories on land or at sea, can move back the finger of fate. Today we maintain ourselves. Tomorrow science will have moved forward yet one more step, and there will be no appeal from the judgment which will then be pronounced on the uneducated."

The Cotton Textile Industry

EXTENSION OF REMARKS
OF
HON. FRANK M. COFFIN
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. COFFIN. Mr. Speaker, those of us who come from areas relying on the cotton textile industry are accustomed to two lines of reasoning: First, the industry is ailing and going downhill; and, second, measures seeking to assist the industry involve subsidies or other types of governmental assistance and should therefore be avoided.

Both statements ignore one vital phenomenon which affects no other industry in so great a degree as cotton textiles. I do not know of any other industry where our Government follows a policy of paying about one-fourth of the price of cotton going to an overseas manufacturer. Indeed, what the Government is actually doing is giving an overseas manufacturer a free bale of cotton for every three he buys. Think what our own manufacturers could do if one bale in four were free. As it is, however, not only must they pay the full price for all bales, but they have the doubtful pleasure of knowing that their taxes have helped pay for that extra fourth bale that is given to their competitors.

The recent news of an increase in the cotton export subsidy ran through all the cotton mills north and south like a wintry breeze. It was almost unbelievable that, at a time when the Congress has been working toward a lessening of this differential, the official policy of the U.S. Department of Agriculture has served to aggravate the situation, thus putting our domestic manufacturers at a greater disadvantage in competing with foreign manufacturers and contributing to unrest in cotton growing areas in other nations by further depressing the world market price.

On February 4, 1959, the Secretary of Agriculture announced that it will pay a subsidy of 8 cents per pound on cotton exports during the crop year beginning August 1, 1959. This is 1.5 cents per pound more than the export subsidy which the Department has been paying this year.

Under the program we will be furnishing foreign cotton mills with U.S. cotton at a price of 23.5 cents, while our own manufacturers will be paying 31.5 cents a pound for the same cotton. This will mean a 34-percent differential in raw material costs, to the detriment of American mills.

In announcing the projected price drop on export cotton, the Secretary of Agriculture served notice on foreign buyers that by holding off on purchases of U.S. cotton until after August 1, great savings could be realized. This reduces our exports and contributes further to cotton surpluses. It hurts the farmer, the exporter, and the manufacturer. Unless the administration is willing to modify its approach to this problem, Congress will have no alternative but to adopt legislation which will effectively protect domestic manufacturers in the pricing of domestic cotton.

The Municipal Interest in the Hill-Burton Hospital Program

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. RAINS. Mr. Speaker, municipal interest in the Hill-Burton hospital program was outlined to the Alabama congressional delegation last week by one of the outstanding city officials in Alabama, Mayor W. H. Powell, of Centre.

Dr. Powell was here with a number of other Alabama mayors to discuss municipal programs and needs with members of our State delegation. Every congressional district in the Nation has benefited from the Hill-Burton program, and in view of the wide interest in hospital and health legislation I submit Mayor Powell's remarks for the benefit of my colleagues.

Dr. Powell's statement follows:

THE MUNICIPAL INTEREST IN THE HILL-BURTON HOSPITAL PROGRAM

(By Dr. W. H. Powell)

In the 11 years of the Hill-Burton program in Alabama, the progress in the fields of hospitals and related facilities has been one of the bright spots in the development of the State. Through the generous assistance of the Hill-Burton Act, the State is now, for the first time in its history, approaching the accomplishment of a system of general hospitals which can provide the hospital and medical care necessary to the achievement and maintenance of a healthy, growing population. In 1947, Alabama had 4,804 acceptable general hospital beds. In 1958, the State hospital plant reached a total of 9,981 general hospital beds. Of these, 3,871 have been or are being provided under the Hill-Burton program. The percentage of need met has increased from 39.16 percent in 1947 to 69.36 percent in 1958. Thus it is seen that although the progress has been remarkable, the goal of achieving a truly adequate system of general hospitals has not yet been met.

GREAT PROGRESS MADE SINCE 1947

In 1947, only 34 of Alabama's 67 counties had acceptable hospital facilities. Nineteen of the sixty-seven counties had no hospital facilities of any kind. Through the Hill-Burton construction program, the number of counties without general hospital facilities has been reducted to three. But these figures, while showing advancement toward extending general hospital services to the entire State, cannot be considered a measure of adequacy. On January 1, 1959, only 20 of the 67 counties could boast of having met 90 percent or more of their needs for general hospital beds. And in the face of this increase in beds, there has been a sig-

nificant increase in the utilization of general hospital services. Every year more and more hospitals report overcrowded occupancies and are requesting assistance in making additions and alterations to meet the public's increasing demand for hospital care.

During the same period, considerable progress toward the provision of adequate facilities for public health has been made through the construction of 38 public health centers and 7 public health laboratories. This has been a commendable extension of public health services. But 18 counties still do not have adequate public health facilities.

Probably the only field in which the State is approaching adequacy in hospital facilities is in the provision of tuberculosis sanatoria. Four sanatoria with 530 beds have been constructed. But even the adequacy of this type facility is open to question. There is a critical need for a 100-bed addition to the sanatorium in Montgomery and all of the existing sanatoria are operating at or near maximum occupancy.

While some progress has been made in providing mental hospitals and schools of nursing, Alabama has a critical need for additional facilities of these types. The increase in the number of hospital beds has concurrently enlarged the need for competent, trained, and capable nurses. Leaders in both these fields, as in the others included within the scope of the Hill-Burton program, are ready and anxious to meet these needs with the assistance of the Hill-Burton program.

THE GREAT NEED FOR NURSING HOMES

Due to the limited appropriations, only minor progress has been made in the fields represented by the 1954 amendments to the Hill-Burton Act. Without question, the most critical need in the health facility program in Alabama is for the provision of modern, well-equipped, efficient, and adequate nursing homes. Everyone is in general agreement that we have, in this Nation, an aging population. The remarkable advancement of medicine in recent years has materially increased life expectancy and more and more of our citizens are reaching the age where nursing homes are essential to their life and well-being. In 1958, Alabama had only 514 suitable nursing home beds whereas a total of 6,252 were needed. Due to limited funds available, only 100 nursing home beds had been constructed through 1958.

Progress in the provision of adequate facilities for the care and treatment of chronic diseases has also been slow due to the serious limitation of funds. In 1958, the State had only 160 chronic disease beds, of which 120 had been constructed under the Hill-Burton program. During the same year, the State needed 6,252 beds to meet its needs in this field.

Progress toward adequacy in the vitally needed field of rehabilitation centers has been appreciable. One of the finest comprehensive rehabilitation centers in the Nation has been completed in Mobile and a small center has been opened in Huntsville, both constructed under the Hill-Burton program. In addition to these, Alabama should have comprehensive rehabilitation centers in Montgomery and Birmingham and four small centers to serve local needs. In addition, the comprehensive rehabilitation center in Tuskegee should be enlarged and remodeled.

FACILITIES FOR AMBULANT PATIENTS

The only category of facilities included within the scope of the Hill-Burton program which has not been wholeheartedly and widely accepted by the people of Alabama is diagnostic and treatment centers. Completed projects include an outpatient department of a general hospital, and a tuberculosis screening center. One mental health clinic is under construction and one has been approved for construction. The actual need in this field is rather nebulous, but it can be truthfully stated that there is a real need for additional facilities for ambulant patients.

A summary of the hospital construction program in Alabama shows that the 139 facilities completed, under construction, and approved are located in 69 cities and towns in 56 counties. The total value of these projects is in excess of $76 million. In addition to these facilities, the State department of public health has on file applications for 55 additional projects located in 38 cities and towns in 33 counties. These 55 projects are estimated to cost in excess of $35 million. There is, in addition to these proposed projects, the extensive medical center being planned in Birmingham. Although the full scope of the medical center is yet to be determined, it is known that it will include one or more facilities such as general hospitals, outpatient services, chronic disease hospital, rehabilitation center, nursing home, school of nursing, public health facilities, and several specialized hospitals.

WE ARE STILL SOME DISTANCE FROM OUR GOALS

Progress toward a truly adequate system of health facilities to serve the citizens of Alabama has been remarkable. But there is still a very long way to go before Alabama can reach its goal. The people of the State, its municipalities, its county governing bodies, and the State itself have all proven their genuine interest in providing an adequate hospital system. This interest is increasing, but help is needed from Hill-Burton sources to permit Alabama to provide the facilities it needs. Alabama's share of the maximum authorized Hill-Burton program is vitally needed and both can and will be wisely spent for many years to come.

Dulles: Exemplar of Dedication

EXTENSION OF REMARKS
OF
HON. ROBERT P. GRIFFIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. GRIFFIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the text of an excellent editorial by Msgr. Joseph C. Walen, editor of the Western Michigan Catholic, published at Grand Rapids, Mich.:

DULLES: EXEMPLAR OF DEDICATION
(By Msgr. Joseph C. Walen)

The request of President Eisenhower that Americans pray for the recovery of Secretary of State John Foster Dulles should gain a ready response from all who believe in prayer—and even from those in our country who don't.

The sense of public service which drove Dulles on to work ceaselessly is altogether too rare. As he faces the battle with cancer for his life, Americans in a spirit of gratitude should seek God's help that this dedicated man be spared suffering, and if it be the will of Providence, that he continue for a while to fight for peace for the human race of our time.

STOOD UP TO RUSSIANS

In the fantastically complex business of international relations of modern times Dulles has consistently sought the good of all freedom-loving nations. He has been criticized, sometimes mercilessly by our own allies. This is not to say that some disagreements with his views were not justified by other leaders in the United States or in other countries. The fact stands out, however, that his firmness in the face of Russian demands for everything they can get is much more to be admired than the pleas of the appeasers who have urged that we learn to live with the Soviets. Dulles was willing to do the latter, too, but not that the life would be one of slavery.

I liked the appraisal of Dulles' spirit by Joseph Alsop, syndicated columnist whose writings appear in this territory in the Grand Rapids Herald.

In his Tuesday piece Alsop pointed out that such a spirit is becoming more and more rare. Alsop wrote that Dulles' critics have accused him of being moralistic in the approach to the cold war. These critics berated him, observes Alsop, as seeing this war too much in terms of right and wrong.

NOT FOOLED BY MIKOYAN

Alsop also refers to the fact that Dulles' view of Anastas Mikoyan as a murderer was better than the view of the big businessmen who were charmed by the insinuating Mikoyan manners, or who saw him as the people of Chicago saw him, who mobbed his opera box to get the Mikoyan autograph. Since Mikoyan is very obviously an immensely complex character, necessarily mingling some good with evil, the Dulles' view of him no doubt is too uncomplicated.

"By the same token, the Dulles' vision of the cold war as a gigantic contest between good and evil, in which one could not give an inch without being guilty of surrender to the powers of darkness, is immeasurably more accurate than the vision of the cold war held by those who denounce Dulles for inflexibility."

John Foster Dulles has served his country untiringly, without regard of partisan politics in the face of national crises. He has felt the whiplash of unjustified criticism often while he went about in the performance of his duties.

AMERICANS, PLEASE NOTE

His exemplary Americanism should not go unnoticed nor unacknowledged. It is tragically true that many Americans are so unwilling to serve their country that they are too lazy or too indifferent to vote, to say nothing of their lack of willingness to give up some of their recreation time to render community service. The exaggerated devotion to the concept that after 40 hours of work a week, Americans should be totally absorbed in recreation and loafing in recent years has brought about a lamentable unwillingness to work and sweat among many of us, and that starts with the young people in our schools, from elementary grades on up, to many workers at varied jobs.

Secretary Dulles on his bed of pain is a solemn reminder that morality and love of freedom has a martyr in our time, but also another reminder that a scarcity of such martyrs can bring about the loss of this freedom to the tyranny of communism.

A Resolution Adopted by the Council of International Relations of San Antonio, Tex.

EXTENSION OF REMARKS
OF
HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. KILDAY. Mr. Speaker, under leave to extend my remarks, I include a copy of a resolution adopted on Feb-

ruary 9, 1959, by the Council of International Relations of San Antonio, Tex.

The Council of International Relations is an organization of dedicated citizens of San Antonio sincerely interested in foreign affairs and the participation of our country therein.

I solicit the attention of the membership of the House to the resolution adopted by this organization.

Whereas the Council of International Relations is an international group of more than 400 men and women with a board of governors of military and civilian leaders from civic, cultural, patriotic, professional and educational organizations, and

Whereas the council has for its major objective the strengthening of the ties of friendship and understanding between our land and the free nations of the world: Therefore be it

Resolved, That the Council of International Relations in regular session assembled, does tonight express its sincere appreciation of the firm, courageous stand taken by our beloved President, Dwight D. Eisenhower, and our illustrious Secretary of State, Hon. John Foster Dulles, in support of our ally, the Republic of China, during these difficult months through which she has been passing; be it further

Resolved, That we as citizens of a Christian nation urge a continuance of our unswerving support of these noble people who have suffered so greatly at the hands of their ruthless oppressor, Red China; be it further

Resolved, That we as intelligent men and women realize that to admit Red China into our United Nations Organization would be a disastrous mistake. By its admission we would condone the actions of those who have desecrated every noble principle and ideal upon which the great nation of China was established and have enslaved millions of liberty loving people behind its iron curtain; we urge our great leaders to continue their wise stand against its admission; and be it further

Resolved, That the more than 100,000 men and women who are represented through our board of governors join us in a united protest of any official recognition of the godless, Communist nation, Red China; be it further

Resolved, That copies of this resolution be sent to President Dwight D. Eisenhower, Secretary of State John Foster Dulles, Generalissimo Chiang Kai-shek, Hon. Watson M. Wise, United Nations delegate, Chinese Consul Raymond S. H. Hoo, Houston, Tex., the press, and that a copy be spread upon the minutes of our organization.

Approved this the 9th day of February 1959, San Antonio, Tex.

Resolutions committee:

JOHN D. PALMER,
Mrs. HENRY SHAFER, Sr.,
L. C. ROBALIN,
Mrs. CHARLES R. ALLEN,
Maj. Gen. J. R. SHEETZ,
Mrs. PRESTON H. DIAL,
President.

Address of E. S. Fields to Indiana Technical College

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. SCHERER. Mr. Speaker, as we all know, during the past few years there has been considerable attention given to the quality of training available in the scientific and technical fields. One of the educational institutions in this country which is making a fine and valuable contribution to the Nation's needs in this respect is the Indiana Technical College at Fort Wayne, Ind.

The midwinter graduating class of the college was addressed recently by one of the country's outstanding executives, E. S. Fields, president of the Cincinnati Gas & Electric Co.

His remarks are of such significance that I feel my colleagues in the House should have the benefit of his observations. Mr. Fields' address follows:

Mr. President, members of the board of trustees, members of the faculty, guests, and members of the graduating class of Indiana Technical College, I am deeply appreciative of the opportunity to participate with you in your program today and speaking to you on this very important occasion.

Several weeks ago I made a visit here to the college. As I was flying to Fort Wayne on that occasion, the particular thought came to me in that temporary detachment from the business world which usually occupies me on such a day, that it was a rare privilege for a businessman to be able to spend a day on the campus of an institution of higher learning.

This particularly so for a person whose college life was many years behind him—more decades than he cares to remember.

In looking through some papers I had brought along for reading on that trip, I came across a leaflet issued by the Council for Financial Aid to Education which intensified my interest in making that visit and the anticipation of being here today.

In that leaflet was the information that now 1 out of every 3 young men and women of college age in the United States is attending college while 50 years ago it was only 1 out of 24. This is indicative of the growth of our country in size and quality and the vast demand for college-educated men and women in all walks of life.

As the plane on that earlier trip came into Fort Wayne, the element of growth of our country was evidenced by the new industries and homes that could be seen spreading out in all directions around your city, a characteristic scene these days throughout the length and breadth of our land.

My attention was attracted, quite naturally I presume, to the sight of the great steel tower electric transmission lines and the scars on the ground marking the presence of high-pressure underground gas lines, both converging on the city. To me, those great transporters of energy exemplified the quality aspect of our country. They represented the contributions of college-educated people to the development of adequate energy sources that are vital to the needs of our modern existence. Their importance lies in the fact that the energy requirements to support the expanding economy of the country are increasing at a rate 10 times that of our population increase.

The leaflet on education went on to state that by 1970 the country's college enrollment will be double what it is now. I am sure that this fantastic increase in demand for higher education does not disturb the administrative heads and faculties of the colleges and universities, as they are dedicated to the proposition that our future well-being depends upon increased numbers of highly educated men and women.

There was ample proof of this at the ninth Thomas Alva Edison Foundation Institute held 2 weeks ago at the University of Cincinnati. The theme of the meeting was "Appraising Science Education." The study of science education in this country has been intensified, and justifiably so, since our leadership in this field has been recently challeged, as evidenced by the Russian launching of the sputniks and their progress in the nuclear fields.

You would have been impressed by the seriousness with which the several hundred teachers of science in attendance at this meeting discussed the student, teacher, and subject relationship to increase the amount of take-home knowledge right down to the preparatory work in the high schools.

If these educators have any concern at all, I believe it is involved in the questions whether there will be sufficient teachers and have available to them the facilities to do the job adequately.

With evidences of expansion of our country on all sides of us, it seemed to me to be appropriate to this occasion to sketch out some concepts of the future, using the next 15 to 20 years for the picture. Here is how you, the members of this graduating class, will be involved. At that time the members of this class will be approximately 40 years of age; you will have matured in your chosen field of endeavor; and it is you and your contemporaries coming out of the colleges of the country that must be depended upon to assume positions of leadership and responsibility in the business, social, and political structures of the time.

The forecasts for the period ahead that are used are those developed by the country's most qualified students of economic trends and they are generally accepted as possible of attainment.

There are two basic premises underlying these forecasts: First, that the population of the country will continue to grow at a rapid pace; and second, that the people of this country will continue to exert their efforts, skills, and ingenuities to raise their standard of living.

In a general way, the economists use two measures to forecast the business volume at any near future date—the number of customers (population) and how much in goods and services it takes to supply them. Simply stated, the expansion derives from more people requiring more things.

As to the first point, the population of the country is now 175 million and there will be some 57 million more people; that is, consumers of goods and services, by the year 1975, an increase of 34 percent. There could be a lesser increase in number of workers, as it appears that the populations at the two ends of the age scale will increase more rapidly than those of employable age in the middle of the scale. In any event, to achieve our ambitions for a higher standard of living, each worker must then be producing about 50 percent more than he produces today.

Concerning the second point, there is no reason to speculate here on what specific things will be provided to meet the people's future demands other than to reiterate that there will be more people requiring more things such as housing, clothing, food, automobiles, home appliances, and so forth, and many new things not yet in the minds of men. Our total energy requirements at the time, another measure of our standard of living, could be three times what they are today.

We are a Nation with only 7 percent of the world's population, yet we have approximately half of the things that add to the pleasures and comforts of modern living.

Keep in mind that this status has been acquired under a freedom of life that brought our ancestors to this country and a freedom of enterprise under which each of us can profit from the fruits of our own genius and labor.

While it is not the subject of this discussion, we must be eternally on guard against the siren calls of those advocates of the easier life through dependence upon the Government—the result can only be a further erosion of the liberties that we prize so highly.

The split world and the split atom dominate the onrushing current of events of our time, and the only way we can possibly attain the goals set for ourselves is to use to capacity our most powerful resource—our brainpower. This is too wonderful and exciting a time for loafers or free riders.

A year ago outer space was something for the cartoon strips and the science-fiction magazines. Today there are satellites on the edge of space; submarines powered and homes lighted by nuclear fission; computers solving problems for business and industry; radar in daily commercial use; and people watching television in remote places of the world.

Not one of these phenomena was happening 20 years ago. Yet, startling as those changes are, they are a mere foretaste of what will almost certainly happen during the next 20 years. For the rate of change is continuing, possibly even accelerating.

New materials, new products, and new machines will present a host of challenging opportunities to individuals willing and able to exploit them.

We are already in the shift from mass production, for which we are noted, into that technological revolution we term automation. Many processes we use today will become obsolete and supplanted by larger and faster machines, and manual effort will be supplemented to an ever-increasing degree by mechanical power.

The laborer will lose out to the semiskilled, as some of the jobs formerly performed by laborers are done by machines. The semiskilled, in turn, will lose out to the skilled, as the machine-operative jobs and servicing of the machines become complicated in the automated process. Many new processes requiring special skills will appear, and many with which we are now familiar will disappear. Please keep in mind, however, that machines cannot think, they cannot exercise judgment, nor do they have imagination. That has to be the contribution of quality educated and trained people in this new order of things.

As we look into the era ahead, it is interesting to trace man's quest for power to supplement the sole efforts of his own muscles. It was centuries before he learned to use the muscles of animals, and it was relatively recent that the wind was resorted to for pumping water and that mill towns grew up along the rivers and streams where falling water could be harnessed to drive machines. Modern industry began with the invention of the steam engine for conversion of the energy of our stored-up fuels—coal, oil, and gas—into mechanical power to drive more machines. And with the advent of mass transportation and electric power the limitation as to location of people and industry was removed.

Human progress has been in proportion to the adaptation of power to the world's work. Beyond the time of exhaustion of our coal, oil, and gas reserves lie the inexhaustible potential power resources available from the most recently discovered process of atomic fission and the possibilities for the controlled use of hydrogen fusion. Our continued progress, which these new sources of energy make possible, can only be assured by the increasing numbers of people freed from manual labors devoting themselves to creative work.

And I would like to say here, parenthetically, that one of the most creative fields, both present and future, is that of teaching.

Now for some thoughts for your consideration upon graduation.

Since a young engineer cannot continue his formal education on a full-time basis indefinitely, he must continue to grow after graduation if he is to equip himself adequately to assume a place of leadership in the future.

Closing the gap between the attitudes of the college campus and the realities of earning a living and making progress in the complex situation of modern business is not an easy task.

While many companies have definite training programs for the young college men that join them, there is much a young man can do on his own initiative to contribute to his self-development by being alert and inquisitive and learning all he can about his employer's business.

The march of progress is constantly occurring and the young engineer must continue to advance his knowledge or be left behind. His college education is a firm foundation on which he can continue to build throughout his lifetime. In addition to advanced technical knowledge he will profit by a deeper understanding of human behavior and motivation; and from a broader appreciation of the business and social institutions of our environment.

It is equally important that the young engineer understand himself. Periodic self analysis can serve as a means of strengthening confidence by recognition of admitted shortcomings. This he can do within his own counsels.

Two of the most important attributes the successful man must possess are first, the ability to deal with men and affairs and second, the ability to read and absorb the written experience of others. A planned reading program of good books and articles of lasting value to broaden and deepen social and technical knowledge will add much personal enjoyment.

Those of you who aspire to leadership of business enterprises must take note of the new and dynamic concepts in the business management fields. The new ideas concerning management now emerging are predicted upon the assumption that management is an identifiable, measurable, and transferable activity that can be mastered, as can any other skill.

In closing, let me leave one more thought with you that is aside from these more or less materialistic points of view.

We are in an international technological race, because a formidable adversary has made it a race. We emphasize the need for technological speed-up, but on the need for a spiritual speed-up much less has been said.

We must not simply overwhelm ourselves with the physical sciences leading to the materialistic; rather we must gain for ourselves an understanding of man's spiritual and emotional progress as reflected in his literature, art, music, history, and philosophy. The man or woman who concentrates on "things" can hardly be trusted to use those "things" for the essential good of mankind.

Only those who have guided the development of their spirit as well as their mind are really educated and qualified to use wisely the things that man's reason has enabled him to fashion out of nature's raw materials.

I extend to you my heartiest congratulations and best wishes.

The Value of the Federal Grant Program for Sewage Treatment Plants

EXTENSION OF REMARKS

OF

HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1959

Mr. RAINS. Mr. Speaker, last week a number of Alabama mayors came to Washington to discuss the various municipal problems with Alabama's congressional delegation. There are several Federal programs which provide much-needed help to cities and towns across the country and we were anxious to hear the views of our local officials on these programs.

The Honorable Hugh Patterson, mayor of Gadsden, Ala., my hometown, discussed the value of the Federal grant program for sewage treatment plants and I am sure that his remarks apply to hundreds of towns and cities. I submit Mayor Patterson's statement for the benefit of my colleagues:

THE VALUE OF THE FEDERAL GRANT PROGRAM FOR SEWAGE TREATMENT PLANTS

(By Hugh Patterson)

It is a privilege to appear before you in the interest of Federal aid to municipalities for the construction of sewage treatment works. Alabama's municipal officials appreciate the unfailing support our congressional delegation has given to Public Law 660 and to appropriations authorized by this law—for grants to cities and towns. Your record on this legislation and appropriation measures speaks for itself and we take pride in the delegation's unanimous support of the entire program.

Each and every community has the responsibility for providing adequate sewage collection and disposal systems to protect the health of its citizens and of those residing in adjoining areas that may be affected by the discharge of improperly treated sewage from the community. Community sewage must also be treated and disposed of in a manner that will be least objectionable, will protect property values and will permit reasonable use of waters into which it is discharged.

A community's growth and prosperity depends upon its facilities and services. There are Alabama communities in which residential expansion has been restricted by the lack of adequate sewage collection and treatment works. I also feel sure that some municipalities have been bypassed by industries seeking a location because of inadequate sewerage facilities.

COST OF MUNICIPAL GOVERNMENT CONTINUALLY RISING

The cost of municipal government continues to rise and municipal governing officials are repeatedly requested to expand services and utilities. Revenues have not kept pace with costs and we have been forced to impose higher tax burdens or increase the utility cost to our citizens. The Federal grant program for municipal sewage works construction has made it easier for many communities to undertake improvements in sewage disposal. Many communities cannot finance construction of these improvements without help from this or other sources. These grants have also stimulated interest in providing for adequate sewage treatment works and are a definite incentive to a community.

Since July 1956, allotments of grant funds to Alabama from appropriations under Public Law 660 have ben made to 21 municipalities—an average of 7 new projects per fiscal year. The total construction cost of these 21 projects is approximately $23,700,000, of which $3,272,000 will be from Federal grants. The high proportion of this cost borne by local government—86.2 percent—has led one of Alabama's leading daily newspapers to editorially praise the Federal grant program to municipalities. It should be recognized that the Federal Government participates only to the extent of 30 percent of the cost of sewage treatment works with the maximum of any one grant set at $250,000. The municipality must bear the total cost of col-

lecting sewers, which are ineligible for Federal participation.

WILL SERVE 700,000 PERSONS

The sewage treatment facilities made available by these 21 projects will have a capacity for 700,000 persons. During the 2-year period the grant program has been in effect 12 projects with a capacity for 42,000 persons and involving construction costs totaling $1,970,000 have been started without grant aid. As a comparison, 15 projects having a capacity for 230,000 persons and costing $3,300,000 were begun during the 3 years prior to the effective date of Public Law 660. It is apparent that municipal sewage disposal problems of long standing are being corrected and public health hazards eliminated through financial assistance from the Federal Government.

While accomplishments during the first 2½ years of the aid program provided by Public Law 660 have been outstanding, we have only scratched the surface in our efforts to correct problems created by unsatisfactory sewage disposal. I am told that 105 communities in Alabama are in need of sewage disposal improvements. These 105 projects would represent an estimated expenditure of $29 million for sewage treatment works alone and, under the present method of grant allocations, will require $5,600,000 in Federal funds. According to the Alabama State Department of Health and the State water improvement commission, these figures do not include replacement and expansion of systems that may become inadequate within the next 5 years. Replacement and expansion costs are estimated to run as high as $2 million annually.

SMALLER COMMUNITIES SERIOUSLY AFFECTED

Among the 105 communities with pressing problems of sewage disposal are Alabama's smaller municipalities which find it more difficult—if not impossible—to finance the cost of necessary improvements without aid. In my own city of Gadsden, we are faced with the necessity for expanding our sewage collection system and replacement of overloaded and inadequate sewage treatment facilities. Our problem has been discussed with representatives of Alabama's health agencies and we have been promised financial assistance if, and when, Federal funds are available for this purpose. We know that Alabama's annual allotment for the Federal grants to municipalities has been slightly over $1,100,000 and recognize that this amount will help only a few and must be distributed on a priority basis. Our city is not alone as I am informed that 23 other communities have requested grant aid to the extent of over $2 million.

Although accomplishments under the grant program have been most encouraging, we are far from attaining the level of sewage works construction necessary to eliminate the many situations of sewage pollution. We must bear in mind that municipal improvements delayed during the war years left our communities with a tremendous financial burden. While the present grant program is most helpful, it is obvious that it must be expanded if we are to meet our responsibilities.

NEED FOR SUPPORT OF BROADER PROGRAM

I am confident that you recognize the importance of adequate sewage disposal and the urgent need for continuing and expanding the grant program authorized by Public Law 660. Three bills introduced in the 85th Congress, H.R. 11472 by Mr. PRICE, of Illinois, H.R. 11714 by Mr. BLATNIK, of Minnesota, and S. 3576 by Senator CHAVEZ, of New Mexico, sought to increase Federal aid to municipalities for sewage treatment works construction. These bills were supported by municipal government. Alabama's municipal officials join me in asking you to continue your support of appropriations authorized by Public Law 660 and to exercise your influence in securing passage of legislation to expand this program.

ABOLISHMENT OF PROGRAM IS INCONCEIVABLE

I understand that President Eisenhower has again asked the Congress to bring to an end the Federal grant-in-aid program for sewage treatment facilities. This is a shocking attitude for a man supposed to be big enough to preside over the governmental affairs of the world's greatest Nation. In that connection I would like to quote from an item appearing in a recent issue of the American Municipal News, indicating that even the President's advisers differ with his viewpoint on this great program. I quote:

"Presidential advisers on water pollution problems again have taken issue with the administration's proposal to end Federal grants to local communities for construction of sewage treatment plants.

"The nine-member Water Pollution Control Advisory Board at its December 16 meeting, by unanimous vote, urged that the present grants-in-aid be continued.

"Milton P. Adams, Vice Chairman of the Board, is reported to have stated, 'the President could have been better advised,' when he recommended that the Federal Government turn the program over to the States. 'He did not ask us,' Adams told a press conference.

"Adams, who like the other members of the Board, is appointed by the President, described the proposal as 'a hot potato' and pointed out that the telephone companies are lobbying for repeal of the tax which was a wartime measure.

"Board members approved a resolution stating that the budget that will be presented to Congress next month should contain at least the $45 million that was appropriated for the program during the current year. Consideration should be given to increasing the amount available for construction, they said.

"The Federal Government now makes the grants under a 1956 law providing an incentive for communities to build sewage treatment facilities by contributing up to 30 percent of the cost. The law calls for a 10-year program and authorizes up to $50 million a year.

"Board members estimated a need of $70 million to $75 million each year in Federal grants to bring community participation up to a satisfactory level."

I thank you, gentlemen, for your courteous hearing of our comments on this very worthwhile Federal-municipal program.

Three Winning Essays by Elementary Students at Mark Twain Elementary School, Lynwood, Los Angeles County, Calif., in the Great 23d Congressional District

---

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1959

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I herewith present to your attention the text of three essays on Abraham Lincoln written by students at the Mark Twain Elementary School, Lynwood, Calif., which is in the great 23d District, Los Angeles, Calif., which I represent in this legislative body Mrs. Amy J. Sherlock is the principal and Donald D. Reber is the superintendent of schools.

I am sure that you, Mr. Speaker, join in congratulations to the principal of this school and to the teachers and instructors thereat for emphasizing the birth and life of Abraham Lincoln. That school also had a special assembly in commemoration of this great American and who knows but that one or more of these youngsters in my native State of California writing these essays may someday sit in Congress as a Member thereof, in a joint meeting of the House and the Senate as we present Members joined with the Senate and the Supreme Court and the President's Cabinet and the Ambassadors on the recent date of February 12, when the distinguished historian, Carl Sandburg, read his magnificent tribute to Lincoln and when the distinguished American, Fredric March, read the Lincoln's Gettysburg Address so feelingly:

THE 16TH PRESIDENT

(An essay by Hillary Barsky, a member of the fifth grade class at Mark Twain Elementary School, Lynwood, Calif.)

Even though Abraham Lincoln had a humble beginning he went to the White House. Abe Lincoln was born on February 12, in a small log cabin. Lincoln had little schooling, but he taught himself. He liked the river too.

Lincoln liked politics also, but failed on his first attempt. He served in the Illinois Legislature.

When Lincoln was President, the Civil War broke out. But Lincoln was strong, he believed in democracy, he preserved our Nation and held together what our forefathers fought for. If it had not been for Lincoln our country might have been split in two.

The war lasted nearly 4 years. Then Lincoln was elected for another term.

Then a terrible thing happened. Lincoln was shot while watching a play, by John Wilkes Booth.

Abraham Lincoln will always be remembered one of America's greatest men. Sometimes he is called the Second Father of our Country.

ABRAHAM LINCOLN

(An essay by Rodney Henke, a student at Mark Twain Elementary School, Lynwood, Calif.)

Abraham Lincoln was born in 1809 and died in 1865. He was our 16th President. He was one of the most hated as well as one of the most loved American Presidents.

He was born in a log cabin on a farm in Kentucky. His father was Thomas Lincoln, a pioneer farmer.

The greatest thing Lincoln did during his term as President was when he set the slaves free in the States on January 1, 1863.

On April 14, in a theater with his family, he was shot by John Booth and died the very next day. This caused the whole world much grief and sorrow.

There have been lots of monuments, shrines and memorials erected and dedicated to his memory.

OUR LINCOLN

(An essay by Deborah Cosman, a fifth-grade student at Mark Twain Elementary School, Lynwood, Calif.)

"Fourscore and seven yours ago, our forefathers brought forth upon this continent a new nation conceived in liberty and dedicated to the proposition that all men are created equal."

The Gettysburg Address had its beginning in Abe's younger life. Born in a crude log cabin, of humble parents, he studied and worked hard. Rising from town postmaster, he was elected to the State legislature. Defeated in the election for U.S. Senator, he went on to become the 16th President of the United States. He remained true to his ideals of human equality by freeing the slaves and finally giving his life for this cause.

In his lifetime, Lincoln was one of the most hated, as well as one of the most loved, of American Presidents. Time has erased hatred, and today Lincoln is known throughout the world as "The Great Emancipator," champion of freedom, and hero of American history.

Dedication Ceremonies, New Supreme Court Building, Brooklyn, N. Y.

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James V. Mangano, general clerk of the Supreme Court of the State of New York, second judicial district, at the dedication ceremonies of the new Supreme Court Building in Brooklyn, N.Y., on January 5, 1959, together with an address by Hon. J. Vincent Keough, justice of the Supreme Court of the State of New York:

ADDRESS BY THE HONORABLE JAMES V. MANGANO

Reverend clergy, associate judge of the court of appeals, Charles W. Froessel; presiding justice of the appellate division, Gerald Nolan; the representative of the mayor of the city of New York; associate justices of the appellate division; chairman and senior justice of the board of justices of the supreme court, second judicial district; Anthony J. DiGiovanna, borough president of Brooklyn; the Honorable John Cashmore, commissioner of public works; Frederick Zurmuhlen, State administrator of the judicial conference; John B. Johnston, justices of our court; distinguished guests; representatives of the bar and of the bench; public officials; ladies and gentlemen, on behalf of the board of justices of the second judicial district may I extend to you a most cordial welcome on this memorable occasion, the dedication of the new Supreme Court Building, Kings County.

At this time as general clerk of the supreme court and its administrative director, and by the direction of the board of justices of the supreme court, second judicial district, I hereby declare the formal and official opening of these ceremonies and of the business of this court.

We are about to start a new year and a new era in a new building. As I have watched this building rise to completion, I have been mindful of the following words:

"If we work upon marble, it will perish; if we work upon brass, time will efface it; if we rear temples, they will crumble into dust; but if we work upon the immortal soul, if we imbue it with principles, with a just fear of God and love for our fellow men, then we engrave on that tablet something which will brighten all eternity."

May we carry on with that thought in mind, ladies and gentlemen.

I also wish to express my sincere thanks to the chairman of the new courthouse committee, the members of that committee, the board of justices for the cooperation and coordination which were extended to me and my staff during my incumbency as the general clerk of this court and during the transition from the old to the new courthouse.

I cannot permit to go unnoticed the efficiency and interest manifested by the chairman of our justices' committee on the new courthouse during his many dealings with many agencies.

I am sure that through his efforts and energy there evolved a better, mutual understanding among the board of justices, the city administration, the department of public works under the commissionership of Commissioner Zurmuhlen, and the department of purchase under the able commissionership of Joseph Spagna, culminating in this beautiful temple of justice, this new Supreme Court Building.

I also cannot permit to go unnoticed the efforts and the energies extended by the chairman of the house committee in the past, and who will continue to cooperate with our staff, the Honorable Justice Walter Hart.

I also wish to publicly acknowledge the able leadership of our chairman of the board of justices. We are very proud of the members of our judiciary in this court, but I am particularly grateful and appreciative to the chairman of our board of justices.

Now it is my extreme pleasure to present to you a man who has done a Herculean job in bringing about the orderly arrangement between city departments and this court. I hope that this is the beginning of a great and mutual understanding between the city departments and our court. I present to you the energetic, able jurist, the chairman of the new courthouse committee, the Honorable J. Vincent Keogh. [Applause.]

ADDRESS BY THE HONORABLE J. VINCENT KEOGH

Mr. Mangano; reverend clergy; our borough president; Mr. Cashmore, associate judge of the court of appeals; Judge Froessel; Judge Nolan, and all other distinguished justices and judges of this great court and of all other courts represented here today; distinguished guests, ladies, and gentlemen, as chairman of the justices' committee of this new Supreme Court Building, which at one time not too long ago wasn't even a gleam in a budgetary eye, I should like to express composite appreciation of my colleagues, the staff and personnel of this court.

Particularly do we realize that my immediate predecessor as chairman, now still of this supreme court but by gubernatorial appointment a distinguished member of our appellate division, really must be given credit for the accomplishment that we dedicate today, the Honorable Henry L. Ughetta, not only a lawyer but an engineer and judge.

To our mayor, borough president, our commissioner of public works, Commissioner Zurmuhlen, commissioner of purchase, Mr. Spagna, and to all of you, our taxpaying friends, our heartfelt thanks.

A modest, efficient, and quietly industrious member of our court personnel anticipated the many details, heard suggestions, listened to what was usually constructive criticism, and in general was the complaint department. He went down the line to this very end and supervised, as you all saw, today's ceremonies. I want to pay public tribute to my loyal assistant, Max Benjamin. [Applause.]

To the members of the committee on the new building, Judges DiGiovanna, Brown, McDonald, A. David Benjamin, and Surrogate Moss, my sincere thanks.

And to another member of the committee who has been indefatigable in making certain the highest traditions and standards are ever maintained, the man you just heard, the Honorable James V. Mangano, our general clerk. [Applause]

To you, Mr. Mangano, I am very happy to throw the housekeeping torch because the committee on the new building is no more. After all, we are here and, as they say in condemnation, the improvement is complete and, technically, depreciation has already set in. [Laughter]

Joseph H. Choate of international legal reputation must have had in mind a man with the credentials of a beloved colleague of ours who we are proud to call chief. Mr. Choate remarked, "Law is the expression and perfection of commonsense." The "expression and perfection of the law" come only from men endowed with a rich spirit, full learning, and humility of soul.

It will be no new experience for our friend to preside at these historic ceremonies. The highest ranking judicial officer of this department, he is presiding justice of our appellate division, which appellate division has and, we all know, will continue to enjoy, a formidable reputation among the members of the bench and bar. Our new 10th home, this building which we dedicate today, represents, to a very great extent, this man's kindly and intense interest in legal and judicial standards.

It is my great pleasure to present our presiding officer of the day, the Honorable Gerald Nolan. [Applause]

Address by Adm. Arleigh A. Burke, USN, Chief of Naval Operations, Charleston, S.C., Friday, February 20, 1959

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith a speech given at the Francis Marion Hotel, Charleston, S.C., Friday, February 20, 1959, by the distinguished Chief of Naval Operations, Adm. Arleigh A. Burke.

This magnificent speech was delivered at the 182d annual meeting of the Charleston Chamber of Commerce, which is the oldest chamber of commerce in the United States. This timely address is a warning to all Americans who want this country to survive in the days that lie ahead:

ADDRESS BY ADM. ARLEIGH A. BURKE, USN, CHIEF OF NAVAL OPERATIONS, BEFORE THE CHAMBER OF COMMERCE OF CHARLESTON, S.C., CHARLESTON, S.C., FEBRUARY 20, 1959

It is a pleasure to be here in Charleston—and I am particularly pleased to have this opportunity to talk to leaders of a community which has always been important to the U.S. Navy—and which is now becoming even more so.

Charleston is becoming more important as the Navy goes forward with its fleet dispersal program. This is a program which has been instituted in recognition of constantly changing needs in national security.

World conditions are very fluid. The situation is constantly changing. We have seen rapid advances in technology. We are wit-

nessing rapid and sometimes unpredictable progress in weapon-system development.

For this reason we must constantly reexamine the nature and degree of the threat facing us, and we must keep under constant review our needs to meet it. This means that we must continually reevaluate our military posture.

In reexamining the threat confronting us, we must recognize at the very outset that the Soviets have no intention of gaining their objectives slowly by the use of military force.

This is one of the most misunderstood facts of life today. The Communists have demonstrated over and over again—both in word and deed—that military force is only one of many means which they expect to use in their efforts to take over the world.

Indeed the danger could come more from an economic Communist offensive leveled against the free world.

It is important for us to understand that a cardinal rule of the Soviet leaders is that the destiny of communism must not be jeopardized by harebrained risk.

It is not saber rattling to say that the Soviets know that the United States has the ability—right now, in being—to destroy the Soviet Union. We can do it in several ways—and several times over with our powerful Strategic Air Command of the U.S. Air Force—with carrier striking forces of the U.S. Navy—with tactical air—and with intermediate range ballistic missiles which are now being installed in certain European sites.

The Soviet Union cannot prevent our retaliatory strikes should the Kremlin leaders decide to initiate general nuclear war.

Therefore, the probability of general nuclear war is remote, for it would be suicide for the U.S.S.R.

The advent of ballistic missiles for delivery of mass destruction warheads has raised some basic considerations in the role of armed force as an instrument of national policy.

Missiles have placed new emphasis upon the importance of concealment and surprise. This makes our own installations and cities more vulnerable than ever before.

In the remote possibility that the Soviets might undertake to initiate a general nuclear war—their prime objective would be to eliminate the ability of the United States to retaliate.

To do this the Soviet Union would launch its missiles against our known positions. Everybody knows where our bases and installations are located. Everybody knows the locations of our strategic air bases here at home and abroad. Our missile sites also will be known no matter how many we build—or how much we attempt to keep them secret.

This poses a major problem for the United States. In the past 100 years of history of our wonderful country—we have considered that anything in the continental limits of the United States was relatively safe.

With the distances involved—and the limitations then inherent in the weapons of war—when the United States became a first-class seapower we recognized that it was a good thing to base our military strength primarily in our own homeland until it was needed in war.

In an age of ballistic missiles—it is now just the opposite. The security of bases in the continental limits of the United States will no longer be fully available to us when ballistic missiles become fully operational.

We face the further problem, on the other hand, that we will not have knowledge of the location of each and every enemy missile site. Even if we could expect to have this knoweldge, we recognize that in general nuclear war missile forces can no longer attempt to destroy their enemy counterpart without destroying the corporate body of the enemy state itself, provided all these forces are stationed within the heart of the homeland.

This works both ways. All the world knows that the United States will not initiate war, or take steps designed to provoke war. In such circumstances—what do we do in the face of a growing Soviet missile capability?

There has ben considerable concern in this country about a missile gap. Most of this concern has been centered primarily upon a numerical difference between U.S. missile strength and that of the Soviet Union.

However, it is not a quantitative gap we should be concerned about. Rather it is a qualitative gap we must be careful to avoid.

In this connection the United States is ahead of the Russians in retaliatory powers. It is far more powerful than the Soviet Union, and this is a status which we can and will maintain.

As we move into the age of ballistic missiles, however, we must have missile sites whose locations are not known to the Soviets. This would reduce any advantage of enemy surprise or initiative. This would present to the enemy a U.S. ballistic missile posture which assures the enemy that he will be destroyed if he launches a nuclear attack against us or any of our allies.

The real question, then is, can we avoid the qualitative gap which could develop in the years immediately ahead? The answer is yes.

It has been in response to these problems that we designed the Navy's fleet ballistic missile system—Polaris—to be carried in submarines. A seagoing system answers these problems. It provides the best answer now in sight. It is a system which will be hidden and moving in the depths of the sea.

The enemy will be unable to pinpoint these fleet ballistic missile forces in advance for a surprise attack because their locations at sea will not be known, and the nuclear submarines carrying Polaris will be constantly on the move. Any attempt to neutralize these forces will draw the enemy's attacks to sea—away from population centers on land.

We will not need many of these fleet ballistic missile systems. We will need enough to do the job. But the United States should not place its reliance for deterrence solely on Polaris—or any other single system. We should retain diversified capabilities.

We must, of course, keep in mind what has to be done. We must make sure that Russia knows we have enough to destroy the Soviet Union, and that we will use it if she launches a nuclear attack.

There is no point trying to equate our requirements and capabilities with the enemy's. Our requirements are entirely different and our capabilities must be developed around our own needs. We do not need to engage in an endless arms race with the Soviets in ballistic missiles—any more than we have attempted to race them in numbers of submarines or army divisions.

The really important thing about a deterrent force is not numbers—but invulnerability not total numbers built—but numbers we will be able to use. In making our retaliatory forces secure from enemy attack—we do not need great numbers of missiles and bombers.

Whether the U.S.S.R. has one-half as many or several times as many missiles as the United States—is really academic as long as we have the assured capability of destroying Russia—and as long as the Soviets know it—and are really convinced of it.

There is—in fact—far greater psychological advantage for the United States in having this capability than in allowing ourselves to be drawn into a fruitless and unnecessary race on Soviet terms.

Hiding behind the Iron Curtain the Kremlin can tell us what they want us to know—and they are able to conceal fairly effectively that which they don't want us to know.

If they had a particular capability, would they make such statements as to cause us to build an appropriate response to that particular threat?

If the Kremlin really intends to exploit an advantage, would it not be better for them to remain quiet and surprise us with deeds rather than words?

The United States is embarked upon a defense program aimed at meeting our security needs. By not entering a numbers race with the Soviets on their terms we also avoid the limitless economic drain which such a race would involve.

We can afford what we have to afford for U.S. security, but also we must spend our funds for what we need. We must apportion our funds carefully to meet all the contingencies facing us.

A general nuclear war deterrent will deter mainly that, little else. Our powerful retaliatory capability has not always deterred lesser assaults in the past, and it will not in the future.

We know that the Soviet expansionist policy is continuing. There have been local aggressions—local uprisings, local crises in the past—which could not be dealt with by the use of mass destruction capabilities.

These will continue to face us in the future, and we will be able to deal with them effectively only by measures which fit the local circumstances.

This means controlled—precision forces which can be operated with discrimination and finesse—forces armed with conventional weapons and small atomic weapons—forces which can apply the right degree of power with pinpoint accuracy.

Our military requirements cover a very wide spectrum of possible situations. But even this is not enough. Military measures by themselves are not enough.

Let us look for a moment at what the Communists themselves have been telling us.

We can debate at length among ourselves on what proper military measures to take in our own defense. We can discuss budgets, military posture, and the various forms of modern warfare. We can examine our weapons systems and our progress in research and development.

But we can lose the entire stamina and integrity of our civilization if we do not recognize the challenge presented to us by a nation sworn to take us over.

Distinguished American visitors to the Soviet Union in recent weeks have told me that the most dangerous thing they saw in Russia is the look on the faces of the people.

What Americans have seen in their visits to Russia is the grim look of determination, the cool and deliberate confidence of people who are going places who know they are missing a lot of life, who know they are being forced to sacrifice both tangible and intangible human values—but who are resolute in their aim to beat the United States in everything.

And what do they expect to gain by this? Simply this, they expect to gain prestige in the eyes of the rest of the world. They expect to gain greater respectability in the world. They expect to demonstrate that their way is the way of the future. How better can they prove all this than by beating the United States in everything—in athletics, in the arts, in scientific achievement, in industry, political maneuver, and everything else.

This is the challenge which faces the United States. The Soviets have not said they were going to take the world through general war. What they have said is that communism is the wave of the future—and will take over the world.

Fifteen years ago we thought the Soviet Union would build a massive force of long range aircraft. They certainly had the capa-

bility of doing it. But they did not build many.

Two years ago we were given a jolt with their unveiling of a new and powerful long-range jet bomber—the Bison. But the Soviets did not build many of these either.

Today their space achievements are impressive. Their objectives is twofold. First, they want to be really able to develop the military capability which is implied by such achievements. They need not necessarily do it, but they want to be able to if they think they have to.

Their second objective is to demonstrate to the world the technological proficiency of the U.S.S.R.—they want to show the world that they can do it.

Both of these have their roots in Soviet psychological pressure on us—on our allies—and on the rest of the world, both within and outside the Sino-Soviet bloc.

We fall into their mousetrap when we ourselves become so obsessed or preoccupied with these worthy accomplishments as to ignore all the other things they are doing to undermine freedom, to upset the stability of independent nations, and to insinuate their philosophy into the thinking of freemen everywhere.

Let us not underestimate the capabilities of the Soviets. Their scientific achievements along certain lines have been superior. But let this not blind us to all the other much less spectacular things they are doing—the many little, devious, conspiratorial inroads they are making everywhere.

We have many problems before us in facing up to this Communist challenge. We must not become enchanted with the prospects of military power in the space age at the expense of the many other demands upon us. The competition covers a far wider range of effort than military effort alone. The range now extends to include everybody—not just the military.

Ladies and gentlemen, our country has grown strong in an environment of personal liberty in which the spirit of competition runs strong among us. The United States has become a world leader as a result of the effort of many hardworking people to whom the concepts of private enterprise and individual initiative have real meaning.

But today we run the grave risk of becoming complacent in our position of world leadership, and of becoming indifferent to the hard realities of the competition we face as a nation.

The U.S.S.R. long ago declared cold war on us, and they have been working hard at it ever since. We cannot stay aloof from this challenge. We are in a competition now for our national existence. We are engaged in a war of attrition in which the Communists intend to make each victory irreversible—no matter how minor it may seem to us. Taken together over the long haul these victories could be decisive.

We are ahead of the Soviet Union now. We are industrially ahead. We are ahead of the Soviets in the application of nuclear power in our naval forces. We are ahead in the development of solid propellants for ballistic missiles—a capability, incidentally, which was first developed by the Navy over 30 years ago at the Naval Engineering Experiment Station, based on early work by Dr. Robert H. Goddard.

We are ahead in the development of a fleet ballistic missile system—the Navy's Polaris missile.

The United States is ahead in its ability to use and exploit the sea, in antisubmarine warfare doctrine and capabilities, in the application of naval air power from carriers at sea, in guided missiles at sea.

These capabilities did not come overnight. They are the result of solid thinking and hard work—hours, days, and years of attention to the many jobs the Navy has to do. They are the result of cool determination, and the intelligent application of always limited resources.

This is the challenge which faces the entire Nation today. It is the challenge of facing Communist competition in every line of human endeavor. It is a challenge which will not be met with slogans, gimmicks, and simple answers.

It is a challenge which summons all Americans once again to reaffirm our purpose in the world community of nations, and to pursue that purpose with vigor, and not be deflected by the cold winds of communism.

Let us take a hard look at what is happening in the world—a hard look at what is happening to our markets in the world—and let us look at the Soviet economic offensive and determine how well we are responding to it.

Let us take a hard look at what we need in military hardware.

The answers will not be found in mathematical equations or with masterstroke answers. We are talking about the whole spectrum of human endeavor, for which there is no single or simple formula.

The United States is ahead today, but we will stay ahead only by the dint of hard work, by higher standards of individual achievement, by the exercise of free initiative, and by placing our personal comforts and interests second to the interests of a strong, virile, and dynamic United States.

This is not a one-man job. It is not a 100-man job, nor a job only for a million men. It is a challenge to 170 million Americans. It is a job for you and for me, for all of us—for your children, and your children's children—for as long as they live they will live in competition.

Dealing With Unemployment—An Editorial Appearing in the Christian Science Monitor, Friday, February 20, 1959

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1959

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I wish to call your attention, and the attention of my other distinguished colleagues, to a very timely and pertinent editorial appearing the the Christian Science Monitor on Friday, February 20, 1959. It seems to me this editorial is very timely on account of the reported high load of unemployment thoughout our great Nation:

DEALING WITH UNEMPLOYMENT

The exchange of barbed pleasantries between President Eisenhower and Walter Reuther has not helped noticeably with the unemployment problem. Both men could make more useful approaches to the situation than they have so far.

We question whether the Reuther plan for a march on Washington by unemployed workers holds any real solution. But the best White House answer would be such manifest awareness of human distress as Mr. Eisenhower displayed last year when he proposed extra Federal aid. Assumption that returning prosperity is wiping out special problems like that in Michigan only supports the argument that a dramatic gesture is required to focus attention on them.

The jibe at labor leaders on Puerto Rican beaches boomeranged all the way to Acapulo—leaving the problems of slow reemployment and of special distress areas still unsolved.

The unemployment problem is spotty and might well be dealt with by spot remedies. We fully understand the President's feeling that in a period of strong economic recovery the Federal Government should not continue a general program designed for last year's recession emergency. But we question whether he can with equal reason reject measures for aid to distressed areas where unemployment remains heavy.

Both humanity and sound economics argue for stopping the waste of idle men and idle plants. This is not primarily a national responsibility. In Michigan, for instance, concentration on one industry is proving a weakness. Both labor and management have made mistakes that contribute to unemployment.

Reported plans of Detroit's "Big Three" to bring out new small cars reflect recognition of a market which rejected the bigger, gaudier—and costlier—sales pitch. Union policies which push wages faster than productivity or prefer high wage rates to high employment are also in the picture. And a thriftier State government—one which had not built political power on welfare generosity—would now be better able to carry burdens Washington is asked to lift.

The responsibility of private industry, labor, and local government can rightly be emphasized. Yet the whole Nation is affected by weak spots in the economy. There is much reason for rejecting general inflationary spending programs as a cure. But by the same logic there is reason for seeking effective spot treatment.
